1. Supplement product data with drawings as necessary to clearly illustrate:

    a. Relations of component part of equipment and system.

    b. Control wiring, schematic wiring, and flow diagram.

2. Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation.

3. Do not use Project Record Documents as maintenance drawings. I. Written text, as required to supplement product data for the particular installation:

1. Organize in a consistent format under separate headings for different procedures.

2. Provide a logical sequence of instructions for each procedure.

J. Copy of each warranty, bond and service contract issued.

1. Provide information sheet for City's personnel, give:

a. Proper procedures in the event of failure.

b. Instances which might affect the validity of warranties or bonds.

1.0.4. MANUAL FOR EQUIPMENT AND SYSTEMS

A. Content, for each unit of equipment and system, as appropriate:

1. Description of unit and component parts.

a. Function, normal operating characteristics, and limiting conditions.

b. Performance curves, engineering data and tests.

c. Complete nomenclature and commercial number of all replaceable parts.

2. Operating Procedures:

a. Start-up, break-in, routine and normal operating instructions.

b. Regulation, control, stopping, shut-down, and emergency instructions.

c. Special operating instructions.

3. Maintenance Procedures:

a. Routine operations.

b. Guide to "trouble shooting".

c. Disassembly, repair, and reassembly.

d. Alignment, adjusting, and checking.

4. Servicing and lubrication schedule:

a. List of lubricants required.

5. Manufacturer's printed operating and maintenance instructions.

6. Description of sequence of operation by control manufacturer.

7. Original manufacturer's parts list, illustration, as drawings and diagrams required for maintenance.

a. Predicted life of parts subject to wear.

b. Items recommended to be stocked as spare parts.

8. List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.

9. Other data as required under pertinent sections of specifications.

B. Content, for each electric and electronic system, as appropriate:

1. Description of system and component parts

a. Function, normal operating characteristics, and limiting conditions.

b. Performance curves, engineering data and test.

2. Switchgear, transformers, and motor control centers.

a. Coordination summary.

b. Relay settings.

c. High voltage switch instructions.

d. High voltage cable termination and splice instructions.

3. Operating procedures:

a. Routine and normal operating instructions.

b. Special operating instructions.

4. Maintenance procedures:

a. Routine operations.

b. Guide to “trouble-shooting”.

c. Disassembly, repair and reassembly.

d. Adjust and checking.

C. Prepare and include additional data when the need for such data becomes apparent during instruction of City's personnel.

D. Additional requirements for operating and maintenance data: The respective sections of Specification.

1.0.5. SUBMITTAL OF MANUALS

A. Two draft copies of the complete operating and maintenance manual shall be submitted for review by the Engineer within 30 calendar days after approval of all shop drawings. One copy will be return to the Contractor within 30 days after receipt by the Engineer.

1.0.6. POSTED OPERATING INSTRUCTIONS

A. General: Operating instructions and diagrams shall be prepared for posting near the equipment. Posted operating instructions shall be photographic or equal non-fading reproductions framed under glass encased in non-discoloring plastic and shall be mounted in location directed. Copies of the posted operating instructions shall also use with the operating and maintenance manuals as a basis in training employees in the operation and maintenance of systems and related equipment installed.

B. Contents: Posted operating instructions shall consist of simplified, consolidated equipment, control and power diagrams graphically representing the entire system and actual equipment installed, including concise written instructions on how to start and stop systems, what settings and conditions are to be observed and what control adjustments are to be made or maintained by the operation.

1.0.7. MANUFACTURES’S NAMEPLATES

A. Each major component of equipment to have manufacturer's name, address, model number and rating on a plate securely affixed in a conspicuous place. Nameplate of a distributing agent will not be acceptable in lieu of manufacturer's nameplate.

B. Nameplate shall be die-stamped, engraved, or etched to guarantee long term legibility.

1.0.8. GUARANTY/WARRANTY

A. The Contractor shall guarantee that all new equipment has the capacity specified and that it will operate without excess noise or vibration.

B. Contractor shall furnish a written guarantee covering all workmanship and materials for a period of one (1) year, from the date of acceptance. This shall include an agreement to repair or replace, at his expense, all defects that may appear in that time, which in the opinion of the Engineer, are due to defective workmanship or materials.

C. Copies of factory warranties on all equipment furnished shall be submitted with the above described, written guarantee period, and included in maintenance manuals.

1.0.9. OPERATING AND MAINTENANCE RESPONSIBILITY

A. Contractor shall provide all required service and maintenance on all equipment installed under this contract for one (1) year following final acceptance or the beginning of beneficial use by the City. The starting date of one (1) year service period shall be determined by the City. Included in the service and maintenance to be provided during this one (1) year period, shall be the following:

1. All required lubrication, adjusting belt tensions, eliminating excessive noise and vibration.

2. Correcting all electrical and mechanical faults, recording all permanent installed gauge meter and temperature readings.

3. General service items, including the answering of service calls.

B. Service during construction:

1. General: Competent and experienced technical representatives shall represent the manufacturers of all equipment and systems as many days as may be necessary to resolve assembly or installation problems at the worksite which are attributable to, or associated with, the equipment furnished. This requirement applies to manufacturers of all equipment furnished, whether or not specifically set forth in the Technical Specifications.

2. Manufacturer's Certificate of Proper Installation: Where called for in the Technical Specifications, the manufacturer's representative shall provide a certificate stating that the equipment or system has been installed in accordance with the manufacturer's recommendation and has been inspected by a manufacturer's authorized representative, that it has been serviced with the proper initial lubricants, that applicable safety equipment has been properly installed, and that the proper electrical and mechanical connections have been made.

C. Functional testing assistance:

1. Where functional (or run) testing is called for on the Technical Specifications, the manufacturer's representative shall assist with the initial test, which shall include checking for proper rotation, alignment, speed, excessive vibration, and noisy operation. Initial equipment and system adjustment and calibrations shall be performed in the presence of and with the assistance of the manufacturer's representative. The previously specified Manufacturer's Certificate of Proper Installation shall include the statement that proper adjustment has been made and that the equipment or system is ready for plant startup and operation.

2. The Contractor, as applicable to the equipment furnished, shall state in writing that all necessary hydraulic structures, piping systems, and valves have been successfully tested; that all necessary equipment systems and subsystems have been checked for proper installation, started, and successfully tested to indicate that they are all operational; that the systems and subsystems are capable of performing their intended functions; and that the facilities are ready for startup and intended operation.

3. Training of Owner's Personnel:
   Where called for in the specifications, the manufacturer's representative shall provide detailed instructions to the City personnel for operation and maintenance of the specified equipment. These training services shall include pre-startup classroom and onsite equipment instruction and/or post-startup classroom and onsite equipment instruction, as stated in the specifications.

PART 2 – PRODUCTS NOT USED

PART 3 – EXECUTION NOT USED

END OF SECTION

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. Where the City has obtained various permits for this Project, copies will be appended at the rear of the Specifications.

B. The Contractor shall familiarize himself with, and comply with, all requirements of these permits and their issuing authorities. All other necessary permits shall be obtained by the Contractor.

C. The Contractor's particular attention is called to any special conditions of the permits relating to construction procedures, excavation and backfill requirements, open trench restrictions, asphalt concrete pavement restoration, turbidity controls, and all other general and special conditions. In the event any of the conditions of the permits are in conflict with the requirements of these Specifications, the more stringent conditions of the permits shall take precedence.

D. Any deviations from the Plans, Specifications or permits appended thereto, must first be approved by the Engineer even if approval for the change has been given by the permitting agency.

E. The Contractor shall assume throughout the life of the Contract all obligations and responsibilities imposed on the City as permittee of the aforementioned permits. All expenses necessary for compliance with the regulations and requirements of each permitting agency and its permit shall be borne by the Contractor and shall be included in his overall bid price.

F. The cost of any fees such as impact fees, inspection fees, etc. and the cost paid for all required permits shall be borne by the City. The Contractor shall pay the required fees, obtain the permit(s) and then upon submission of proof of cost to the City, be reimbursed for said cost out of the Permit Fee Dedicated Allowance Item. This shall apply only to required permits and fees. Permits obtained or fees paid for the advantage of the Contractor or non-required permits obtained for whatever reason shall not be reimbursed. The necessity or non-necessity of a permit or fee shall be determined by the Engineer whose word shall be final. As specified in the paragraph above, all costs of compliance with the permit(s) shall be borne by the Contractor and included in his bid price.

G. All surveying required by the Project permits shall be done by the Contractor's Registered Professional Surveyor and Mapper (PSM) licensed to practice in the State of Florida.

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

NOT USED

END OF SECTION

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. The Contractor shall be responsible for providing the Engineer with Maintenance of Traffic (M.O.T.) plans for lane closures and/or detours for approval. These M.O.T. plans shall be produced by an individual employed by the Contractor and certified as "Work Zone Traffic Safety Supervisor" by the American Traffic Safety Service Association, ATSSA.

B. The Contractor shall be responsible for the maintenance of public streets and traffic control for the duration of the project. The cost of Traffic Control including the cost of any required off duty police officers shall be included under the appropriate bid item in the Proposal. If no bid item for this is included, said costs shall be included in other appropriate items of the bid and no extra compensation will be allowed.

1.0.2. REGULATIONS

A. As used herein, any reference to City of Opa-Locka, or its published regulations, permits and data, shall be synonymous and interchangeable with other recognized governing bodies over areas or streets, or their departments, published regulations, permits or data. The Contractor shall abide by all applicable laws, regulations, and codes thereof pertaining to maintenance of public streets, detour of traffic, traffic control and other provisions as may be required for this project.

1.0.3. MAINTENANCE OF TRAFFIC (M.O.T.)

A. The Contractor shall be fully responsible for the maintenance of public streets, detour of traffic (including furnishing and maintaining regulatory and informative signs along the detour route), traffic control, and other provisions throughout the Project as required by the City of Opa-Locka, Miami-Dade County Department of Transportation and Public Works (MDCDTPW) Traffic Division, Florida Department of Transportation (FDOT), or other governing agency. Traffic shall be maintained according to corresponding typical traffic control details as outlined in the MDCDTPW Manual. No street shall be completely blocked, nor blocked more than one-half at any time, keeping the other one-half open for traffic, without specific approval. Hard closures require approval from the City of Opa-Locka Transportation Department

B. An off-duty City of Opa-Locka police officer is required. Off-Duty Office phone number is (305) 681-1033.

C. The Contractor shall provide all barricades with warning lights, necessary arrow boards and signs, to warn motorists of the work throughout the project. Adequate approved devices shall be erected and maintained by the Contractor to detour traffic.

D. Excavated or other material stored adjacent to or partially upon a roadway pavement shall be adequately marked for traffic safety at all times.

E. The Contractor shall provide necessary access to all adjacent property during construction.

F. The Contractor shall be responsible for the provision, installation and maintenance of all traffic control and safety devices, in accordance with specifications outlined in the MDCDTPW Manual. In addition, the Contractor shall be responsible for the resetting of all traffic control and information signing removed during the construction period.

G. Where excavations are to be made in the vicinity of signalized intersections, the Contractor is alerted that vehicle loop detectors may have been embedded in the pavement. Every effort has been made to show the approximate locations on the plans; however, the Contractor shall verify these locations by inspecting the site of the work and by contacting the Traffic Division. Any loop detector which is damaged by the Contractor, whether shown on the plans or not, shall be repaired or replaced by the Contractor, at his expense, and to the satisfaction of the Traffic Division.

H. **The Contractor shall notify the Traffic Division twenty-four (24) hours in advance of the construction date, and forty-eight (48) hours in advance of construction within any signalized intersection.**

I. Temporary pavement will be required over all cuts in pavement areas, and also where traffic is to be routed over swale or median areas. When the temporary pavement for routing traffic is no longer necessary, it shall be removed, and the swale or median areas restored to their previous condition.

J. Pavement markings damaged during construction shall be remarked, as required by the Traffic Division.

PART 2 – PRODUCTS

2.0.1. MAINTENANCE OF TRAFFIC PLANS

A. For construction within the City public right-of-way, the Contractor shall submit two sets of maintenance of traffic (MOT) plans for review to the City of Opa-Locka Public Works Department and the agency having jurisdiction.

B. MOT plans should be designed and developed by a certified MOT Specialist when normal traffic flow will be impacted causing unexpected or confusing situations in unclear travel path for motorist/pedestrians when entering non advanced warning work zones. MOT work zone traffic controls separate and protect workers, pedestrians and motorists delineating areas closed to traffic.

C. MOT plans must be designed in accordance with the requirements of the agency having jurisdiction.

D. MOT plans must be site-specific.

E. MOT plans will be reviewed and approved by the agency having jurisdiction.

F. MOT plans shall be in color. **PART 3 – EXECUTION**

NOT USED

END OF SECTION

DIVISION 2 – SITE WORK

02210 SITE GRADING

PART – 1 GENERAL

1.0.1. SCOPE OF WORK

A. The Contractor shall perform grading work within the limits, elevations and grades indicated on the plans and as specified herein.

1.0.2. RELATED WORK

A. Section 01031 “Grades, Lines and Levels”.

B. Section 02314 “Excavation, Backfill and Fill for Structural Facility and Utility Systems”.

C. Section 02510 “Asphaltic Concrete Pavement”.

1.0.3. QUALITY CONTROL

A. The site shall be graded to the required elevations. Spot elevations are shown on the plans and the finished surfaces shall be uniformly sloped between these locations.

B. Suitable excavated material shall be used in the formation of embankments. The Contractor shall provide all additional fill material required to complete the embankments.

1.0.4. EXISTING CONDITIONS

A. Known underground, surface, and aerial utility lines and buried objects are based on best available data and indicated on the plans. Contractor shall verify all locations.

1.0.5. PROTECTION

A. Protect trees, shrubs, and lawns and other features remaining as part of final landscaping.

B. Protect bench marks, existing structures, fences, roads, sidewalks, paving, and curbs against damage from equipment and vehicular traffic.

C. Protect aerial, surface, or underground utility lines or appurtenance which are to remain.

PART 2 – PRODUCTS

2.0.1. FILL

A. Unless otherwise noted, suitable fill material shall be non-cohesive, non-plastic, granular mixture of local sand and lime rock, shall be free from vegetation, organic material or muck and shall contain not more than 8 percent material by weight which passes the No. 200 sieve. Broken concrete shall not be used in the fill. Fill material containing lime rock shall have sufficient sand to fill the voids in the lime rock, and no individual rocks or pieces of hard material that will not pass a 6-inch diameter ring shall be used in the fill; except that the upper 4-inches of all backfill or fills shall not contain any rock or hard material that will not pass a 3-inch diameter ring. All fill material shall be provided by the Contractor from any excess suitable on-site material or from off site sources, all subject to review and acceptance by the Engineer prior to use. The Contractor shall be responsible for determining the volume of material required for the site.

PART 3 – EXECUTION 3.0.1.

PREPARATION

A. Establish and identify required lines, levels, contours, and datums.

B. Maintain benchmarks, monuments, and other reference points. Re-establish if disturbed or destroyed at no cost to the City.

C. Before start of grading, establish the location and extent of utilities in the work areas. Notify utilities to remove and relocate lines which are in the way of construction.

D. Maintain, protect, reroute, or extend as required existing utilities to remain which pass through the work area.

3.0.2. REMOVAL OF TOPSOIL

A. Topsoil of horticultural value shall be stripped from areas of construction under this contract and stockpiled in area designated by Engineer. Said material shall be stockpiled separately from fill material.

B. Do not permit topsoil to be mixed with subsoil.

C. Do not strip topsoil when wet.

D. Do not drive heavy equipment over stockpiled topsoil.

3.0.3. ROUGH GRADING

A. Rough grade site to required levels, profiles, contours, and elevations ready for finish grading and surface treatment. Maintain the following:

1. Sodded areas: 4 ½-inches below finished grade elevation

2. Seeded areas: 6-inches below finished grade

3. Paved areas: 21½-inches below finished grade elevations

4. Shrub beds: 24-inches below finished grade elevations

5. Flower beds: 18-inches below finished grade elevations

6. Concrete sidewalks: 6-inches below finished grade elevations

B. Prior to placing fill material over undisturbed subsoil, scarify surface to depth of 6inches.

3.0.4. GRADING AND COMPACTION

A. Fill material shall be placed in lifts not to exceed 8-inches and compacted to a density of not less than 95 percent of maximum density at optimum moisture as determined by ASTM D 1557. Fill material shall be within plus or minus 2 percentage points of optimum moisture content. The minimum density acceptable at any location within the pavement subgrade shall be as specified in Section 02745 “Asphaltic Concrete Pavement”.

3.0.5. FINE GRADING

A. After structures, bases and pavements are completed and the yard piping trenches backfilled, the disturbed areas of the site shall be fine graded. All construction debris, regardless of size, shall be removed. The completed surface shall be shaped and sloped to drain away from the structures. The completed surface shall be within 0.1 foot of the elevations shown on the plans, unless otherwise accepted by the Engineer. Minor adjustments to line and grade may be required as the work progresses in order to satisfy field conditions.

3.0.6. SURPLUS MATERIAL

A. Remove surplus materials from site.

B. Dispose of surplus material at no cost to the City.

END OF SECTION

02220 EXCAVATION – GENERAL

PART 1 – GENERAL 1.0.1.

SCOPE OF WORK

A. The work specified in this section consists of the removal of protruding objects as required to prepare the area of the proposed construction, and the removal and disposal of all product and debris which are not required to be salvaged or nor required to complete the construction.

1.0.2. RELATED WORK

A. Section 02230 “Clearing and Grubbing”.

B. Section 02314 “Excavation, Backfill and Fill for Structural Facility and Utility Systems”.

PART 2 – PRODUCTS

NOT USED

PART 3 - EXECUTION

3.0.1. REGULAR EXCAVATION

A. Regular Excavation shall include roadway excavation and borrow excavation, as defined for each.

B. Roadway Excavation shall consist of the excavation and the utilization or satisfactory disposal, of all materials necessary for the construction of the roadway, side ditches, etc., within the limits of the roadway right of way as show in the plans.

3.0.2. BORROW EXCAVATION

A. Borrow Excavation shall consist of the excavation and satisfactory utilization of material from authorized borrow pits. It shall include only material that is suitable for the construction of roadway embankments or of other work of constructing embankment covered by the contract and unsuitable material in borrow areas furnished by the City, which must be excavated as determined by the Engineer, in order to obtain the suitable material.

3.0.3. LATERAL DITCH EXCAVATION

A. Lateral ditches shall include inlet and outlet ditches to structures and roadway, changes in channels of streams, and ditches parallel to the roadway right of way, as shown in the plans. Unless otherwise shown in the plans all excavation in that portion of lateral ditches beyond the limits of the roadway right of way, including the sections where dressing is required as provided in 120-11.1, shall be classified as Lateral Ditch Excavation.

3.0.4. SUBSOIL EXCAVATION

A. Where muck, rock, clay or other material within the limits of the roadway is unsuitable in its original position, the Contractor shall excavate such material to the cross sections shown in the plans or indicated by the Engineer, and shall backfill with suitable material, which shall be shaped to conform to the required cross sections. Where the removal of plastic soils below the finished earthwork grade is required, a construction tolerance from the lines shown in the plans as the removal limits, of plus or minus 0.2 foot in depth and plus or minus six inches (each side) in width will be allowed.

3.0.5. TRENCH EXCAVATION

A. General

1. Design, Provide, and maintain shoring, sheeting and bracing as necessary to support the side of excavations and to prevent detrimental settlement and lateral movement of existing facilities, adjacent property, and completed work.

B. Trench Excavation Plan: Prepare Trench Excavation Plan addressing the following topics:

1. Details or shoring, sloping, or other provisions for worker protection from hazards of caving ground.

2. Design assumptions and calculations.

3. Methods and sequencing of installing excavation support.

4. Proposed locations of stockpiled excavated material.

5. Minimum lateral distance from the crest of slopes for vehicles and stockpiled excavated materials.

6. Anticipated difficulties and proposed resolutions.

C. Removal of Excavation Support

1. Remove excavation support in a manner that will maintain support as excavation is backfilled or leave voids of backfill.

2. Do not begin to remove excavation support until support can be removed without damage to existing facilities, completed work, or adjacent property.

D. Trenches

1. For trench exceeding 5 feet in depth, provide adequate safety system meeting requirements of applicable state and local construction safety order, and federal requirements.

3.0.6. DEWATERING SYSTEMS

A. Any water which accumulates in the excavations for structures shall be removed promptly by means satisfactory to the Engineer of Record in such a manner as to not create a nuisance to adjacent property or public thoroughfare. Pumps and engines for dewatering systems shall be operated with mufflers and at a minimum noise level suitable to a residential area. The Contractor shall be responsible for any nuisance created due to the disposal of the water from his drainage system.
B. Where applicable, the Contractor shall be required to obtain all necessary permits approving the location and proposed method of disposal before discharging water from any excavation into any portion of the public right-of-way or into any existing drainage structure or facility.

3.0.7. STOCKPILING EXCAVATED MATERIAL

C. Stockpile excavated material that is suitable for use as fill or backfill until material is needed.

D. Post signs indicating proposed use of material stockpiled. Post signs that are readable from all directions of approach to each stockpile. Signs should be clearly worded and readable by equipment operators from their normal seated position.

E. Confine stockpiles to within easements, right-of-way, and approved work areas. Do not obstruct road or streets.

F. Do not stockpile excavated material adjacent to trenches and other excavations unless excavation side-slopes and excavation support systems are designed, constructed, and maintained for stockpile loads.

G. Do not stockpile excavated materials near or over existing facilities, adjacent property, or completed work, if weight of stockpiled material could induce excessive settlement.

H. Disposal of Spoil

3.0.8. DISPOSAL OF SURPLUS AND UNSUITABLE MATERIAL

A. Ownership of Excavated Materials

2. Owner of all suitable excavated material shall remain in the City until the final job requirements for fill or backfill materials have been fulfilled. Unless otherwise provided by the plans or special provisions, any surplus materials then remaining and not needed for job requirements shall become the property of the Contractor and are to be disposed of by him/her, outside the right of way, to the satisfaction of the Engineer.

3. In urban or other areas where temporary storage of apparent excess suitable materials within the right of way may be impracticable, the Contractor may stockpile the materials outside the right of way in areas provided by him/her. Until stock materials are needed in the job or are declared surplus. With the written approval of the Engineer, the Contractor may dispose of such apparent excess material with the

stipulation that he shall replace any portion of the disposed material required to fulfill the actual job requirements, with equally suitable material, at his own expenses.

4. No extra compensation will be allowed for any re-handling involved under the provisions of this Sub-article.

B. General Requirements for Disposal: Excavated muck or other materials unsuitable for the roadway construction shall be disposed of as shown in the plans or, if the plans do not indicate the disposal, the materials shall become the property of the Contractor and shall be disposed of by him/her outside the right of way.

C. Disposal of Muck on Side Slopes: As an exception to the provisions of 120-5.2 when approved by the Engineer, in rural undeveloped areas muck (A-8 material) may be placed on the slopes, or may be stored alongside the roadway, provided there shall be a clear distance of at least six feet between the roadway grading limits and the muck, and the muck shall be so dressed as to present a reasonably neat appearance. In addition, disposal of this material by placing on the slopes may also be permitted in developed areas where, in the opinion of the Engineer, this will result in an esthetically pleasing appearance and will have no detrimental effect on the adjacent developments. Where muck or other unsuitable material is permitted to be disposed of inside the right of way limits, such material shall not be placed such as to impede the inflow or outfall of any channel or of side ditches. The Engineer shall determine the limits adjacent to channels within which such materials shall no be placed.

D. Disposal of Paving Materials: Unless otherwise indicated in the plans, paving materials excavated in the removal of existing pavements, such as paving brick, asphalt block, concrete slab, lime-rock, sidewalk, curb and gutter, etc., shall become the property of the Contractor and shall be disposed of by him/her outside the right of way. If the materials are to remain the property of the City, they shall be placed in neat piles as directed.

E. Disposal Areas: Where the plans or specifications require the Contractor to dispose of excavated materials outside the right of way, and the disposal area is not indicated in the contract documents, the Contractor shall furnish the disposal area without additional compensation. Areas provided by the Contractor for disposal of removed paving materials shall be out of sight of the project and at least 300 feet from the nearest roadway right of way line of any State-maintained road. The 300-foot limitation will not apply, however, if the materials are buried.

1.0.10 USE OF PUBLIC STREETS

A. Ownership of use of public streets and alleys shall be such as to provide a minimum of inconvenience to the public and to other traffic. Any earth or other excavated material spilled from trucks shall immediately be removed by the Contractor and the streets cleaned to the satisfaction of the governing authority.

B. The City has not made any attempt to define the equipment to be used in transporting the excavated material since this may vary, however, the Contractor shall abide by the following general requirements:

1. Transport vehicles must be of the type(s) approved for this application by the political jurisdictions involved. General requirements are that the vehicles have watertight bodies that they be properly equipped and fitted with seals and covers to prohibit material spillage or draining, and that they be cleaned as often as is necessary to prevent deposit of material on roadways. Vehicles must be loaded within all legal weight limits and operated safely within all traffic and speed regulations.

2. Access to businesses, schools and homes along the route of the work must be provided by the Contractor at all times.

3. Where traffic will pass over backfilled trenches before they are paved, the top of the trench shall be maintained with temporary asphalt that will allow normal vehicular traffic to pass over.

END OF SECTION

02230 CLEARING AND GRUBBING

PART 1 – GENERAL 1.0.1.

SCOPE OF WORK

A. Unless otherwise shown in the plans, Standard Clearing and Grubbing shall be done within the following areas:

1. All areas where excavation is to be done, including borrow pits, lateral ditches, right of way ditches, etc.

2. All areas where roadway embankments will be constructed.

3. All areas where structures will be constructed, including pipe culverts and other pipelines.

4. Any other areas specifically called for on the plans to be cleared and grubbed.

1.0.2. DEFINITIONS

A. Clearing shall consist of the cutting, removal and satisfactory disposal of all trees, stumps, brush, shrubs, rubbish and any other objectional material within the designated areas.

B. Grubbing shall consist of the removal and disposal of all stumps larger than 1-1/2 inches in diameter and other objectional material to a depth of at least 12 inches below the ground surface.

1.0.3. QUALITY ASSURANCE

A. In the course of the work, it may become to remove trees if they interfere with the work. Dade County and various municipalities have ordinances regulating the removal, relocation and pruning of trees in the public right-of-way, these ordinances shall be strictly adhered to. The Contractor shall obtain a permit from Dade County and/or other regulatory agencies having jurisdiction over the work area before removing, relocating and/or pruning any tree. The Contractor shall comply with all requirements and conditions of the permit.

PART 2 – PRODUCTS

NOT USED

PART 3 – EXECUTION

3.0.1. CLEARING AND GRUBBING

A. The Contractor shall remove and replace, where required all existing shrubbery, trees, grass, sprinklers, fences, signs, mailboxes, structures, roadways, sidewalks, curbs and similar items or structures in the way of all excavation necessary for the construction of the project.

B. Where pavements or sidewalks are cut, they shall be cut by means of a mechanical pavement saw to form true and straight edges. Where such cutting is for the purpose of pipeline installation, saw cutting shall be either parallel or at right angles with the centerline of the pipe.

C. To protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction, prior to proceeding with any work in the vicinity.

3.0.2. DEPTHS OF REMOVAL OF ROOTS, STUMPS AND OTHER DEBRIS

A. In all areas where excavation is to be done and where the excavated material is to be used in the construction of roadway embankment or roadway base or pavement; also in all areas where roadway embankment will be constructed; roots and other debris shall be removed to a depth of at least one foot below the ground surface. The surface shall then be plowed to a depth of at least six inches and all roots thereby exposed shall be removed to a depth of at least one foot. All stumps within the roadway right of way shall be completely removed and disposed of by the Contractor.

B. Where excavation is done within the roadway area and where excavation for structures is done, all roots, etc., protruding trough or appearing on the surface of the completed excavation shall be removed to a depth of at least one foot below the excavation surface.

C. In borrow pits, material pits and lateral ditches, all stumps, roots, etc., protruding through or appearing on the surface of the completed exaction shall be removed or cut off below the finished excavation surface.

D. In borrow and material pits no clearing or grubbing shall be done to within three feet inside the right of way line.

E. Within all other areas where Standard Clearing and Grubbing is to be done, roots and other debris, projecting through or appearing on the surface of the original ground, shall be removed to a depth of one foot below the surface, but no plowing and harrowing will be required in these areas.

3.0.3. TREES TO REMAIN

A. As an exception to the above provisions, where so directed by the Engineer, desirable trees within the roadway and project site area shall be trimmed, protected and left standing. Branches of trees extending over the area occupied by the roadway shall be trimmed as directed, to give a clear height of 16 feet above the roadway.

3.0.4. BOULDERS

A. Any boulders encountered in the roadway excavation, or found on the surface of the ground, shall be removed and placed in neat piles inside the right of way and adjacent to the right of way line.

3.0.5. SELECTIVE CLEARING AND RUBBING

A. Selective Clearing and Grubbing shall consist of removing and disposing of all vegetation, obstructions, etc., as provided above except that, where the Contractor so elects roots, etc., may be cut off flush with the ground surface. Stumps shall be completely removed and disposed of by the Contractor. Undergrowth shall be entirely removed except in specific areas designated by the Engineer to remain for aesthetic

purposes. Desirable trees shall be trimmed, protected and left standing, with the exception of such trees as the Engineer may designate to be removed in order to facilitate right of way maintenance. Undesirable or damage trees (as so designated by the Engineer), shall be removed. Selective Clearing and Grubbing shall be done only in areas so designated in the plans.

3.0.6. PROTECTION OF ADJACENT AREAS

A. The Contractor shall protect areas shown on the drawings or designated by the Engineer of Record to remain protected from damage by construction operations by erecting suitable barriers of other acceptable means.

B. Property obstructions which are to remain in place, such as buildings, sewers, drains, water or gas pipes, conduits, poles, walls, posts, bridges, etc., are to be carefully protected from damage and are not to be displaced.

3.0.7. DISPOSAL

A. All roots, vegetation and other refuse removed from the site during clearing and/or grubbing operations shall be legally disposed of by the Contractor. Where required, the Contractor shall obtain a permit from Miami-Dade County and/or other regulatory agencies having jurisdiction over the work area before burning any material on the site.

END OF SECTION

02314 EXCAVATION, BACKFILL AND FILL FOR STRUCTURAL FACILITY AND UTILITY SYSTEMS

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. The work included under this Section consists of furnishing material and equipment, and performing all labor necessary for excavating, backfilling, filling and compaction of areas to be occupied by facilities or utility systems to be constructed.

B. Plan For Excavation: Prior to commencing the excavation, the Contractor shall submit a plan of his proposed operations to the Engineer of Record for approval. The Contractor shall consider, and his plan for excavation shall reflect, existing utilities that are to remain, the equipment and methods to be employed in the excavation.

1.0.2. QUALITY ASSURANCE

A. All excavations shall conform with South Florida Building Codes, the State of Florida Trench Safety Act, OSHA requirements and the provisions herein. Excavations shall be executed in accordance with all applicable requirements of Section 01016, including notification of Sunshine State One-Call Center (1-800-432-4770) 48 hours prior to any excavation.

B. Work shall be performed in accordance with Contract Documents, Drawings, and/or City of Opa-Locka Public Works Manual Specifications and Standard Details, in a neat and accurate manner. It is the intent of the City to obtain a complete and working installation according to these Specifications, and any items of labor, equipment, or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the project plans or stated herein.

C. Asphalt Acceptance Standards: The following minimum defects identified by the City or designee must be covered by warranty (but not limited to):

1. Sunken pavement patches greater than or equal to one-quarter (¼) inch (measured by a twelve (12) foot straight edge).

2. Surface raveling or oxidation due to deficiencies with the asphalt material.

3. Poor workmanship.

4. Inadequate compaction per Standards and Specifications.

PART 2 – PRODUCTS 2.0.1.

BACKFILL MATERIAL

A. Except where a 1:10 cement/sand or flowable fill concrete mix is required, granular soil backfill materials shall be utilized. Suitable backfill material shall be clean, shall not be expansive nor have high organic content, shall be free of clay, marl, unstable materials, debris, lumps and clods, and shall meet the following requirements.

1. Maximum Liquid Limit shall not exceed 12 as determined by ASTM D4318.

2. Maximum Plasticity Index shall not exceed 35 as determined by ASTM D4318.

3. Not more than 10 percent of weight shall be finer than 74-micron (No. 200) U.S. Standard Sieve.

B. Backfill material containing limerock shall have sufficient sand to fill the voids in the limerock. No stones or rocks larger than 6-inches in diameter will be permitted in any backfill.

C. Debris, broken paving, or broken concrete shall not be used.

D. Material for backfill may be material resulting from excavation, only if it meets the above mentioned requirements, or if suitable in the opinion of the City or designee. If sufficient suitable backfill material, including select backfill material, is not available from the site, additional material shall be furnished.

2.0.2. SELECT BACKFILL

A. Select backfill material specified herein shall meet all the general requirements for backfill material set forth in 2.01, and in addition, shall be free of any rocks or stones larger than 2 inches in diameter. Select backfill material may be material resulting from trench excavation, if suitable in the opinion of the City or designee, carefully selected to comply with these requirements.

1. Trenches remaining open to facilitate the repair of existing underground utilities damaged by the Contractor during excavation shall not be deemed a portion of the allowable 600 feet of open trench, unless otherwise decided by the Engineer, at his discretion.

2. **Backfilling and compaction shall be kept up with the rate of pipe laying. Backfill consisting of the specified material shall be placed and properly compacted, to the degree specified hereinafter. Unless otherwise ordered or approved by the Engineer, in writing, no temporary fill, refill, or uncompacted fill shall be installed. Under no circumstances shall backfill material other than that specified or an approved equal be installed. Backfill shall be placed and compacted immediately after installation of piping.**

3. Where existing paving is damaged or removed, temporary paving, as specified hereinafter shall be placed the same day as the ditch backfill and compaction and it shall be replaced with permanent paving within thirty (30) days, to the limits shown in the City's Standard Details or directed by the Engineer.

4. Backfilling and compaction of trenches will not be allowed until the work has been inspected by the Engineer, and the Engineer indicates that backfilling and compaction may proceed. Any work covered up or concealed without the

knowledge or consent of the Engineer may be required to be uncovered or exposed at no cost to the City.

5. The Contractor shall backfill and compact all trenches and other excavations made in the process of installing the pipe. The cost of all backfilling and compaction shall be included in the price bid under the various Items. The Contractor shall maintain the surface of the backfill free from major irregularities and potholes. Backfill to a point at least one (1) foot above the pipe shall be select backfill material not exceeding two (2) inches in diameter. Above this point, backfill shall be of material not exceeding six (6) inches in diameter.

6. Backfilling and compacting of material under and around the pipe and to one (1) foot above the crown shall be in layers not exceeding six (6) inches in thickness. Each layer shall be thoroughly compacted to at least 98 percent of maximum density as determined by AASHTO Standard No T-180-74, "Moisture-Density Relations of Soils using a 10-lb. (4.54 Kg.) Rammer and an 18 in. (457 mm) Drop." The material in the ditch may be compacted by either hand tamper or a mechanized power tamper, provided the results obtained meet the continued approval of the Engineer.

7. Backfilling and compacting of material lying above a point one (1) foot above the crown of the pipe and below the pavement base or the surface of the ground if out of pavement shall be accomplished in layers not exceeding six (6) inches in thickness. Each layer shall be thoroughly compacted with a powered hand tamper or a mechanized power tamper to at least 98 percent of maximum density as determined by AASHTO Specification T-180-74 or such greater density as may be required by the governing authority over the area in which the work is performed.

8. A testing laboratory, designated by the City, will make periodic field tests to determine the density being obtained in each lift, or layer, of the backfill. The City will pay the cost for each test that indicates that the density obtained in the backfill meets or exceeds the specified percentage. Contractor shall pay the cost for each test that indicates that the density obtained in the backfill is insufficient and does not meet the specified percentage. When compacted backfill fails to meet the specified percentage of maximum density as shown by test results, it shall be reworked and recompacted in a manner approved by the Engineer, and then retested. The reworking, recompacting and retesting of the backfill shall be repeated as many times as may be necessary to obtain compacted backfill with density meeting or exceeding the specified percentage as indicated by test results. The Contractor shall exercise proper care to ensure that no pipe will be broken or displaced through the use of the type of mechanical compacting equipment he selects. Water shall be added as required to obtain optimum moisture to facilitate compaction, but ponding or inundation of backfill will not be permitted. These ponding limitations shall not prohibit backfill in a wet trench up to the level of the

natural water table if the "Alternate Method of Construction" is utilized. See Section 02220 “Excavation – General”.

9. Backfill and compaction shall be kept up with the rate of pipe laying. The backfill up to the spring line of the pipe shall be placed and compacted as soon as practical after the laying of the pipe.

10. On parts of the line where ground water level may be high enough to float the pipe, the placing of the backfill and the rate of pumping the trench shall be so controlled as to prevent the pipe from floating or moving from the line and grade shown on the Plans.

11. In the event that sufficient suitable material is not available at any point to properly backfill the trench, the Contractor shall transport suitable material from points of the line where such material is available or shall otherwise furnish suitable material at no additional cost to the City.

12. Suitable material in excess of all backfill requirements shall be removed from the work and disposed of by the Contractor. The cost for removal shall be included in the overall Project cost bid.

13. Where cuts have been made through unpaved, stabilized rock roadways, driveways and parkways, surface restoration shall consist of 3 inches of compacted limerock overlaid by 3 inches of gravel or graded and washed rock with a maximum diameter of 1/2-inch except as otherwise directed by the Engineer. The rock shall be installed over the entire width of the disturbed area and shall closely match the existing rock at each location. Several grades of rock may be required to attain this end, but it is not anticipated that more than one grade will have to be used at any one location. The cost for replacement of gravel or rock stabilized driveways and roadways shall be included in the overall Project cost bid unless a specific Bid Item is established in the Quotation.

14. Backfill material shall consist of the suitable excavated material being stored for this purpose. Backfill material placed within one (1) foot of piping and appurtenances shall not contain any stones or rocks larger than two (2) inches in diameter, and no stones or rocks larger than 6 inches in diameter will be permitted in any backfill. Backfill material containing mangrove muck or other unsuitable materials shall not be used.

15. During the backfilling operation, care shall be taken to preserve the alignment and gradient of the installed pipe.

2.0.3. SUITABLE BACKFILL

A. Suitable backfill material shall be clean and free from all organic material, clay, marl or unstable materials, debris, lumps, broken paving, or other deleterious material. No rocks or stones larger than 3½ inches in diameter shall be allowed in any suitable backfill. Material for backfill may be material resulting from excavation, if suitable in the opinion of the City or designee.

2.0.4. STRUCTURAL FILL

A. Structural fill shall consist of an inorganic, non-plastic, granular soil containing less than 10% material passing the No. 200 mesh sieve (relatively clean sand or crushed limerock with a 2 inches max. particle size) with a Unified Soil Classification of GP, GW, SP, SPGM, SW-SM or SP-SM.

2.0.5. UNSUITABLE FILL AND BACKFILL MATERIAL

A. Unsuitable fill and unsuitable backfill material shall be all material not meeting the definition of Structural Fill, Suitable Backfill, or Select Fill and cannot be amended or blended in the field to meet the standard of one of these fills. Unsuitable Fill material may contain deleterious material including but are not limited to: cherty or other extremely hard pieces, lumps, balls or pockets of sand or clay size material, organic matter, muck, loose sand, loose free shells, corals or skeletal remain of other marine invertebrates retained on the No. 4 sieve, or water sensitive clay minerals.

2.0.6. BEDDING MATERIAL

A. Pipe bedding material shall be accordance with the Culvert Pipe Manufacturer's Standard Details, firstly, and FDOT if not specified.

B. Bedding may be select backfill material, as specified above, if approved by the City or designee.

C. No. 57 stone may be used for bedding of piping (except for copper pipe) and/or manholes as shown on the Standard Details.

D. Sand for bedding shall be dry screened. Sand shall be graded sand with 100% passing a ⅜ inch sieve and not more than 5% passing a No. 200 sieve.

E. Limerock screenings, sand or other fine material shall not be used for bedding.

F. All pipe bedding material shall be new, unless otherwise approved by the City or designee. Existing pipe bedding material may not be used.

2.0.7. NO 57. STONE

A. No 57 stone shall be crushed stone (or drain field limerock). Crushed stone shall consist of hard, durable, sub-angular particles of proper size and gradation, and shall be free from organic material, wood, trash, sand, loam, clay, excess fines, and other deleterious materials. The stone shall conform to the requirements of ASTM C 33, Size No. 57 (3/4- inch rock) and be graded within the following limits:

Sieve size	Percent Finer by Weight
1-½ inch	100
1 inch	95 to 100
½ inch	25 to 60
No. 4	0 to 10
No. 8	0 to 5

2.0.8. BALLAST ROCK

A. Ballast rock shall be composed of hard, durable, sound pieces having a specific gravity of not less than 2.65. It shall be crushed rock conforming to the following gradation:

Sieve size	Percent Finer by Weight
1-½ inch	100
¾ inch	30 to 75
½ inch	15 to 55
¼ inch	0 to 5
No. 8	0 to 5

2.0.9. SEPARATOR GEOTEXTILE

A. If required by Geotechnical Report, roadways shall be demucked or stabilized with a separator geotextile in accordance with the Geotechnical Report.

B. Laboratory analysis shall be completed, and all material to be used in the construction of the road shall be approved by the City or designee prior to placement.

C. Separator geotextile shall be made from woven fabric, meeting the physical requirements of FDOT Specifications Section 985 and placed as per manufacturer's Specifications or as directed by the City or designee. At a minimum, separator geotextile shall have 1 foot overlap, and upslope segments must overlap on top of down slope segments.

D. Follow the manufacturer's recommendations regarding protection from direct sunlight. At the time of installation, the City or designee will reject the material if it has defects, tears, punctures, flaws, deterioration, or other damage. However, if approved by the City or designee, the Contractor may repair torn or punctured sections by placing a patch over the damaged area following manufacturer's recommendation. The Contractor shall replace or repair any rejected geosynthetic at no additional expense to the City.

E. Repair existing or newly installed separator geotextile by a patch consisting of the same material as the reinforcement separator geotextile over the damaged area. Overlap the undamaged reinforcement separator geosynthetic with the patch a minimum of 5 feet in all directions. Replacement of existing separator geotextile material shall be of similar or better quality and shall meet the requirements as provided in FDOT Specifications, Section 985.

2.0.10. STEEL – REINFORCING

A. Bar reinforcement for concrete structures shall conform to the requirements of ASTM A615, "Deformed and Plain Billet-Steel Bars for Concrete Reinforcement," Grade 60, Deformed, except that Steel manufactured by the Bessemer Process will not be accepted. Wire mesh reinforcing for concrete structures shall be welded wire fabric meeting the requirements of ASTM A185 "Steel Welded Wire Fabric, Plain, for Concrete Reinforcement."

B. The Contractor shall furnish the Engineer with the manufacturer's test certificates showing the Steel to meet the above requirements, in addition to which the Engineer may take representative samples from the material on the job and have them tested by an independent testing laboratory.

C. Completely detailed shop drawings and bending schedules shall be submitted by the Contractor for the approval of the Engineer. Such approval shall be obtained before the bars are cut and bent.

2.0.11. STEEL – SHEET PILING

A. Steel sheet piling shall conform to the requirements of ASTM A572 "High-Strength Low-Alloy Columbium-Vanadium Steels of Structural Quality," (AASHTO No. M223) or ASTM A328 "Steel Sheet Piling."

B. The Contractor will be responsible for design and selection. Structural plans for the sheet steel piling installation and the calculations for the required Section Modulus and the Sheet Piling Designation shall be prepared by a registered professional engineer licensed to practice in the State of Florida. Sealed plans shall be submitted to the Engineer for approval prior to installation of the piling system.

C. Structural steel shall meet the requirements of ASTM A36 "Structural Steel."

D. Whenever shoring is required, locate the system to clear permanent construction and to permit forming and finishing of concrete surfaces. Provide shoring system adequately anchored and braced to resist earth and hydrostatic pressures. Shoring system adequately anchored and braced to resist earth on which the support or stability of existing structures is dependent must be left in place at completion of work. Maintain bracing until structural elements are supported by other bracing or until permanent construction is able to withstand lateral earth and hydrostatic pressures.

PART 3 – EXECUTION 3.0.1.

PREPARATION

A. The Contractor shall remove and replace, where required, all existing shrubbery, trees, grass, sprinklers, fences, signs, mail boxes, guard rails, structures, roadways, sidewalks, curbs and similar items or structures in the way of the culvert and shall make all excavation necessary for the construction of the culvert, to the lines and grades shown on the Plans. Weeded areas shall be restored as specified in Section 02900 “Landscaping”, Care of Trees, Shrubs and Grass. Where pavements or sidewalks are cut, they shall be cut by means of a mechanical pavement saw to form true and straight edges which shall in general be either parallel or at right angles with the centerline of the culvert. Unless specific bid items are provided in the Quotation form, the cost of removing and replacing any plantings or existing structures shall be included in the price bid. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. A copy of all such notices shall be forwarded to the Engineer.

B. Clearing: The construction site shall be cleared of all obstructions and vegetation, including large roots and undergrowth, within 5 feet of the lines of excavation, in accordance with Section 02230 “Clearing and Grubbing”. All debris created by this clearing operation shall be hauled from the site and disposed of by the Contractor.

1. All cleared materials shall be promptly removed from the work area and disposed of in an area provided by the Contractor, at no additional cost to the City. Accumulation of debris or stockpiling along the route of the work will not be allowed.

C. Removals: Complete all removals within the lines of excavation prior to beginning excavation. Where required, all existing shrubbery, trees, grass, sprinklers, fences signs, mailboxes, structures, sidewalks, curbs, utility poles, or structures subject to

damage resulting from the excavation should be transplanted, relocated, braced, shored, or otherwise protected and preserved.

3.0.2. EXCAVATION

A. Excavation shall be conducted in accordance with FDOT Specifications, Section 120.

B. Where rock, clay, or other material within the limits of the roadway is unsuitable in its original position, the Contractor shall excavate such material to the cross sections shown in the Plans or indicated by the City or designee, and shall backfill with suitable material, which shall be shaped to conform to the required cross sections. Where the removal of plastic soils below the finished earthwork grade is required, a construction tolerance from the lines shown in the Plans as the removal limits as defined by the Geotechnical Engineer of plus or minus 0.2 feet in depth and plus or minus six (6) inches each side in width will be allowed.

C. The Contractor shall perform all excavation of every description and of whatever substances encountered, to the dimensions and depths shown on the approved plans, but in all cases as required for construction, and as specified herein. All excavations shall be made by open cut. All existing utilities such as pipes, poles, and structures shall be carefully located, supported, and protected from injury; in case of damage, they shall be restored at the Contractor's expense.

D. When the walls of the excavations are to be kept vertical and in order to protect the safety of workmen, the general public, this or other work or structures, or excavation walls, or pipe installation including materials encountered in the excavation which have a tendency to slough or flow into the excavation, undermine the banks, weaken the overlying strata, or are otherwise rendered unstable by the excavation operation shall be retained by steel sheeting, stabilization, grouting or approved methods. Said methods shall comply with the Trench Safety Act (TSA). Sheeting and shoring or other approved method shall be designed by a Professional Engineer licensed to practice in the State of Florida.

E. For structures, the Contractor shall maintain the bottom of the excavation firm and dry and maintain an elevation of the water one (1) foot below the concrete to be placed, by use of pumps, tremie or other acceptable method.

F. Pipe trench excavation shall be in accordance with the appropriate Standard Detail in the Miami-Dade County Public Works Manual or FDOT.

G. The Contractor shall excavate pipe trenches to a minimum of 6 inches below the outside bottom of the proposed pipe barrel to provide for the installation of the bedding material.

H. Not more than 100 feet of trench shall be opened ahead of pipe laying operations at one time unless a greater length of open trench is approved by the Engineer.

I. If, in the opinion of the Engineer, the soil at that depth is unsatisfactory as foundation material because it contains marl, muck, organic matter, or other unsuitable material, the excavation shall be continued two (2) feet deeper, except if a suitable foundation material is exposed at a lesser depth, further excavation will not be required. The cost of this extra excavation, and backfilling with select backfill material, shall be included in the price for pipe laying and no additional payment will be made for this work.

J. If the soil is still unsuitable after the additional excavation as prescribed above, and the Engineer authorizes "Overcut," the trench bottom shall be excavated further in one (1) foot increments and paid for as "Trench Overcut." See below 3.0.6. "Trench Overcut.

K. Trench widths, when measured at a point 12 inches above the top of the pipe, shall provide a 12 inch maximum clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used. Minimum trench width shall provide at least 6 inch clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used.

For excavations five (5) feet deep or less, sheeting and shoring shall be installed where necessary to control trench width, protect the workmen and the general public, and prevent damage to this or adjacent work, or structures. When an excavation is in excess of five (5) feet deep, the Contractor shall comply with the provisions of Florida Statutes Chapter 553, Part III, "Trench Safety Act." Method(s) of compliance used shall protect the workmen and the general public, prevent damage to this or adjacent work, structures, utilities, pavements, sidewalks, curbs, gutters and similar improvements both public and private, and provide for proper maintenance of traffic. The trench width may vary to accomplish this and to comply with the provisions of Florida Statutes Chapter 553, Part III, "Trench Safety Act," but only from a point one (1) foot above the top of the pipe.

L. For trench exceeding 5 feet in depth, provide adequate safety system meeting requirements of applicable Local, State, and Federal requirements.

M. In areas where trench widths are not limited by right-of-way or easement widths, property line restrictions, existing adjacent improvements including pavements, structures, and other utilities, and maintenance of traffic, the trench sides may be sloped to a suitable angle of repose of the excavated material.

N. In areas where trench widths are not limited by site constraints the trench sides may be sloped to a stable angle of repose of the excavated material but only from a point one foot above the crown of the pipe. A substantially and safely constructed

movable shield, "box" or "mule" may be used in place of sheeting when the trench is opened immediately ahead of the shield and closed immediately behind the shield as pipe laying proceeds inside the shield.

O. Ladders or steps shall be provided for and used by workmen to enter and leave trenches.

P. Excavated material shall be stored and disposed of in such a manner that they will not interfere unduly with traffic on public streets and sidewalks. In congested areas, such materials, cannot be stored adjacent to the trench nor used immediately as backfill, shall be removed to convenient places of storage. If any material is creating a public hazard or other unsafe condition, it shall be removed immediately to a storage area.

Q. Materials suitable for use as backfill be hauled to and used in areas where not enough suitable material is available from the excavation. Suitable material in excess of backfill requirements shall be used on the site as directed by the City or designee, or removed at the Contractor’s expense. Any pockets of organic matter, concrete or other unsuitable material encountered in excavating shall be removed and replaced with material satisfactory to the City.

R. The excavation of walls for forms will not be permitted.

S. The trench wall shall be kept at a stable angle of repose to maintain trench widths within the limits hereinafter specified or shown on the Plans.

T. The trench, when in rock, shall be excavated to a width within the limits of the top of the pipe and the trench bottom so as to provide a clearance on each side of the pipe barrel, measured to the face of the excavation, of 12 inches. Rock or removal in the excavation shall be considered a part of the excavation and as such no additional payment shall be made therefore. Where excavation is in silt, the width of trench bottom shall be pipe O.D. plus two (2) feet with the trench walls being kept at a stable angle of repose. All pipe trenches shall be excavated to a level at least 12 inches below the outside bottom of the proposed pipe barrel.

U. Where wood sheeting or certain designs of steel sheeting are used, the City may require that the sheeting be cut off at a level two (2) feet above the top of the installed pipe and that portion below that level be left in place. If ordered left in place, sheeting and shoring shall be paid for under the appropriate Quotation Item.

V. If interlocking steel sheeting is used, the City may permit its complete removal in lieu of the cut-off, providing removal can be accomplished without disturbing the bedding, pipe or pipe alignment. Any damage to the pipe bedding, pipe or pipe alignment shall be cause for rejection of the affected portion of the work.

W. A substantially and safely constructed moveable shield or box, as approved by the Engineer, may be used in place of sheeting when the trench is opened immediately behind the shield as pipe laying proceeds inside the shield. All construction in conjunction with using such a shield must be as approved by the Engineer, including excavation, installation of pipe and backfilling and compaction.

X. The Contractor shall perform all excavation of every description and of whatever substances encountered, to the dimensions and depth shown on the Plans, or as directed by the Engineer. All excavations shall be made by open cut. Any existing utilities such as pipes, cables, etc., shall be carefully supported and protected from damage, and in case of damage, they shall be restored at no cost to the City.

Y. Excavation for other piping and appurtenances shall be sufficient to leave at least 12 inches clear between their outer surfaces and the embankment or sheeting that may be used to protect them.

Z. Provide excavation support as necessary to support sides of excavations and prevent detrimental settlement and lateral movement of existing facilities, adjacent property, and completed Work.

AA. Remove excavation support in a manner that will maintain support as excavation is backfilled or leave voids of backfill. Do not begin to remove excavation support until support can be removed without damage to existing facilities, completed Work, or adjacent property.

BB. Materials removed from the trenches shall be stored and disposed of in such a manner that they will not interfere unduly with traffic on public streets and sidewalks and they shall not be placed on private property. In congested areas, such materials as cannot be stored adjacent to the trench or used immediately as backfill shall be removed to convenient places of storage. If any material is creating a public hazard or other unsafe condition, in the opinion of the Engineer, it shall be removed immediately by the Contractor to a storage area.

CC. The Contractor shall temporarily store excavated material suitable for backfill in full compliance with the provisions of the permits. All mud, silt, debris and other material unsuitable for backfilling the trench shall be removed and legally disposed of offsite by the Contractor. The Contractor shall make his own arrangements regarding stock piling of excavated suitable material and storage and assembly space to properly and safely carry out the construction. Any agreements entered into by the Contractor and property owners shall hold the City harmless. Storage of excavated material shall not cause environmental problems and shall be performed at no additional cost to the City.

DD. Excavation for structures:

1. Clear, as stated above, all existing items or structures in the way of the proposed pipeline or structures and excavate as necessary to the depths and dimensions shown on the plans, but in all cases as necessary for satisfactory installation.

2. Where pavements or sidewalks are cut, they shall be cut by means of a mechanical pavement saw to form true and straight edges which shall, in general, be either parallel or at right angles.

3. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. A copy of all such notices shall be forwarded to the City.

4. Where interlocking steel sheeting is used, the City may require that the sheeting be cut off at a level two (2) feet above the top of the installed pipe and that portion below the level be left in place.

5. Excavation for manholes and other piping appurtenances shall be sufficient to leave at least two (2) feet clear between their outer surfaces and the embankment or sheeting.

6. If, in the opinion of the Engineer of Record or the City, the soil at that depth is unsatisfactory as foundation material because it contains marl, muck, organic matter, or other unsuitable material, the excavation shall be continued two (2) feet deeper, except if a suitable foundation material is exposed at a lesser depth, further excavation will not be required.

7. When the pipe to be installed in a trench requires the pipe installers to work under and around the pipe, the Contractor may request the City that he be allowed to exceed the 12" maximum clearance, specifying the clear distance desired.

8. The ends of existing mains shall be temporarily capped or plugged to keep them clean and the ends of all mains shall be temporarily anchored to keep the joints from blowing apart from internal pressure until the new mains can be reconnected to them.

9. In addition to specific construction methods specified, the general requirements in subsequent subsections, below, shall apply to the work of this project.

3.0.3. TRENCH STABILIZATION

A. No claim for extras or additional payment will be considered for cost incurred in the stabilization of trench bottoms which are rendered soft or unstable as a result of

construction methods, such as improper or inadequate sheeting, or other causes. In no event shall pipe be installed when such conditions exist and the Contractor shall correct such conditions so as to provide proper bedding or foundations for the proposed installation at no additional cost to the City.

3.0.4. SHEETING AND SHORING

A. Contractor shall be solely responsible for the design, installation, and maintenance of shoring, sheeting, and bracing as necessary to support the sides of excavations and to prevent detrimental settlement and lateral movement of existing facilities, adjacent property, and completed Work. Design of shoring or other excavation support shall be provided by a Professional Engineer licensed in the State of Florida. Prior to trench excavation, a Trench Excavation Plan shall be prepared and shall address the following topics.

1. Details of shoring, sloping, or other provisions for worker protection from hazards of caving ground.

2. Design assumptions and calculations.

3. Methods and sequencing of installing excavation support.

4. Proposed locations of stockpiled excavated material.

5. Minimum lateral distance from the crest of slopes for vehicles and stockpiled excavated materials.

6. Anticipated difficulties and proposed resolutions

B. Sheeting and shoring shall be installed where necessary to control trench width, protect the workmen and the general public, and prevent damage to this or adjacent work, or structures.

C. For excavations five (5) feet deep or less, sheeting and shoring shall be installed where necessary to control trench width, protect the workmen and the general public, and prevent damage to this or adjacent work, or structures. When an excavation is in excess of five (5) feet deep, the Contractor shall comply with the provisions of Florida Statutes Chapter 553, Part III, "Trench Safety Act." Method(s) of compliance used shall protect the workmen and the general public, prevent damage to this or adjacent work, structures, utilities, pavements, sidewalks, curbs, gutters and similar improvements both public and private, and provide for proper maintenance of traffic. The trench width may vary to accomplish this and to comply with the provisions of Florida Statutes Chapter 553, Part III, "Trench Safety Act," but only from a point one (1) foot above the top of the pipe.

D. Trench widths, when measured at a point 12 inches above the top of the pipe, shall provide a 12-inch maximum clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used. Minimum trench width shall provide at least 6-inches clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used.

E. Where wood sheeting or certain designs of steel sheeting are used, the City may require that the sheeting be cut of at a level two (2) feet above the top of the installed pipe and that portion below that level be left in place. If ordered left in place, sheeting and shoring shall be paid for under the appropriate Quotation Item.

F. If interlocking steel sheeting is used, the City may permit its complete removal in lieu of the cut-off, providing removal can be accomplished without disturbing the bedding, pipe or pipe alignment. Any damage to the pipe bedding, pipe or pipe alignment shall be cause for rejection of the affected portion of the work.

G. In areas where trench widths are not limited by right-of-way and/or easement widths, property line restrictions, existing adjacent improvements, including pavements, structures and other utilities, and maintenance of traffic, the trench sides may be sloped to a suitable angle of repose of the excavated material, but only from a point one (1) foot above the crown of the pipe.

3.0.5. MOVABLE SHIELD (MULE)

A. A substantially and safely constructed moveable shield or box, as approved by the Engineer, may be used in place of sheeting except where it is specifically called out on the Plans or in the Specifications to install sheeting. When using a shield, the trench is opened immediately ahead of the shield as pipe laying proceeds inside the shield. All construction in conjunction with using such a shield must be as approved by the Engineer, including excavation, installation of pipe, and backfilling and compaction. When a moveable shield or box is used, the installed pipe shall be secured to prevent it from moving when the box is moved.

3.0.6. TRENCH OVERCUT

A. Trench overcut provisions herein shall be used only under direct authorization by the Engineer.

B. If, after excavating the trench to a depth of 2 feet 6 inches below the outside bottom elevation of the proposed pipe barrel, and the soil at that depth is still unsatisfactory as foundation material because it contains marl, muck, organic matter, or other unsuitable material, and the Engineer authorizes overcut, the pipe trench shall be excavated further in one (1) foot increments until either a suitable foundation material is found, or the Contractor is directed by the Engineer to stop trench overcut operation

and begin backfilling. In no case will trench overcut be more than 6 feet in depth, i.e., to a point 8 feet 6 inches below the bottom of the pipe.

C. Selected backfill, as defined in 2.0.1. “Materials” shall then be compacted in 6-inch layers up to the bottom of the proposed 6 inches of pipe bedding.

3.0.7. DEWATERING

A. It is a basic requirement of these Specifications that excavation shall be free from water before pipe or structures are installed. The Contractor shall refer to 3.0.12. "Alternate Method of Construction" below.

3.0.8. TRENCH RESTORATION

A. Trench restoration shall be per the applicable of Miami Dade County Standard Details, firstly, and FDOT if not specified.

B. Mill and resurface minimum 1 inch in accordance with the restoration limits in Part 1 or as directed by the City of Opa-Locka Public Works Department. Prior to placing pavement, City Public Works inspection is required. If milled section crosses a pedestrian path or temporary pedestrian path/detour, an asphalt apron must be provided at transitions with all adjacent surfaces within the pedestrian crossing.

C. Where cuts have been made through unpaved, stabilized rock roadways, driveways and parkways, surface restoration shall consist of 3 inches of compacted limerock overlaid by 3 inches of gravel or graded and washed rock with a maximum diameter of ½ inch, except as otherwise directed by the City or designee. The rock shall be installed over the entire width of the disturbed area and shall closely match the existing rock at each location. Several grades of rock may be required to attain this end, but it is not anticipated that more than one grade will have to be used at any one location.

3.0.9. TEMPORARY PAVEMENT

A. Temporary paving will be required along the entire route where the original paved surface is removed. Unless otherwise approved by the City or designee, temporary paving shall be placed the same day the trench is backfilled. The trench shall be backfilled up to a level 1 inch below the existing pavement surface and a temporary, cold mixed sand/asphalt pavement shall be constructed up to the level of the existing pavement surface. The liquid asphalt shall be Grade RC-70, conforming to the requirements of FDOT Specifications, Section 916-2. The sand shall conform to the requirements of FDOT Specifications, Section 902 for fine aggregate.

B. The cold mix is to be installed one block at a time, not crossing any intersection, or a maximum of 1,200 feet shall be completed before the Contractor may move forward

with This excavation Work. Backfill, compaction and temporary paving is to keep pace with the pipe installation. Written permission must be obtained from the City of OpaLocka Public Works Department to allow lengths greater than 1,200 feet. At the sole discretion of the City of Opa-Locka Public Works Department, the allowable limits in the permit may be reduced due to unforeseen right-of-way conditions.

C. The temporary pavement shall be maintained by the Contractor in a condition satisfactory to the City or designee until its removal. Removal shall include any surplus backfill material. Replacement of the temporary pavement with permanent pavement shall be made within 30 days. In replacing the temporary paving with permanent pavement, all Work shall be completed in sections compatible with specified traffic maintenance procedures.

D. The Contractor may elect to install a suitable temporary hot mix asphaltic pavement to be left in-place, in lieu of cold mix, when the hot mix asphalt is left in-place and installed over properly compacted limerock base course. This temporary pavement shall be incorporated into the specified permanent pavement restoration as part of paving restoration.

E. Sand seal on the limerock base course will not be permitted in lieu of temporary paving.

F. Unless otherwise approved by the City or designee, temporary paving shall be placed within twenty-four (24) hours following the completion of backfilling.

G. If temporary asphalt is utilized, it shall be removed prior to placement of final asphalt surface.

H. Temporary restoration requires field approval by City of Opa-Locka Public Works Department Field Inspector

3.0.10. STOCKPILED MATERIALS

A. Stockpile excavated material that is suitable for use as fill or backfill until material is needed.

B. Material suitable for backfill and not needed for backfill at the structure shall be stockpiled and later moved where needed.

C. Materials shall be stored and in such a manner that will not interfere unduly with City operations, traffic at the site, traffic on public roadways, or sidewalks and shall not be placed on private property. In congested areas, such materials that cannot be stored adjacent to the trench or used immediately as backfill shall be removed to other convenient places of storage acceptable to the City or designee at the Contractor’s expense.

D. Post signs indicating proposed use of material stockpiled. Post signs that are readable from all directions of approach to each stockpile. Signs should be clearly worded and readable by equipment operators from their normal seated position.

E. Confine stockpiles to within easements, right-of-way, and approved Work areas. Do not obstruct road or streets.

F. Do not stockpile excavated material adjacent to trenches and other excavations unless excavation side-slopes and excavation support systems are designed, constructed, and maintained for stockpile loads.

G. Do not stockpile excavated materials near or over existing facilities, adjacent property, or completed Work if weight of stockpiled material could induce excessive settlement.

H. Do not place stockpiles within 50 feet of inlets, streams, wetlands, bodies of water, etc. unless permitted by the City or designee.

I. Stockpile side slopes shall be no steeper than 3 horizontal : 1 vertical unless approved by the City or designee. Top of stockpile shall have a minimum slope of no less than 5% to promote positive drainage.

J. Provide perimeter erosion control measures around stockpiles, located no closer than 5- feet from toe of slope, and stabilized stockpile surface with temporary seeding or other measures if stockpile will remain inactive for more than seven (7) days.

3.0.11. BACKFILL

A. Place and compact granular bedding and fill over pipelines and conduits. Density tests for determination of the specified compaction shall be made by a testing laboratory approved by the City or designee. Testing of compacted fill materials is required in accordance with these Specifications. If results of tests taken during the progress of the Work indicate compacted materials do not meet specified requirements, such defective Work will be removed, replaced, and re-tested as directed by the City or designee and at the Contractor's sole expense. Compacted fill is to be tested before proceeding with the placement of surface materials.

B. Backfilling of pipe trenches will not be allowed until the Work has been approved by the City or designee, pressure tested if required, and the City or designee indicates that backfilling may proceed. Any Work which is covered or concealed without the knowledge and consent of the City or designee shall be uncovered or exposed for inspection. Partial backfill may be made to help restrain the pipe during pressure testing, if previously authorized by the City or designee.

C. The Contractor shall backfill all trenches and other excavations made in the process of installing the culvert. The Contractor shall maintain the surface of the backfill free from major irregularities and potholes.

D. The Contractor shall maintain trenches free of debris, wood, rocks over 2 inches in diameter, and water.

E. Backfill shall be in accordance with the Culvert Pipe Manufacturer's Standard Details, firstly, and FDOT if not specified. Material shall be placed in maximum 6-inch layers. Each layer shall be thoroughly compacted to at least 98% of maximum density as defined by AASHTO Specifications T-180. The material in the ditch may be compacted by either hand tamper or a mechanized power tamper, provided the results meet the requirements and are approved by the City or designee. Care shall be taken to preserve the alignment and gradient of the installed pipes.

F. A testing laboratory will make periodic field tests to determine the density being obtained in each lift of backfill. Testing shall be performed at a minimum frequency of one test every 10 feet. When compacted backfill fails to meet the specified percentage of maximum density as shown by test results, it shall be reworked and recompacted, and then retested. The reworking, recompacting, and retesting of the backfill shall be repeated as many times as may be necessary to obtain compacted backfill with density meeting or exceeding the specified percentage as indicated by test results.

G. The Contractor shall exercise proper care to ensure no pipe will be broken or displaced by use of mechanical compacting equipment. Water shall be added as required to obtain optimum moisture content to facilitate compaction but ponding or inundation of backfill will not be permitted.

H. In the event sufficient suitable material is not available at any point to properly backfill the trench, the Contractor shall transport suitable material from points of the line where such material is available or shall otherwise furnish suitable material.

3.0.12. ALTERNATE METHOD OF CONSTRUCTION

A. A combination of conditions in the substrata, water table, method of disposal or regulatory agency requirements may be encountered during the course of the work which makes dewatering impossible, or possible only through the use of unusual methods, the cost of which is excessive. When such conditions are encountered, but only after all reasonable means to dewater the excavation have been employed without success, the Contractor may request permission to employ the following Alternate Method of Construction. The concurrence of the Engineer shall be obtained in writing and shall limit the use of the Alternate Method of Construction to such specific portions of the work as the Engineer shall determine.

B. The requirements set forth in other Sections of these Specifications shall establish the required standards of construction quality for this work. Use of the Alternate Method

of Construction described hereinafter shall in no way be construed as relieving the Contractor of his basic responsibility for satisfactory completion of the work.

C. Under no conditions will any additional or increased payments be made to the Contractor for excavation, backfill, sheeting or any cost incurred for work or materials, or any other costs incurred as a result of the use of this alternate method of construction. The unit prices established in the Quotation shall be full payment for the various items of work.

D. Subject to all of the requirements stated herein, including written approval of the Engineer, construction will be permitted in accordance with the following specifications. All requirements of these Specifications shall apply to this construction unless otherwise specifically modified herein.

1. Removal of Water: The installation of pipe and appurtenances under water will be permitted and the dry-trench requirements of Section 6.06 "Removal of Water" will be waived.

2. Excavation: Excavation shall be performed in accordance with 3.0.2. "Excavation."

3. Pipe Bedding:

   a. Pipe bedding shall be placed from 6 inches below the outside bottom of the proposed pipe barrel up to the level of the lower one-third of the pipe barrel for pressure mains.

   b. The bedding material shall be pea rock, or drainfield limerock. Limerock screenings, sand or other fine organic material shall not be used.

   c. The bedding material shall be tamped and graded to provide a proper bedding for the pipe and shall then be shaped to receive the pipe. Bedding shall be provided under the branch of all fittings to furnish adequate support and bearing under the fittings.

4. Backfill:

   b. After the pipe is installed, backfilling shall proceed in accordance with the provisions of 2.0.1. “Materials”

   c. Select backfill material shall be used to backfill around the pipe and to a level one (1) foot above the crown of the pipe.

d. Under no circumstances will material other than select backfill or specified pipe bedding material be considered satisfactory for this purpose.

E. If the Alternate Method of Construction is used, all backfill material, including specified pipe bedding material, shall be carefully lifted into the trench and not released to fall freely therein until the bucket or container is at or just above water level. Under no circumstances will backfill material be dumped or pushed into trenches containing water. Below existing water level, and to a point not more than 18 inches above the water level the backfill material shall be carefully placed in uniform layers, of equal depth on each side of the pipe. From a point not more than 18 inches above the water level, and below the pavement base or the surface of the ground, if out of paved areas, backfill material shall be placed and compacted for normal backfilling as provided in 2.0.1. “Materials” for compacted backfill.

END OF SECTION

02371 RIP-RAP

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. Construct riprap composed of sand-cement or rubble (consisting of broken stone or broken concrete) as shown in the Standard Plans and in the Plans.

PART 2 – PRODUCTS 2.0.1.

FILTER FABRIC

A. Use products listed on the FDOT’s APL.

B. Schedule work so that covering the fabric with the specified material does not exceed the manufacturer’s recommendations for exposure to ultraviolet light or five days, whichever is less. If the Engineer determines the exposure time was exceeded, the Contractor shall replace the fabric at no expense to the City.

C. Place the filter fabric (fabric) at locations as shown in the Plans, in accordance with the manufacturer’s directions. Place the fabric on areas with a uniform slope that are reasonably smooth, free from mounds, windrows, and any debris or projections which might damage the fabric.

D. Loosely lay the material. Do not stretch the material. Replace or repair any fabric damaged or displaced before or during placement of overlying layers. Repair in accordance with the manufacturer's instructions.

E. The Contractor may sew the seams to reduce overlaps as specified in 985-3. Follow the manufacturer’s instructions for all seams and overlaps.

2.0.2. PREPACKAGED SAND-CEMENT BAGS

A. Evenly proportioned sand and cement in the ratio of five cubic feet of sand to 94 pounds of cement. Material proportioned by mass shall use a sand density of 85 pounds per cubic foot.

B. Sealed package of 80 pounds of sand-cement in a bag.

C. Bag made of scrim-reinforced paper capable of holding the sand-cement without leakage.

D. Sand meets requirements of Section 902-3.3

E. Type I/II cement meets requirements of Section 921.

F. Prepackaged Sand-Cement Bags shall be one of the products listed on the FDOT’s Approved Product List. Manufacturers seeking evaluation of their product shall submit an application in accordance with Section 6. Include with the submittal a product data sheet, safety data sheet, product label, and a self-certified statement the product meets the requirements of this Section.

2.0.3. RUBBLE

A. Rubble (Bank and Shore Protection):

1. Provide sound, hard, durable rubble, free of open or incipient cracks, soft seams, or other structural defects, consisting of broken stone with a bulk specific gravity of at least 2.20. Ensure that stones are rough and angular.

2. For this application, use broken stone meeting the following gradation and thickness requirements:

Weight Maximum Pounds	Weight 50% Pounds	Weight Minimum Pounds	Minimum Blanket Thickness in Feet

670	290	60	2.5
Ensure that at least 97% of the material by weight is smaller than Weight Maximum pounds]. Ensure that at least 50% of the material by weight is greater than Weight 50% pounds]. Ensure that at least 85% of the material by weight is greater than Weight Minimum pounds.			

B. Rubble (Ditch Lining):

1. Use sound, hard, durable rubble, free of open or incipient cracks, soft seams, or other structural defects, consisting of broken stone or broken concrete with a bulk specific gravity of at least 1.90. Ensure that stones or broken concrete are rough and angular.

2. Use broken stone or broken concrete meeting the following gradation and thickness requirements:

Weight Maximum Pounds	Weight 50% Pounds	Weight Minimum Pounds	Minimum Blanket Thickness in Feet
75	30	4	1.5
Ensure that at least 97% of the material by weight is smaller than Weight Maximum pounds]. Ensure that at least 50% of the material by weight is greater than Weight 50% pounds]. Ensure that at least 90% of the material by weight is greater than Weight Minimum pounds.			

C. Physical Requirements of Broken Stone and Broken Concrete:

1. Use broken stone and broken concrete meeting the following physical requirements:

Absorption (FM 1-T 85)	Maximum 5%
Los Angeles Abrasion (ASTM C535)	Maximum loss 45%*
Soundness (Sodium Sulphate) (AASHTO T 104)	Maximum loss 12%** (after five cycles)
Flat and elongated pieces	Materials with least dimension less than one third of greatest dimension not exceeding 10% by weight.
Dirt and Fines	Materials less than 1/2 inch in maximum dimension accumulated from interledge layers, blasting or handling operations not exceeding 5% by weight.

Drop Test***(EM 1110-2-2302)	No new cracks developed, or no existing crack widened additional 0.1 inch, or final largest dimension greater than or equal to 90% original largest dimension of dropped piece.

* Ensure that granite does not have a loss greater than 55% and that broken concrete does not have a loss greater than 45%.

** The Engineer may accept rubble exceeding the soundness loss limitation if performance history shows that the material will be acceptable for the intended use. The Engineer will waive the soundness specification for rubble riprap (broken stone) when project documents indicate it will be placed in or adjacent to water or soil with a sulfate content less than 150 parts per million and a pH greater than 5.0. Soundness is not required for broken concrete.

*** The Engineer will waive the Drop Test unless required to ensure structural integrity. Provide all equipment, labor and testing at no expense to the City. EM refers to the US Army Corps of Engineer's Specification Engineering Method.

PART 3 – EXECUTION 3.0.1.

GEOTEXTILE FABRIC

A. Overlap adjacent strips of fabric a minimum of 24 inches, and anchor them with securing pins (as recommended by the manufacturer) inserted through both strips of fabric along a line through the midpoint of the overlap and to the extent necessary to prevent displacement of the fabric.

B. Place the fabric so that the upstream (upper) strip of fabric overlaps the downstream (lower) strip.

C. Stagger vertical laps a minimum of 5 feet. Use full rolls of fabric whenever possible in order to reduce the number of vertical laps.

D. Do not drop bedding stone or riprap from heights greater than 3 feet onto the fabric.

3.0.2 SAND-CEMENT BAGS

A. Place the bags with their ends all in the same direction. Lay the bags with broken joints, in a regular pattern. Ram or pack the bags against each other so as to form a close and molded contact. Remove and replace bags ripped or torn in placing with sound, unbroken bags. Then, thoroughly saturate all bags with water.
B. Immediately after watering, fill all openings between bags with dry grout composed of onepart Portland cement and five parts sand.
C. Use sand-cement bags for the toe walls if required. Fill the entire trench excavated for the toe walls with sand-cement bags.

3.0.3. RUBBLE

A. Dump rubble in place forming a compact layer conforming to the neat lines and thickness specified in the Plans. Ensure that rubble does not segregate so that smaller pieces evenly fill the voids between the larger pieces.

02510 ASPHALTIC CONCRETE PAVEMENT

PART 1 – GENERAL

1.0.2. SCOPE OF WORK

A. Construct asphaltic concrete pavement in accordance with the lines, grades and typical sections as indicated on the drawings, specified herein and as required for a complete installation.

B. Replace and / or repair all existing asphaltic concrete pavement areas impacted by Contractor operations, including trenching for new utilities, as well as damage that may result from Contractor operations during the progress of the work.

C. Temporary asphalt / trench repairs shall be installed within 1 week of excavation and backfill work on plant roadways impacted by construction.

1.0.3. SUBMITTALS

A. The Contractor shall submit its proposed formulae for the asphaltic concrete paving for review in accordance with the Section 01300 “Submittals”.

1.0.4. QUALITY CONTROL

A. Work shall be performed in accordance with Contract Documents, Drawings, and/or City of Opa-Locka Public Works Manual Specifications and Standard Details, in a neat and accurate manner. It is the intent of the City to obtain a complete and working installation according to these Specifications, and any items of labor, equipment, or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the project plans or stated herein.

B. Asphalt Acceptance Standards: The following minimum defects identified by the City or designee must be covered by warranty (but not limited to):

1. Sunken pavement patches greater than or equal to one-quarter (¼) inch (measured by a twelve (12) foot straight edge).

2. Surface raveling or oxidation due to deficiencies with the asphalt material.

3. Poor workmanship.

4. Inadequate compaction per Standards and Specifications.

1.0.5. RESTORATION LIMITS

A. At a minimum, sidewalk, curb, gutter, and roadway restoration shall be in accordance with the requirements of the agencies having jurisdiction including but not limited to City of Opa-Locka, Miami-Dade County, and FDOT.

B. The Contractor is responsible to restore the full lane width of two-lane roads when a trench is longitudinally cut within a lane. If the cut is in between two lanes, the Contractor is responsible to restore both lanes. If the cut impacts multiple lanes, all lanes impacted shall be restored. When a perpendicular cut is made crossing the pavement, a minimum of 25 feet width on each side of the cut, or to the intersection, must be restored by milling and resurfacing. For new developments, the Contractor shall restore the pavement from property line to property line.

C. At a minimum, the width of all asphalt repairs within the Work area shall extend at least 12 inches beyond the limit of the damage. Where the line for repaving for trenches extends 12-inches into the edge of the existing paving, repaving shall be to this edge only. Damage by the Contractor to the pavement beyond 12-inches into the edge of the existing paving will require the full lane be repaved.

D. The edge of the pavement shall be cut to a true edge with a saw or other acceptable method so as to provide a clean edge to abut the repair. The line of the repair shall be uniform with no irregularities. Repair of damage by the Contractor beyond the Work area shall be approved by the City or designee prior to commencing the Work.

E. Any base course or surface course beyond the restoration limits, damaged as a result of the Contractor's operation, shall be restored in accordance with the applicable requirements of these Specifications, to the satisfaction of the City or designee.

F. Permanent pavement repair shall be with edges straight and parallel and patches rectangular in plan. Replace any paving, beyond the limits shown in the details and as called for in the Specifications, as required. Where trenches are located out of the

existing pavement and damage occurs to the pavement, that pavement shall also be replaced by the Contractor.

G. Five Year Moratorium Directive from City: If the road is under Moratorium, the Contractor is to restore the entire roadway width.

H. Final asphalt application requires milling and resurfacing full travel lanes or as directed by City of Opa-Locka Public Works Department Field Inspector.

PART 2 – PRODUCTS 2.0.12.

MATERIALS

A. Subbase: Limit gradation of the material within the limits of the area being stabilized to 97% passing 3½-inch sieve. Soil shall be clean, non-deleterious material. Subbase material supporting the roadway and shoulders shall have a minimum LBR of 40. The stabilized subbase shall be 12 inches, placed in maximum compacted lift thickness of 8- inches, and compacted to 98% of maximum dry density as per AASHTO T-180.

B. Limerock Base Course

1. The material used in limerock base courses shall be material classified as either Miami Oolite Formation or Ocala Formation at the Contractor's option having a minimum of 70% calcium carbonate or magnesium carbonate; however, only one formation may be used on any contract.

2. Limerock base course shall have a minimum LBR of 100. Limerock base shall be twice the thickness of the existing adjacent base and shall be minimum of 12inches thick and a maximum of 18-inch thick, placed in 6-inch lifts. Base material shall be compacted to a density of not less than 98% of maximum dry density as per AASHTO T-180 under all paved areas.

3. The limerock material shall contain no more than 0.5% of organic material or objectionable matter and shall show no significant tendency to air slake or undergo any chemical under exposure to weather.

4. The maximum percentage of water sensitive clay material shall be three percent (3%).

5. At least 97% (by weight) of the material shall pass a 3½-inch sieve, and the material shall be graded uniformly down to dust. The fine material shall consist entirely of dust of fracture. All crushing or breaking up which might be necessary

in order to meet such size requirements shall be done before the material is placed on the road.

6. The limerock material shall be uniform in quality and shall not contain cherty or other extremely hard pieces, lumps, balls or pockets of sand or clay size material in sufficient quantity as to be detrimental to prevent proper bonding, finishing, or strength of the limerock base.

7. Limerock material shall be non-plastic, and the liquid limit shall not exceed 35.

C. Asphaltic Concrete

1. Bituminous Material: Asphalt cement, Viscosity Grade AC-20 or AC-30, shall conform with the requirements of FDOT Specifications, Section 916-1.

2. Coarse Aggregate: Coarse aggregate, stone or slag shall conform to the requirements of the FDOT Specifications, Section 901.

3. Fine aggregate: Fine aggregate shall conform to the requirements of FDOT Specifications, Section 902.3.

4. Mineral Filler: Mineral filler shall conform to the requirements of FDOT Specifications, Section 917-1 and 917-2.

5. Prime Coat: Unless otherwise indicated, the material used for the prime coat shall be cutback asphalt, Grade RC-70 or RC-250, and shall conform with the requirements specified in AASHTO Destination M 81. Unless otherwise indicated, the use of wither RC-70 or RC-250 shall be at the Contractor's option.

6. Tack Coat: The material used for the tack coat shall be Emulsified Asphalt, Grade RS-2 and shall conform with the requirements specified in AASHTO Designation M 140.

7. Where Type S Asphalt Concrete is specified in the Contract Documents, if approved by the City or designee, the equivalent fine Type SP Asphalt Concrete mixture (Traffic Level C) meeting the requirements of FDOT Specifications Section 334 may be selected as an alternate at no additional cost to the City or Owner. The equivalent mixes are as follows:

Type S-I……..Type SP-12.5 Type
S-II…….Type SP-19.0 Type
S-III……Type SP-9.5

2.0.13. TEXTURED PAVEMENT

A. “StreetBond SP150E Coating Material” refers to a high-performance premium coating material consisting of epoxy modified acrylic polymers blended with sand and aggregate, and specially formulated by GAF, Inc. (Tel. 1-800-766-3411), for application on asphalt surfaces to provide a durable, long lasting color and texture to the asphalt surface.

B. “StreetBond Colorant” is a highly concentrated, high quality, UV stable pigment blend designated to be added to StreetBond SP150E coating system to provide color to the coating. The colors to be used shall be shown on the Drawings. The same StreetBond Colorant shall be used in each SP150E coating layer to the asphalt surface. One pint of colorant shall be used with one pail of StreetBond coating material.

C. Use only patterned/textures pavement products listed on the Qualified Products List (QPL). Meet manufacturer’s Specifications for all pattern/texture templates, coating, and coloring material. Use only material that is delivered to the job site in sealed containers bearing the manufacture’s original labels. Material coating used to achieve the pattern/texture and/or color shall produce an adherent, weather resistant, skid resistant surface capable of resisting deformation to traffic. Paint and thermoplastic material must meet the requirements of this Specifications and FDOT Specifications Section 971, except that the requirements for Color and Retroreflectivity do not apply.

D. Manufacturers seeking approval for inclusion on the QPL must submit application and certifications in accordance with FDOT Specifications Section 6 along with the following documentation:

1. Manufacturer’s Specifications and procedures for materials and installation.

2. Manufacturer’s certification with supporting test data and results that the patterned/textured pavement installed in accordance with the manufacturer’s Specifications and procedures has been tested in accordance with the ASTM E274, Skid Resistance of Paved Surfaces using a standard ribbed full-scale tire at a speed of 40 mph (FN40R) and has a minimum FN40R value of 35.

PART 3 – EXECUTION

3.0.1. INSTALLATION OF ASPHALT

A. General

1. Pavement markings removed or obliterated by the Contractor’s operations shall be promptly replaced, in kind, to the satisfaction of the City of Opa-Locka Department of Public Works, Traffic Engineering Division or designee.

2. At least three density determinations shall be made on each day's final compaction operations on each course, and the density determinations shall be made at more frequent intervals if deemed necessary by the City or designee.

B. Subbase: Roadway subbase shall be stabilized to the minimum depth shown on the Drawings to a LBR not less than 40. Stabilizing shall be type C as defined in Section 160 of the FDOT specifications. Stabilization may require the addition and thorough mixing in of crushed limerock, coarse limerock screenings, or any other stabilizing material acceptable to the City or designee. The stabilizing material shall be applied in such quantity that, after mixing and blending, the subbase will have a LBR not less than 40. Stabilizing material shall be mixed or blended in the subbase material by plowing, scarifying, disking, harrowing, blading, and mixing with rotary tillers until the mixed materials are of uniform bearing ratio throughout the width and depth of the layer being processed. The minimum acceptable density at any location will be 98% of maximum dry density as determined by AASHTO T-180.

C. Limerock Base: The limerock base shall be constructed in accordance with Section 200 of the FDOT Specifications, to the thickness and width indicated on the Drawings. Pavement base shall be constructed in maximum 6-inch lifts.

D. After spreading of the base material is completed, the entire surface shall be scarified and shaped so as to produce the exact grade and cross section after compaction. For double course base, this scarifying shall extend a depth sufficient to penetrate slightly the surface of the first course. The maximum depth of each lift shall be 6-inches.

E. When the material does not have the proper moisture content to ensure the required density, wetting or drying shall be required. If the material is deficient in moisture, water will be added and uniformly mixed in by disking the base course to its full depth. If the material contains an excess of moisture, it shall be allowed to dry before being compacted. Wetting and drying operations shall involve manipulation of the entire width and depth of the base as a unit. As soon as proper conditions of moisture are attained, the material shall be compacted to an average density not less than 98% of maximum dry density as determined by AASHTO T-180. Where the base is being constructed in more than one course, the density shall be obtained in each lift of the base.

F. During final compacting operations, if blading of any areas is necessary to obtain the true grade and cross section, the compacting operations for such areas shall be completed prior to making the density determination on the finished base.

G. Unless otherwise directed by the City or designee, the surface shall be "hard-planed" with a blade grader immediately prior to the application of the prime coat to remove the thin glaze or cemented surface and to allow free penetration of the prime material. The materials planed from the base shall be removed from the base area.

H. If cracks or checks appear in the base, either before or after priming, which in the opinion of the City or designee, would impair the structural efficiency of the base course, the Contractor shall remove such cracks or checks by re-clarifying, reshaping, adding base material where necessary and re-compacting, at no additional cost to the City or Owner.

I. Mixing Base and Subbase: If at any time the subbase material shall become mixed with the base course material, the Contractor shall, without additional compensation, dig out and remove the mixture, reshape and compact the subbase and replace the materials removed with clean base material, which shall be shaped and compacted as specified above.

J. Prime Coat: The prime coat shall be applied at a rate of 0.15 gallons per square yard and the work performed in accordance with Section 300 of the FDOT Specifications.

K. Asphaltic Concrete: The spreading, compacting, and jointing the wearing surface shall be in accordance with Sections 330 and 333 of the FDOT Specifications to the thickness indicated on the Drawings.

L. Tack Coat: Apply tack coat at a rate between 0.02 and 0.10 gallons per square yard and perform the Work in accordance with Section 300 of the FDOT Specifications.

M. Connections with Existing Facilities Where the bituminous pavement is to be connected with an existing roadway surface or other facility, the Contractor shall modify the existing roadway profile in such a manner as to produce a smooth riding connection to the existing facility. Where it is necessary to remove existing asphalt surfaces to provide proper meet lines and riding surfaces, the Contractor shall saw cut the existing surface so that there will be sufficient depth to provide a minimum of 1inch of asphalt concrete, and the waste material shall be disposed of to the satisfaction of the City or designee. Prior to placing the asphalt concrete, these areas shall be tacked. Meet lines shall be straight and the edges vertical. The edges of meet line cuts shall be painted with liquid asphalt or emulsified asphalt prior to placing asphalt concrete. After placing the asphalt concrete, the meet line shall be sealed by painting with a liquid asphalt or emulsified asphalt and immediately covered with clean, dry sand.

N. Surface Tolerance

1. Tests for conformity with the specified grade shall be made immediately after initial compression. Any variation shall be immediately corrected by the removal or addition of materials and by continuous rolling. The completed surface of the pavement shall be of uniform texture, smooth, uniform as to grade, and free from defects of all kinds.

2. The completed surface shall not vary more than 1/8 inch from the lower edge of a 12-foot straightedge placed on the surface along the centerline or across the trench.

3. After completion of the final rolling, the smoothness and grade of the surface shall again be tested by the Contractor.

4. When deviations in excess of the above tolerances are found, the pavement surface shall be corrected as stated in Section 330-12.4 of the FDOT Specifications.

5. All areas in which the surface of the completed pavement deviates more than twice the allowable tolerances described above shall be removed and replaced to the satisfaction of the City or designee.

O. Weather Conditions: Asphalt shall not be applied to wet material. Asphalt shall not be applied during rainfall or any imminent storms that might adversely affect the construction. The Engineer will determine when surfaces and materials are dry enough to proceed with construction. Asphalt concrete shall not be placed during heavy rainfall or when the surface upon which it is to be placed is wet.

P. Protection of Structures and Adjustment of Appurtenances

1. Provide whatever protective coverings may be necessary to protect the exposed portions of bridges, culverts, curbs, gutters, posts, guard fences, road signs, and any other structures from splashing oil and asphalt from the paving operations. Remove any oil, asphalt, dirt, or any other undesirable matter that may come upon these structures by reason of the paving operations.

2. Where water valve boxes, manholes, catch basins, or other underground utility appurtenances are within the area to be surfaced, the Contractor shall adjust the covers of these improvements to conform to the proposed surface elevations.

3. In this effort, the Contractor shall be responsible for ensuring that appurtenances are brought to proper grade to conform to the finished surface elevations and any delays experienced from such obstructions will be considered as incidental to the paving operation. No additional payment will be made. Protect all covers during asphalt application.

Q. Pavement Warranty: Settlement of replaced pavement over trenches within the warranty period shall be considered the result of improper or inadequate compaction of the subbase or base materials. The Contractor shall promptly repair all pavement deficiencies noted during the warranty period at the Contractor’s sole expense.

R. The pressure distributor used for placing the tack or prime coat shall be equipped with pneumatic tires having sufficient width of rubber in contact with the road surface to avoid breaking the bond of or forming a rut in the surface. The distance between the centers of openings of the outside nozzles of the spray bar shall be equal to the width of the application required, within an allowable variation of 2-inches. The outside nozzle at each end of the spray bar shall have an area of opening of not less than 25 percent, nor more than 75 percent in excess of the other nozzles which shall have uniform openings. When the application covers less than the full width, the normal opening of the end nozzle at the conjunction line may remain the same as those of the interior nozzles.

S. Application Temperatures: For asphalt cement Viscosity Grade AC-5, the application temperature shall be between 300 degree and 350 degree F; for emulsified asphalt, between 100 degrees and 170 degrees F; and for cut-back asphalt, between 175 degree and 275 degree F.310-9.3 Uniformity of Distribution: Special precautions shall be observed to assure that an even and uniform distribution of bituminous material will be obtained, and the distributor shall be so adjusted and operated as to maintain uniform, even distribution of the type of material being applied. Excessive deposits of bituminous material upon the road surface caused by stopping or starting the distributor, by leakage or otherwise, shall be immediately removed.

T. When the prime or tack coat is applied adjacent to curb and gutter, or any other concrete or special pavement surface (except where they are to be covered with a bituminous wearing course) such concrete surfaces shall be protected by heavy paper or other protective material while the prime or tack coat is being applied. Any bituminous material deposited on such concrete surfaces shall be removed immediately.

U. No bituminous material shall be applied when the air temperature is less than 50 degree in the shade, or when the weather conditions or the condition of the existing surface is unsuitable. In no case shall bituminous material be applied while rain is falling or when there is water on the surface to be covered.

V. After the base has been finished, the full width of surface shall be swept with a power broom supplemented with hand brooms and mechanical blowers prior to the application of the prime coat. Care shall be taken to remove all loose dust, dirt and objectionable matter. If deemed necessary, the base shall be lightly sprinkled with water immediately in advance of the prime coat. The prim coat shall be applied to the full width of the base.

W. The temperature of the prime material shall be such as to insure uniform distribution. The material shall be applied with a pressure distributor as specified above. The amount to be applied shall be sufficient to coat the surface thoroughly and uniformly without any excess to form pools or to flow off the base. For lime rock base, the rate of application shall not be less than 0.10 gallons per square yard.

X. The roadway may be opened for use following the application of the prime material, and a light uniform application of clean sand shall be applied and rolled. The sand shall be non-plastic, shall be free from silt rock particles and shall not contain any sticks, vegetation, grass, roots or organic matter. After the sand covering has been applied, the surface will be opened to traffic.

Y. Asphalt Densities: The in place density of each course of asphalt mix construction, with the exceptions of patching courses, leveling and intermediate course less than one-inch thick or a specified spread rate less than 100 pounds per square yard, overbuild courses where the minimum thickness is less than one-inch, and opengraded friction course, shall be determined by the use of the Nuclear Density Backscatter Methods as specified by FM 1-T238 (method B). The required density of a completed course shall be at least 98 percent of the average density of the control strip.

3.0.2. INSTALLATION OF TEXTURED PAVEMENT

A. Applications of textured pavement include the following. Imprinting patterns into existing or new pavement and covering with a surface coating(s) of paint or thermoplastic. Imprinting patterns into existing or new pavement and inlaying the imprint with performed thermoplastic material. Colored, preprinted, preformed texturized thermoplastic material that is applied over existing pavement. Colored thermoplastic material that can be imprinted and texturized during or after application to existing pavement.

B. Patterns are defined as visible surface markings. Imprinted textures are defined as palpable surface markings.

C. Use the location, pattern/texture type (brick, stone, etc.) and coating color as specified in the Plans. Joint openings shall not exceed ½ inch in width.

D. Apply a patterned and/or textured treatment to asphalt or concrete in accordance with manufacturer's recommendations.

E. For application requiring removal and replacement of existing pavement, meet the requirements of FDOT Specifications Section 350 for cement concrete pavement; the requirements of Section 334 for Superpave asphalt or Section 337 for FC 9.5 and FC 12.5 asphalt.

F. Protect treated surfaces from traffic and environmental effect until the area is completely coated/imprinted and any coating have dried or cured according to the manufacturer's instructions. Complete all utility, traffic loop detector, and other items requiring a cut and installation under the finished surface, prior to pattern installation.

For asphalt roadways, apply patterned/textured pavement a minimum of 14 days after placement of the adjacent pavement. Upon completion of the installation, the City or designee will check the area at random location(s) for geometric accuracy, as specified in the plans. If any of the chosen areas have an imprint width and depth that is less than the manufacturer's specifications, correct the entire textured area, at no additional cost to the City. Supply the specified pattern and color sample for the Engineer's use to visually determine that the material matches the color specified in the plans. For any continuous or abutting areas, i.e., all treated areas of an intersection, color material must be from the same lot/batch. Provide certification that the textured pavement was installed in accordance with the manufacturer's requirements.

G. Textured pavement on crosswalks and travel lanes are to be tested for skid resistance in accordance with ASTM E303.

3.0.3. TEMPORARY TRENCH REPAIR OR STABILIZATION

A. Following trenching and backfill within active plant roadways, but prior to final asphalt replacement at substantial completion, the Contractor shall install temporary trench repair, consisting of compacted base course and temporary asphalt.

B. Temporary trench repair shall include the preparation of the subgrade, the placing and compacting of the lime rock base, the priming of the base, the placing and maintaining of the surface treatment, all as specified herein.

C. The width of trench repairs shall extend at least 12 inches each side beyond the limits of the asphalt impacted by excavation. The edge of the pavement to be left in place shall be cut to a true edge with a saw or other approved method so as to provide a clean edge to abut the repair. The line of the repair shall be reasonably uniform with no unnecessary irregularities.

3.0.4. PAVEMENT MARKINGS

A. All existing markings (i.e., lanes, edge of pavement, parking stalls, etc.) impacted by the Contractor during construction shall be replaced with new painted items in accordance with the requirements of Section 971 of the FDOT Specifications.

3.0.5. CONNECTIONS WITH EXISTING FACILITIES

A. Where the bituminous pavement is to be connected with an existing roadway surface or other facility, the Contractor shall modify the existing roadway profile in such a manner as to produce a smooth riding connection to the existing facility.

B. Where it is necessary to remove existing asphalt surfaces to provide proper meet lines and riding surfaces, the Contractor shall saw cut the existing surface so that there will be sufficient depth to provide a minimum of 1-inch of asphalt concrete, and the waste

material shall be disposed of to the satisfaction of the Engineer. Prior to placing the asphalt concrete, these areas shall be tacked. Meet lines shall be straight and the edges vertical. The edges of meet line cuts shall be painted with liquid asphalt or emulsified asphalt prior to placing asphalt concrete. After placing the asphalt concrete, the meet line shall be sealed by painting with a liquid asphalt or emulsified asphalt and immediately covered with clean, dry sand.

3.0.6. SURFACE TOLERANCE

A. Tests for conformity with the specified grade shall be made immediately after initial compression. Any variation shall be immediately corrected by the removal or addition of materials and by continuous rolling.

B. The completed surface of the pavement shall be of uniform texture, smooth, uniform as to grade, and free from defects of all kinds. The completed surface shall not vary more than 1/8 inch from the lower edge of a 12-foot straightedge placed on the surface along the centerline or across the trench.

C. After completion of the final rolling, the smoothness and grade of the surface shall again be tested by the Contractor.

D. When deviations in excess of the above tolerances are found, the pavement surface shall be corrected as stated in Section 330-12.4 of the FDOT Specifications.

E. All areas in which the surface of the completed pavement deviates more than twice the allowable tolerances described above shall be removed and replaced to the satisfaction of the Engineer.

3.0.7. WEATHER CONDITIONS

A. Asphalt shall not be applied to wet material. Asphalt shall not be applied during rainfall or any imminent storms that might adversely affect the construction. The Engineer will determine when surfaces and materials are dry enough to proceed with construction. Asphalt concrete shall not be placed during heavy rainfall or when the surface upon which it is to be placed is wet.

3.0.8. PROTECTION OF STRUCTURES AND ADJUSTMENT OF APPURTENANCES

A. Provide whatever protective coverings may be necessary to protect the exposed portions of bridges, culverts, curbs, gutters, posts, guard fences, road signs, and any other structures from splashing oil and asphalt from the paving operations. Remove any oil, asphalt, dirt, or any other undesirable matter that may come upon these structures by reason of the paving operations.

B. Where water valve boxes, catch basins, or other underground utility appurtenances are within the area to be surfaced, the Contractor shall adjust the covers of these improvements to conform to the proposed surface elevations.

C. In this effort, the Contractor shall be responsible for ensuring that appurtenances are brought to proper grade to conform to the finished surface elevations and any delays experienced from such obstructions will be considered as incidental to the paving operation. No additional payment will be made. Protect all covers during asphalt application.

3.0.9. PAVEMENT WARRANTY

A. Settlement of replaced pavement over trenches within the warranty period shall be considered the result of improper or inadequate compaction of the sub-base or base materials. The Contractor shall promptly repair all pavement deficiencies noted during the warranty period at the Contractor's sole expense.

3.0.10. INSTALLATION OF TEXTURED PAVEMENT

H. Applications of textured pavement include the following.

22. Imprinting patterns into existing or new pavement and covering with a surface coating(s) of paint or thermoplastic.

23. Imprinting patterns into existing or new pavement and inlaying the imprint with performed thermoplastic material.

24. Colored, preprinted, preformed texturized thermoplastic material that is applied over existing pavement.

25. Colored thermoplastic material that can be imprinted and texturized during or after application to existing pavement.

I. Patterns are defined as visible surface markings. Imprinted textures are defined as palpable surface markings.

J. Use the location, pattern/texture type (brick, stone, etc.) and coating color as specified in the Plans. Joint openings shall not exceed ½ inch in width.

K. Apply a patterned and/or textured treatment to asphalt or concrete in accordance with manufacturer's recommendations.

L. For application requiring removal and replacement of existing pavement, meet the requirements of FDOT Specifications Section 350 for cement concrete pavement; the

requirements of Section 334 for Superpave asphalt or Section 337 for FC 9.5 and FC 12.5 asphalt.

M. Protect treated surfaces from traffic and environmental effect until the area is completely coated/imprinted and any coating have dried or cured according to the manufacturer's instructions. Complete all utility, traffic loop detector, and other items requiring a cut and installation under the finished surface, prior to pattern installation. For asphalt roadways, apply patterned/textured pavement a minimum of 14 days after placement of the adjacent pavement. Upon completion of the installation, the City or designee will check the area at random location(s) for geometric accuracy, as specified in the plans. If any of the chosen areas have an imprint width and depth that is less than the manufacturer's specifications, correct the entire textured area, at no additional cost to the City. Supply the specified pattern and color sample for the Engineer's use to visually determine that the material matches the color specified in the plans. For any continuous or abutting areas, i.e., all treated areas of an intersection, color material must be from the same lot/batch. Provide certification that the textured pavement was installed in accordance with the manufacturer's requirements.

N. Textured pavement on crosswalks and travel lanes are to be tested for skid resistance in accordance with ASTM E303.

END OF SECTION

02526 CONCRETE PAVEMENT, CURB AND WALKWAYS

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. Concrete pavement, curbs and sidewalk shall be constructed to the lines and grades and dimensions required for a complete installation as shown on the drawings and specified herein.

1.0.2. SUBMITTALS

A. Shop drawings for reinforcing, joint material and mix designs shall be submitted for review in accordance with the Section 01300 "Submittals".

PART 2 – PRODUCTS

2.0.2. MATERIALS

A. All roadways are to be de-mucked or stabilized with geotextile material in accordance with the geotechnical report and City requirements.

B. Laboratory analysis shall be complete, and the material approved by the Engineer prior to placement.

B. Geotextile material: Woven fabric to be structurally prepared and placed as per manufactures written specification.

C. Sub-grade: limited to maximum six (6") diameter clean non deleterious material Sub grade to be proof-rolled. Subgrade material supporting the roadway and shoulders shall have a minimum lime rock bearing (LBR) of 40. The stabilized subgrade shall be twelve (12) inches compacted to 98% of maximum dry density as per AASHTO-T-180.

D. Lime rock: The material used in lime rock base courses shall be material classified as either Miami Oolite Formation or Ocala Formation at the Contractor's option having a minimum percentage of calcium or magnesium of 60; however, only one formation may be used on any contract. Lime rock base course shall have a minimum bearing ratio (LBR) of 100 and shall be minimum of eight (8) inches thick. Base material shall be compacted to a density of not less than 98% of maximum dry density as determined by AASHTO-T180 under all paved areas.

1. Composition:

    a. The lime rock material shall contain not more that 0.5 percent of organic material or objectionable matter and shall show no significant tendency to air slake or undergo any chemical under exposure to weather.

    b. Lime rock material shall contain not less than 70 percent of carbonates of calcium and magnesium. The maximum percentage of water sensitive clay material shall be three (3).

2. Gradation: At least 97 percent (by weight) of the material shall pass a 3 1/2-inch sieve and the material shall be graded uniformly down to dust. The fine material shall consist entirely of dust of fracture. All crushing or breaking up which might be necessary in order to meet such size requirements shall be done before the material is placed on the road.

3. Quality:

a. The lime rock material shall be uniform in quality and shall not contain cherty or other extremely hard pieces or lumps, balls or pockets of sand or clay size material in sufficient as to be detrimental to prevent proper bonding, finishing or strength of the lime rock base. Lime rock material shall be nonplastic, and the liquid limit shall not exceed 35.

b. Lime rock material shall have an average LBR value of not less than 100.

E. Sidewalks:

1. The replacement of gray concrete sidewalks throughout the City shall be with the Miami-Dade County's sidewalk color standard, unless otherwise specified by any applicable City land use board, in accordance with Resolution 2019-30800.

2. The Public Works Director has the authority to determine on a street-by-street basis if replacement of sidewalks to Miami-Dade County's sidewalk color standard is appropriate.

2.0.1. CONCRETE

A. Concrete shall be composed of cement, fine aggregate, coarse aggregate, and water, so proportioned and mixed as to produce a plastic workable mixture in accordance with all requirements under this section suitable to the specific conditions of placement.

B. Cement:

1. The cement shall be a standard brand of Portland cement manufactured within the continental limits of the United States. It shall meet the requirements of ASTM C150 "Portland Cement" and shall be Type II.

2. Only one brand of cement shall be used in any individual structure unless approved by the Engineer. Cement which has become damaged, partially set, and lumpy or caked shall not be used the entire contents of the sack or container which contains such cement will be rejected. No salvage or reclaimed cement shall be used.

3. Different types of cement shall not be mixed nor shall they be used alternately except when authorized in writing by the City or their designee. Different brands of cement or the same brand from different mills may be used alternately. A resubmittal will be required if different cements are proposed during the Project.
4. Slump shall not exceed six inches (6").

5. Concrete for underground work shall be acid resistant cement and shall maintain a minimum compressive strength of 4000 psi in 28 days.

6. The total alkalies in the cement (calculated as the percentage of NA2O plus 0.658 times the percentage of K2O) shall not exceed 0.40%.

7. The proposed Portland Cement shall not contain more than 8% tricalcium aluminate and more than 12% tetracalcium aluminoferrite.

8. Cement shall be stored in a suitable weather-tight building so as to prevent deterioration or contamination. Cement which has become caked, partially hydrated, or otherwise damaged will be rejected. The Contractor shall provide suitable means for storing and protecting the cement against dampness. Bags of cement which for any reason may become partially set, or which contain lumps of caked cement, shall be rejected. In no instance shall any portion of a bag of damaged cement, or a bag containing lumps of caked cement, be used. Cement salvaged from discarded or used sacks shall not be used. Different brands of cement, even if tested and approved, shall not be mixed during use, nor used alternately in any section of the work without written permission of the Engineer.

C. Aggregates:

1. Fine Aggregate (Sand) in the various concrete mixes shall consist of natural or manufactured siliceous sand, clean and free from deleterious substances, and graded within the limits of ASTM C33.

2. Coarse Aggregate: Coarse aggregate shall consist of gravel, broken stone or local limerock. Coarse aggregate shall be size #57 or #67 as graded within the limits given in ASTM C33 unless otherwise specified. It shall be free from adherent coatings.

3. Aggregates shall be tested for gradation by sieve analysis tests in conformance with ASTM C136.

4. When tested for soundness in accordance with ASTM C88, the loss resulting after five cycles shall not exceed 10 percent for fine or coarse aggregate when using either magnesium sulfate or sodium sulfate.

5. When tested in accordance with "Potential Reactivity of Aggregates (Chemical Method)" (ASTM C289), the ratio of silica released to reduction in alkalinity shall not exceed 1.0. F. When tested in accordance with "Organic Impurities in Sands for Concrete" (ASTM C40), the fine aggregate shall produce a color in the supernatant liquid no darker than the reference standard color solution.

6. When tested in accordance with "Resistance to Abrasion of Small size Coarse Aggregate by Use of the Los Angeles Machine" (ASTM C131), the coarse aggregate shall show a loss not exceeding 42 percent after 500 revolutions, or

10.5 percent after 100 revolutions

D. Water: Water shall be taken from a potable water supply and shall be fresh, clean and free from injurious amounts of oil, acid, alkali or organic matter.

E. Admixtures:

26. Air entraining agent shall be added to all concrete unless noted otherwise. The agent shall provide entrained air in the concrete in accordance with ASTM C260.

27. The following admixtures are required or used for water reduction, slump increase, and/or adjustment of initial set. Admixtures permitted shall confirm to the requirements of ASTM C494. Admixtures shall be non-toxic after 30 days and shall be compatible with and made by the same manufacturer as the air-entraining admixtures.

a. Water reducing admixture shall conform to ASTM C494, Type A and shall contain no more than 0.05% chloride ions. Acceptable products are “Eucon Series” by the Euclid Chemical Company, “Master Pozzolith Series” by BASF, and “Plastocrete Series” by Sika Corporation.

b. High range water reducer shall be sulfonated polymer conforming to ASTM C494, Type F or G. The high range water reducer shall be added to the concrete at either the batch plant or at the job site and may be used in conjunction with a water reducing admixture. The high range water reducer shall be accurately measured and pressure injected into the mixer as a single dose by an experienced technician. A standby system shall be provided and tested prior to each day’s operation of the job site system. Concrete shall be mixed at mixing speed for a minimum of 100 mixer revolutions after the addition of the high range water reducer. Acceptable products are “Eucon 37” or Plastol 5000 by the Euclid Chemical Company, “Master Rheobuild 1000 or Master Glenium Series” by BASF, and “Daracem 100 or Advaflow Series” by W.R. Grace. High range water reducer shall be mandatory for class A1 concrete intended for placement in walls.

c. A non-chloride, non-corrosive accelerating admixture may be used where specifically approved by the City or their designee. The admixture shall conform to ASTM C494, Type C or E, and shall not contain more chloride ions than are present in municipal drinking water. The admixture manufacturer must have longterm noncorrosive test data from an independent testing laboratory (of at least a year’s duration) using an acceptable accelerated corrosion test method such as that using electrical potential measures. Acceptable products are “Accelguard 80/90 or NCA” by the Euclid Chemical Company and “Daraset” by W.R. Grace.

d. A water reducing retarding admixture may be used where specifically approved by the Engineer. The admixture shall conform to ASTM C494, Type D and shall not

contain more than 0.05% chloride ions. Acceptable products are “Eucon NR or Eucon Retarder 100” by the Euclid Chemical Company, “Pozzolith Retarder” by BASF, and “Plastiment” by Sika Corporation.

28. Admixtures containing calcium chloride, thiocyanate or more than 0.05 chloride ions are not permitted

F. Membrane Curing Compound: Membrane curing compound shall conform to the requirements of AASHTO Designation M 148, Type 1-clear, or type 2-white pigmented.

G. Expansion Joint Filler:

1. Preformed expansion joint filler shall be of the nonextruding and resilient bituminous type and conform to the requirements of AASHTO Designation M 213.

2. Expansion joint filler shall be gray neoprene sponge rubber that conforms to AASHTO Designation M 153, Type I.

H. Reinforcing and Welded Wire Fabric: Reinforcing and welded wire fabric shall be 6”X6” – 10/10 steel bars to be used in curb & gutter and wire mesh in sidewalk.

2.0.2. CONCRETE PAVERS

A. Concrete pavers shall Miami-Dade County’s color standard approved equal. Use of other colors to complement project design theme and/or match existing pavers’ configuration require shall only be used with written approval from the City of OpaLocka Beach Public Works Department.

B. All concrete pavers shall have a skid resistant finish.

C. Provide products supplied by a member of the Interlocking Concrete Pavement Institute (ICPI) as called for in the Drawings and/or as specified herein.

D. Concrete pavers shall conform to the requirements of ASTM C936.

E. Concrete pavers shall have an average compressive strength of 8,000 psi with no individual unit under 7,200 psi.

F. Average absorption of 5% with no unit greater than 7% when tested in accordance with ASTM C140.

2.0.3. TEXTURED PAVEMENT

A. “Street Bond SP150E Coating Material” refers to a high performance premium coating material consisting of epoxy modified acrylic polymers blended with sand and aggregate, and specially formulated by Integrated Paving Concept, Inc. (Tel. 800-6885652), for application on asphalt surfaces to provide a durable, long lasting color and texture to the asphalt surface.

B. “Street Bond Colorant” is a highly concentrated, high quality, UV stable pigment blend designated to be added to Street Bond SP150E coating system to provide color to the coating. The colors to be used shall be shown on the drawings. The same Street Bond Colorant shall be used in each SP150E coating layer to the asphalt surface. One pint of colorant shall be used with one pail of Street Bond coating material.

C. Use only patterned/textures pavement products listed on the Qualified Products List (QPL). Meet manufacturer’s Specifications for all pattern/texture templates, coating, and coloring material. Use only material that is delivered to the job site in sealed containers bearing the manufacture’s original labels. Material coating used to achieve the pattern/texture and/or color shall produce an adherent, weather resistant, skid resistant surface capable of resisting deformation to traffic. Paint and thermoplastic material must meet the requirements of this Specifications and FDOT Specifications Section 971, except that the requirements for Color and Retroreflectivity do not apply.

D. Manufacturers seeking approval for inclusion on the QPL must submit application and certifications in accordance with Section 6 along with the following documentation:

1. Manufacturer’s specifications and procedures for materials and installation.

2. Manufacturer’s certification with supporting test data and results that the patterned/textured pavement installed in accordance with the manufacturer’s specifications and procedures has been tested in accordance with the ASTM E274, Skid Resistance of Paved Surfaces using a standard ribbed full scale tire at a speed of 40 mph (FN40R), and has a minimum FN40R value of 35.

PART 3 – EXECUTION

3.0.1. INSTALLATION OF ROADWAY MATERIALS

A. Subgrade: The work shall consist of bringing the bottom of the excavations and the top of the embankments of the roadways between the outer limits of the roadway to a surface conforming to the lines, grades, and cross sections shown on the plans, of uniform required density, ready to receive the base or paving course. The final elevation of the subgrade shall be within 0.1 foot of the required elevation.

1. All submerged stumps, roots, and other unsuitable matter encountered in the preparation of the subgrade shall be removed and replaced with a suitable material.

2. The material in the top 12” of subgrade shall have a minimum CBR of 25 when compacted to 95% of maximum density as determined by AASHTO Specification T 180-74. In areas such a condition does not exist, the top 12” of subgrade shall be stabilized as described below:

3. Stabilizing Material: Where stabilized subgrade and shoulders are required, the subgrade and shoulder material shall have a minimum California Bearing Ratio Material Value not less than 25. If the in place subgrade or shoulder material has a CBR value less than 25, a suitable stabilizing material shall be added. Such stabilizing material shall be crushed lime rock, coarse lime rock screenings, or any other stabilizing material approved by the Engineer.

4. Suitable stabilizing materials obtained from an existing base or pavement which is to be replaced or abandoned may be used providing that such material contain no fragments larger than 3 ½ inches in diameter.

5. The entire subgrade, including 2 feet beyond the edge of the proposed pavement, shall be thoroughly plowed, scarified, and mixed to a depth of not less than 6 inches below grade. All pot holes and other irregularities shall be filled with suitable material or trimmed down as the case may be, prior to compacting. If the area is cut to grade in natural lime rock, the top 6 inches shall be thoroughly plowed, scarified, and mixed. This plowed, scarified, and mixed layer shall be compacted to not less than 95 percent of the maximum density as determined by AASHTO Specifications T 180-74 prior to the placement of the base course.

6. After the subgrade has been prepared as specified above, the Contractor shall maintain it free from ruts, depressions, and damage resulting from the hauling and handling of any material, equipment, tools, etc. Ditches or drains shall be constructed and maintained along the completed subgrade section. Just before the base course is laid, the subgrade shall be tested as to, elevation and density.

B. Transporting Lime rock: The lime rock shall be transported to the point where it is to be used, over rock previously placed if practicable, and dumped on the end of the preceding spread. No hauling over the subgrade or dumping on the subgrade shall be done

C. Spreading Lime rock:

1. When using new material, the lime rock shall be spread uniformly, and all segregated areas of fine or coarse rock shall be removed and replaced with wellgrade rock.

2. When the specified compacted thickness of the base is greater than 6-inches, the base shall be constructed in two courses. The thickness of the first course shall be approximately one-half the total thickness of the finished base, or enough additional to bear the weight of the construction equipment without disturbing the subgrade.

3. When using the existing base material, the Contractor shall expose the existing base material to the final base grade shown on the drawings. The Contractor shall then proceed with scarifying the top 6 inches of the base and reworking and compacting the material to achieve the required cross-section.

4. Minimum longitudinal slope shall be 0.3% for all roadways. For roadways with gutters, the longitudinal slope may be reduced upon approval by the Public Works Department.

D. Compacting and Finishing Base:

1. General:

a. For single course base, after spreading is completed, the entire surface shall be scarified and then shaped so as to produce the required grade and cross section after compacting.

b. For multi lift base course, the first course shall be four (4) inches thick compacted cleaned of foreign material, bladed and brought to a surface cross section approximately parallel to that of the finished base. Prior to the spreading of any material for the upper course, the density test for the lower course shall be made and the Engineer shall have determined that the required compacting has been obtained. After the spreading of material for the second course is completed, its surface shall be finished and shaped so as to produce the required grade and cross section after compacting and free of scab and laminations.

2. Moisture Content: When the material does not have the proper moisture content to insure the required density, wetting or drying will be required. If the material is deficient in moisture, water shall be added and uniformly mixed in by discing the base course to its full depth. If the material contains an excess of moisture, such excess shall be reduced or removed until the required moisture content is attained before being compacted. Wetting or drying operations shall involve manipulation of the entire width and depth of the base as a unit.

3. Density Requirements: As soon as proper conditions of moisture are attained, the material shall be compacted to a density of not less than 98 percent of the

maximum density as determined by AASHTO Designation T-180 as described below:

a. During final compacting operations, if blading of any areas is necessary to obtain the true grade and cross section, the compacting operations for such areas shall be completed prior to making the density determinations on the finished base.

b. At least three density determinations shall be made at the completion of each course, also the density determinations shall be made at new/replaced every utility crossings and also at every 7,000 square feet of roadways or at more frequent intervals if deemed necessary by the Engineer.

4. Correction of Defects:

a. If at any time the subgrade material should become mixed with the base course material, the Contractor shall dig out and remove the mixture, reshape and compact the subgrade and replace the materials removed with clean base material, which shall be shaped and compacted as specified above.

b. If cracks or checks appear in the base, either before or after priming, which in the opinion of the Engineer would impair the structural efficiency of the base course, the Contractor shall remove such cracks or check by re-scarifying, reshaping, adding base material where necessary and recompacting.

E. Testing Surface: The finished surface of the base course shall be checked with a templet cut to required crown and cross section and with a 10-foot straightedge laid parallel to the centerline of the road. All irregularities greater than 1/4-inch shall be corrected by scarifying and removing or adding lime rock as may be required, after which the entire area shall be recompacted as specified herein before.

F. Thickness Determinations:

The thickness of the compacted lime rock base shall be measured at intervals of not more than 200-feet. Measurements shall be taken at various points on the cross sections prior to the application of the prime coat.

2. The measurements shall be taken in holes through the base of not less than 3inches in diameter. Where the compacted base is deficient by more than 1/2-inch from the thickness called for on the drawings, the Contractor shall correct such areas by scarifying and adding lime rock. The base shall be scarified and rock added for a distance of 100-feet in each direction from the edge of the deficient area. The affected areas shall then be brought to the required state of compaction and to the required thickness and cross section.

G. Priming and Maintaining:

1. The prime coat shall be applied only when the base meets the specified density requirements and the moisture content in the top half of the base does not exceed 90 percent of the optimum moisture content of the base material. At the time of priming, the base shall be firm and unyielding.

2. The Contractor will be responsible for assuring that the true crown and grade are maintained with no rutting or other distortion and that the base meets all the requirements at the time the surface course is applied.

3.0.2. INSTALLATION OF CONCRETE

A. The concrete shall be placed on stabilizing or compacted subgrade to such depth that, when it is consolidated and finished, the slab thickness required by the drawings will be obtained at all points and surface will at no point be below the grade specified for the finished surface, after application of the allowable tolerance. The concrete shall be deposited on the stabilized subgrade in a manner which will require as little rehandling as possible. Placing of the concrete shall be continuous between transverse joints, without the use of intermediate bulkheads.

B. Steel reinforcement is called for on the drawings shall be placed at mid slab depth and the fabric shall be maintained at this location during the placing and finishing operations.

C. Concrete shall be thoroughly consolidated against and along the faces of all forms, and along the full length and on both sides of all joint assemblies, by means of hand operated, vibrators. Vibrators shall not be permitted to come in contact with joint assembly, the subgrade or a side form. Vibration at any one location shall not continue so long as to produce puddling or the accumulation of excessive grout on the surface. In no case shall the vibrator be operated longer than 15 seconds in any one location.

1.

D. Coloring of concrete shall be done by dry-mixing the compound and broadcasting over the fresh-poured concrete after it has been struck off.

E. Striking off, Consolidating and Finishing Concrete:

1. Immediately after the placing, the concrete shall be struck off, consolidated and finished, to produce a finished pavement conforming to the cross section, width and surface finish required by the drawings and specifications. The sequence of operations shall be as follows: strike-off; vibratory consolidation; screeding; floating; removal of laitance; straight edging; and final surface finish. Strike-off, consolidation and finishing shall be accomplished in a manner such as to avoid damage to, or misalignment of, joint assemblies, dowels and other embedded items.

F. Straight edging and Surface Correction:

1. After floating has been completed and the excess water removed, but while the concrete is still in a plastic state, the surface of the concrete shall be tested for trueness with an accurate 10-foot straightedge. The straightedge shall be furnished by the Contractor. The straightedge shall be held in successive positions parallel to the road center line, in contact with the surface, and the whole area tested from one side of the slab to the other as necessary. The advance along the road shall be in successive stages of not more than one-half the length of the straightedge. Any depressions shall be immediately filled with freshly mixed concrete and struck-off, consolidated and refinished. High areas shall be cut down and refinished. Straightedge testing and surface correction shall continue until the entire surface appears to conform to the required grade and cross section.

2. As soon as the concrete has hardened sufficiently to be walked on, straight edging shall again be done. All surface irregularities exceeding ¼-inch in a 10-foot shall be corrected by grinding as directed by the Engineer.

G. Final Finish: As soon as the water sheen has disappeared from the surface of the pavement and just before the concrete becomes non-plastic, a light broom finish shall be given to the surface.

H. Edging:

1. After the final finish has been applied, but before the concrete has become nonplastic, the edge of the pavement along each side of the strip being placed, on each side of transverse and longitudinal contraction joints and construction joints and along structure extending into the pavement, shall be carefully rounded to a ¼-inch radius except as otherwise indicated. A well-defined and continuous radius shall be produced and a smooth, dense mortar finish obtained. All concrete shall be completely removed from the top of the joint filler.

2. All joints shall be checked with a straightedge before the concrete has become non-plastic and, if one side of the joint is higher than the other or the entire joints is higher or lower than the adjacent slabs, corrections shall be made as necessary.

I. Joints:

Transverse Construction Joints: Transverse construction joints shall be constructed at the end of all pours and at other locations where the paving operations are stopped for as long as 30 minutes. Construction joints, however, shall not be placed within ten feet of any other transverse joint or of either end of a section of pavement. If sufficient concrete has not been placed to form a slab at least ten feet long, the excess concrete, back to the last preceding joint, shall be removed. The joints shall be formed by placing a wood or metal bulkhead accurately and securely in place, in a plane perpendicular to the profile and center line of the pavement.

2. Transverse & Longitudinal Contraction Joints: Construction joints shall be constructed at the interval indicated in the plans and shall consist of planes of weakness created by an edging tool. The cut in the fresh concrete shall be perpendicular to the surface of the pavement, shall extend to a depth of 1/3 of its thickness (1 ½" for 4" pavement) and shall have tooled edges as described above.

3. Expansion Joints: ½" Expansion Joints shall be formed by placing performed joint filler around all structures and foundations where pavement abuts curbs and gutters and at intervals not to exceed 100'.

4. Cleaning and Sealing Joints: Joints which are to be sealed, shall be filled with joint sealing material before the pavement is opened to traffic and as soon after completion of the curing period as is feasible. Just prior to sealing, each joint shall be thoroughly cleaned of all foreign material (including any membrane curing compound) and the joint faces shall be clean and surface-dry when the sealer is applied.

a. The sealing material shall be applied to each joint to conform to the details shown on the drawings and in accordance with the manufacture's recommendation. The pouring shall be done in such manner that the material will not be spilled on the exposed surfaces of the concrete. Any excess material on the surface of the concrete pavement shall be removed immediately and the pavement surface cleaned.

b. All cracks occurring in the pavement prior to its acceptance shall be cleaned out and sealed as specified above, except that the cracks and fractures shall be completely filled with joints sealer and any excess filler material cut down level with the pavement surface.

1.

3.0.3. INSTALLATION OF CONCRETE PAVERS

A. Install paver blocks as manufactured by licensee of Paver Systems, Inc., in accordance with the Drawings, manufacturer's recommendations, and Standard Details. Paver block construction shall conform to the requirements of Interlocking Concrete Pavers Institute (ICPI).

B. Where necessary to cut blocks, cutting shall be done so as leave tight joint along all adjacent edges and surfaces. Smoothly split or sawn blocks only will be accepted.

C. After final vibrating/compaction there shall be no more than ¼ inch deviation from proposed grades.

D. Installation of concrete pavers in non-roadway areas shall be in accordance with the following.

D. Replacement of all underground utilities that are in conflict with paver installation.

E. The finished subbase shall be approved before placement of limerock base.

F. The limerock base course shall be compacted to 98% of maximum dry density as per AASHTO T-180.

G. The finished limerock base course shall be approved by the City or designee prior to placement of the sand leveling course.

H. The uncompacted sand leveling base shall be screened over the compacted limerock base to an uncompacted thickness of 1½ inches. The bedding course shall be treated with soil sterilizers to prohibit growth of grass and weeds.

I. The paver blocks shall be laid in the pattern approved by the City of Opa-Locka Public Works Department in accordance with the Standard Details.

J. Construct concrete header curb in accordance with the Standard Details.

E. Installation of concrete pavers in on roadways shall be in accordance with the following.

K. Replacement of all underground utilities that are in conflict with paver installation.

L. The finished subbase shall be approved before placement of the concrete slab.

M. The concrete pavers on the roadway shall be installed over a 6-inch-thick concrete base reinforced with galvanized steel wire mesh 6X6-W1.4xW1.4 with 1½ inches bedding between the concrete base and the concrete pavers.

N. The uncompacted sand leveling base shall be screened over the concrete base to an uncompacted thickness of 1½ inches. The bedding course shall be treated with soil sterilizers to prohibit growth of grass and weeds.

O. Construct concrete header curb in accordance with the Standard Details..

3.0.4. INSTALLATION OF TEXTURED PAVEMENT

A. Applying a patterned and/or textured treatment to asphalt or concrete, in accordance with manufacturer's recommendations. Applications include the following:

Imprinting patterns into existing or new pavement and covering with a surface coating(s) of paint or thermoplastic.

2. Imprinting patterns into existing or new pavement and inlaying the imprint with performed thermoplastic material.

3. Colored, preprinted, preformed texturized thermoplastic material that is applied over existing pavement.

4. Colored thermoplastic material that can be imprinted and texturized during or after application to existing pavement.

B. Patterns are defined as visible surface markings. Imprinted textures are defined as palpable surface markings.

C. Use the location, pattern/texture type (brick, stone, etc.) and coating color as specified in the Plans. Joint openings shall not exceed ½ inch in width.

D. Apply a patterned and/or textured treatment to asphalt or concrete in accordance with manufacturer's recommendations.

E. For application requiring removal and replacement of existing pavement, meet the requirements of Section 350 for cement concrete pavement; the requirements of Section 334 for Superpave asphalt or Section 337 for FC 9.5 and FC 12.5 asphalt.

F. Protect treated surfaces from traffic and environmental effect until the area is completely coated / imprinted and any coating have dried or cured according to the manufacturer's instructions. Complete all utility, traffic loop detector, and other items requiring a cut and installation under the finished surface, prior to pattern installation.

1.

For asphalt roadways, apply patterned/textured pavement a minimum of 14 days after placement of the adjacent pavement. Upon completion of the installation, the Engineer will check the area at random location for geometric accuracy, as specified in the plans. If any of the chosen areas have an imprint width and depth that is less than the manufacturer's specifications, correct the entire textured area, at no additional cost to the City. Supply the specified pattern and color sample for the Engineer's use to visually determine that the material matches the color specified in the plans. For any continuous or abutting areas, i.e. all treated areas of an intersection, color material must be from the same lot/batch. Provide certification that the textured pavement was installed in accordance with the manufacturer's requirements.

G. Textured pavement on crosswalks and travel lanes are to be tested for skid resistance in accordance with ASTM E303.

3.0.5. INSTALLATION OF SIDEWALK

A. Sidewalks at intersections and driveways shall be six (6) inches thick. Driveways shall include a 4-foot section at 2% maximum cross slope as per Standard Details and FDOT Index 522-03.

B. Sidewalks not at intersections or driveways shall be four (4) inches thick.

C. The concrete for sidewalk shall be 3,000 psi, with Miami-Dade County's sidewalk color standard match existing.

D. The concrete shall be reinforced with 6X6-W1.4xW1.4 welded steel wire mesh.

P. Wherever possible, sidewalks shall be designed with a minimum effective width of 6 feet on residential streets and 8 feet on collectors and arterials. Effective sidewalk widths shall be determined in accordance with the Miami Dade County Standard Details, firstly, and FDOT if not specified.

E. All wayfinding signage shall be installed in the back of the sidewalk wherever permitted by sight visibility, otherwise 4 feet minimum clear pedestrian path around sign shall be provided.

F. Repair of Concrete Sidewalk Surface Defects:

Q. Remove and replace all concrete surfaces that contain surface defects, which includes, but not limited to cracking, cracks which penetrate to reinforcement or completely through non-reinforced sections regardless of width, spalling, pop-outs, honeycomb, rock pockets and other objectionable and rough conditions and other objectionable conditions deemed unacceptable to the Engineer immediately after form removal. Test unformed surfaces sloped to drain for trueness of slope, in addition to smoothness.

R. Concrete rejected for any reason is to be removed and replaced, including labor, forms and reinforcing, to meet specifications at no additional cost to the City. Compounds for adhesion or as patching ingredients may be used, if approved by the City or designee. All repair of surface defects to be made require the approval of the City or designee, as to the method and procedure. Approval of the completed work must be obtained from the City or designee.

S. Remove existing sidewalk, or curb and gutter to either the nearest joint beyond or to where no remaining section is less than five (5) feet long.

3.0.6. INSTALLATION OF CURB RAMPS

A. It is the policy of the City of Opa-Locka Public Works Department to install truncated dome detectable warnings on the curb ramps, in compliance with the ADA Standards and PROWAG requirements for detectable warnings on walking surfaces and with FDOT standards. Curb ramps shall be directional and aligned with the crosswalk. Refer to the City of Opa-Locka Street Design Guidelines.

B. The installation of truncated domes on curb ramp shall be in compliance with the FDOT Index 522-002 and FDOT Specifications Section 527 and associated QPL. This Specification excludes stamped concrete detectable warnings due to poor performance.

C. The detectable warnings are required to have a dark-on-light or light-on-dark contrast with the surrounding concrete. Use Miami-Dade County' color standard on the detectable warning portion of the curb ramp. The color of the detectable warnings shall be integral with the device material.

D. Provide certification from an independent testing laboratory that the applied detectable warning device meets the above minimum requirements. Submit this certification for review and approval by the City or designee at least 10 days before the planned installation of any applied detectable warning device.

E. At least ten (10) days before the first installation of any applied detectable warning device, submit manufacture's installation recommendations and instructions for review and approval by the City or designee.

F. Special Considerations: 2 curb ramps per corner should always be used unless technically infeasible. US Access Board Public Rights-of-Way Access Advisory Committee strongly discourages single installations where possible because single ramps can:

    1. Misdirect blind pedestrians who use the slope of curb ramps as a cue.

    2. Increase crossing times for persons who use wheeled mobility aids and can place users into oncoming traffic at small radius corners where it is difficult to provide landing space at the bottom that is wholly within marked crossings.

    3. Drivers may not be as alert to persons crossing at the apex of a corner.

G. If a single diagonal curb ramp is installed because of technical infeasibility, a 48 inches clear space wholly contained within the crosswalk must be provided at the bottom of the curb ramp to allow wheelchair users enough room to maneuver off of the ramp and into the crosswalk

END OF SECTION

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. This section includes minimum construction requirements for precast concrete flared end sections. The sections shall be constructed in accordance with FDOT specifications and Standard Details, and in conformity with the Plans.

1.0.2. PRECAST PRESTRESSED CONCRETE CONSTRUCTION

A. Fabricate, store, transport and erect precast/prestressed concrete members prestressed by the pretensioning method. Pretensioned precast prestressed concrete products are products prestressed by the pretensioning method. In this method, steel or fiber reinforced polymer (FRP) components are stressed and anchored; the concrete for the product is then cast and cured, and finally the stress in the steel or FRP components is released from the anchorages to the concrete through bond, after the concrete has attained its specified release strength.

B. A precast prestressed concrete plant, hereinafter called plant, is an independent operating facility capable of performing all the operations necessary to fabricate precast/prestressed concrete products.

1.0.3. QUALITY ASSURANCE

A. The Engineer will perform periodic inspections, sampling, and testing to ensure of the quality and acceptability of the materials, methods, techniques, procedures and processes being utilized in the fabrication of precast prestressed concrete products.

02641 PIPE CULVERTS

PART 1 – GENERAL

1.0.1 SCOPE OF WORK

A. Materials and installation for pipe culverts with Aluminized Steel Type 2 ULTRA FLO (UF) corrugated steel pipe by Contech Engineered Solutions or approved equal.

1.0.2. RELATED WORK

A. Section 02222 “Excavation – General”

B. Section 02230 “Clearing and Grubbing”.

C. Section 02314 “Excavation, Backfill and Fill for Structural Facility and Utility Systems”.

PART 2 – PRODUCTS

2.0.1. TYPE OF PIPE TO BE USED

A. When the Plans designate a type (or types) of pipe, use only the type (or choose from the types) designated.

B. When metal pipe is allowed and no future maintenance concerns exist, the Contractor may propose the pipe gage based on the FDOT’s Drainage Manual and Culvert Service Life Estimator for approval by the Engineer. When extending existing pipes, construct the pipe extensions of the same size and kind as the existing pipe. Extensions of existing pipes, whose materials are no longer produced, shall be extended with the most similar pipe material available.

C. The Aluminized Steel Type 2 coils shall conform to the applicable requirements of AASHTO M 274 or ASTM A929.

2.0.2. COUPLING BANDS

A. Coupling bands for the UF shall be made of the same base metal and coatings as the UF to a minimum of 18 gauge.

B. Ends of the UF are rerolled with annular corrugations for proper indexing.

C. Connection fasteners will be provided with by the manufacturer.

PART 3 – EXECUTION

3.0.1. LAYING PIPE

A. Lay all pipe, true to the lines and grades given, with bells upgrade and spigot end fully entered into the bell. When pipe with quadrant reinforcement or circular pipe with elliptical reinforcement is used, install the pipe in a position such that the manufacturer's marks designating "top" and "bottom" of the pipe are not more than five degrees from the vertical plane through the longitudinal axis of the pipe. Do not allow departure from and return to plan alignment and grade to exceed 1/16 inch per foot of nominal pipe length, with a total of not more than 1 inch departure from theoretical line and grade. Take up and relay any pipe that is not in true alignment or which shows any settlement after laying at no additional expense to the City.

B. Do not use concrete pipe with lift holes except round pipe which has an inside diameter in excess of 54 inches or any elliptical pipe.

C. Repair lift holes, if present, with hand-placed, stiff, non-shrink, 1-to-1 mortar of cement and fine sand, after first washing out the hole with water. Completely fill the void created by the lift hole with mortar. Cover the repaired area with a 24 inch by 24 inch piece of filter fabric secured to the pipe.

D. Follow the manufacturer's instructions, to secure the filter fabric to the pipe, until the backfill is placed and compacted.

E. Do not cut or drill into or through the corrugations or ribs of plastic pipe except when necessary to meet the dimensional requirements shown in the Plans.

F. When installing pipes in structures, construct inlet and outlet pipes of the same size and kind as the connecting pipe shown in the Plans. Use the same pipe material within each continuous run of pipe. Extend the pipes through the walls for a distance beyond the outside surface sufficient for the intended connections, and construct the concrete around them neatly to prevent leakage along their outer surface as shown on FDOT's Standard Plans, Index 425-001. Keep the inlet and outlet pipes flush with the inside of the wall. Resilient connectors as specified in 942-3 may be used in lieu of a masonry seal.

G. Furnish and install a filter fabric jacket around all pipe joints and the joint between the pipe and the structure in accordance with Standard Plans, Indexes 425-001 and 430- 001. Use fabric meeting the physical requirements of Type D-3 specified in Section 985. Extend the fabric a minimum of 12 inches beyond each side of the joint or both edges of the coupling band, if a coupling band is used. The fabric must have a minimum width of 24 inches, and a length sufficient to provide a minimum overlap of 24 inches. Secure the filter fabric jacket

against the outside of the pipe by metal or plastic strapping or by other methods approved by the Engineer.

H. When rubber gaskets are to be installed in the pipe joint, the gasket must be the sole element relied on to maintain a tight joint. Soil tight joints must be watertight to 2 psi. Water-tight joints must be water-tight to 5 psi unless a higher pressure rating is required in the Plans.

I. When laying pipes that pass through mechanically stabilized earth (MSE) reinforced fill, connect the portion of the pipe within the wall to the external portion of the pipe run only after the full height of the wall supported embankment is in place.

J. When Wall Zone Pipes are shown in the Plans, meet the following requirements:

1. Use resilient connectors on pipes entering and leaving drainage structures.
2. Provide a 2 to 4 inch pipe overhang beyond the drainage structure internal walls.
3. For pipes without welded joints, meet the following additional requirements:
   3.1 Pipe joints must be watertight to 10.8 psi when pulled out 2 inches from the fully homed position in both straight alignment and 5% deflection.
   3.2 Do not allow the gap between sections of pipe to exceed 5/8 inch for all pipe diameters.

3.0.2. TRENCH EXCAVATION

C. Excavate the trench for storm and cross drains, and side drains as specified in sections 02222 “Excavations – General” , Section 02230 “Clearing and Grubbing” and Section 02314 “Excavation, Backfill and Fill for Structural Facility and Utility Systems”.

3.0.3. FOUNDATION

A. Provide a suitable foundation, where the foundation material is of inadequate supporting value, as determined by the Engineer. Remove the unsuitable material and replace it with suitable material, as specified in section 02314 “Excavation, Backfill and Fill for Structural Facility and Utility Systems”.. Where in the Engineer’s opinion, the removal and replacement of unsuitable material is not practicable, he may direct alternates in the design of the pipeline, as required to provide adequate support. Minor changes in the grade or alignment will not be considered as an adequate basis for extra compensation.

B. Do not lay pipe on blocks or timbers, or on other unyielding material, except where the use of such devices is called for in the Plans.

3.0.4. BACKFILLING

A. Backfill around the pipe as specified in section 02314 “Excavation, Backfill and Fill for Structural Facility and Utility Systems” unless specific backfilling procedures are described in the Contract Documents.

3.0.5. PLUGGING PIPE

A. When existing pipe culverts are to be permanently placed out of service, fill them with flowable fill that is non-excavatable, contains a minimum 350 pounds per cubic yard of cementitious material. Install masonry plugs that are a minimum of 8 inches in thickness, in accordance with FDOT’s Standard Plans, Index 430-001.

B. When proposed or existing pipe culverts are to be temporarily placed out of service, plug them with prefabricated plugs as shown in the Plans. Install prefabricated plugs in accordance with the manufacturer’s recommendations. Do not fill or construct masonry plugs in any pipe culvert intended for current or future service.

3.0.6. GRATES

A. Use metal gratings that meet the requirements of 962-8 of FDOT’s Standard Specifications Manual.

3.0.7. END TREATMENT

A. Place an end treatment at each storm and cross drain, and side drain as shown in the Plans. Sod around end treatments in accordance with FDOT’S Standard Plans, Index 570-001.

3.0.8. TYPE CONCRETE ENDWALLS

A. Construct in accordance with the Plans and Standards Plans.

3.0.9. REMOVING EXISTING PIPE

A. If the Plans indicate that existing pipe is to remain the property of the Department, collect and stack along the right-of-way all existing pipe or pipe arch so indicated in the Plans to be removed, or that does not conform to the lines and grades of the proposed work and that is not to be re-laid, as directed by the Engineer. Take care to prevent damage to salvageable pipe during removal and stacking operations.

3.0.10. SPECIFIC REQUIREMENTS FOR CORRUGATED METAL PIPE

A. Make a field joint with locking bands, as specified in Article 9 of AASHTO M36 and AASHTO M196M for aluminum pipe. For aluminum pipe, fabricate bands from the same alloy as the culvert sheeting.

B. When corrugated metal pipe is used as side drain, storm and cross drain, or gutter drain, use a rubber or neoprene gasket of a design shown to provide a joint. Use a gasket of one of the following dimensions:

    1. For annular joints with 1/2 inch depth corrugation: either a single gasket a minimum of 7 inches by 3/8 inch or two gaskets a minimum of 3-1/2 inches by 3/8 inch; and for annular joints with 1 inch depth corrugations: either a single gasket a minimum of 7 inches by 7/8 inch or two gaskets a minimum of 3-1/2 inches by 7/8 inch.

    2. For helical joints with 1/2 inch depth corrugation: either a single gasket a minimum of 5 inches by 1 inch or two gaskets a minimum of 3-1/2 inches by 1 inch; and for helical joints with 1 inch depth corrugations: either a single gasket a minimum of 5 inches by 1-1/2 inches or two gaskets a minimum of 3-1/2 inches by 1-1/2 inches.

    3. Such other gasket designs as may be approved by the Engineer.

C. If, in lieu of a single gasket spanning the joint, two gaskets are used, place these individual gaskets approximately 2 inches from each pipe end at the joint. When two gaskets are used, seal the overlapping area on the coupling band between the gaskets consistent with the joint performance specified. The Contractor may tuck a strip of preformed gasket material over the bottom lip of the band for this purpose. Use coupling bands that provide a minimum circumferential overlap of 3 inches. As the end connections on the coupling band are tightened, ensure that there is no local bending of the band or the connection. Use precurved coupling bands on pipe diameters of 24 inches or less.

D. Use flat gaskets meeting the requirements of ASTM D1056, designation 2C2 or 2B3. In placing flat gaskets on pipe prior to placing the coupling band, do not stretch the gasket more than 15% of its original circumference. Use circular gaskets meeting the requirements of ASTM C361. Do not stretch the circular gasket more than 20% of its original circumference in placing the gasket on pipe.

E. Apply an approved vegetable soap lubricant.

F. In lieu of the above-specified combination of locking bands and flat gaskets, the Contractor may make field joints for these pipe installations by the following combinations:

    1. Use the metal bands as specified in Article 9 of AASHTO M36M that are at least 10-1/2 inches wide and consist of a flat central section with a

corrugated section near each end, designed to match the annular corrugation in the pipe with which they are to be used. Connect the bands in a manner approved by the Engineer, with a suitable fastening device such as the use of two galvanized 1/2-inch diameter bolts through a galvanized bar and galvanized strap, suitably welded to the band. Use a strap that is the same gage as the band. Where helically corrugated pipe is to be jointed by this alternate combination, ensure that at least the last two corrugations of each pipe section are annular, and designed such that the band will engage each pipe end with the next-to-outside annular corrugation.

2. For these bands, use a rubber gasket with a circular cross-section of the "O-ring" type conforming to ASTM C361. Use gaskets having the following cross-sectional diameter for the given size of pipe:

Pipe Size	Gasket Diameter
12 inches through 36 inches (with 1/2-inch depth corrugations)	13/16 inch
42 inches through 96 inches (with 1/2-inch depth corrugations)	7/8 inch
36 inches through 120 inches (with 1 inch depth corrugations)	1-3/8 inches

3. Use channel band couplers in helical pipe with ends which have been reformed and flanged specifically to receive these bands. Use channel band couplers that are of a two-piece design, are fabricated from galvanized steel stock conforming to AASHTO M36, have 2 inch by 2 inch by 3/16 inch angles fastened to the band ends to allow for proper tightening, and meet the following:

Band Thickness	Pipe Wall Thickness
0.079 inch	0.109 inch or lighter
0.109 inch	0.138 inch or heavier
3/4 inch wide	0.109 inch or lighter
One inch wide	0.138 inch or heavier

G. Furnish two 1/2-inch diameter connection bolts with each band, that conform to ASTM A307, Grade A and are electroplated in accordance with ASTM B633.

H. Use a gasket with the joint that is a hydrocarbon blend of butyl rubber meeting the chemical composition and physical properties of 942-2.2. Use a 3/8 by 3/4-inch gasket for pipe fabricated from 0.109 inch or lighter material and a 3/8 by 1 inch gasket for pipe fabricated from 0.138 inch and heavier material.

I. The Contractor may use a flange band coupler without the gasket for all applications other than side drain, storm and cross drain, and gutter drain.

J. Do not use the flange band coupler to join dissimilar types of pipes.

K. The Contractor may join reformed flanged helical pipe to existing annular or reformed pipe having annular ends. On non-gasketed installations, use either an annular band or an alternate joint. On gasketed installations, use an annular band, minimum of five corrugations in width, in conjunction with two O-ring gaskets. Use mastic material to seal the area of band overlap.

L. Install pipe using either a trench or open ditch procedure.

M. Check pipe shape regularly during backfilling to verify acceptability of the construction method used. Pipe deflected 5% or more of the certified actual mean diameter of the pipe at final inspection shall be replaced at no cost to the City. Deflection measurements are taken at the point of smallest diameter on the corrugations.

END OF SECTION

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. Work included under this Section covers the furnishing of all labor, equipment and material required for cutting, removing, protecting, constructing, replacing or stabilizing all existing roadways, driveways and pavements of the various types encountered, removed or damaged under this Contract.

B. In addition, all existing utility castings, including valves boxes, junction boxes, handholes, pull boxes, inlets and similar structures in the areas of trench restoration, pavement replacement and pavement overlay shall be adjusted by the Contractor to bring them flush with the surface of the finished work.

1.0.2. QUALITY CONTROL

A. The phrase “FDOT Specifications” shall refer to the Florida Department of Transportation Standard Specifications for Road and Bridge Construction, latest edition. The FDOT Specifications, are referred to herein and are hereby made a part of this Contract to the extent of such references, and shall be as binding upon the Contract as through reproduced herein in their entirety.

1.0.3. DAMAGE BY CONTRACTOR

A. The Contractor shall be responsible for the protection from damage from his construction operations, all pavements, including all base courses and surface courses, within the work area.

B. Payment for pavement restoration will be made only where such base courses or surface courses are encountered within the limits defined in the pavement repair details shown on the Plans and/or in the City Standard Details at the rear of the Specifications.

C. Any base course or surface course beyond those limits, damaged as a result of the Contractor's operation, shall be restored in accordance with the applicable requirements of these specifications, to the satisfaction of the City, and to the satisfaction of the governing authority having jurisdiction over the work area.

D. Any damage to adjacent lanes of pavement will require the Contractor to resurface the entire lane width for a length, as approved by the City. When the damage amounts to 25 percent or more in any one block (approximately 600 feet), the Contractor shall resurface the entire width of the lane in which the damage occurred for the entire block.

E. The Contractor is hereby notified that wherever the line for repaving for trenches extends one foot into the edge of the existing paving, he shall repave to this edge only. Full lane paving will not be required. Damage to the pavement beyond this line by the Contractor will require that he repave the full width.

F. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. A copy of all such notices shall be forwarded to the City.

G. No payment shall be made for pavement restoration which falls outside the above described limits and is required for thrust blocks and other appurtenant items. The cost for such work shall be included in the price bid for the applicable item.

H. It is brought to the Contractor's attention that wherever the line of the nominal repaving for trenches extend to within two (2) feet of the edge of the existing paving, he shall repave to this edge.

PART 2 – PRODUCTS 2.0.1.

MATERIALS – GENERAL

A. Lime rock Base shall be as specified in Section 02526 “Concrete Pavement, Curb and Walkways”.

B. Asphaltic Pavement, Prime Coat and Tack Coat shall be as specified Section 02750 “Asphaltic Concrete Pavement”.

C. Sand cover material shall be clean and non-plastic, and shall be composed of hard durable grains, free from loam, silt rock particles and shall not contain any sticks, vegetation, grass, roots or organic matter. Local sand meeting such requirements may be used. Sand shall be subject to approval by the City.

D. 1:10 Mix: Sand-cement mix for backfill within state roads shall be a 1:10 mix of Type I or II Portland Cement and Sand that shall produce a slump of 4 to 6 inches.

2.0.2. BITUMINOUS PAVING MATERIAL

Asphalt cement for asphaltic concrete mixes shall be Viscosity Grade AC-20 or AC-30, homogeneous, free from water and shall meet the requirements of FDOT Specifications, Section 916-1. Unless otherwise specified, all test samples required shall be supplied by

the Contractor. For friction courses, in addition to meeting the above requirements, the bituminous material shall contain 0.5% of a heat-stable, anti-stripping additive from an approved source.

A. Asphaltic Concrete - Type S-I Mix shall meet the requirements of FDOT Specifications for Type S-I Asphaltic Concrete, Sections 330, 331 and 916 of FDOT Specifications.

B. Asphaltic Concrete - Type I Mix shall meet the requirements of Miami-Dade County Public Works Department Specifications for Type I Asphaltic Concrete Surface Course, Section 133 of the Public Works Manual.

C. Asphaltic Concrete - Type III Mix for asphaltic concrete wearing surface overlay, both machine laid and standard (skin patch), shall meet the requirements of FDOT Specifications for Type III Asphaltic Concrete, Section 333-1 through Section 333-6.

D. Type V paving repairs shall consist of a machine-laid asphaltic concrete wearing surface overlay, which shall be a nominal one-inch thick asphaltic concrete, meeting the material requirements of Type I repairs. See subsection 3.07, below.

E. Asphaltic Concrete - Type FC-1, FC-2, FC-3 and FC-4 shall meet the requirements of D.O.T Specifications for Friction Courses, Sections 337-1 through Section 337-7.

F. Emulsified Asphalt for Slurry Seal Coat shall be of the slow-setting, mixing type and shall be homogeneous, meeting the requirements of the Asphalt Institute, Grade SS1 or SS-1h.

G. Liquid Asphalt for Prime and Tack Coat: See Section 02741.

H. Liquid Asphalt for Sand and Asphalt Paving shall be asphalt cement, viscosity Grade AC-5 or emulsified asphalt, Grade RS-2 (anionic) conforming to the requirements of FDOT Specifications, Section 916-1 and 916-4, respectively.

I. Mineral Aggregate for Slurry Seal Coat shall consist of screened sand or limestone screenings or gray granite screenings or a mixture of sand and screenings plus not less than 3%, by weight, of Type I or Type II Portland cement.

PART 3 – EXECUTION

3.0.1. INSTALLATION – GENERAL

A. Permanent pavement repair shall be in accordance with the details shown in the Standard Details herein, with edges straight and parallel and patches rectangular in plan. Replace any paving, beyond the limits shown in the details and as called for in the specifications, as required. Where trenches are located out of the existing

pavement and damage occurs to the pavement, that pavement shall also be replaced by the Contractor.

B. Pavement markings removed or obliterated by the Contractor's operations shall be promptly replaced, in kind, to the satisfaction of the City of Opa-Locka Public Works Department.

C. All equipment necessary for construction shall be on the job site in first class working condition. Spilling or dropping of petroleum products is prohibited and all defective equipment shall be removed or replaced immediately. The Contractor shall be subject to all DERM (Department of Environmental Resources Management) regulations and clean up requirements.

D. The percentages of maximum density for subgrade and lime rock base specified herein are minimum. Greater percentages of maximum density shall be obtained, if so required, by the governing authority having jurisdiction over the work location.

E. Asphaltic concrete mixtures shall be obtained only from plants which comply with the requirements of FDOT Specifications, Section 320 as applicable, using materials specified herein, and producing the specified mixture. General construction requirements for all hot bituminous mixtures specified herein shall conform to FDOT Specifications, Section 330, as applicable.

I. Asphaltic concrete shall be laid only where the surface to be covered is intact, firm, cured and dry, and only when weather conditions are suitable. The temperature of the mixture at the time of spreading shall be within 25°F of the temperature set by the Engineer. No mixture shall be spread when the air temperature is less than 40°F nor when the spreading cannot be finished and compacted during daylight hours.

F. Any mixture caught in transit by a sudden rain may be laid at the Contractor's risk, if the base is in suitable condition. Under no circumstances shall asphaltic material be placed while rain is falling, or when there is water on the area to be paved.

G. Subgrade: Roadway subgrades shall be stabilized to the minimum depth shown on the drawings to a Lime rock Bearing Ratio of not less than 40. Stabilizing shall be Type B as defined in Section 160 of the FDOT Specifications. Stabilization may require the addition and thorough mixing in of crushed lime rock, course lime rock screenings, or any other stabilizing material acceptable to the City. The stabilizing material shall be applied in such quantity that, after mixing and blending, the subgrade will have a LBR of not less than 40. Stabilizing material shall be mixed or blended in the subgrade material by plowing, scarifying, disking, harrowing, blading and mixing with rotary tillers until the mixed materials are of uniform bearing value throughout the width and depth of the layer being processed.

H. At least three density determinations shall be made on each day's final compaction operations on each course, and the density determinations shall be made at more frequent intervals if deemed necessary by the City.

I. Lime rock Base: The lime rock base shall be constructed in accordance with Sections 200 and 911 of the FDOT Specifications, to the thickness and width indicated on the drawings.

J. After spreading of the base material is completed, the entire surface shall be scarified and shaped so as to produce the exact grade and cross section after compaction. For double course base, this scarifying shall extend a depth sufficient to penetrate slightly the surface of the first course. The maximum depth of each lift shall be 8-inches.

K. When the material does not have the proper moisture content to ensure the required density, wetting or drying shall be required. If the material is deficient in moisture, water will be added and uniformly mixed in by disking the base course to its full depth. If the material contains an excess of moisture, it shall be allowed to dry before being compacted. As soon as proper conditions of moisture are attained, the material shall be compacted to an average density not less than 98 percent maximum density as determined in more than one course, the density shall be obtained in each lift of the base.

L. During final compacting operations, if blading of any areas is necessary to obtain the true grade and cross section, the compacting operations for such areas shall be completed prior to making the density determination on the finished base.

M. Unless otherwise directed by the Engineer of Record, the surface shall be "hardplaned" with a blade grader immediately prior to the application of the prime coat to remove the thin glaze or cemented surface and to allow free penetration of the prime material. The materials planed from the base shall be removed from the base area.

N. If cracks or checks appear in the base, either before or after priming, which in the opinion of the City, would impair the structural efficiency of the base course, the Contractor shall remove such cracks or checks by rescarifying, reshaping, adding base material where necessary and recompacting.

O. Mixing Base and Subgrade: If at any time the subgrade material shall become mixed with the base course material, the Contractor shall, without additional compensation, dig out and remove the mixture, reshape and compact the subgrade and replace the materials removed with clean base material, which shall be shaped and compacted as specified above.

P. Asphaltic Concrete: The spreading, compacting and jointing the wearing surface shall be in accordance with Sections 330 and 331 of the FDOT Specifications to the thickness indicated on the drawings.

3.0.2. TEMPORARY PAVING

A. Prior to commencing excavation, the asphalt surface shall be saw-cut within the limits of the allowable trench width. Temporary paving will be required along the entire route where the original paved surface is removed. Unless otherwise approved by the City, temporary paving shall be placed the same day the trench is backfilled. The trench shall be backfilled up to a level 1 inch below the existing pavement surface and a temporary, cold mixed sand/asphalt pavement shall be constructed up to the level of the existing pavement surface. The liquid asphalt shall be Grade RC-70, conforming to the requirements of FDOT Specifications, Section 916-2. The sand shall conform to the requirements of FDOT Specifications, Section 902.3 for fine aggregate.

B. The cold mix is to be installed one block at a time, not crossing any intersection, or a maximum of 1,200 feet shall be completed before the Contractor may move forward with his excavation work. Backfill, compaction and temporary paving is to keep pace with the pipe installation. Written permission must be obtained from the City permitting the work to allow greater lengths than 1,200 feet. Permitting agencies may reduce the allowable limits in their permit, or for other unforeseen right-of-way conditions.

C. Prior to completion of the work and within a maximum of 30 calendar days, the Contractor shall remove the 1 inch of cold mix and surplus backfill. The Contractor shall replace it with the specified compacted lime rock base course and asphaltic within the specified working limits. Municipal agencies permitting this work may accelerate the time for removal of the cold mix, at their discretion.

D. The temporary pavement shall be maintained by the Contractor in a condition satisfactory to the City until its removal. Removal shall include any surplus backfill material. Replacement of the temporary pavement with permanent pavement shall be made within 30 days. In replacing the temporary paving with permanent pavement, all work shall be completed in sections compatible with specified traffic maintenance procedures.

E. The Contractor may elect to install a suitable temporary hot mix asphaltic pavement, to be left in-place, in lieu of cold mix, when the hot mix asphalt is left in-place and installed over properly compacted lime rock base course. This temporary pavement shall be incorporated into the specified permanent pavement restoration as part of Type I paving restoration.

F. Sand seal on the lime rock base course will not be permitted in lieu of temporary paving.

G. Unless otherwise approved by the City, temporary paving, shall be placed within twenty-four hours following the completion of backfilling.

3.0.3. TYPE I PAVING REPAIR (LIMEROCK BASE - ASPHALTIC CONCRETE SURFACE)

A. Type I paving repairs shall be made with an 8-inch thick compacted lime rock base and a minimum 1-inch thick asphaltic concrete surface, as detailed in the Standard Details. On Public Works roads asphaltic concrete shall have a compacted thickness of 2-inch, placed in a minimum of two (2) compacted 1-inch lifts.

B. Limerock for pavement base shall be Miami limerock obtained from local sources where the overburden was removed from the pits prior to mining operations. The limerock shall comply with the requirements of FDOT Specifications, Section 911.

C. The backfill previously placed and compacted shall be excavated to the required depth below the existing road surface and the existing paving shall be cut back beyond all excavations, using an abrasive disc saw to trim the edges to straight and true lines, minimum width for the lime rock base shall be equal to the trench width plus 2 feet. Eight inches of lime rock base shall be placed in two layers, each layer compacted to not less than ninety-eight percent (98%) density in accordance with Section 200 of FDOT Specifications. During rolling, the base shall be wetted down, as necessary, to secure the greatest possible compaction. After rolling, the entire surface of the base shall be thoroughly scarified to a depth of not less than 3 inches and shaped to conform to and be parallel with the existing surface, then watered and rolled again. Rolling and watering shall continue until the entire depth of the base is bonded and compacted into an unyielding mass.

D. If at any time the subgrade material becomes mixed with the lime rock base course materials, the Contractor shall, without additional compensation, dig out and remove the mixture, reshape and compact the subgrade and replace the materials removed with clean rock which shall be watered and rolled until satisfactorily compacted.

E. After the lime rock base course has been properly prepared and is dry and ready to receive the wearing surface, a tack coat of emulsified asphalt, in accordance with Section 02741, shall be applied at a rate of 0.10 gallon per square yard, immediately followed by the asphaltic concrete. The tack coat shall be applied to the entire lime rock base uniformly, and shall thoroughly coat all surfaced. Care shall be taken to tack coat and bond the edge of surrounding pavement.

F. The asphaltic concrete shall be plant mixed, using the best grade of local aggregates of approved size and gradation and mixed with an approved binder and conforming the either the State of Florida Department of Transportation Specifications, Type S-1 Asphaltic Concrete, Sections 330, 331 and 916 of FDOT Specifications, or Miami Dade County Public Works Type I, as ordered by the Engineer of Record.

G. Where the width of the repair permits, the asphaltic concrete plant mix material shall be placed by means of an approved mechanical spreader and finisher. The mixture shall be compacted to true grade and cross section by means of a tandem roller weighing not less than eight tons. The compacted asphaltic concrete mixture shall not be, in any case, less than one inch in thickness. Rolling shall proceed as closely behind the spreader as possible and all material shall be completely compacted the same day it is placed. The minimum width of the wearing surface shall be the same as the base.

3.0.4. TYPE IV PAVING REPAIRS (CONCRETE SLAB – RIGID PAVEMENT)

A. Type IV repairs will be used when the restoration work falls within the limits of existing rigid pavement.

B. Paving repairs shall be similar to Type III paving repairs except that No. 4 reinforcing steel bars spaced 12 inches on centers both ways shall be substituted for the mesh reinforcement, and the slab shall be 8 inches thick instead of 6 inches, with the top of the concrete matching the elevation and finish of the existing pavement. The asphaltic concrete surface course is not required.

3.0.5. TYPE V PAVING REPAIRS (ASPHALTIC CONCRETE WEARING SURFACE OVERLAY)

A. Type V paving repairs shall be made where noted on the plans and/or as ordered by the Engineer or Record. Type V paving repairs shall consist of a machine-laid asphaltic concrete wearing surface overlay, which shall be a nominal one-inch thick asphaltic concrete, meeting the material requirements of Type I repairs, as specified hereinabove. As used herein, "overlay" shall mean Type V paving repairs. A special wearing surface may be substituted, if required.

B. In general, the overlay shall be applied in a full lane width or widths, after the permanent paving repairs over the trench have been made. Type V is usually in addition to required Type I repairs. Since the quantity of Type V repairs that may be required is usually unknown until pavement restoration work begins, Type V repairs may be established in the Proposal on a contingent basis.

C. All longitudinal and transverse asphalt replacement overlay wearing surfaces shall butt into adjacent existing asphalt wearing surfaces in full lane asphaltic pavement restoration. The finish elevation of the new full lane overlay shall meet existing elevations adjacent to the new work.

D. The existing asphaltic concrete surface shall be saw cut for its full depth or 1-inch minimum, and then stripped back for at least 2 feet into the area to be overlaid to a second cut which shall also be in clean straight lines. The second, or interior, cut edge shall be rolled with a tandem roller weighing not less than 8 tons before the overlay is applied. The stripped area shall be used to provide a smooth transition or "feather"

area between the overlay and the existing pavement. Before placing the overlay, all cut edges and the surface of the stripped area shall be tack coated with emulsified asphalt as specified herein below.

E. If the Contractor requests in writing to "feather" the longitudinal edge, and if written permission is granted to "feather" the asphalt by the City a sanded mix of 70-30 type shall be used. "Feathering" shall begin 18 inches from the tapered edge.

F. Prior to installing a full lane width overlay over existing asphaltic pavement the trench and shoulders over the pipe shall be sawcut and filled with asphaltic concrete to the required depth, terminating flush with the existing adjacent asphalt in accordance with the municipality having jurisdiction over the work for Types I, II or M. Type V overlay will be installed as detailed above.

G. When a minor amount of asphalt surface will remain, generally with large pipe installations, after the pipe has been installed and the required longitudinal saw cutting of the asphaltic pavement completed, the Contractor may request permission to remove all the asphalt in the lane, by saw cutting the asphalt adjacent to the existing lane, then placing the Type V overlay flush with the adjacent asphalt. This would require that the Type I, II or M finish elevation be lowered 1 inch to allow for the Type V overlay.

H. Before the overlay is applied, existing surfaces shall be swept clean of all dirt and debris, using a power driven broom if warranted by the size of the location to be overlaid and/or as ordered by the City. Pavement edges shall be cleared of all encroaching vegetation, loose sand, rock and all other foreign matter. When the existing surface is thoroughly clean, a tack coat of Emulsified Asphalt Grade RS-2 (anionic) shall be applied at the rate of approximately 0.10 gallon per square yard, immediately followed by the asphaltic concrete overlay.

I. Machine-laid overlay shall be placed by means of an approved mechanical spreader and finisher, and the mixture shall be compacted to true grade and cross section by means of a tandem roller weighing not less than 8 tons.

J. The compacted overlay shall be thicker as required to produce a smooth uniform surface free of any irregularities but shall not be less than one inch in thickness. Existing depressed areas in the asphaltic pavement, which could collect water after a rainfall shall be corrected before placing the asphaltic overlay. Rolling shall proceed as close behind the spreading of the asphaltic overlay as possible, and all materials shall be completely compacted the same day it is placed.

3.0.6. SLURRY SEAL COAT

A. Slurry-seal repairs shall be made where ordered by the Engineer of Record or the City.

B. Before any material is laid, the existing surface shall be cleaned with brooms or power blowers. Vegetation which has overgrown the edges shall be removed. All cracks, potholes and depressions shall be brought up to grade with bituminous concrete skin patching.

C. A tack coat, if required, shall consist of emulsified asphalt SS-1h, diluted with 3 parts of water, sprayed and squeegeed or broomed at a rate of 0.1 to 0.2 gallons per square yard.

D. A minimum thickness of 1/8-inch to a maximum of 1/4-inch of slurry mix shall be spread by a drag distributor at a maximum rate of 180 feet per minute. Any ridges or surplus material shall be smoothed by hand squeegee. The pavement shall be kept damp with a fog spray just ahead of the machine.

E. A second coat shall not be applied to, nor traffic permitted to drive upon, the first application until it has thoroughly dried. (A dry condition is such that an automobile tire track does not show after driving on the surface).

3.0.7. ASPHALT COLD MILLING

A. Cold milling of the existing pavement for a 1-inch depth shall be done by using an automated pavement planer capable of maintaining an accurate depth. Cold milling equipment shall meet the approval of the Engineer and the governing agency having jurisdiction at the location of the pavement milling operation. The Engineer's word as to the acceptability of the equipment shall be final

B. After the pavement has been milled and the existing pavement removed, a tack coat shall be applied as specified above.

C. The required width of 1-inch thick asphaltic concrete wearing surface of the specified wearing course shall be applied in accordance with the above specifications.

D. The Contractor shall perform asphalt cold milling where called for on the plans or as required for a complete installation, when approved or requested by the City. Cold milling shall be done using an automated pavement planer capable of maintaining an accurate depth. Cold milling equipment shall meet the approval of the City and governing agency having jurisdiction at the location of the pavement milling operation. All charges for maintenance of traffic, transportation of personnel, equipment and other mobilization charges shall be considered as incidental to the cold milling operation.

E. Cold asphalt milling shall be provided to improve the rideability of the finished pavement, lower the finished grade adjacent to an existing curb prior to resurfacing or to completely remove existing pavement. The overall length of the milling machine (excluding the conveyor) shall be a minimum of 18 feet, and having a minimum cutting

width of six feet. The milling operation shall be operated to effectively minimize the amount of dust being emitted from the machine. Prewetting of the pavement may be required. In areas where milling is to be performed around the City utility structures such as manholes, valve boxes etc., proper caution shall be taken as not to damage any of the structures. Saw-cutting of the concrete surrounding the structure and using a pick or other means so as not to disturb the structure shall be employed to prevent any damage. Prior to opening an area which has been milled to traffic, the pavement shall be thoroughly swept with a power broom or other approved equipment to remove to the greatest extent practicable, the fine material which will dust under traffic. This operation shall be conducted in a manner so as to minimize the potential for creating a traffic hazard and to minimize air pollution.

F. The milling operation shall be continuous so as to complete each site without any delays. All milling operations shall be coordinated by the City Inspector.

G. Traffic maintenance charges shall include the installation and maintenance of all traffic control and safety devices, in accordance with specifications outlined in the Dade County Public Works Manual. In addition, the Contractor shall provide all barricades, flashing warning lights and/or arrow boards necessary to maintain safety and warn motorists of the construction.

3.0.8. REPAIR OF DAMAGED PAVEMENT

A. All damage to pavement by the Contractor as a result of Work under this project shall comply with "DAMAGE BY CONTRACTOR", above, and shall be repaired in a manner satisfactory to the City. The repair shall include the preparation of the subgrade, the placing and compacting of the lime rock base, the priming of the base, the placing and maintaining of the surface treatment, all as specified herein.

B. The width of all repairs within the work area shall extend at least 12 inches beyond the limit of the damage. The edge of the pavement to be left in place shall be cut to a true edge with a saw or other acceptable method so as to provide a clean edge to abut the repair. The line of the repair shall be uniform with no irregularities. Repair of damage by the Contractor beyond the work area shall be approved by the governing agencies having jurisdiction over the work prior to commencing the work.

3.0.9. CONCRETE PAVEMENT REPAIR

A. This type of repair shall be made only on Florida Department of Transportation roadways when the original pavement is concrete.

B. The existing pavement shall be saw cut in straight lines as outlined by the City at the location of the replacement. The pavement shall be removed and the fill shall be mechanically compacted to 98% of the maximum density obtainable as determined by AASHTO Standard T-180. The fill in the trench and shoulders shall be brought to a

depth equal to the thickness of the existing concrete pavement, but not less than 8 inches in any case. The opening thus formed, shall be filled with concrete having a design strength of 5,000 psi and made with High Early Strength Cement. The concrete slab shall be reinforced with ½ inch steel reinforcing rods, 12 inches on center each way, placed 2 inches above the bottom of the slab. The surface of the slab shall be struck off with a screed and finished with a wood float and brush to conform to the grade and finish of the existing pavement. Apply liquid curing compound after initial set. The Contractor shall provide adequate means to protect the slab until it has cured sufficiently to withstand vehicular traffic without spalling or breaking apart. Construction joints and expansion joints in the original pavement shall be reproduced in the repair with matching materials.

END OF SECTION

02765 PAVEMENT MARKINGS AND TRAFFIC SIGNS

PART 1 – GENERAL

1.0.1 SCOPE OF WORK

This section consists of pavement markings and traffic signs on the Drawings, specified herein and as required for a complete installation.

1.0.2. QUALITY ASSURANCE

A. The phrase "DOT Specifications" shall refer to the Florida Department of Transportation Standard Specifications for Road and Bridge Construction, latest edition. The DOT Specifications, are referred to herein and are hereby made a part of this Contract to the extent of such references, and shall be as binding upon the Contract as though reproduced herein in their entirety.

B. Pavement markings for this Project shall conform to the Florida Department of Transportation Standard Specifications for Road and Bridge Construction, latest edition. Pavement markings removed or obliterated by the Contractor's operations shall be promptly replaced in kind to the satisfaction of the City of Opa-Locka Public Works Department, or other authority having jurisdiction over the work area.

1.0.3. CERTIFICATION

The Contractor shall furnish the manufacturer's certification that all signs furnished conform to these specifications and shall replace or repair at his expense all signs that fail to meet this requirement.

PART 2 - PRODUCTS

2.0.1. PAVEMENT MARKING

Paint for pavement strips shall be as specified in Part 3, Execution.

2.0.2. REFLECTIVE MARKERS

Reflective markers shall be installed in the pavement in accordance with OSHA, DOT and City of Opa-Locka Public Works requirements.

2.0.3. TRAFFIC SIGNS

A. General: Traffic regulating signs shall conform to the colors, dimensions and requirements of the Manual on Uniform Traffic Control Devices (ANSI) and displaying the lettering and symbols indicated on the Drawings.

B. Sign Panels and Support Members: Sign panels and support members shall conform to Aluminum Association Alloy 6061-T6.

C. Bolts: Bolts shall conform to Aluminum Association Alloy 2024-T4 with an anodic coating 0.0002-inches thick minimum and chromate sealed.

D. Nuts: Nuts shall conform to Aluminum Association Alloy 6269-T9.

E. Reflective Sheeting: Reflective sheeting shall conform to DOT Type A requirements.

F. Construction Warning Signs: The CONTRACTOR shall install traffic and warning signs during construction in accordance with OSHA, DOT and Dade County Public Works requirements.

PART 3 - EXECUTION

3.0.1. TRAFFIC PAINT

A. This type of pavement painting shall be used where no thermoplastic paint is required or as temporary paint during the time required for paving "cure" prior to application of thermoplastic paint markings.

B. Traffic paint used for this work shall conform with the requirements of Section 971-12 of the Florida Department of Transportation Standard Specifications for Road and bridge Construction, or, at the Contractor's option, fast dry traffic paint, as specified in D.O.T. Specifications, Section 971-13, may be used.

C. The colors of the paint shall be yellow or white, as existed before the repair.

D. All equipment shall be of a type and design which will readily produce the required uniformity of application of the stripes, both as to thickness of coating and alignment. The paint machine shall be of the spray type, capable of spraying the paint to the required "spread" without thinning of the paint. The paint tank shall be equipped with a mechanical agitator. The nozzle shall have cut-off valves which will apply broken or "skip" lines automatically. Each nozzle shall also be provided with suitable line guides, either metallic shrouds or air blasts.

E. Painting shall be done only during daylight hours and, as far as practicable, shall be terminated in time to permit sufficient drying by sunset. No paint shall be applied when moisture is present on the surface to be painted or when the air temperature is below 40 degrees

F. Painting shall not be done when winds are sufficient to cause spray dust. F. The surface which is to be painted shall be cleaned, by compressed air or other effective means, immediately before the start of painting, and shall be clean and dry when the

paint is applied. Any vegetation or soil shall be removed from the pavement before edge striping is begun.

G. The paint shall be thoroughly mixed before it is poured into the painting machine and no thinning of the paint will be allowed at any time. Before the start of each day's work, the paint container, the connections, and the spray nozzles on the machine shall be thoroughly cleaned with paint thinner or other suitable cleaner.

H. The traffic stripe shall be of the specified width, with clean, true edges and without sharp breaks in the alignment. A uniform coating of paint shall be obtained and the finished stripe shall contain no light spots or paint skips. Any stripes which do not have a uniform, satisfactory appearance, both day and night, shall be corrected.

I. All newly painted stripes, including edge stripes, shall be protected until the paint is sufficiently dry to permit vehicles to cross the stripe without damage from the tires. While the center line stripes are being painted, all traffic shall be routed away from the painting operations and the newly painted stripe. When necessary, a pilot car shall be used to protect the painting operations from traffic interference.

J. Any portions of the stripes damaged by passing traffic or from other causes shall be repainted.

K. Paint for temporary pavement markings shall also be used where thermoplastic markings are to be applied after the asphaltic concrete has "cured." The cure time shall be based on thermoplastic manufacturer's recommendations. However, in accordance with FDOT requirements, asphalt shall have been in place for 30 days before application of thermoplastic stripe.

3.0.2. THERMOPLASTIC TRAFFIC STRIPES AND MARKINGS

A. Thermoplastic pavement markings, including stripes, pavement messages, stop bars, directional arrows, reflective pavement markers and other miscellaneous items, shall be replaced as existed before the repair was made. The thermoplastic compound shall be extruded or sprayed onto the pavement surface in a molten state by mechanical means, with surface application of glass spheres, when required. Upon cooling to ambient pavement temperature, the compound shall produce an adherent pavement marking of specified thickness and width and capable of resisting deformation.

B. The colors of the compound shall be white or yellow, as existed before the repair.

C. Where thermoplastic markings are to be applied to concrete pavement, a sealing primer, as specified in F.D.O.T. Specifications Section 711-2.2, shall be applied in advance of the placing of the stripes.

D. The thermoplastic shall be applied to the pavement utilizing either extrusion or spray application equipment. The application equipment shall be so constructed as to provide continuous mixing and agitation of the material. Conveying parts of the equipment between the main material reservoir and the shaping die or gun shall be so constructed as to prevent accumulation and clogging. The equipment shall be constructed so that all mixing and conveying parts up to and including the shaping die or gun, maintain the material at the plastic temperature with heat transfer oil or electrical element controlled heat. Direct fire heat transfer will not be allowed.

E. The application equipment shall be so constructed as to insure continuous uniformity in the dimensions of the stripe. The applicator shall provide a means for cleanly cutting off square stripe ends and shall provide a method of applying "skip" lines. The use of pans, aprons, or similar appliances which the die overruns will not be permitted.

F. Glass spheres applied to the surface of the completed stripe shall be applied by an automatic bead dispenser attached to the striping machine in such a manner that the beads are dispensed almost instantaneously upon the installed line.

G. Special kettle(s) shall be provided for melting and heating the thermoplastic material. The kettle(s) shall be equipped with automatic thermostatic control devises to provide uniform temperature control and prevent overheating of the material. The applicator and kettle(s) shall be equipped and arranged as to satisfy the requirements of the National Fire Underwriters, the State of Florida, Dade County and any municipal authority applicable to where the work is being done.

H. Applicators shall be mobile and maneuverable to the extent that straight lines can be followed and normal curves can be made in a true arc. The applicator equipment to be used on roadway installations shall consist of either hand equipment or truck mounted units depending on the type of marking required.

I. The hand applicator equipment shall be insulated, have sufficient capacity to hold 150 pounds of molten material, and be sufficiently maneuverable to install crosswalks; lane, edge and center lines; arrows and legends.

J. The truck mounted unit for lane, edge and center lines shall consist of a mobile selfcontained unit carrying its own material capable of operating at a minimum speed of five miles per hour while installing striping.

K. Application time, weather limitations and surface preparation shall be in accordance with FDOT. Specifications Sections 710-4, 710-5 and 710-8. In accordance with FDOT requirements, asphalt shall have been in place for 30 days before application of thermoplastic stripe.

L. The material, when formed into traffic stripes or other markings, shall be readily renewable by placing an overlay of new material directly over an old line of compatible material in such a manner that no splitting or separation takes place.

M. The application temperature shall be within the range specified by the manufacturer of the thermoplastic compound being used.

N. All pavement edge lines, gore, island and diagonal strip markings, bike lane symbols and messages, wherever located, shall have a minimum thickness of 0.060 inch at the edges and a maximum thickness of 0.120 inch at the center. A minimum average film thickness of 0.060 inch shall be maintained. All lane lines, center lines, transverse markings (except shoulder markings) and pavement markings within traffic wearing area (such as dotted turning guide lines) shall have a minimum thickness of 0.090 inch at the edges and a maximum thickness of 0.188 inch at the center. A minimum average film thickness of 0.090 shall be maintained. All thickness measurements shall be an average in any three foot length.

O. The glass sphere top coating shall be applied by a type of glass sphere dispenser or gun which will embed the spheres into the line surface to at least one-half their diameter. The glass sphere top coating shall not incur more than a 10 percent loss during the first 30 days of traffic exposure.

P. Reflective pavement markers shall be installed as they existed before the repair. They shall be replaced with the appropriate color or colors and oriented in the correct direction as specified in Section 706 of the F.D.O.T. Specifications. Paving markings for this Project shall conform to the Florida Department of Transportation Standard Specifications for Road and Bridge Construction, as revised by the governing agency.

3.0.3. FABRICATION

Preparation of sign blanks and fabrication of reflectorized faces shall conform to the applicable requirements of DOT Sections 700-4 and 700-5.

END OF SECTION

02840 CONCRETE BARRIER

PART 1 – GENERAL

1.0.1 SCOPE OF WORK

A. Construct precast or cast in place concrete barriers, traffic railings, opaque visual barriers, and parapets, herein referred to as rigid barrier, in accordance with the Standard Plans and the details shown in the Plans. Use stationary removable forms or sliding forms to construct the rigid barrier. Do not use permanent precast concrete rigid barrier on bridge or box culvert structures.

B. Submit written certification from the manufacturer of the precast rigid barrier that the barrier meets the requirements of this Section. Rigid barrier is produced using certification acceptance; therefore, assume responsibility for performance of quality control testing and inspections required by Sections 346 and 400 of FDOT's Standard Specifications Manual. Perform all Quality Control Testing and inspections using CTQP qualified testing personnel. Perform compressive strength testing in a laboratory inspected by CCRL or CMEC.

C. Ensure that each shipment of products to the job site includes a list of products shipped and the required written certification statement for each product. Submit this list and certifications to the Engineer.

PART 2 - PRODUCTS

2.0.1. MATERIALS

A. Meet the following requirements:

Flowable Fill .....Section 121
Concrete ..... Sections 346 and 347
Reinforcing Steel .....Section 415
Joint Materials..... 932-1.1
Joint Materials*..... 932-1.2 and 932-1.3 Barrier
Delineators *.....Sections 705

*Use products listed on the Department's Approved Product List (APL).

PART 3 - EXECUTION

3.0.1. CONSTRUCTION

A. General: The Contractor may use stationary removable forms or slip form construction methods provided a completed rigid barrier with acceptable alignment and finish is obtained. Do not use forms which are damaged or are not in alignment. At no expense to the Department, remove and replace sections of rigid barrier having unconsolidated concrete, surface blemishes, deviations in alignment or profile which exceed tolerances, or other defects which cannot be repaired to the satisfaction of the Engineer.

B. Stationary Form Construction: Provide precast or cast in place concrete rigid barrier constructed using stationary forms in accordance with Section 400 and provide a general surface finish. Align and erect the stationary form so that all plane surfaces of the finished barrier will have no deviation greater than 3/8 inch measured as an ordinate between the concrete and a 10 foot straightedge. Correct all alignment deviations greater than 3/8 inch. Straightedge by half lapping the straightedge for the full length of all plane surfaces.

C. Slip Form Construction: When electing to use the slip form method in lieu of the stationary forming method, place the concrete with a slip form machine approved by the Engineer. The concrete cover tolerance is plus or minus 3/4 inches from the plan dimensions, except the minimum concrete cover, as constructed, must not be less than 1-3/4 inches.

Provide a finished texture to the slip formed rigid barrier by hand troweling, brushing, or both to eliminate pockmarks, blemishes and any other discontinuities in surface texture. Ensure that the final finish has a fine texture and is free of pinholes, pockmarks, and blemishes.

Remove and recast or repair sections of slip formed rigid barrier having areas of unconsolidated concrete, having surface blemishes, and/or having pockmarks greater than 1/2 inch in diameter after hand troweling and brushing. Repair areas of unsatisfactory surface finish by hand methods using mortar screened from the concrete used to construct the rigid barrier. Use the mortar screened from the rigid barrier concrete only to fill holes and surface blemishes below the slip formed surface of the concrete. Do not use mortar as a surface overlay coating on the rigid barrier concrete.

During the finishing operation, while the concrete remains plastic, straightedge all plane surfaces of the slip formed rigid barrier with a 10 foot straightedge. Straightedge by half lapping the straightedge for the full length of the plane surfaces. Correct any deviation found during straightedging, greater than 3/8 inch, measured as an ordinate between the concrete surface and the straightedge, in an approved manner at no expense to the Department. Do not use surface overlay coatings of mortar screened from the concrete, or surface overlay coatings of concrete to correct alignment deviations.

3.0.2. JOINTS

A. General: Place expansion and contraction joints in concrete rigid barrier either mounted on or adjoining rigid structures in a manner similar to the type and method of jointing used in the supporting or adjoining structure or as shown in the Contract Documents. Place expansion and contraction joints in concrete rigid barrier supported by soil or flexible foundation materials in the manner detailed in the Plans.

B. Contraction Joints in Rigid Barrier Supported by or Adjoining Rigid Structures: The Contractor may form or saw contraction joints. When sawing contraction joints, saw them as soon as the concrete has hardened sufficiently to permit sawing without raveling and before uncontrolled cracking occurs, but in no case later than 12 hours after casting. Match contraction joints to adjacent contraction joints in the structure. Space contraction joints at 15 to 30 foot intervals. For rigid barrier on bridge structures or approach slabs, space contraction joints as shown in the Contract Documents.

C. Expansion Joints in Rigid Barrier Supported by or Adjoining Rigid Structures: Construct expansion joints at right angles to the face, and extend them through the entire crosssection of the rigid barrier. Construct expansion joints at the same location and width as the expansion joints in the structure on which the rigid barrier rests and at other locations shown in the Contract Documents. Form expansion joints with an expansion filler material or removable forming materials and secure to the forms as required to provide proper position.

3.0.3. REPAIRS AND REJECTION

A. For permanent precast concrete rigid barrier that has not been installed, evaluate cracks, spalls and other deficiencies in accordance with 450-12. Repair deficiencies in accordance with 450-13 or the plant's approved repair methods that are included as part of the Quality Control (QC) Plan. Ensure that the original performance and durability of the repaired rigid barrier is maintained. Use materials for concrete repair that will meet or exceed the strength requirement for the class of concrete used. Materials meeting the requirements of Section 930 may be substituted for non-shrink grout when required by 450-13. Concrete rigid barrier is subject to rejection if it fails to conform to any of the Specification requirements after repair. The disposition of concrete cracks in rigid barrier after installation shall be in accordance with 400- 21.

END OF SECTION

02900 LANDSCAPING

PART 1 – GENERAL

1.0.1 SCOPE OF WORK

D. Work included in this Section includes tree removal, tree relocations, furnishing and planting trees, plants and grass of the species, sizes and quality specified, fertilizing, watering, maintaining plants, guarantee and obtaining all permits from municipalities having jurisdiction over this work.

E. The schedule of trees and plants, if applicable, is shown on the drawing, and indicates the common and botanical names, the quantities and sizes of plants to be used.

F. Plants shall be sound, healthy and vigorous, well branched and densely foliated when in leaf with well developed root systems free of disease and insects, pests, eggs or larvae. No plants will be accepted unless healthy and showing satisfactory foliage conditions.

1.0.2. Solid sod and grass submittal to be submitted to the Engineer or Record for approval prior to installation.

PART 2 - PRODUCTS

2.0.1. GRASSING, SOLID SOD AND SEED:

A. General:

1. Solid sod shall be planted in the unpaved areas abutting the structures and extending to the limits shown on the Plans.

2. Grass seeding: All other unpaved areas shall be planted with grass seed and mulched.

3. When solid sod or grass seed is to be placed adjacent to or in close proximity to existing sod or grass, the Contractor is to use similar sod or grass and obtain approval from the Engineer of Record prior to installation. In public areas and rightof-ways the Contractor is also required to comply with Governmental Agency requirements and provide the City with written approval of said agency prior to installation of grass and sod.

B. Materials:

1. Solid Sod:
   a. Solid sod shall be certified bitter blue St. Augustine Floratam. The sod shall be firm touch texture having a compact growth of grass with good root development. It shall contain no weeds or other objectionable vegetation.

b. The soil embedded in the sod shall be good clean earth, free from stones and other debris. The sod shall be free from fungus, vermin and other diseases. The sod and soil shall be approximately 2" thick.

c. Before being cut and lifted, the sod shall have been mowed at least three times with a lawn mower, with the final mowing not more than seven days before the sod is cut. The sod shall be cut into uniform dimensions approximately 12" X 24". Abutting joints shall be free of open spaces with a tamped or rolled surface so that there are no joint openings.

2. Topsoil: Soil utilized for planting grasses shall be a mixture of pulverized 50% rock free siliceous sand and 50% clean mulch from an approved source. All ingredients shall be free of sticks, roots, rocks, lumps or other impurities or debris. All soil shall be delivered in a loose friable condition. Topsoil may be "unsuitable top soil" removed during the course of other work hereunder, if approved by the Engineer of Record. Topsoil shall be free of undesirable plants and seeds. Any such plants sprouting from areas of recent topsoil application shall be presumed to have originated in the topsoil and shall be eradicated from the area by the Contractor at his expense. Means of eradication shall be submitted to the Engineer of Record for approval.

C. Planting of Grassing:

1. Solid Sod: Unless otherwise directed by the Engineer, four inches of topsoil shall be placed. The ground area shall be saturated with water. Sod shall be placed on the graded and watered ground firmly butted on all sides by sod without leaving holes, slots, or depressions. Sod shall be top dressed with soil (herein before specified) where required to bring all fill to voids and provide a uniform grass matt if approved by the Engineer of Record. Soil shall firmly abut all structures to which it surrounds or contacts. Immediately after the grassing process, the entire grassed or mulched area shall be rolled thoroughly with a cultipacker traffic approved roller, or other 1,000 pound roller. At least two trips over the entire area will be required.

2. Grass Seeding: As above, place four inches of topsoil and saturate with water. Thereafter seed and mulch

D. Fertilizing Grassing:

1. Commercial fertilizers shall comply with all Federal, State and County fertilizer laws.

2. The numeral designations for fertilizer indicate the minimum percentage (respectively) of (1) total nitrogen, (2) available phosphoric acid, and (3) water soluble potash, contained in the fertilizer.

3. Designations may be approved specifically for a particular project and if liquid fertilizer other than that of chemical designation 8-8-8 is used, the total nitrogen content shall not exceed 12 percent.

4. At the Contractor's option liquid or dry fertilizer may be used. All grass shall be fertilized and watered in during the planting operation using the application rate and method directed by the manufacturer of the fertilizer used.

E. Guarantee and Maintenance of Grassing:

1. Guarantee:

a. The Contractor shall guarantee all grasses for a period of six months from the date of acceptance of the completed overall project from the Contractor.

b. The Contractor shall guarantee the grasses shall be alive, free of disease and have a healthy appearance at the end of the guarantee period.

c. During the guarantee period, the Contractor shall replace any grass which is diseased, dead or visually unsightly within 3 days when requested in writing.

2. Maintenance:

a. The Contractor shall maintain all grass guaranteed above for the period of the guarantee. Such maintenance shall include filling, leveling, and repairing eroded areas, replanting areas where the establishment of the grass does not develop satisfactorily, and watering as required. In no case shall such maintenance be less than 3 weeks for watering and 6 weeks for remaining maintenance care.

b. The maintenance of the grass shall include, regular mowing, one application of approved dry or liquid fertilizer to the grasses guaranteed above. The fertilizer shall be applied and watered in as directed by the manufacturer. The time of fertilizing shall be approved.

c. The Contractor shall be required under the maintenance of the guaranteed grasses to safeguard and take all possible precautions against damage from the elements and other possible damage. The Contractor shall be required to clean up the effected landscape area during the maintenance period due to any such event. The Contractor shall not be responsible to replace grasses

properly protected under this item of the specifications, damaged by the events beyond his control.

2.0.2. PLANTS AND TREES: (If required by relocation and if shown on the drawings)

A. Grade Standards and Quality:

1. Quality of all plants shall be at least equal to that defined as No. 1 by the State Plant Board of Florida in Grades and Standards for Nursery Plants, Part I, 1963 Revised Edition, and Part II, Palms and Trees.

2. All plants shall be sound, healthy and vigorous, well branched and densely foliated when in leaf. They shall have healthy, well developed root systems and shall be free of disease and insect pests, eggs or larvae.

3. No plants will be accepted unless they are healthy and show satisfactory foliage conditions.

4. All plants shall conform to the measurements specified or indicated on the Drawings except that up to 10 percent of undersized plants in any one variety or grade may be used provided there are sufficient oversized plants to make the average equal to or above specified grade. Plants larger than specified may be used if approved by the Engineer of Record, but use of such plants shall not increase the Contract price. The spread of roots or ball of earth for larger plants shall be increased in proportion to the size of the plant.

B. Plant Designation: With reference to method of cultivation, root system status, etc., plants for landscaping shall be classified under the following designations:

1. Balled and Burlapped:

a. Plants so classified shall be dug with firm natural root balls of earth, of sufficient diameter and depth to include most of the fibrous roots. The root ball of these plants shall be properly wrapped with burlap sack material and remain protected and moist until they are planted. Plants whose burlapped balls have cracked or become sagging, or plants showing scars from rope and cable marks or other improper handling are not acceptable. All balled and burlapped plants which cannot be planted immediately upon delivery shall be set on the ground and shall be well protected with soil, wet moss, or other acceptable material. The plants shall be set with the burlap cover intact and with the burlap showing, until inspection. At final inspection, the burlap may be cut away to ground level and completely covered with soil.

b. It is required that, balled and burlapped materials, 1½ inches or more in caliper, shall be root-pruned at least 45 days before being dug and such fact shall be certified on accompanying invoices. Where, in the opinion of the Engineer of Record following his inspection of the grower's stock, adequate root pruning is being obtained by the grower's general cultivating practices, he may consider such fact as meeting this requirement.

2. Wire Balled and Burlapped:

a. Plants grown in soil of a loose texture which does not readily adhere to the root system shall have sound hog wire placed around the burlapped ball before the plant is removed from the excavation. The wire shall be looped and tensioned until the burlapped ball is substantially packaged so as to prevent loosening of the soil around the roots during handling.

b. Wire balled and burlapped plants shall otherwise comply with the requirements for balled and burlapped plants described in 1 above.

3. Container Grown Plants:

a. Container grown plants shall have been grown in a container large enough and for sufficient time for the root system to have developed well enough to hold its soil together firm and whole. No plants shall be loose in the container. Plants which have become pot bound or for which the top system is too large for the size of the container, will not be acceptable.

b. All containers with vertical sides shall be cut and opened fully, in a manner such as will not damage the root system. Container grown plants shall not be removed from the container until immediately before planting, when all due care shall be taken to prevent damage to the root system.

4. Bare-Root Plants: No bare-root plants shall be used unless specifically required by the Engineer of Record or called for on the drawings.

5. Palms:

a. Palm species shall have the roots adequately wrapped before transplanting except when they are container grown. Burlapping will not be required if the palm is carefully dug from marl or heavy soil that it adheres to the roots and retains its shape without crumbling. During transporting and after arrival, root balls of palm shall be carefully protected from the wind and exposure to the sun. After delivery to the job site, if palm is not planted within 24 hours, the root ball shall be covered with a moist material.

b. All moving of sabal, coconut and royal palms shall be in accordance with Heavy Trunk Palms, as described in "Florida Grades and Standards for Nursery Plants, Part II".

6. Rooted Cuttings: Cuttings shall be kept moist at all times. They shall be rooted in a medium other than wood shavings and have at least 4 root tips of ½-inch or longer.

C. Transportation and Inspection:

1. Plant transportation shall comply with all Federal and State regulations therefor and, upon delivery at the site, all plants shall be inspected for conformity to specifications and for handling damage. Rejected plants shall be removed immediately from the site by the Contractor.

2. Foliage trees when moved in full leaf shall be treated with "Wilt Pruf" or "Plantguard", as they are loaded at their growing site. This material shall be applied to the entire tree with a fine spray at a dilution of 1 part "Wilt Pruf" or "Plantguard" to 15 parts of water.

3. Trees which have to be transported in excess of 10 miles to reach the job site, shall be covered with a 70 percent shade-cloth-tarp, or equal in order to prevent wind burn.

4. Immediately following the delivery and inspection at the job, all plants with exposed roots shall be heeled-in moist soil or peat moss. All plants heeled-in shall be properly maintained by the Contractor until planted.

5. The balls of balled and burlap plants, must, if not immediately planted after delivery and inspection, be adequately protected by covering until removed for planting, in a manner appropriate to prevailing conditions and in accordance with accepted horticultural practices. The Contractor shall, in loading, unloading, or handling of plants, exercise utmost care to prevent injuries to the branches or roots of the plants. The solidity of the ball of balled and burlapped plants shall be carefully preserved. Handling of the plant by parts other than the ball shall be cause for rejection of such plant. Bare root plants which have been heeled-in shall be properly handled during the distribution of planting beds.

D. Planting Materials:

1. Planting Soil: Planting soil shall be a pulverized mixture of 50% rock free siliceous sand and 50% clean mulch from an approved source. All ingredients shall be free of sticks, roots, rocks, lumps, or other impurities or debris. All soil shall be delivered in a loose friable condition.

2. Fertilizer:

    a. Fertilizer shall be as specified in subsection 2.01-D, herein.

    b. Fertilizer shall be selected and used as recommended by the manufacturer for each particular plant.

3. Mulch: Mulch shall be ground bark, bark peelings, peat, hay or straw. Cypress mulch shall not be used because its harvest degrades cypress wetlands.

4. Anti-Desiccant: Anti-desiccant shall be "Wilt Pruf", "Plantguard", or equal, delivered in the manufacturer's containers and used in accordance with the manufacturer's instructions.

5. Water:

    a. Water for the irrigation of the new plantings during the progress of construction shall be provided by the Contractor in accordance with the provisions previously specified.

    b. The Contractor shall furnish adequate watering equipment and shall continue watering to properly establish the new plantings throughout the maintenance period.

6. Wire: Wire for the bracing and guying shall be pliable No. 12 or No. 14 gauge galvanized soft steel wire.

7. Stakes and Ties: Stakes and ties shall be provided in accordance with the requirements of PART 3 EXECUTION, below.

PART 3 - EXECUTION

3.0.1. EXCAVATION OF PLANT HOLES:

A. Plant hole excavations shall be roughly cylindrical in shape, with the sides approximately vertical. Plants shall be centered in the hole, with the trunk location as shown in the Plans.

B. Bottoms of the holes shall be loosened at least 6-inches deeper than the required depth of excavation.

C. Holes for balled and burlapped and wire balled and burlapped plants shall be large enough to allow at least 8-inches of backfill around the earth ball. For root balls over 18-inches in diameter, this dimension shall be increased to 12-inches.

D. Where excess material has been excavated from the plant hole, the excavated material shall be disposed of as and where directed by the Engineer of Record.

E. PREPARATION OF GROUND

1. Four inches minimum thickness of topsoil shall be placed over the areas off the right of way on which the sod is to be placed.

F. APPLICATION OF FERTILIZER

1. Before applying fertilizer, the soil pH shall be brought to a minimum range of 6.0 - 7.0.

2. The fertilizer shall be spread uniformly over the area to be sodded at the rate of 500 pounds per acre, by a spreading device capable of uniformly distributing the material at the specified rate. Immediately after spreading, the fertilizer shall be mixed with the soil to a depth of approximately 4-inches.

3. On steep slopes, where the use of a machine for spreading or mixing is not practicable, the fertilizer shall be spread by hand and raked in and thoroughly mixed with the soil to a depth of approximately 2-inches.

G. PLACING SOD

1. The sod shall be placed on the prepared surface, with edges in close contact and shall be firmly and smoothly embedded by light tamping with appropriate tools. Sod areas abutting concrete, asphalt or other applicable surfaces shall have the soil depressed at edges of the pavements so that the cut grass does not protrude over 2-inches above the adjacent property.

2. Where sodding is used in drainage ditches, the setting of the pieces shall be staggered so as to avoid a continuous seam along the line of flow. Along the edges of such staggered areas, the offsets of individual strips shall not exceed 6-inches. In order to prevent erosion caused by vertical edges at the outer limits, the outer pieces of sod shall be tamped so as to produce a featheredge effect.

3. On steep slopes, the Contractor shall, if so directed by the Engineer of Record, prevent the sod from sliding by means of wooden pegs driven through the sod blocks into firm earth, at suitable intervals.

4. Sod which has been cut for more than 72 hours shall not be used unless specifically authorized by the Engineer of Record after his inspection thereof. Sod which is not planted within 24 hours after cutting shall be stacked in an approved manner and maintained and properly moistened. Any pieces of sod which, after placing, show an appearance of extreme dryness shall be removed and replaced by fresh, uninjured pieces.

5. Sodding shall not be performed when weather and soil conditions are, in the Engineer of Record's opinion, unsuitable for proper results.

H. WATERING

1. The areas on which the sod is to be placed shall contain sufficient moisture, as determined by the Engineer of Record, for optimum results. After being placed, the sod shall be kept in a moist condition to the full depth of the rooting zone for at least 2 weeks. Thereafter, the Contractor shall apply water as needed until the sod roots and starts to grow for a minimum of 60 days (or until final acceptance whichever is latest).

3.0.2. UNDERGROUND OBSTRUCTIONS:

A. In the event that rock, underground construction work, utility lines or obstructions out of the ordinary are encountered in any plant hole excavation, alternative locations will be selected by the Engineer of Record.

B. Where locations cannot be changed and the obstructions may be removed, the obstructions shall be removed to a depth of not less than 3-feet below grade and not less than 6-inches below bottom of balls or roots when plant is properly set at the required grade.

3.0.3. SETTING OF PLANTS:

A. When lowered into the hole, the plant shall rest on a prepared hole bottom such that the roots are level with, or slightly above, the level of their previous growth and so oriented such as to present the best appearance. The Contractor, when setting plants in holes, shall make allowances for any anticipated settling of the plants.

B. The backfill shall be made with planting mixture as specified hereinbefore and shall be firmly rodded and watered-in, so that no air pockets remain. The quantity of water applied immediately upon planting shall be sufficient to thoroughly moisten all the backfilled earth. Plants shall be kept in a moistened condition for the duration of the Contract.

3.0.4. STAKING AND GUYING:

A. When called for on the Drawings or directed by the City, plants shall be staked in accordance with the following provisions:

1. Small Trees: For trees and shrubs of less than 1-inch caliper, the size of stakes and the method of tying shall be such as to rigidly support the staked plant against damage caused by wind action or other effects. Trees larger than 1-inch and smaller than 1½ inch caliper shall be staked with a 2-inch square stake driven at least 24inches in the ground and extending to the crown of the plant. The plant shall be firmly fastened to the stake with two strands of 14 gauge soft wire, enclosed in rubber hose, or other approved covering. The wire shall then be nailed or stapled to the stake to prevent slippage.

2. Medium Trees: All trees, other than palm trees, larger than 1½-inch caliper and smaller than 2½-inch caliper shall be staked with two or more, 2-inch by 2-inch stakes, 8-feet long, set 2-feet in the ground. The tree shall be midway between the stakes and held firmly in place by two strands of 12 gauge wire, applied as specified above for single stakes. Tie wires shall be tightened and kept tight by twisting.

3. Large Trees: All trees, other palm trees, larger than 2½-inch caliper, shall be guyed from at least 3 points with double strands of 12 gauge wire. Guy wires shall be anchored to 2-inch by 4-inch stakes, 24-inches long, driven into the ground at least 2-feet and sufficient that the top of the stake is at least 3 inches below the finished ground level. In firm rock soils, No. 4 steel reinforcing rods or ½-inch pipe may be used instead of 2 by 4's. Tie wires shall be securely fastened to the tree by means of a collar of rubber hose, or other approved material. Guy wires shall be tightened and kept tight by twisting.

4. Palm Trees: Brace palm trees with three or more 2-inch by 4-inch wood braces, toenailed to cleats which are securely banded at two points to the palm, at a point at least 6-feet above the ground. The trunk shall be padded with five layers of burlap under the cleats. Braces shall be approximately equidistantly spaced and secured underground with 2-inch by 4-inch by 24-inch stake pads. In firm rocky soils, No. 4 steel reinforcing rods or ½-inch pipe is acceptable.

3.0.5. PRUNING:

All broken or damaged roots shall be cut off smoothly and the tops of all trees shall be pruned in a manner complying with standard horticultural practice. At the time pruning is completed, all remaining wood shall be alive. All cut surfaces of 1-inch or more in diameter, above the ground, shall be treated with an approved commercial tree paint.

3.0.6. MULCHING:

Within one week after the planting, mulch material, approved by the Engineer of Record, shall be uniformly applied to a minimum thickness of 2-inches, over the entire area of the backfilled hole or bed. The mulch shall be maintained continuously in place until the time of final inspection. Mulch is not required if other ground surface covers, such as rooted cuttings are called in the Plans.

3.0.7. INSPECTION:

On completion of the work, the Engineer of Record will inspect all planting work. The Contractor shall repair or replace all defective work, whichever is unsatisfactory to the Engineer of Record or the City. Preliminary acceptance of all plant materials will be given only after the materials are planted and after meeting all requirements prescribed herein.

3.0.8. MAINTENANCE:

A. Maintenance shall begin immediately after each plant is planted and shall continue until all work under this Contract has been completed and final acceptance is obtained from the City, however, the minimum period of this maintenance shall not be less than 60 days even if it extends beyond final acceptance of contract. Plants shall be watered, mulched, weeded, pruned, sprayed, fertilized, cultivated and otherwise maintained and protected. Settled plants shall be reset to proper grade position, planting saucer restored and dead material removed. Guys shall be tightened and repaired.

B. Defective work shall be corrected as soon as possible after it becomes apparent. Upon completion of planting, the Contractor shall remove from the site excess soil and debris, and repair any damage to structures, etc., resulting from planting operations.

3.0.9. GUARANTEE:

The Contractor shall guarantee all planting work for a period of six months after the date of final acceptance. During the guarantee period, the Contractor shall replace at no cost to the City any plant that dies or is not established within the guarantee period. Any plants missing or defective shall be furnished or replaced in a manner satisfactory to the City.

END OF SECTION

DIVISION 3 – CONCRETE

03300 CAST-IN-PLACE CONCRETE, REINFORCING AND FORMWORK

PART 1 – GENERAL 1.0.4.

SCOPE OF WORK

A. Provide all labor, materials, equipment, fabrication, incidentals, transportation, placing and supervision necessary to complete all cast-in-place concrete work, its finishing, and all related work called for by the Contract Drawings and/or specifications, or reasonably inferable from either or both, as needed for a complete and proper installation.

B. Work affecting this Section includes, but is not limited to:

1. Shop Drawings-Per General Conditions and as specified herein.
2. Materials and storage thereof.
3. Reinforcing-Bar and fabric.
4. Accessories of every nature, including form tie system.
5. Formwork and removal thereof, including shoring and reshoring.
6. Concrete proportions and mixes.
7. Placing of concrete.
8. Admixtures.
9. Joints, metal joint screeds and joint fillers.
10. Finishes of all types.
11. Protection and curing.
12. Patching.
13. Laboratory Testing.

1.0.5. QUALITY ASSURANCE

A. Unless otherwise indicated, all materials, workmanship and practices shall conform to the requirements of ACI 301-96 "Specifications for Structural Concrete for Buildings", except as modified by supplemental requirements hereinafter.

B. All reinforced concrete structures shall conform to ACI 301, ACI 302.1R, ACI 305, ACI 306, ACI 315, ACI 318, and ACI 350.

C. Concrete shall be composed of cement, fine aggregate, coarse aggregate, and water, so proportioned and mixed as to produce a plastic workable mixture in accordance with all requirements under this Section suitable to the specific conditions of placement.

D. Work shall be performed in accordance with Contract Documents, Drawings, and/or City of Opa-Locka Public Works Manual Specifications and Standard Details, in a neat and accurate manner. It is the intent of the City to obtain a complete and working installation according to these Specifications, and any items of labor, equipment, or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the project plans or stated herein.

1.0.6. STANDARDS

A. ACI 301-96 Specifications for Structural Concrete.

B. ACI 318-95 Building Code Requirements for Reinforced Concrete.

C. Florida Building Code, latest edition.

D. ACI 117-90 Standard Specifications for Tolerances for Concrete Construction and Materials

PART 2 – PRODUCTS

2.0.3. GENERAL

B. All reinforced concrete structures shall conform to ACI 301, ACI 302.1R, ACI 305, ACI 306, ACI 315, ACI 318, and ACI 350.

C. Concrete shall be composed of cement, fine aggregate, coarse aggregate, and water, so proportioned and mixed as to produce a plastic workable mixture in accordance

with all requirements under this Section suitable to the specific conditions of placement.

2.0.4. CEMENT

D. The cement shall be a standard brand of Portland cement manufactured within the continental limits of the United States. It shall meet the requirements of ASTM C150 "Portland Cement" and shall be Type II.

E. The total alkalies in the cement (calculated as the percentage of NA2O plus 0.658 times the percentage of K2O) shall not exceed 0.40%.

F. The proposed Portland Cement shall not contain more than 8% tricalcium aluminate and more than 12% tetracalcium aluminoferrite.

G. Different types of cement shall not be mixed nor shall they be used alternately except when authorized in writing by the City or their designee. Different brands of cement or the same brand from different mills may be used alternately. A resubmittal will be required if different cements are proposed during the Project.

H. Cement shall be stored in a suitable weather-tight building so as to prevent deterioration or contamination. Cement which has become caked, partially hydrated, or otherwise damaged will be rejected.

2.0.5. FLY ASH

A. If fly ash is used as supplementary cementitious material, it shall meet the physical and chemical requirements of ASTM C618 Class F, except that the loss of ignition shall not exceed 4%. Sampling and testing of fly ash shall follow the requirements of ASTM C311.

B. For Type A1 concrete as required for use in environmental engineering concrete structures, inclusion of fly ash or slag cement in the concrete mix is mandatory

2.0.6. SLAG CEMENT

D. Slag cement shall meet the requirements of ASTM C989 including tests for effectiveness of slag in preventing excessive expansion due to alkali-aggregate reactivity as described in Appendix X-3 of ASTM C989.

E. For Type A1 concrete as required for use in environmental concrete structures, i.e., process structures or fluid containing structures, inclusion of fly ash or slag cement in the concrete mix, is mandatory.

2.0.7. WATER

B. The water used in mixing the concrete shall be from potable water supplies that are approved by the Florida Department of Health.

2.0.8. AGGREGATES

A. Fine Aggregate (Sand) in the various concrete mixes shall consist of natural or manufactured siliceous sand, clean and free from deleterious substances, and graded within the limits of ASTM C33.

B. Coarse Aggregate: Coarse aggregate shall consist of gravel, broken stone or local limerock. Coarse aggregate shall be size #57 or #67 as graded within the limits given in ASTM C33 unless otherwise specified. It shall be free from adherent coatings.

C. Aggregates shall be tested for gradation by sieve analysis tests in conformance with ASTM C136.

D. When tested for soundness in accordance with ASTM C88, the loss resulting after five cycles shall not exceed 10 percent for fine or coarse aggregate when using either magnesium sulfate or sodium sulfate.

E. When tested in accordance with "Potential Reactivity of Aggregates (Chemical Method)" (ASTM C289), the ratio of silica released to reduction in alkalinity shall not exceed 1.0.

F. When tested in accordance with "Organic Impurities in Sands for Concrete" (ASTM C40), the fine aggregate shall produce a color in the supernatant liquid no darker than the reference standard color solution.

G. When tested in accordance with "Resistance to Abrasion of Small size Coarse Aggregate by Use of the Los Angeles Machine" (ASTM C131), the coarse aggregate shall show a loss not exceeding 42 percent after 500 revolutions, or 10.5 percent after 100 revolutions.

2.0.9. ADMIXTURES

A. Air entraining agent shall be added to all concrete unless noted otherwise. The agent shall provide entrained air in the concrete in accordance with ASTM C260.

B. The following admixtures are required or used for water reduction, slump increase, and/or adjustment of initial set. Admixtures permitted shall confirm to the requirements of ASTM C494. Admixtures shall be non-toxic after 30 days and shall be compatible with and made by the same manufacturer as the air-entraining admixtures.

1. Water reducing admixture shall conform to ASTM C494, Type A and shall contain no more than 0.05% chloride ions. Acceptable products are “Eucon Series” by the Euclid Chemical Company, “Master Pozzolith Series” by BASF, and “Plastocrete Series” by Sika Corporation.

2. High range water reducer shall be sulfonated polymer conforming to ASTM C494, Type F or G. The high range water reducer shall be added to the concrete at either the batch plant or at the job site and may be used in conjunction with a water reducing admixture. The high range water reducer shall be accurately measured and pressure injected into the mixer as a single dose by an experienced technician. A standby system shall be provided and tested prior to each day’s operation of the job site system. Concrete shall be mixed at mixing speed for a minimum of 100 mixer revolutions after the addition of the high range water reducer. Acceptable products are “Eucon 37” or Plastol 5000 by the Euclid Chemical Company, “Master Rheobuild 1000 or Master Glenium Series” by BASF, and “Daracem 100 or Advaflow Series” by W.R. Grace. High range water reducer shall be mandatory for class A1 concrete intended for placement in walls.

3. A non-chloride, non-corrosive accelerating admixture may be used where specifically approved by the City or their designee. The admixture shall conform to ASTM C494, Type C or E, and shall not contain more chloride ions than are present in municipal drinking water. The admixture manufacturer must have longterm noncorrosive test data from an independent testing laboratory (of at least a year’s duration) using an acceptable accelerated corrosion test method such as that using electrical potential measures. Acceptable products are “Accelguard 80/90 or NCA” by the Euclid Chemical Company and “Daraset” by W.R. Grace.

4. A water reducing retarding admixture may be used where specifically approved by the Engineer. The admixture shall conform to ASTM C494, Type D and shall not contain more than 0.05% chloride ions. Acceptable products are “Eucon NR or Eucon Retarder 100” by the Euclid Chemical Company, “Pozzolith Retarder” by BASF, and “Plastiment” by Sika Corporation.

C. Admixtures containing calcium chloride, thiocyanate or more than 0.05 chloride ions are not permitted

C. Portland cement and reinforcing steel: Comply with ACI 301 and, with all modifications and supplements thereto listed in Part 3 of this specifications.

2.0.10. CONCRETE MIX DESIGN

A. The proportions of cement, aggregates, admixtures, and water used in the concrete mixes shall be based on the results of field experience or preferably laboratory trial

mixes in conformance with Section 5.3. "Proportioning on the Basis of Field Experience and/or Trial Mixtures" of ACI 318 and ACI 350. When trial mixes are used, they shall also conform to Article 3.01 of this Section of the Specifications. If field experience records are used, concrete strength results shall be from concrete mixed with all of the ingredients proposed for use on job used in similar proportions to mix proposed for use on job. Contractor shall submit verification confirming this stipulation has been followed. Field experience records and/or trial mix data used as the basis for the proposed concrete mix design shall be submitted to the City or their designee along with the proposed mix.

B. Structural concrete shall conform to the following requirements. Cementitious materials refer to the total combined weight of all cement, fly ash, and slag cement contained in the mix.

1. Compressive Strength (28 day)

CONCRETE CLASS	COMPRESSIVE STRENGTH
Concrete Class A1	4,500 psi (minimum)
Concrete Class A2	4,000 psi (minimum)
Concrete Class B	3,000 psi (minimum)

2. Water/cementitious materials ratio, by weight

CONCRETE CLASS	MAXIMUM	MINIMUM
Concrete Class A1	0.42	0.39
Concrete Class A2	0.45	0.39
Concrete Class B	0.50	0.39

3. Slump Range

a. 4" nominal unless high range water reducing admixture is used.

b. 8” max if high range water reducing admixture is used

4. Air Content

CONCRETE CLASS	COMPRESSIVE STRENGTH
Concrete Class A1, A2	6% ± 1.5%
Concrete Class B	3% Max (non air-entrained)

2.0.11. REINFORCING STEEL

A. Bar reinforcing shall conform to the requirements of ASTM A615 for Grade 60 Billet Steel reinforcing. All reinforcing steel shall be from domestic mills and shall have the manufacturer's mill marking rolled into the bar which shall indicate the producer, size, type, and grade. All reinforcing bars shall be deformed bars. Smooth reinforcing bars shall not be used unless specifically called for on Drawings.

B. Reinforcing supports shall include all necessary chairs, slab bolsters, concrete blocks, tie wires, dips, supports, spacers, and other devices to position reinforcing during concrete placement. Wire bar supports shall be plastic protected (CRSI Class 1).

C. Precast concrete blocks to space and support the reinforcing bars may be used to support and position bottom reinforcing steel. Use concrete blocks with a strength equal to or greater than the concrete in which they are to be placed and have wires cast into them for fastening to the reinforcing bars. Moist-cure the blocks for at least three days.

D. Reinforcing steel shall be accurately positioned as shown on the Drawings and shall be supported and wired together to prevent displacement, using annealed iron wire ties or suitable clips at intersections. All reinforcing steel shall be supported by concrete, plastic or plastic protected (CRSI Class 1) metal supports, spacers or metal hangers which are strong and rigid enough to prevent any displacement of the reinforcing steel. Where concrete is to be placed on the ground, supporting concrete blocks (or dobies) shall be used in sufficient numbers to support the reinforcing bars without settlement. In no case shall concrete block supports be continuous.

E. All reinforcement shall be entirely free of rust, scale, grease, or other coating which might destroy or reduce its bond with the concrete.

F. Reinforcing of curbs and gutters shall be in accordance with City of Opa-Locka Public Works Manual Standard Details.

G. Welded wire fabric reinforcing shall conform to the requirements of ASTM A1064. Welded wire fabric shall be 6X6-W1.4xW1.4 steel to be used in all sidewalks and driveways

2.0.12. REINFORCING STEEL

A. Bar reinforcing shall conform to the requirements of ASTM A615 for Grade 60 Billet Steel reinforcing. All reinforcing steel shall be from domestic mills and shall have the manufacturer's mill marking rolled into the bar which shall indicate the producer, size, type, and grade. All reinforcing bars shall be deformed bars. Smooth reinforcing bars shall not be used unless specifically called for on Drawings.

B. Reinforcing supports shall include all necessary chairs, slab bolsters, concrete blocks, tie wires, dips, supports, spacers, and other devices to position reinforcing during concrete placement. Wire bar supports shall be plastic protected (CRSI Class 1).

C. Precast concrete blocks to space and support the reinforcing bars may be used to support and position bottom reinforcing steel. Use concrete blocks with a strength equal to or greater than the concrete in which they are to be placed and have wires cast into them for fastening to the reinforcing bars. Moist-cure the blocks for at least three days.

D. Reinforcing steel shall be accurately positioned as shown on the Drawings and shall be supported and wired together to prevent displacement, using annealed iron wire ties or suitable clips at intersections. All reinforcing steel shall be supported by concrete, plastic or plastic protected (CRSI Class 1) metal supports, spacers or metal hangers which are strong and rigid enough to prevent any displacement of the reinforcing steel. Where concrete is to be placed on the ground, supporting concrete blocks (or dobies) shall be used in sufficient numbers to support the reinforcing bars without settlement. In no case shall concrete block supports be continuous.

E. All reinforcement shall be entirely free of rust, scale, grease, or other coating which might destroy or reduce its bond with the concrete.

F. Curbs and gutters shall be in accordance with Miami Dade County or FDOT's Standard Details.

G. Welded wire fabric reinforcing shall conform to the requirements of ASTM A1064. Welded wire fabric shall be 6X6-W1.4xW1.4 steel to be used in all sidewalks and driveways.

2.0.13. FORMS

A. Burlap mats: Conform to AASHTO Specification M182. (Burleen non-staining mats.)

B. Epoxy bonding agent: A two (2) component, solvent free, moisture insensitive structural epoxy adhesive conforming to ASTM C881 Type II, Sikadur 32 Hi-Mod, as manufactured by Sika Corp., Concresive 1090 Liquid by Master Builders or approved equal.

C. Anchor bolts, nuts and washers shall be American made 316 stainless steel.

D. Dovetail slots: Galvanized steel, 22 gauge, 1"x 1", with 5/8" throat, fiber filled.

E. Forms:

1. Plywood Forms: PS-1, B-B Concrete Form, Class I, exterior type, mill oiled and edge sealed. Thickness shall be as required to support concrete at the rate placed, but not less than 3/4".

2. Steel Forms: Uncoated steel, 3/16"-inch minimum thickness, fabricated to close tolerances, protected only by the specified release agent, braced so as not to dent, bend or dimple under wet concrete loads, vibrator impact and tool impact. Maintain steel forms in rust free condition by use of steel wool and light grinding, followed by coats of the specified release agent. Forms should be adjustable to be brought into true alignment without steps or ridges.

F. Form release agent:

1. For plywood forms use a natural non-petroleum base, non-staining and nonretarding release agent that will effectively prevent absorption of moisture and prevent bond with concrete and leaves the concrete with a paintable surface.

2. For steel forms, use an approved material that will not stain, color or otherwise affect the finish of the concrete. Form coating shall not be detectable on finished surfaces.
3. Round column forms: Provide seamless fiber forms with the three plies nearest to the interior surface of the form deckled or scarfed and overlapped to minimize spiral gaps or seams on the column surface.

G. Form Ties: Steel rod type with integral waterstops and cones, and with ends or end fasteners that can be removed without spalling the concrete and which leave a hole equal in depth to the required reinforcement clearance, but not less than 2 inches from the formed face of the concrete. Wire tie, banding wire and wood spreaders will not be permitted.

H. Form Inserts:

1. Bevel or chamfer strips: Wood or non-staining plastic, 3/4" wide on each leg at exposed edges of concrete members, unless otherwise noted on plans.

2. Tongue and Groove Joint Forms: Minimum 24 gauge with steel stakes and splice plates. Forms shall be designed for joints not to receive a poured seal.

3. Pipe hangers and other utility supports: AISI Type 316 stainless steel.

2.0.14. MORTAR

A. Standard premixed mortar conforming to ASTM C387, Type S, or proportion 1 part Portland cement to 2 parts clean, well-graded sand which will pass a 1/8-inch screen. Portland Cement shall conform ASTM C150.

B. Sand shall conform to AASHTO M45.

C. Admixtures may be used not exceeding the following percentages of weight of cement:

1. Hydrated lime: 10 percent

2. Diatomaceous earth or other inert materials: 5 percent.

D. Consistency of mortar shall be such that it will readily adhere to concrete

2.0.15. GROUT

A. Non-Shrink Grout: Non-shrink, non-metallic grout conforming to ASTM C 1107 Grade B or Grade C only. Grout must meet ASTM C 1107 at a temperature range of 50 F to 90 F at a flowable consistency. A minimum compressive strength of 5,000 pounds per square inch (psi) shall be obtained at 28 days.

B. Grout for Surface Repair and Bond Coat:

1. For repair, one part Portland cement to two parts fine sand, and a 50%of water and 50% Acryl 60 or equal (Thoroseal or Acryl Set Bonding Agent by Master Builders) to produce a stiff mortar.

2. For bond coat, one part Portland cement to one part sand, and a 50% of water and 50% Acryl 60 or equal (Thoroseal or Acryl Set Bonding Agent) to produce a slurry mix.

C. Moisture Barrier: Kraft paper and glass reinforcing fibers sandwiched between 2 layers of polyethylene film with a permeance rating of maximum 0.1 as per ASTM E-96, Procedure A.

D. Expansion Joint Filler:

1. Preformed expansion joint filler shall be of the non-extruding and resilient bituminous type and conform to the requirements of AASHTO Designation M 213.

2. Expansion joint filler shall be gray neoprene sponge rubber that conforms to AASHTO Designation M 153, Type I.

Q. Joint Sealant Compound: Non-sag, 2 component, solvent free, moisture insensitive, flexible, epoxy resin conforming to the requirements ASTM C920-87 Type M, Grade NS. Additionally, the sealant must be recommended by the manufacturer to perform under continuous immersion in water.

R. Polyurethane Elastomeric Sealant: Sikaflex-2c, NS/SL or approved equal. Provide a 2- component, premium-grade, polyurethane-based, elastomeric sealant. It is principally a chemical cure in a non-sag and self-leveling consistency. Sealant shall meet ASTM C-920 and Federal Specifications TT-S-00227E.

1. Joint Movement: +50%.

S. Waterstops:

1. Polyvinyl chloride (PVC): Conforming to the requirements of U.S. Army Corps of Engineers Specification CRD-C-572 and of the following type:

a. Expansion Joints: 9-inches by 3/8-inch, ribbed center bulb.

b. Construction Joint: 9-inches by 3/8-inch, flat ribbed.

c. Only where specified on plans at construction and expansion joints: 9-inches by 3/8-inch, split ribbed.

2. Thermoplastic butt splices shall be performed using approved prefabricated pretested fittings; do not lap splice waterstops.

3. Waterstops for impermeable joints between prefabricated structures Non-hydro expansive based on bituminous resins to seal horizontal and vertical joints; hydrostatic load resistance 7 m column of water; not soluble in water; flashpoint 315degree Celsius ASTM D92; elongation capacity at 20 degree Celsius 230% compared to its initial dimension. Suitable for tunnels, water treatment plants, sewage, septic tanks, tanks, pipelines, sewer trunk lines and for any prefabricated concrete structure in general.

T. Fiber Reinforcement: Fiber reinforcement shall not be used in the concrete unless ordered buy the Engineer in writing. It shall consist of 100% virgin polypropylene fibrillated fiber dosage of 2 lbs. per cubic foot.

1. Compressive Strength: 1 psi (.006895 M Pa), ASTM C-39.

2. Flexural Strength: 288 psi (2.0 M Pa) after 7 days, 390 psi (2.7 M Pa) after 28 days; ASTM C-78.

3. Splitting Tensile Strength: 194 psi (1.3 M Pa) after 7 days, and 290 psi (2.0 M Pa) after 28 days; ASTM C-496.

4. Source: Fiber mesh Micro-Reinforcement System by Fiber mesh Company, Division of Synthetic Industries, Inc. Or approved equal.

U. Provide other materials, not specifically described but required for a complete and proper installation, as selected by the Contractor subject to the approval of the Engineer.

V. A shrinkage reducing admixture (Teraguard) or equivalent at the rate of 2.2% by weight of cement may be used in the concrete to meet the shrinkage limitations.

W. To protect the concrete slab against the elements, the Engineer may direct the Contractor to spray an evaporation retarder on the finished concrete slab immediately behind the cement finishing process at no additional cost to the City. This is not a curing compound.

PART 3 – EXECUTION 3.0.1.

READY MIX CONCRETE

A. Concrete obtained from a ready-mix plant shall conform to the requirements of these Specifications, and all applicable portions of ASTM C94 "Ready-Mixed Concrete".

3.0.2. MIXING AND DELIVERING CONCRETE

D. Produce a completely uniform mixed concrete in a truck mixer for 70 to 100 revolutions at the mixing speed designated by the truck manufacturer.

E. Prior to starting the discharge of the concrete at the jobsite, when water is added, record the added quantity and mix the concrete 30 additional drum mixing revolutions. Do not make more than two mix adjustments. Seek approval from the Engineer prior to using a central mixer and depositing the batch into a truck mixer.

F. Transit Time Using Agitator Trucks: The maximum allowable transit time between the initial introduction of water into the mix and completely discharging all the concrete from the truck will be 60 minutes. The maximum transit time can be 90 minutes if water reducing and retarding admixture (Type D, Type G, or Type II) is used. Reject concrete exceeding the maximum transit time.

G. All the concrete in a load must be in its final placement position a maximum of 15 minutes after the transit time has expired unless a time extension is approved by the Engineer.

H. Adding Water to Concrete at the Placement Site: Water may be added at the placement site provided the addition of water does not exceed the water to cementitious materials ratio as defined by the mix design. After adding water, perform a slump test to confirm the concrete is within the slump tolerance range stated in Section 2.01. If the slump is outside the tolerance range, reject the load. If an adjustment is made at the concrete production facility, perform a slump test on the next load to ensure the concrete is within the slump tolerance range. Do not place concrete represented by slump test results outside of the tolerance range. Include water missing from the water storage tanks upon arrival at the project site in the jobsite water added

3.0.3. PLACING CONCRETE

B. Weather Restrictions

1. Concreting in Cold Weather: Do not place concrete when the air temperature at placement is below 40ºF. The requirements of concreting in cold weather do not apply to precast concrete mixing and placement operations occurring in a temperature-controlled environment.

2. Concreting in Hot Weather: Hot weather concreting is defined as the production, placing, and curing of concrete when the concrete temperature at placing exceeds 85ºF but is less than 100ºF . Unless the specified hot weather concreting measures are in effect, reject concrete exceeding 85ºF at the time of placement. Concrete temperature shall be measured per ASTM C1064. Regardless of special measures taken, reject concrete exceeding 100ºF. Predict the concrete temperatures at placement time and implement hot weather measures to avoid production shutdown.

B. Inspections Before Placing Concrete: Do not place concrete until the depth and character of the foundation and the adequacy of the forms and falsework have been approved by the Engineer. Do not deposit any concrete until all reinforcement is in place and has been inspected and approved by the Engineer.

C. Exposure to Water: Do not expose concrete other than seal concrete in cofferdams to the action of water before final setting. Do not expose such concrete to the action of salt or brackish water for a period of seven days after placing the concrete. Protect the concrete during this period by keeping salt or brackish water pumped out of cofferdams.

D. Deposit concrete as nearly as possible in its final position. Do not deposit large quantities at one point and then run or work it along the forms. Take special care to fill each part of the forms, to work coarse aggregate back from the face, and to force concrete under and around reinforcing bars without displacing them.

E. Use a method and manner of placing concrete that avoids the possibility of segregation or separation of aggregates. If the Engineer determines that the quality of concrete as it reaches its final position is unsatisfactory, remove it and discontinue or adjust the method of placing until the Engineer determines that the quality of the concrete as placed is satisfactory.

F. Use metal or metal-lined open troughs, chutes, or other means of concrete conveyance which have no aluminum parts in contact with the concrete. As an exception, chutes made of aluminum for ready mixed concrete trucks, no longer than 20 feet, may be used. This exception does not apply to any other means of concrete conveyance. Where steep slopes are required, use chutes that are equipped with baffles or are in short lengths that reverse the direction of movement. Where placing operations would involve dropping the concrete freely more than 5 feet, deposit it through pipes, troughs, or chutes of sheet metal or other approved material. Use troughs, chutes, or pipes with a combined length of more than 30 feet only with the City''s authorization. Keep all troughs, chutes, and pipes clean and free from coatings of hardened concrete by thoroughly flushing them with water after each run or more often if necessary.

G. Place concrete against supporting material that is moist at the time of concrete placement. If additional water is required, uniformly apply it ahead of the concrete placement as directed by the Engineer. The Contractor may use a moisture barrier in lieu of controlling the foundation grade moisture when approved by the Engineer.

H. Place concrete in continuous horizontal layers, approximately 20 inches thick. To avoid obtaining a plane of separation or a cold joint between layers, vibrate the concrete.

I. Vibrate concrete to avoid honeycomb and voids, especially at construction joints, expansion joints, valleys, and ends of form sheets. Use approved pouring sequences.

J. Do not use calcium chloride or any other admixture containing chloride salts in the concrete.

K. The concrete shall be placed on stabilizing or compacted subgrade to such depth that, when it is consolidated and finished, the slab thickness required by the Drawings will be obtained at all points and surface will at no point be below the grade specified for the finished surface, after application of the allowable tolerance. The concrete shall be deposited on the stabilized subgrade in a manner which will require as little re-handling as possible. Placing of the concrete shall be continuous between transverse joints, without the use of intermediate bulkheads.

L. Concrete shall be thoroughly consolidated against and along the faces of all forms, and along the full length and on both sides of all joint assemblies, by means of hand operated, vibrators. Vibrators shall not be permitted to come in contact with joint assembly, the subgrade, or a side form. Vibration at any one location shall not continue so long as to produce puddling or the accumulation of excessive grout on the surface. In no case shall the vibrator be operated longer than 15 seconds in any one location.

M. Coloring of concrete shall be done by dry-mixing the compound and broadcasting over the fresh-poured concrete after it has been struck off.

N. Placing of concrete shall be so regulated that the pressure caused by the wet concrete shall not exceed that used in the design of the forms.

O. All concrete for walls shall be placed through openings in the form spaced at frequent intervals or through tremies (heavy duct canvas, rubber, etc.), equipped with suitable hopper heads. Tremies shall be of variable lengths so the free fall shall not exceed five (5) feet and a sufficient number shall be placed in the form to ensure the concrete is kept level at all times.

P. When forms are removed, surfaces shall be even and dense, free from aggregate pockets or honeycomb. To achieve this, concrete shall be consolidated using mechanical vibration, supplemented by forking and spading by hand in the corners and angle of forms and along form surfaces while the concrete is plastic under the vibratory action. Consolidation shall conform to ACI 309.

Q. Care shall be taken to prevent cold joints when placing concrete in any portion of the work. The concrete placing rate shall be such as to ensure that each layer is placed while the previous layer is soft or plastic, so that the two layers can be made monolithic by penetration of the vibrators. Maximum thickness of concrete layers shall be 18 inches. The surface of the concrete shall be level whenever a run of concrete is stopped.

R. Placement in Wall Forms: Concrete shall not be dropped through reinforcement steel or into any deep form, whether reinforcement is present or not, causing separation of the coarse aggregate from the mortar on account of repeatedly hitting rods or the sides of the form as it falls, nor shall concrete be placed in any form in such a manner as to leave accumulation of mortar on the form surfaces above the placed concrete. In such cases, some means such as the use of hoppers and, if necessary, vertical ducts of canvas, rubber, or metal shall be used for placing concrete in the forms in a manner that it may reach the place of final deposit without separation. In no case shall the free fall of concrete exceed 4 feet below the ends of ducts, chutes, or buggies. Concrete shall be uniformly distributed during the process of depositing, and in no case after depositing shall any portion be displaced in the forms more than 6 feet in horizontal direction. Concrete in forms shall be deposited in uniform horizontal layers not deeper

than 2 feet; and care shall be taken to avoid inclined layers or inclined construction joints where such are required for sloping members. Each layer shall be placed while the previous layer is still soft. The rate of placing concrete in forms shall not exceed 5 feet of vertical rise per hour.

3.0.4. FORMWORK

A. Forms to confine the concrete and shape it to the required lines shall be used wherever necessary. The Contractor shall assume full responsibility for the adequate design of all forms, and any forms which are unsafe or inadequate in any respect shall promptly be removed and replaced at the Contractor 's expense. All design, construction, maintenance, preparation, and removal of forms shall be in accordance with the FBC, ACI 347 and the requirements specified herein.

B. All forms shall be true in every respect to the required shape and size, shall conform to the established alignment and grade, and shall be of sufficient strength and rigidity to maintain their position and shape under the loads and operations incident to placing and vibrating the concrete.

C. Vertical Surfaces: All vertical surfaces of concrete members shall be formed, except where placement of the concrete against the ground is called for by the Engineer.

D. Construction Joints: Concrete construction joints will not be permitted at locations other than those shown or specified, except as may be acceptable to the Engineer. When a second lift is placed on hardened concrete, special precautions shall be taken in the way of the number, location, and tightening of ties at the top of the old lift and bottom of the new to prevent any unsatisfactory effect whatsoever on the concrete.

E. Form Ties: Wire ties for holding forms will not be permitted. No form-tying device or part thereof, other than metal, shall be left embedded in the concrete. Ties shall not be removed in such manner as to leave a hole extending through the interior of the concrete members. The use of snap-ties which cause spilling of the concrete upon form stripping or tie removal will not be permitted. If steel panel forms are used, rubber grommets shall be provided where the ties pass through the form in order to prevent loss of cement paste. Where metal rods extending through the concrete are used to support or to strengthen forms, the rods shall remain embedded and shall terminate not less than 1 inch back from the formed face or faces of the concrete.

F. Careful procedures for the removal of forms shall be strictly followed, and this work shall be done with care so as to avoid injury to the concrete. No heavy loading on green concrete will be permitted. Members which must support their own weight shall not have their forms removed until they have attained at least 75 percent of the 28day strength of the concrete as specified herein. Forms for all vertical walls and columns shall remain in place at least 2 days after the concrete has been placed. Forms for all

parts of the Work not specifically mentioned herein shall remain in place for periods of time as determined by the City or their designee.

3.0.5. REINFORCING STEEL

A. Reinforcing steel shall be accurately formed to the dimensions and shapes shown on the Drawings, and the fabricating details shall be prepared in accordance with ACI 315 and ACI 318, except as modified by the Drawings.

B. Bending or Straightening: Reinforcement shall not be straightened or rebent in a manner which will injure the material. Bars with kinks or bends not shown shall not be used. All bars shall be bent cold, unless otherwise permitted by the Engineer. No bars partially embedded in concrete shall be field-bent except as shown or specifically permitted by the Engineer.

C. Reinforcing steel shall be accurately positioned as shown on the Drawings and shall be supported and wired together to prevent displacement, using annealed iron wire ties or suitable clips at intersections. All reinforcing steel shall be supported by concrete, plastic or metal supports, spacers or metal hangers which are strong and rigid enough to prevent any displacement of the reinforcing steel. Where concrete is to be placed on the ground, supporting concrete blocks (or dobies) shall be used, in sufficient numbers to support the bars without settlement, but in no case shall such support be continuous. All concrete blocks used to support reinforcing steel shall be tied to the steel with wire ties which are embedded in the blocks. For concrete over formwork, the Contractor shall furnish concrete, metal, plastic, or other acceptable bar chairs and spacers.

D. The portions of all accessories in contact with the formwork shall be made of concrete, plastic, or steel coated with a 1/8-inch minimum thickness of plastic which extends at least 1/2 inch from the concrete surface. Plastic shall be gray in color.

E. Tie wires shall be bent away from the forms in order to provide the specified concrete coverage.

F. Bars additional to those shown which may be found necessary or desirable by the Contractor for the purpose of securing reinforcement in position shall be provided by the Contractor at its own expense.

G. Reinforcement placing tolerances shall be within the limits specified in ACI 318, unless otherwise directed by the Engineer.

H. Welded wire fabric reinforcement placed over horizontal forms shall be supported on slab bolsters having gray, plastic-coated standard type legs as specified herein. Slab bolsters shall be spaced not less than 30 inches on centers, shall extend continuously

across the entire width of the reinforcing mat, and shall support the reinforcing mat in the plane shown.

I. Welded wire fabric placed over the ground shall be supported on wired concrete blocks (dobies) spaced not more than 3 feet on centers in any direction. The construction practice of placing welded wire fabric on the ground and hooking into place in the freshly placed concrete shall not be used.

J. Reinforcement bar splices shall only be used at locations shown. When it is necessary to splice reinforcement at points other than where shown, the character of the splice shall be as acceptable to the City or their designee.

K. Lap length for reinforcement bars shall be in a Class B Splice in accordance with ACI 318, unless otherwise shown. Laps of welded wire fabric shall be in accordance with the ACI 318.

L. Reinforcing steel shall at all times be protected from conditions conducive to corrosion until concrete is placed around it.

M. The surfaces of all reinforcing steel and other metalwork to be in contact with concrete shall be thoroughly cleaned of all dirt, grease, loose scale and rust, grout, mortar, and other foreign substances immediately before the concrete is placed. Where there is a delay in depositing concrete, reinforcing shall be reinspected and, if necessary, recleaned.

3.0.6. PREPARATION OF SURFACES FOR CONCRETING

A. General: No concrete shall be placed until the reinforcement steel and formwork have been erected in a manner acceptable to the City or their designee. The Contractor shall notify the City or their designee not less than two working days prior to concrete placement, allowing for inspection and any corrective measures which are required. Earth surfaces shall be thoroughly wetted by sprinkling, prior to the placing of any concrete, and these surfaces shall be kept moist by frequent sprinkling up to the time of placing concrete thereon. The surface shall be free from standing water, mud, and debris at the time of placing concrete.

B. Joints in Concrete: Concrete surfaces upon or against which concrete is to be placed, where the placement of the old concrete has been stopped or interrupted so that, as determined by the City or their designee, the new concrete cannot be incorporated integrally with that previously placed, are defined as construction joints. The surfaces of horizontal joints shall be given a compacted, roughened surface for good bond. Except where the Drawings call for joint surfaces to be coated, the joint surfaces shall be cleaned of all laitance, loose or defective concrete, and foreign material. Such cleaning shall be accomplished by sandblasting, followed by thorough washing. All

pools of water shall be removed from the surface of construction joints before the new concrete is placed.

C. Existing concrete surfaces upon or against which concrete is to be placed shall be given a roughened surface for good bond. Joint surfaces shall be cleaned of all laitance, loose or defective concrete, and foreign material. Such cleaning shall be accomplished by Thydroblasting. All pools of water shall be removed from the surface of construction joints before the new concrete is placed.

D. Placing Interruptions: When placing of concrete is to be interrupted long enough for the concrete to take a set, the working face shall be given a shape by the use of forms or other means that will secure proper union with subsequent work, provided that construction joints shall be made only where acceptable to the City or their designee.

E. Embedded Items: No concrete shall be placed until all formwork, installation of parts to - be embedded, reinforcement steel, and preparation of surfaces involved in the placing have been completed and accepted by the City or their designee at least 4 hours before placement of concrete. All surfaces of forms and embedded items that have become encrusted with dried grout from concrete previously placed shall be cleaned of all such grout before the surrounding or adjacent concrete is placed.

F. All reinforcement, anchor bolts, sleeves, inserts, and similar items shall be set and secured in the forms where shown on the Drawings or by shop drawings and shall be acceptable to the City or their designee before any concrete is placed. Accuracy of placement is the responsibility of the City or their designee.

G. Casting Against Old Concrete: Where concrete is to be cast against old concrete (any concrete which is greater than 60 days of age), the surface of the old concrete shall be thoroughly cleaned and roughened by hydro-blasting (exposing aggregate) prior to the application of an epoxy bonding agent. Application shall be according to the bonding agent manufacturer's instructions and recommendations.

H. No concrete shall be placed in any structure until all water entering the space to be filled with concrete has been properly cut off or has been diverted by pipes, or other means, and carried out of the forms, clear of the work. No concrete shall be deposited under water nor shall the Contractor allow still water to rise on any concrete until the concrete has attained its initial set. Water shall not be permitted to flow over the surface of any concrete in such manner and at such velocity as will injure the surface finish of the concrete.

I. Openings for pipes, inserts for pipe hangers and brackets, and the setting of anchors shall, where practicable, be provided for during the placing of concrete.

J. Corrosion Protection: Pipe, conduit, dowels, and other ferrous items required to be embedded in concrete construction shall be so positioned and supported prior to

placement of concrete that there will be a minimum of 2 inches clearance between said items, and any part of the concrete reinforcement will not be permitted.

K. Cleaning: The surfaces of all metalwork to be in contact with concrete shall be thoroughly cleaned of all dirt, grease, loose scale and rust, grout, mortar, and other foreign substances immediately before the concrete is placed.

3.0.7. TAMPING AND VIBRATING

A. As concrete is placed in the forms or in excavations, it shall be thoroughly settled and compacted, throughout the entire depth of the layer which is being consolidated, into a dense homogeneous mass, filling all comers and angles, thoroughly embedding the reinforcement, eliminating rock pockets, and bringing only a slight excess of water to the exposed surface of concrete during placement. Vibrators shall be high speed power vibrators (8,000 or 10,000 rpm) of an immersion type in sufficient number and with (at least one) standby units as required.

B. Concrete in walls shall be internally vibrated and at the same time rammed, stirred, or worked with suitable appliances, tamping bars, shovels, or forked tools until it completely fills the forms or excavations and closes snugly against all surfaces. Subsequent layers of concrete shall not be placed until the layers previously placed have been worked thoroughly as specified. Vibrators shall be provided in sufficient numbers, with standby units as required, to accomplish the results herein specified with 15 minutes after concrete of the prescribed consistency is placed in the forms. The vibrating head shall be kept from contact with the surfaces of the forms. Care shall be taken not to vibrate concrete excessively or to work it in any manner that causes segregation of its constituents.

3.0.8. FINISHING CONCRETE SURFACE

A. General: Surfaces shall be free from fins, bulges, ridges, offsets, honeycombing, or roughness of any kind, and shall present a finished, smooth, continuous hard surface. Allowable deviations from plumb or level and from the alignment, profiles, and dimensions shown on the Drawings are defined as tolerances and are specified herein. These tolerances are to be distinguished from irregularities in finish as described herein. Aluminum finishing tools shall not be used.

B. Formed Surfaces: After removal of forms, the finishes described below shall be applied in accordance with Article 3.13, D. Unless the finish schedule specifies otherwise, all surfaces shall receive at least a Type I finish. The Engineer shall be the sole judge of acceptability of all concrete finish work.

1. Type I - Rough: All fins, burrs and other projections left by the forms shall be removed. All holes left by removal of ends of ties, and all other holes, depressions, or voids shall be filled solid with cement grout after first being thoroughly wetted.

Honeycombs shall be chipped back to solid concrete as directed, prior to patching with cement grout. Holes shall be filled with a small tool that will permit packing the hole solidly with cement grout. Cement grout shall consist of one part cement to three parts sand, and the amount of mixing water shall be as little as consistent with the requirements of handling and placing. Color of cement grout shall match the adjacent wall surface. At locations where concrete coatings are specified to be applied, epoxy-based patch material or filler surfaces compatible with the coating shall be used in lieu of cement grout specified herein. Concrete finish shall be in strict conformance to the coating / paint manufacturer's recommendations.

2. Type II - Grout Cleaned: Where this finish is required, it shall be applied after completion of Type I finish. After the concrete has been predampened, slurry consisting of one part cement (including an appropriate quantity of white cement in order to produce a color matching the surrounding concrete) and 1-1/2 parts sand passing the No. 16 sieve, by damp loose volume, shall be spread over the surface with clean burlap pads or sponge rubber floats. Any surplus shall be removed by scraping and then rubbing with clean burlap. The finish shall be kept damp for at least 36 hours after application.

3. Type III - Smooth Rubbed: Where this finish is required, it shall be applied after the completion of the Type I finish. No rubbing shall be done before the concrete is thoroughly hardened and the mortar used for patching is firmly set. A smooth, uniform surface shall be obtained by wetting the surface and rubbing it with a carborundum stone to eliminate irregularities. Unless the nature of the irregularities requires it, the general surface of the concrete shall not be cut into. Corners and edges shall be slightly rounded by the use of the carborundum stone. Brush finishing or painting with grout or neat cement will not be permitted.

C. Unformed Surfaces: The finishes described below shall be applied to unformed surfaces such as floors, slabs, flow channels and top of walls in accordance with Article 3.05 - Concrete Finish Schedule. The Engineer shall be the sole judge of acceptability of all such finish work.

1. Type "A" - Screeded: This finish shall be obtained by placing screeds at frequent intervals and striking off to the surface elevation required. When a Type "F" finish is subsequently to be applied, the surface of the screeded concrete shall be roughened with a concrete rake to ½" minimum deep grooves prior to final set.

2. Type "B" - Wood Floated: This finish shall be obtained after completion of a Type "A" finish by working a previously screeded surface with a wood float until the desired texture is reached. Floating shall begin when the water sheen has disappeared and when the concrete has sufficiently hardened so that a person's foot leaves only a slight imprint. If wet spots occur, water shall be removed with a squeegee. Care shall be taken to prevent the formation of laitance and excess water on the finished surface. The finished surface shall be true, even, and free from blemishes and other irregularities.

3. Type "C" - Cork Floated: This finish shall be similar to Type "B" but slightly smoother than that obtained with a wood float. It shall be obtained by power or band floating with cork floats.

4. Type "D" - Steel Troweled: This finish shall be obtained after completion of a Type "B" finish. When the concrete has hardened sufficiently to prevent excess fine material from working to the surface, the surface shall be compacted and smoothed with not less than two thorough and complete steel troweling operations. In areas, which are to receive a floor covering such as tile, resilient flooring, or carpeting, only one troweling operation is required. The finish shall be brought to a smooth, dense surface, free from defects and blemishes.

5. Type "E" - Broom or Belt: This finish shall provide the surface with a transverse scored texture by drawing a broom or burlap belt across the surface immediately after completion of a Type "B" finish.

6. Type "F" - Swept in Grout Topping: This finish shall be applied after a completion of a Type "A" finish. The concrete surface shall be properly cleaned, washed, and coated with a mixture of water and Portland Cement. Cement grout in accordance with Section 03315 shall then be plowed and swept into neat conformance with the blades or arms of the apparatus by turning or rotating the previously positioned mechanical equipment. Special attention shall be paid to true grades, shapes and tolerances as specified by the manufacturer of the equipment. Before beginning this finish, the Contractor shall notify the Engineer and the equipment manufacturer of the details of the operation and obtain approval and recommendations of the equipment manufacturer.

7. Type "G" - Hardened Finish: Either a liquid hardened finish or an aggregate hardened finish shall be provided at the Contractor's option.

8. Type "H" - Non-Slip Finish: This finish shall be provided by applying a non-slip shake-on aggregate concurrently with the application of a Type "D" finish. Application procedure shall be in accordance with manufacturer's instructions.

9. Type "J" - Raked Finish: This finish shall be provided by raking the surface as soon as the condition of the concrete permits by making depressions of +/-1/4-inch.

3.0.9. CONCRETE FINISH SCHEDULE

ITEM	TYPE OF FINISH

Inner face of walls of tanks, flow channels, wet wells, perimeter walls, and miscellaneous structures to be coated	I
Exterior concrete walls below grade	I
Exterior exposed concrete walls and columns (including top of wall) to one foot below grade. All other exposed concrete surfaces not specified elsewhere	II
All interior exposed concrete vertical surfaces in buildings	III
Interior exposed ceiling, including beams	III
Floors of process equipment tanks or basins, and slabs to receive roofing material or waterproof membranes	B

All interior finish floors of buildings and structures and walking surfaces which will be continuously or intermittently wet	C
All interior finish floors of buildings and structures which are not continuously or intermittently wet	D
Floors to receive tile, resilient flooring, or carpeting	D
Concrete in flow channels not specified to be coated	D
Exterior concrete sidewalks, steps, ramps, decks, slabs on grade and landings exposed to weather	E
Floors of process tanks indicated on Drawings or in the specifications to receive cement grout topping	F
Precast concrete form panels, hollow core planks, double tees	J

3.0.10. CURING AND DAMP PROOFING

A. All concrete shall be cured for not less than 14 days after placing, in accordance with the methods specified herein for the different parts of the work and described in detail in the following paragraphs.

SURFACE TO BE CURED OR DAMPPROOFED	METHOD
Unstripped forms	1
Construction joints between footings and walls, and between floor slab and columns	2
Encasement concrete and thrust blocks	3
All concrete surfaces not specifically provided elsewhere in this paragraph	4

B. Method 1: Wooden forms shall be wetted immediately after concrete has been placed and shall be kept wet with water until removed. If steel forms are used, the exposed concrete surfaces shall be kept continuously wet until the forms are removed. If forms are removed within 14 days of placing the concrete, curing shall be continued in accordance with Method 4.

C. Method 2: The surface shall be covered With burlap mats which shall be kept wet with water for the duration of the curing period, until the concrete in the walls has been placed. No curing compound shall be applied to surfaces cured under Method 2.

D. Method 3: The surface shall be covered with moist earth not less than 4 hours, nor more than 24 hours, after the concrete is placed. Earthwork operations that may damage the concrete shall not begin until at least 7 days after placement of concrete.

E. Method 4: The surface shall be sprayed with a liquid curing compound. It shall be applied in accordance with the manufacturers printed instructions at a maximum coverage rate of 200 square feet per gallon and in such a manner as to cover the surface with a uniform film which will seal thoroughly.

F. Care shall be exercised to avoid damage to the seal during the curing period. Should the seal be damaged or broken before the expiration of the curing period, the break shall be repaired immediately by the application of additional curing compound over the damaged portion.

G. Wherever curing compound may have been applied by mistake to faces against which concrete subsequently is to be placed and to which it is to adhere, said compound shall be entirely removed by hydroblasting just prior to the placing of new concrete.

H. Curing compound shall be applied as soon as the concrete has hardened enough to prevent marring on uniformed surfaces, and within 2 hours after removal of forms from contact with formed surfaces. Repairs required to be made to formed surfaces shall be made within the said 2-hour period; provided, however, that any such repairs which cannot be made within the said 2-hour period shall be delayed until after the curing compound has been applied. When repairs are to be made to an area on which curing compound has been applied, the area involved shall first be wet-sand blasted to remove the curing compound, following which repairs shall be made as provided herein.

3.0.11. TESTING

A. Field Testing of Concrete

1. The Contractor shall coordinate with the Engineer's project representative the onsite scheduling of the materials testing consultant personnel as required for concrete testing.

2. Concrete for testing shall be supplied by the Contractor at no additional cost to the Owner, and the Contractor shall provide assistance to the materials testing consultant in obtaining samples. The Contractor shall dispose of and clean up all excess material.

C. Consistency

1. The consistency of the concrete will be checked by the materials testing consultant by standard slump cone tests. The Contractor shall make any necessary adjustments in the mix as the Engineer and/or the materials testing consultant may direct and shall upon written order suspend all placing operations in the event the consistency does not meet the intent of the specifications. No payment shall be made for any delays, material, or labor costs due to such eventualities.

2. Slump tests shall be made in accordance with ASTM C143. Slump tests will be performed as deemed necessary by the materials testing consultant and each time compressive strength samples are taken.

3. Concrete with a specified nominal slump shall be placed having a slump within 1" (higher or lower) of the specified slump. Concrete with a specified maximum slump shall be placed having a slump less than the specified slump.

D. Unit Weight

1. Samples of freshly mixed concrete shall be tested for unit weight by the materials testing consultant in accordance with ASTM C138.

2. Unit weight tests will be performed as deemed necessary by the Engineer and each time compressive strength samples are taken.

E. Air Content

1. Samples of freshly mixed concrete will be tested for entrained air content by the materials testing consultant in accordance with ASTM C231.

2. Air content tests will be performed as deemed necessary by the materials testing consultant and each time compressive strength samples are taken.

3. In the event test results are outside the limits specified, additional testing shall occur. Admixture quantity adjustments shall be made immediately upon discovery of incorrect air entrainment.

F. Compressive Strength

1. Samples of freshly mixed concrete will be taken by the materials testing consultant and tested for compressive strength in accordance with ASTM C172, C31 and C39, except as modified herein.

2. In general, one sampling shall be taken for each placement, with a minimum of one (1) sampling for each day of concrete placement operations, or for each one

fifty (50) cubic yards of concrete, or for each 5,000 square feet of surface area for slabs or walls, whichever is greater.

3. Each sampling shall consist of at least five (5) 6x12 cylinders or eight (8) 4x8 cylinders. Each cylinder shall be identified by a tag, which shall be hooked or wired to the side of the container. The materials testing consultant will fill out the required information on the tag, and the Contractor shall satisfy himself that such information shown is correct.

4. The Contractor shall be required to furnish labor to the Owner for assisting in preparing test cylinders for testing. The Contractor shall provide approved curing boxes for storage of cylinders on site. The insulated curing box shall be of sufficient size and strength to contain all the specimens made in any four consecutive working days and to protect the specimens from falling over, being jarred or otherwise disturbed during the period of initial curing. The box shall be erected, furnished, and maintained by the Contractor. Such box shall be equipped to provide the moisture and to regulate the temperature necessary to maintain the proper curing conditions required by ASTM C31. Such box shall be located in an area free from vibration such as pile driving and traffic of all kinds and such that all specimens are shielded from direct sunlight and/or radiant heating sources. No concrete requiring inspection shall be delivered to the site until such storage curing box has been provided. Specimens shall remain undisturbed in the curing box until ready for delivery to the testing laboratory but not less than sixteen hours.

5. The Contractor shall be responsible for maintaining the temperatures of the curing box during the initial curing of test specimens with the temperature preserved between 60°F and 80°F as measured by a maximum-minimum thermometer. The Contractor shall maintain a written record of curing box temperatures for each day curing box contains test specimens. Temperature shall be recorded a minimum of three times a day with one recording at the start of the workday and one recording at the end of the workday.

6. When transported, the cylinders shall not be thrown, dropped, allowed to roll, or be damaged in any way.

7. Compression tests shall be performed in accordance with ASTM C39. For 6x12 cylinders, two test cylinders will be tested at seven days and two at 28 days. For 4x8 cylinders, three test cylinders will be tested at seven days, three at 28 days. The remaining cylinders will be held to verify test results, if needed.

G. Evaluation and Acceptance of Concrete

1. Evaluation and acceptance of the compressive strength of concrete shall be according to the requirements of ACI 214, ACI 318, and ACI 350.

2. The strength level of concrete will be considered satisfactory if all of the following conditions are satisfied.

    a. Every arithmetic average of any three consecutive strength tests equals or exceeds the minimum specified 28-day compressive strength for the mix (see Article 2.08). b. No individual compressive strength test results falls below the minimum specified strength by more than 500 psi.

3. In the event any of the conditions listed above are not met, the mix proportions shall be corrected for the next concrete placing operation.

4. In the event that condition 2B is not met, additional tests in accordance with Article 3.10, paragraph H shall be performed.

5. When a ratio between 7-day and 28-day strengths has been established by these tests, the 7-day strengths shall subsequently be taken as a preliminary indication of the 28-day strengths. Should the 7-day test strength from any sampling be more than 10% below the established minimum strength, the Contractor shall:

    a. Immediately provide additional periods of curing in the affected area from which the deficient test cylinders were taken.

    b. Maintain or add temporary structural support as required.

    c. Correct the mix for the next concrete placement operation, if required to remedy the situation.

6. All concrete which fails to meet the ACI requirements and these specifications is subject to removal and replacement at no additional cost to the Owner.

H. When non-compliant concrete is identified, test reports shall be sent immediately to the Engineer for review.

I. Additional Tests

1. When ordered by the Engineer, additional tests on in-place concrete shall be provided and paid for by the Contractor.

2. In the event the 28-day test cylinders fail to meet the minimum strength requirements as outlined in Article 3.10, paragraph F, the Contractor shall have concrete core specimens obtained and tested from the affected area immediately.

    a. Three cores shall be taken for each sample in which the strength requirements were not met.

b. The drilled cores shall be obtained and tested in conformance with ASTM C42. The tests shall be conducted by a materials testing consultant approved by the Engineer.

c. The location from which each core is taken shall be approved by the Engineer. Each core specimen shall be located, when possible, so its axis is perpendicular to the concrete surface and not near formed joints or obvious edges of a unit of deposit.

d. The core specimens shall be taken, if possible, so no reinforcing steel is within the confines of the core.

e. The diameter of core specimens should be at least 3 times the maximum nominal size of the coarse aggregate used in the concrete but must be at least 2-inches in diameter.

f. The length of specimen, when capped, shall be at least twice the diameter of the specimen.

g. The core specimens shall be taken to the laboratory and when transported, shall not be thrown, dropped, allowed to roll, or damaged in any way.

h. Two (2) copies of test results shall be mailed directly to the Engineer. The concrete in question will be considered acceptable if the average compressive strength of a minimum of three test core specimens taken from a given area equal or exceed 85% of the specified 28-day strength and if the lowest core strength is greater than 75% of the specified 28-day strength.

J. In the event that concrete placed by the Contractor is suspected of not having proper air content, the Contractor shall engage a materials testing consultant approved by the Engineer, to obtain and test samples for air content in accordance with ASTM Specification C457. D

END OF SECTION

03360 GROUT

PART 1 – GENERAL 1.0.1.

SCOPE OF WORK

A. The work included in this Section consists of grouting the various items listed hereinafter and indicated on the drawings.

1.0.2. RELATED WORK

A. Section 03300 “Cast-in-Place Concrete, Reinforcement and Formwork”.

1.0.3. SUBMITTALS

A. Manufacturer's literature shall be submitted for review on the following items.

1. Nonshrink grout data shall include grout properties, mixing, surface preparation and installation instructions.

1.0.4. DELIVERY AND STORAGE

A. Grouting materials shall be delivered and stored in unbroken containers with seals and labels intact as packaged by the manufacturer.

1.0.5. QUALITY ASSURANCE

A. If the project includes patching, through bolt holes, epoxy anchors, and/or block outs, the manufacturer shall, if necessary, train the Contractor's employees in the mixing and curing of the epoxy grouts for each of these applications.

B. Furnish one year warranty. Manufacturer's warranty shall not contain a disclaimer limiting responsibility to the purchase price of products or materials.

PART 2 – PRODUCTS 3.0.1.

MATERIALS

A. Cementitious grout shall be composed of one part of Type II Portland cement to three parts of sand.

B. Non-shrink Nonmetallic Grout shall be Five Star Special Grout 150, Five Star Products, Inc.; Grout F-100, Sauereisen Cement; Masterflow 713, BASF Building Systems; NS Grout, Euclid Chemical Company, pre-mixed type, or approved equal.

C. Non-shrink Metallic Grout: Master Builders Embeco 636 Plus Grout, BASF Building Systems, pre-mixed type, or approved equal.

D. Non-shrink Hydraulic Cement Grout shall be Waterplug, Thoro Products, BASF Building Systems, or approved equal.

E. Non-shrink shall be Five Star HP Epoxy Grout, Five Star Products, Inc., available from Coastal Construction Products, Inc. or Wall-Nu Trowelable, Steelcote Manufacturing Co., available from Florida Wire and Rigging Works, or approved equal.

F. Specifications for cement and sand for mortar and grout shall be the same as those for concrete.

3.0.2. EPOXY ANCHOR GROUT

A. Epoxy anchor grout shall conform to ASTM C 881 - Epoxy-Resin-Base Bonding Systems for Concrete, Type IV, Class A, B and C, Grade 3 with the exception of gel time.

B. Heat deflection temperature per ASTM D 648 -- Test Method for Deflection Temperature of Plastics Under Flexural Load shall be a minimum 120 degrees.

C. Manufacturer shall certify that the epoxy anchor grout will maintain 90 percent of its strength up to a temperature of 125 degrees F.

D. Grout shall come in a 2 chambered cartridge with a metering system that provides the proper ratio of hardener and resin. The grout shall also come with a static mixer nozzle to thoroughly mix the hardener and resin together.

E. Epoxy anchor grout shall be capable of being used in submersed applications once cured.

F. Compressive strength per ASTM D 695 - Test Method for Compressive Properties of Rigid Plastics shall be 10,000 psi minimum.

G. If the average working or operating temperature will be over 100 degrees F or in a high fire risk area, use cement based non-shrink grout and oversized holes.

H. Overhead anchors and anchors in fire-resistive construction shall be cast-in anchors.

I. Embedment of adhesive anchors/rebar shall be deep enough to develop the anchor/rebar. Embedment shall not exceed 67 percent of the member depth.

J. Epoxy anchor grout shall be SET-XP by Simpson Strong-Tie Co., Inc.; Powers PE1000+ by Powers Fasteners, Inc.; RE 500 SD by Hilti, Inc.; or approved equal.

PART 3 – EXECUTION 3.0.1.

PREPARATION

A. All bonding surfaces shall be clean and dust and oil free. Grout shall be mixed and applied in accordance with manufacturer's recommendations.

B. Grout Mix proportions (for grout to fill cores in reinforced masonry walls): 1. One part Portland cement, Type I or II. 2. 2-1/4 parts damp, loose sand. 3. Parts shot gravel (3/8" maximum). 4. Mix to conform to ASTM C476-83 with a minimum compressive strength of 2500 psi at 28 days, have an 8" minimum and 10" maximum slump.

C. Grout shall not be placed until base concrete or masonry has attained its design strength, unless authorized otherwise by the Engineer. Surfaces that will be in contact with grout shall be free of dirt, loose rust, oil, wax, grease, curing compounds, laitance, loose concrete, and other deleterious materials.

D. Mechanical, electrical, and finish WORK shall be completed prior to placement of topping or concrete/grout fill. To ensure bonding to the base slab, the base slab shall be given an exposed aggregate finish. Alternatively where accepted by the Engineer, the base slab shall be given a roughened textured surface by a close-spaced rake while the surface is green. After curing, high pressure washing shall expose the aggregates and produce not less than a 3/16-inch amplitude roughness. Jackhammers or chipping hammers shall not be used.

3.0.2. INSTALLATION

A. Non shrink Grout:

1. Non shrink, nonmetallic grout shall be used for grouting precast concrete wall panel connections, column base plates, anchor bolts, reinforcing bars, pipe sleeves, and machinery supports.

2. Grout shall be mixed as close to the work area as possible and transported quickly to its final position in a manner which will not permit segregation of materials.

3. Non shrink grout shall be cured with water saturated burlap for at least three days or with an application of Super Rez Seal cure and seal compound applied immediately after grout placement.

4. Machinery set on grout pads shall not be operated until the grout has cured for at least 24 hours.

5. Expansive, non-shrink epoxy grout in the category of the DP Five Star Epoxy Grout shall be used for installation of vibrating machinery such as pumps.

B. Epoxy Adhesive Anchors: Grout shall be proportioned and mixed with automatic equipment. Unless otherwise indicated, embedment shall be sufficient to develop the ultimate tensile strength of the anchor or reinforcing bar per the manufacturer's ICCES report but shall not be less than 8 diameters for threaded rod or 12 diameters for reinforcing or smooth bars. Holes shall be dry.

C. Drilled anchors and reinforcing bars shall be installed in strict accordance with the manufacturer's instructions. Holes shall be roughened with a brush on a power drill, and cleaned. Drilled anchors shall not be installed until the concrete has reached the required 28 Day compressive strength. Anchors shall not be loaded until the grout has reached its indicated strength in accordance with the manufacturer's instructions.

END OF SECTION

03400 PRECAST PRESTRESSED CONCRETE

PART 1 – GENERAL

1.0.1. SCOPE OF WORK

A. The work under this section includes the design, casting, delivery, erection and shoring of precast prestressed concrete structures as shown on the Contract Drawings.

1.0.2. RELATED WORK

A. Section 03300 “Cast-in-Place Concrete, Reinforcement and Formwork”.

B. Section 01340 “Shop Drawings”.

1.0.3. REFERENCE SPECIFICATIONS, CODES AND STANDARDS

A. Without limiting the generality of other requirements of these specifications all work hereunder shall conform to the applicable requirements of the referenced portions of the following documents, to the extent that the requirements therein are not in conflict with the provisions of this Section:

1. South Florida Building Code, latest edition.

2. ACI 318, Building Code Requirements for Reinforced Concrete.

3. PCI MNL 116, Manual for Quality Control for Plants and Production of Precast Concrete Products.

4. ASTM A416, Specification for Uncoated Seven-Wire Stress-Relieved Steel Strand for Prestressed Concrete.

1.0.4. QUALITY ASSURANCE

A. Fabricator shall be a recognized prestressed concrete manufacturer with minimum five (5) years' experience in the manufacture and erection of similar units and whose design, fabrication and erection operations are supervised by a Florida Registered Professional Engineer.

1.0.5. CONTRACTOR SUBMITTALS

A. Shop Drawings: The Contractor shall submit shop and erection drawings for approval, showing concrete design strength; unit dimensions; unit weights; size, number, location and stress in prestressing strands; size, number and location of reinforcing bars including reinforcing for erection and handling stresses; concrete cover over reinforcing and strands; bearing and anchorage details; concrete finish; curing method; erection marks; hoist points and shoring points.

B. Design Calculations: The Contractor shall submit for approval, neat, legible and complete design calculations prior to fabrication. Calculations shall be by a Florida Registered Professional Engineer whose seal shall appear on calculation sheets and shop drawings.

1. Calculations shall include predicted in-place cambers without superimposed loads, with superimposed dead loads and with superimposed dead loads and live loads.

2. Span length in calculations shall be from center of bearing to center of bearing.

3. Include bearing and anchorage details including those in the precast sections and those in the job cast concrete structure.

C. Certificates: The Contractor shall submit manufacturer's test certificates on prestressing strands and reinforcing.

D. Concrete Cylinder Tests: The Contractor shall submit copies of cylinder break reports by an approved commercial test laboratory, made from each casting for this project to verify that concrete has attained minimum ultimate prestressed transfer strength specified.

1.0.6. DEFINITIONS

A. In these specifications, where the terms "Precast Concrete" and "Precast Concrete Specialties" are used, they shall have equivalent meaning.

PART 2 – PRODUCTS

2.0.1. MATERIALS

A. Concrete: Minimum 7 day ultimate compressive strength 4000 of psi. Higher strength will be permitted to suit manufacturer's design. In other respects, concrete shall comply with requirements of Section 03300 “Cast-in-Place Concrete, Reinforcing and Formwork”.

B. Prestressing Strands: High strength 7 wire strand conforming with ASTM A416-94. Elongation test conforming with ASTM A270-90 with minimum elongation at rupture of 3.5% in 24 inches. Tests need not be made if certification of conformance with specifications is provided by manufacturer. Use strand of U.S. manufacture.

C. Reinforcing Steel: ASTM A615, grade 60.

D. Forms: Provide smooth units true to size, shape and detail with flat panes, sharp lines and arises, free from warp, twist, bow or similar distortions, spalling, broken edges, cracks or similar defects. Dimensional tolerances to be as provided in ACI 525 Standards Minimum Requirements for Thin Section Precast Concrete Construction.

2.0.2. FABRICATION

A. General: Fabricate units accordance with approved shop drawings and approved design calculations

B. Unit design and fabrication: Conform with ACI Standard Building Code Requirements for Reinforced Concrete and the Prestressed Concrete Institute Standards. Fabricator shall design joists and beams in accordance with loads indicated on drawings. Camber under dead load or deflection under total load shall not exceed 1/360 of span.

C. Inserts: Install hanger inserts and sleeves in unit forms for mechanical and electrical items as provided under other sections and as shown on drawings.

D. Curing: Top surface to receive water curing only.

E. Marking: Distinctively mark each unit with manufacturer's name and mark indicated on erection drawings.

F. Age: Units shall be minimum 10 days old before shipping or erection.

2.0.3. PREFORMED JOINT SEALANT

A. The joint sealing compound shall be Quik-Seal, a preformed, cold applied, ready to use plastic joint sealing compound as supplied by Quikset Utility Vaults, Santa Ana, California; Ram-Nick by K.T. Snyder Company; or approved equal.

2.0.4. MORTAR

A. Mortar used between the sections of precast concrete vaults shall be as recommended by the manufacturer.

2.0.5. NON-SHRINK GROUT

A. Non-shrink grout shall be as specified in the Section 03360 "Grout".

2.0.6. QUALITY CONTROL

A. Precast concrete units shall be made by an experienced manufacturer and shall be constructed as shown on the drawings and specified herein and shall be free of defects, checks and cracks. Care shall be taken in the mixing of materials, casting, curing and shipping to avoid any of the above.

B. The Contractor shall notify the City a minimum of 5 days before the units are cast and 5 days before shipment is made, in order to provide for plant inspection, if the City so directs.

PART 3 – EXECUTION

3.0.1. ERECTION

A. Erection to be by manufacturer and supervised by manufacturer's Florida Registered Professional Engineer or authorized representative. Handle and install units with precision, in conformance with drawings, details and erection drawings.

3.0.2. INSTALLATION

A. Required pads, plates and reinforcing bars shall be furnished for casting and anchorage in the adjoining work. The precast concrete units shall be installed in a workmanlike manner with the units tight and at right angles to the supporting beams or walls. The units shall be aligned and leveled in accordance with the procedures recommended by the manufacturer. Units shall be grouted by a mixture of not less than one part cement to three parts fine sand, care being taken to see that joints are filled. Damp grout that may have seeped through shall be removed before it hardens.

B. All openings in the precast units shall be made by the Contractor and are the responsibility of the Contractor. Where details for an opening are not shown on the drawings, the opening shall be made in accordance with the recommendation of the manufacturer. When an opening causes a loss in carrying capacity of the unit, the adjacent units shall be designed to carry the additional dead and superimposed load transferred from the unit with the opening. The Contractor shall provide saddle headers as required.

C. Extreme care shall be used to avoid damaging or soiling concrete as no repairing or cutting will be permitted. Damaged units shall be replaced at the expense of the Contractor. Wooden hammers shall be used, with pinch bars being used on unexposed parts only.

3.0.3. CLEANING AND REPAIRS

A. Cleaning: Clean exposed surfaces of units of stains to a uniform appearance. Do not use caustic or acid cleaners.

B. Repairs: Repair nicks or chips in exposed areas.

END OF SECTION

DIVISION 5 – METALS

05550 ALUMINUM RAILING

PART 1 - GENERAL

1.0.1. SCOPE OF WORK

A. The Contractor shall design, furnish, fabricate, and install aluminum railing and appurtenances as indicated on the Drawings, complete, all in accordance with the requirements of this section.

1.0.2. QUALITY ASSURANCE

Standards: Unless otherwise specified, all materials, workmanship and practices shall conform to the following Standards:

A. South Florida Building Code, latest edition.

B. Aluminum Construction Manual, latest edition, by the Aluminum Association.

C. Applicable OSHA requirements

D. Rail and fittings shall be clear anodized, as specified below. Railing shall be plastic wrapped for protection. Wrap shall be removed only after erection.

1.0.3. SUBMITTALS

A. The Contractor shall submit to the Engineer of Record detailed shop drawings, prior to fabrication, for review and approval. The drawings shall be complete, covering all aluminum railing members, fastenings, connections, means of galvanic protection, etc., which for part of a finished structure.

B. Where written certification are called for below, it shall be submitted to the Engineer of Record.

PART 2 – PRODUCTS

2.0.7. ACCEPTABLE MANUFACTURING

G. Wesrail: Moultrie Manufacturing Co.

H. Thompson Railing Systems: Thompson Fabricating Co.

I. Approved equals.

2.0.8. ALUMINUM RAILING SYSTEM

A. General: Where indicated on the Drawings, pipe handrailing shall be provided. Pipe handrailing shall be supplied as required by the South Florida Building Code and OSHA whether indicated on the Drawings or not, including stair railings.

B. Prior to fabrication, verify all dimensions by actual measurement, so that the finished ladder will fit accurately and provide a neat appearance, with no part out of line and grade by more than 1/8 inch.

C. Handrailing system, including rails, stanchions and attachments, shall be designed and constructed to resist a load of not less than 200 pounds applied in any direction and at any point on the rails.

D. The handrailing shall be of welded construction design, with field splices where required between sections. All exposed welds shall be continuous fillets, watertight, and ground smooth. Bends, warps and ramps in the rails shall be made by bending the pipe to true and even curves, without kinks.

E. Vertical pipe supports to be set in concrete shall be set in built-in pipe sleeves, or concrete may be cored, minimum 5-inches in length. Removable posts shall be sleeved. The joint between upright and sleeve shall be cemented with epoxy grout.

F. Wall brackets for handrail shall be as manufactured by Mouitrie Manufacturing Company, J.G. Braun Company, Fulton Metal Products Company, or equal. Wall brackets shall be fabricated of metal compatible with handrail metal. End all wall mounted railings at the line of the first nosing.

G. Provide chain gates across all openings in railings. Chain shall be welded, stainless steel, close link hoisting chain, 1/4-inch by 1-5/16 inch links. One end of each chain gate shall be attached by a stainless steel shackle to a 1/4-inch round stainless steel stock eye bolted to the pipe stanchion and the other end connected to a heavy stainless steel snap hook. A 1/4-inch stainless steel eye shall be provided in the opposite stanchion or concrete wall, installed at the height of the center lines of the top rail.

H. Aluminum Railing: Stanchions and rails shall be nominal 2 inch diameter minimum, Schedule 80 aluminum alloy 6061-T6 with clear anodized finish. Railing posts must be adequately reinforced to meet the specified design loads. Handrailing shall be 42 inches in height. In no case shall the spacing of handrail posts exceed five (5) feet on center. Stainless steel railings may be used in lieu of aluminum railing at the CONTRACTOR's option.

I. Kickplates: Kickplates where not specifically called for in the Drawings shall be furnished and installed typically at the edges of all metal walkways and at other handrail installations. Kickplates shall be l/4-inch thick, must meet OSHA

5-02

requirements, shall project 4-inches above walkway surface, may not infringe on minimum required walkway width and material must be the same as that of handrail construction. Kickplates shall be connected to handrail posts as detailed on the drawings.

2.0.9. FINISHES

A. Finish shall be natural anodized after forming, and before assembly. Each piece of aluminum to be anodized shall be finished (anodized) in accordance with the following Aluminum Association Designations:

1. Sheet: AA-M10C11c21A31, with minimum 0.4 mil coating

2. Structural shapes, plates, bars and pipe: AA-M10C11C21A41, with minimum 0.8 mil coating.

B. All fabricated aluminum items of the railing shall be anodized after fabrication. No touch-up paint will be accepted.

C. A written certification stating compliance with the aluminum finish (anodizing) as specified above shall be furnished for all aluminum material and/or items furnished and installed by the Contractor.

D. Protect all aluminum by a factory applied coating of water-tight clear methacrylate lacquer having a minimum thickness of 0.008"minimum capable of withstanding the action of lime and mortar for a period of at least one week in an atmosphere of 100% relative humidity at 100ºF.; the action of 10% by weight muriatic acid for a period of six hours at 70ºF.; and the action of the atmospheric weather for a period of 12 months. The coating shall be sprayed on, after anodizing and sealing procedures have been followed. Submit written certification indicating that the coating meets or exceeds the requirements of the Aluminum Association Mortar Test for Clear Lacquers on Anodized Aluminum.

2.0.10. EXPANSION BOLTS

A. Stainless steel type 316 wedge bolts furnished by handrail manufacturer.

PART 3 -- EXECUTION

3.0.1. EXAMINATION

A. Verify that field conditions are acceptable and are ready to receive work.

B. Beginning of installation means erector accepts existing conditions.

3.0.2. PREPARATION

A. Clean and strip primed items to bare metals where site welding is required.

B. Supply items required to be cast into concrete with setting templates, to appropriate sections.

3.0.3. FABRICATION

A. Fabricate railings in shop, made and erected square, plumb, straight and true, designed for adjustment to field variations, accurately fitted with tight joints and intersections.

3.0.4. INSTALLATION

A. Install items plumb and level, accurately fitted, free from distortion or defects.

B. Provide anchors and plates required for connecting railings to structure.

C. Aluminum Railings: Aluminum railing fabrication shall be performed by craftsmen experienced in the fabrication of architectural metal work. Exposed surfaces shall be free from defects or other surface blemishes. Dimensions and conditions shall be verified in the field. All joints, junctions, miters and butting sections shall be precision fitted with no gaps occurring between sections, and with all surfaces flush and aligned. Electrolysis protection of materials shall be provided.

D. After satisfactory installation, all coating shall be removed leaving the clean undamaged surface. In locations where aluminum may come in contact with dissimilar metals or masonry, the surfaces shall be given a heavy brush coat of alkaliresistant bituminous paint or separated with a non-absorptive tape or gasket.

3.0.5. EXPANSION BOLTS

A. Expansion bolts shall be spaced 10d apart and 5d edge distance for no reduction in pull out strength. A safety factor of four shall be provided on expansion bolt pull out values published by the manufacturer.

3.0.6. ALUMINUM SURFACES

A. Aluminum surfaces in contact with concrete, grout (except epoxy grout), dissimilar metals (except stainless steel), or buried in the ground shall be protected with a heavy coat of Bitumastic No. 300, as manufactured by Kop-Coat, Inc., or approved equal.

END OF TECHNICAL SPECIFICATIONS

EVALUATION PROCESS

SELECTION COMMITTEE

A Selection Committee, consisting of City personnel, will convene, review and discuss all proposals submitted.

The Selection Committee will use a point formula during the review process to score proposals and assign points in the evaluation process in accordance with the evaluation criteria. The Proposer shall satisfy and explicitly respond to all the requirements of the RFP, including a detailed explanation of how the services shall be performed.

Each proposal will be reviewed to determine if the Proposal is responsive to the submission requirements outlined in the Solicitation. A responsive Proposal is one which follows the requirements of this Solicitation that includes all documents submitted in the format outlined in this Solicitation, is of timely submission, and has the appropriate signatures as required on each document. Failure to comply with these requirements may result in the Proposal being deemed non- responsive. The Contract (s) will be awarded to the most responsive Proposer whose Proposal best serves the interest of and represents the best value to the City of Opa-locka.

EVALUATION CRITERIA

The Committee may select and choose to invite any and/or or all firms to make presentations and be interviewed by the Committee as part of the evaluation process for this Solicitation. The Committee's decision will be communicated by staff to all Proposers. The Proposer's presentation may clarify but may not modify their submitted Proposal. Any discussion between the presenter (s) and Evaluation Committee during presentations are intended only for purposes of providing clarification in response to questions from the Committee.

Category	Points
1. Experience and Qualifications. The technical expertise and professional competence in areas directly related to this RFP; required number of years of experience in performing similar work 2. demonstrated. The ability to manage and coordinate the services, deliver quality products/services, be a reliable service provider, stay within budget, and meet deadlines; level of experience and training of key personnel assigned, including sub-consultants, if applicable; strength and stability of the firm; breadth and depth of resources.	40
1. References Provide a minimum of three (3) references of recent demonstrated experience in providing consulting services similar in nature and size to the Scope of Work and include any government references. Provide a short description of the work performed, dates of service, names, addresses, telephone numbers, fax numbers, locations, remedies, and contract amount.	20
1. Resources and approach The methodology and systems reflecting the ability to provide the requested services; thorough discussion of objectives; sensitive approach to public and regulatory concerns; management, coordination of services and quality controls; attention to detail and creativity.	30
Price Proposal 1. Cost of proposed services	10
TOT ıL	100

ORAL PRESENTATIONS

Proposers may be required to make individual presentations to the City Selection Committee to clarify their proposals. Only those firms with the highest rated scores in accordance with the stated criteria and their weights will be invited to give oral presentations. However, the City has the right to accept the best proposal as submitted, without discussion or negotiation.

If the City determines that such presentations are needed, a time and place will be scheduled for oral presentations. Each Proposer shall be prepared to discuss and substantiate any of the areas of the proposal submitted, and its qualifications to perform the specified services. During the oral presentations, the Proposers should relate their discussion to the evaluation criteria, which will include (but not be limited to) their approach to the project. The proposed Project Manager must be in attendance.

The Evaluation Criteria may be changed for the oral presentation evaluation phase. References and site visits (if completed) shall be included in the final evaluation criteria, along with other criteria and weights as determined by the Selection Committee. Finalists will be informed as to the revised criteria, if any, prior to their oral presentation.

Additionally, prior to award of an Agreement pursuant to this RFP, the City may require Proposers to submit such additional information bearing upon the Proposer's ability to perform the services in the Agreement as the City deems appropriate.

FINAL SELECTION

The City of Opa-locka will select the firm that meets the best interests of the City. The City shall be the sole judge of its own best interests, the proposals, and the resulting negotiated Agreement. The City's decisions will be final. Following the selection of firm, the expectation is that an Agreement will be executed between both parties. City staff will recommend award to the responsible Proposer whose Proposal is determined to provide overall best value to the City, considering the evaluation factors in this RFP.

AWARD AND CONTRACT EXECUTION

After review by the Selection Committee of the proposals and oral presentations a recommendation will be made to the City Manager for submission to the City Commission for final approval. Upon Commission authorization, contract negotiations will be initiated with the first ranked firm. If those negotiations are unsuccessful, the City will formally terminate negotiations with the first ranked firm and will commence contract negotiations with the next ranked firm, etc. Upon successful contract negotiations with the prevailing firm, the remaining firms will be notified that the process has been completed and that they were not selected.

THE CITY OF OPA-LOCKA, FLORIDA

BID PROPOSAL FORM

TO THE COMMISSION OF THE CITY OF OPA- LOCKA,
FLORIDA

Ladies and Gentlemen:

The undersigned bidder proposes to furnish all labor, tools, material and supplies, and to sustain all the expense incurred in doing the work set forth below that may be awarded the undersigned by the City of Opa-Locka, Florida, through its proper officers, and to do the same strictly in accordance with the plans and contract documents on file in the Office of the City Engineer of Opa-Locka, which are referred to below and made a part hereof, at the following combination of lump sum prices:

Item No.	Estimated Quantity	Description	Total
1.	Lump Sum (Divided into 2 or 4 payments See Measurement and Payment for Conditions)	For performing preparatory work and operations in mobilizing for beginning the work of the Project, but excluding materials and permit costs, both of which are paid under other payments items, the lump sum of _____ Dollars and _____ Cents	$_____
2.	130 LF	For selling and delivering to the City 66-inch SRASP pipe and joints by Contech, or approved equal, for the three (3) barrel culvert installation, the price per linear foot of _____ Dollars and Cents	$_____

3.	130 LF	For installing 66-inch SRASP pipe and joints by Contech, or approved equal, for the three (3) barrel culvert, price per linear foot of _____ Dollars and Cents	$_____
Item No.	Estimated Quantity	Description	Total
4.	75 LF	For selling and delivering to the City General Guardrail per FDOT index No. 400 with mechanical appurtenances required, the price per linear foot of _____ Dollars and Cents	$_____
5.	75 LF	For installing City General Guardrail per FDOT index No. 400 with mechanical appurtenances required, the price per linear foot of _____ Dollars and Cents	$_____
6.	Lump Sum	For demolition and removal of existing three (3) 66-inch concrete pipe culvert with headwalls and retaining walls, the lump sump of _____ Dollars and Cents	$_____

7.	670 CY	For the excavating of existing backfill material at existing Culvert location, the price per cubic yard of _____ Dollars and Cents	$_____

8.	Lump Sum	For providing adequate bypass pumping to maintain uninterrupted Canal flow during construction, the price per lump sump of _____ Dollars and Cents	$_____
Item No.	Estimated Quantity	Description	Total
9.	100 LF	For furnishing and installing all necessary Turbidity Barriers for erosion control measures specified on plans, the price per linear foot of _____ Dollars and Cents	$_____
10.	2 Each	For furnishing and installing all necessary Drop Inlet Sediment Protection for erosion control measures specified on plans, the per unit of _____ Dollars and Cents.	$_____

11.	45 CY	For selling and delivering to the City Concrete for the installation of 10-inch thick Concrete Pavement (min. 3,000 psi at 28-day) per FDOT index No. 350, the price per cubic yard of _____ Dollars and Cents.	$_____
12.	45 CY	For constructing 10-inch thick Concrete Pavement (min. 3,000 psi at 28-day) per FDOT index No. 350, as indicated in the Plans, the price per cubic yard of _____ Dollars and Cents.	$_____

13.	405 SF	For furnishing and constructing 4-inch thick sidewalk and ramp curbing to match existing per FDOT index No. 310, the price per square foot of _____ Dollars and Cents.	$_____
Item No.	Estimated Quantity	Description	Total
14.	150 SF	For constructing new concrete curb and gutter per FDOT index No. 300, the price per square foot of _____ Dollars and Cents.	$_____

15.	200 CY (Contingent Item)	For furnishing and placing suitable Backfill (A-24 or better) required for Culvert placement, the price per cubic yard of _____ Dollars and Cents.	$_____
16.	280 TON	For furnishing and installing Rubble (Broken Stone), including filter fabric, at Culvert embankment for the rip-rap installation as per FDOT Standard Specification No. 530, the price per ton of _____ Dollars and Cents.	$_____

17.	25 CY	For furnishing and installing sand-cement rip rap bags at culvert pipe ends per Miami-Dade County DTPW BC 3.4 & BC 3.5 for straight end pipes, the price per cubic yard of _____ Dollars and Cents.	$_____
Item No.	Estimated Quantity	Description	Total
18.	45 CY	For furnishing and constructing concrete endwall for three (3) 66” barrel culvert installation as per FDOT index 430-032, the price per cubic yard of _____ Dollars and Cents.	$_____

19.	65 LF	For furnishing and installing concrete shoulder barrier as per FDOT index No. 521-001, the price per linear foot of _____ Dollars and Cents.	$_____
20.	1025 SY	For milling (nominal 1 inch thick), surface course for permanent paving repairs, the price per square yard of _____ Dollars and Cents.	$_____
21.	1025 SY	For constructing for Type "V" permanent paving repairs as per details provided in plans, the price per square yard of _____ Dollars and Cents.	$_____

22.	8 each	For replacing pavement markings damaged, removed, or obliterated by the contractor's operation, the price per unit of _____ Dollars and Cents.	$_____
Item No.	Estimated Quantity	Description	Total

23.	40 SY (Contingent Item)	For restoring sodded area, the price per square yard of _____ Dollars and Cents.	$_____
24.	Lump Sum	For providing full Traffic Control during construction, Maintenance of Traffic, the lump sum price of _____ Dollars and Cents.	$_____
25.	2100 SF (Contingent Item)	For sheeting and shoring ordered left in place by the Engineer, the price per square foot of _____ Dollars and Cents.	$_____
26.	670 CY (Contingent Item)	For removal, transport and legal disposal of unsuitable backfill materials, including tipping fees, the price per cubic yard of _____ Dollars and Cents.	$_____

27.	**Sub-Total – Bid Items 1 through 26**	**$_____**	

Item No.	Estimated Quantity	Description	Total
28.	Dedicated Allowance	For providing uniformed, off-duty policemen for the purpose of maintenance of traffic, the aggregate sum of _____ Dollars and Cents.	$_____
29.		For all cost of required permit fees, impact fees, if required by the Engineer, the sum of 3% of the Subtotal, Item 27 (0.03) x (Subtotal, Item 27) _____ Dollars and Cents.	$_____
30.		For unforeseen conditions, for minor construction changes and for quantity adjustments, if ordered by the Engineer, the sum of 10% of the Subtotal, Item 27 (.10) x (Subtotal, Item 27) _____ Dollars and Cents.	$_____

31.	**TOTAL BID – (Sum of Bid Item Nos. 27, 28, 29 and 30)**	$_____	

Note: For a detailed description of each Quotation Item, refer to Section 01025 of the Specifications entitled "Measurement and Payment.

THE CITY OF OPA-LOCKA OPA-LOCKA, FLORIDA

BID PROPOSAL FORM

The City of Opa-Locka reserves the right to waive any informality in any bid and to reject any or all bids.

TOTAL BASE BID PRICE FOR PROPOSAL (ITEMS 1 THROUGH 32): $_____
(FIGURES)

_____Dollars and

_____Cents

AMOUNTS SHALL BE SHOWN ON BOTH WORDS AND FIGURES. IN CASE OF DISCREPANCIES, THE AMOUNT SHOWN IN WORDS SHALL GOVERN FOR EACH BID ITEM AND TOTAL BASE BID.

Bidder acknowledges that included in the various items of the bid proposal and in the TOTAL BASE BID PRICE are costs for complying with the Florida Trench Safety Act, F.S. 553.60 et. seq. The Bidder by signing and submitting the Trench Safety Act Compliance Statement is, in writing, assuring that it will perform any trench excavation in accordance with applicable trench safety standards.

Contract award shall be based upon the total base bid price, as identified above, by the lowest responsive, responsible bidder.

RFP NO. 23-1016200

The Proposer, as a result of this proposal, MUST hold a County and/or Municipal Contractor's Occupational License in the area of their fixed business location. The following information MUST be completed and submitted with the proposal to be considered:

1. Legal Name and Address:

   Name: _____

   Address: _____

   City, State, Zip: _____ Phone/Fax: _____

2. Check One: Corporation ( ) Partnership ( ) Individual ( )

3. If Corporation, indicate:
   Date of Incorporation: _____ State in which Incorporated: _____

4. If an out-of-state Corporation, currently authorized to do business in Florida, give date of such authorization: _____

5. **Name and Title of Principal Officers Date Elected:**

   _____ _____

   _____ _____

   _____ _____

   _____ _____

6. The length of time in business: _years

7. The length of time (continuous) in business as a service organization in Florida: ___years

8. Provide a list of at least three commercial or government references that the bidder has supplied service/commodities meeting the requirements of the City of Opa-locka RFP during the last twenty-four months.

9. A copy of County and/or Municipal Occupational License(s)

Note: *Information requested herein and submitted by the Proposers will be analyzed by the City of Opa-locka and will be a factor considered in awarding any resulting contract. The purpose is to insure that the Contractors, in the sole opinion of the City of Opa-locka, can sufficiently and efficiently perform all the required services in a timely and satisfactory manner as will be required by the subject contract. If there are any terms and/or conditions that are in conflict, the most stringent requirement shall apply.*

CITY OF OPA-LOCKA

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non- responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

CITY OF OPA-LOCKA RFP NO. 23-1016200

DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by_____ the
(Name)
_____ of _____
(Title/Position) (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

E-VERIFY

Effective January 1, 2021, public and private employers, contractors and subcontractors will be required to register with, and use of the E-Verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/sub-consultants/sub-contractors) assigned by Vendor /Consultant/ Contractor to perform work pursuant to the contract with the Department. The Vendor /Consultant/ Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City; and

By entering into a Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If t contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination. The Contractor acknowledges it is liable to

the City for any additional costs as a result of termination of the contract due to Contractor’s failure to comply with the provisions herein.

E-VERIFY FORM

Definitions:

“Contractor” means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

“Subcontractor” means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.

Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-Verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security’s E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/subconsultants/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the
U.S. Department of Homeland Security’s E-Verify System during the term of the contract is a condition of the contract with the City of Opalocka; and

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the EVerify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

Subject: Bid Proposal Submittal for Sesame Street Culvert Replacement between NW 135th St. & Atlantic Ave (RFP NO: 23-1016200)

Dear City of Opa-Locka,

I am writing to submit my bid proposal for the Sesame Street Culvert Replacement between NW 135th St. & Atlantic Ave as advertised by your esteemed organization. As a highly skilled and experienced Safa Construction, I am confident that my proposal will not only meet but exceed your expectations.

I have carefully reviewed the project requirements outlined in the Request for Proposal (RFP) document and believe that my expertise aligns perfectly with the needs of the project. I have a proven track record of delivering exceptional results in similar projects, and I am eager to bring my skills and knowledge to contribute to the success of your project.

I take great pride in my professionalism, attention to detail, and commitment to delivering projects on time and within budget. Throughout my career, I have built strong relationships with clients by actively listening to their needs, communicating effectively, and providing tailored solutions. I am confident that my dedication to customer satisfaction and my ability to adapt to changing project requirements will make me an ideal partner for this endeavor.

Furthermore, I understand the importance of collaboration and teamwork in achieving project success. I am ready to work closely with your team, actively participating in meetings, sharing progress reports, and addressing any concerns promptly. By fostering open communication and maintaining a strong work ethic, I am confident that we can achieve outstanding results together.

SAFA CONSTRUCTION, LLC

Bonding Program

Dear Sir or Madam:

Please let this letter serve as notice that Safa Construction is bonded by the Foundation Surety & Insurance Solutions, which is listed as a U.S. Treasury Department approved surety.

Based upon our solid relationship, and Safa Construction's top rated performance, we are pleased to state that Safa Construction does have bonding capacity currently available with Foundation Surety & Insurance Solutions for a single bond of $1.5 million with an aggregate of up to $3.5 million. It is understood the issuance of any final or bid bonds is a matter between the Safa Construction and Foundation Surety & Insurance Solutions and no liability to third parties is assumed should bonds not be executed for any reason.

We fully recommend Safa Construction for your construction needs. You will find the company has a proven track record of owner satisfaction and of bringing projects in on time and within budget.

If you have any questions, please feel free to call.

Sincerely,

David S. Salavitch

B3.Debarment, Suspension Certification

CITY OF OPA-LOCKA

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

B7. E-Verify Form

E-VERIFY FORM

Definitions:

"Contractor" means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

"Subcontractor" means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.

Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/subcompanies/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City of Opa-locka; and

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

B8. Certification Regarding Debarment

CITY OF OPA-LOCKA

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and, persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly

rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

SUMMARY OF EXPERIENCE

Over Twenty (20) years of professional experience in Civil Engineering and leading all functions of Heavy Civil Construction and Project Management including Contract Administration, Accounting, Planning, Design, Processing, Specs Review, Field Supervision and Operations, Managing Staff, Mentoring young Professionals, Supervising sub-contractors, Budgeting, Scheduling, Progress Reporting and Timely Completion of Projects. Mr. MD's areas of expertise are:

- Manage contracts and completion of several municipal, commercial and private construction projects from a variety range of scopes and in excess of $15 Billion.
- Monitoring the progress of contracts administration including design-build projects.
- Receive and analyze bids after award for turnover to management team.
- Execution of construction including supervision of subcontractors, and awarding sub's subcontracts and major purchase orders with vendors and suppliers.
- Work with Senior VP, operations manager, field and office core personnel to establish planning for job Execution and Logistics.
- Evaluate and maintain cost control and forecasting from beginning and thru the duration of project.
- Coordinates requirements of governing authorities for permits, inspections and final approval of the project with A/E.
- Maintain submittal control, including scheduling, receiving, reviewing, approving and expediting submittals from suppliers and subcontractors to comply with progress of CPM schedule.
- Manages client relations and participate with the development of new business for the company.
- Control invoicing from subcontractors and vendors, including review and approval of schedules of values, pay requisitions and verify compliance of subs with proper insurance coverage.
- Review and monitors QC/QA and safety.
- Supervise and assists in the development of office personnel through mentoring and on-the-job training.
- Effectively manages project close-out tasks and warranty work.

PROJECT EXPERIENCES

- Midtown Miam, Miami Dade County FL - Installation of 26,400 LF of 36" C-900 PVC Pipe, 21,400 LF of 42" HDPE pipe including a new meter station and site work restoration for asphalt, concrete sidewalks, curbing, driveways, installation of new drainage structures, piping valves and appurtenances - $25M

- Marriott at Miami Airport , Miami, FL - Installation of 38,500 LF of 28" HDPE and 9,100 LF of 14" HDPE piping system including 200 LF of 30" DIP pipe and overhead metal bridge, nine (9) Recovery Well Systems connected to 28" header pipe with approx. depth from 70-95 feet. FL - $17.0 M

Dilnahar H. Shuvo, MS, PE
Vice-President

Ms. Shuvo, with eight years of experience, has prepared calculations and plans for the design of highways and streets, including roadway alignments and profiles, signing and striping, lighting, paving, and grading, preforming quantity calculations, design calculations, and project cost estimating, researched standards and specifications and has worked with City, County, State, and Federal manuals utilizing applied software to perform engineering analysis and prepare reports. She also has lighting, sign design and drainage design experience using AGI32, Guide Sign, AutoTurn Analysis and ICPR. Ms. Shuvo has working experience with OpenRoads Designer, MicroStation, AutoCAD, Microsoft Office, HCM 2000, and CORSIM (Version 6.0).

PROJECT EXPERIENCE

I-95 and Spanish River Boulevard Interchange, Palm Beach County – FDOT District 4

Engineer Intern responsible for assisting in the design for the drainage modifications of Segments 4 and 5. This task was part of the on-going design build project at the I-95 Spanish River Blvd Interchange in Boca Raton, FL. This project included the construction a new two-level interchange, modification of the existing Yamato Road and I-95 interchange, addition of auxiliary lanes from Glades Road to Congress Avenue on I-95 and cross street improvements of Spanish River Blvd. and Yamato Road. This two-level interchange includes coordination with FAA, Boca Airport, City of Boca Raton, and Florida Atlantic University (FAU). This improvement will provide connectivity between FAU, Tri-Rail and I-95 and alleviate daily congestion as well as accommodate traffic generated during events held at the FAU stadium.

Boynton Beach Various Locations, Palm Beach County – FDOT District 4

Project Engineer for this is a federally funded, MPO driven, off-system project to improve mobility along Boynton Beach Blvd. This project has two main corridors with various segments. The first segment runs along Boynton Beach Blvd, the existing travel lanes width will be reduced to provide an 11' and 10' travel lane in each direction with sharrows and an 11' and 15' shared use path. This segment also includes decorative lighting along the corridor. The second segment runs along NE 3rd St, Boynton Beach Blvd, and Ocean Ave providing sharrows. The main items included in the scope are, the accommodation of bicyclists.

City of Oakland Park Lakeside Sidewalks – Various Locations, Broward County – FDOT District 4

Project Engineer for this mobility project consisting of pedestrian improvements for the Lakeside neighborhood. Improvements include filling sidewalk gaps, drainage improvements, and signing and pavement markings.

SR 615/S 25th St from N of Edwards Rd to N of Virginia Ave, St. Lucie County – FDOT District 4

Project Engineer for this RRR project consisting of milling and resurfacing of the existing pavement to extend the service life of the corridor, as well as general highway safety enhancements. The project also includes lighting retrofit at the three signalized intersections and the addition reflectorized backplates.

SR 809/Military Trail from Dyer Blvd to N of Flag Dr, Palm Beach County – FDOT District 4

Project Engineer for this RRR project consisting of milling and

(6) different locations

Safa restore pond bank for a private owen.
Contract cost : Five thousand

Safa intalled concete in Nine (9) different locations

Note: In this project Safe is not installed by culvert or restore the canal bank. This task will be done by the sub. Safa will installed the concrete pavement on top of the culvert.

C3. RESOURCES AND APPROACHES

Resources :

Safa consists of full of adequate resources for this project. In this project, most of work will be done the skilled subcontractor, who are working on this type of project for their living. The resource subdivisions are many based on different management organizations. It is our understanding in this project four (4) type of resources is significant. 1) Human resources 2) Material resources 3) Equipment resources 4) Financial resources/capacity.

1) Human resources: Safa Construction is full of capable and skilled labor firms. Two Professional Engineers will consciously assist the workers, guide them, and inspect their work. Safa has also a highly skilled project manager/ superintend who will coordinate with workers for their work and safety. See the list of major subcontractors for subcontractor information.
2) Material resources: Safa Construction will purchase all the materials as specified in the plan.
3) Equipment resources: Safa mostly rented the equipment from commercial equipment rental places. Safa has commercial accounts with equipment rental places.
4) Financial resources/capacity:

   1) Currently the SAFA construction has a working capital of 1.5M dollars.
   2) Bonding capacity of 3.5 million dollars.
   3) SAFA construction is a comparatively new company. However, in this short amount of time, we completed eight (8) public projects and six (6) single-family homes (finishing in November 2023). The net project cost for all of the projects is 1.7 million dollars. This is a proven record of financial stability and the flourishing of the company.

Approaches: (See the attached sketch below)

1) PHASE I –MOBILIZATION

STEP –1 INITIATE MOBILIZATION.

STEP –2 VERIFY EXISTING UTILITY AND PROTECT THOSE.

STEP –3 VERIFY PROPOSED AND EXISTING ELEVATION.

STEP –4 SHOP DRAWING SUBMITTAL.

STEP 5– INSTALL A TEMPORARY FENCE.

C5. Price Proposal

THE CITY OF OPA-LOCKA, FLORIDA

BID PROPOSAL FORM

TO THE COMMISSION OF THE CITY OF OPA-LOCKA, FLORIDA

Ladies and Gentlemen:

The undersigned bidder proposes to furnish all labor, tools, material and supplies, and to sustain all the expense incurred in doing the work set forth below that may be awarded the undersigned by the City of Opa-Locka, Florida, through its proper officers, and to do the same strictly in accordance with the plans and contract documents on file in the Office of the City Engineer of Opa-Locka, which are referred to below and made a part hereof, at the following combination of lump sum prices:

Item No.	Estimated Quantity	Description	Total
1.	Lump Sum (Divided into 2 or 4 payments See Measurement and Payment for Conditions)	For performing preparatory work and operations in mobilizing for beginning the work of the Project, but excluding materials and permit costs, both of which are paid under other payments items, the lump sum of _____ Dollars and _____ Cents	$ 20,000.00
2.	130 LF	For selling and delivering to the City 66-inch SRASP pipe and joints by Contech, or approved equal, for the three (3) barrel culvert installation, the price per linear foot of 200.00 Dollars and Cents	$ 26,000.00

3.	130 LF	For installing 66-inch SRASP pipe and joints by Contech, or approved equal, for the three (3) barrel culvert, price per linear foot of 800.00 Dollars and Cents	$ 104,000.00

Item No.	Estimated Quantity	Description	Total
4.	75 LF	For selling and delivering to the City General Guardrail per FDOT index No. 400 with mechanical appurtenances required, the price per linear foot of 100.00 Dollars and Cents	$ 7,500.00
5.	75 LF	For installing City General Guardrail per FDOT index No. 400 with mechanical appurtenances required, the price per linear foot of 200.00 Dollars and Cents	$ 15,000.00
6.	Lump Sum	For demolition and removal of existing three (3) 66-inch concrete pipe culvert with headwalls and retaining walls, the lump sump of _____ Dollars and Cents	$ 300,000.00
7.	670 CY	For the excavating of existing backfill material at existing Culvert location, the price per cubic yard of 150.00 Dollars and Cents	$ 100,500.00

8.	Lump Sum	For providing adequate bypass pumping to maintain uninterrupted Canal flow during construction, the price per lump sump of _____ Dollars and Cents	$ 50,000.00

Item No.	Estimated Quantity	Description	Total
9.	100 LF	For furnishing and installing all necessary Turbidity Barriers for erosion control measures specified on plans, the price per linear foot of 20.00 Dollars and Cents	$ 2,000.00
10.	2 Each	For furnishing and installing all necessary Drop Inlet Sediment Protection for erosion control measures specified on plans, the per unit of 5000.00 Dollars and Cents.	$ 10,000.00
11.	45 CY	For selling and delivering to the City Concrete for the installation of 10-inch thick Concrete Pavement (min. 3,000 psi at 28-day) per FDOT index No. 350, the price per cubic yard of 350.00 Dollars and Cents.	$ 15,750.00
12.	45 CY	For constructing 10-inch thick Concrete Pavement (min. 3,000 psi at 28-day) per FDOT index No. 350, as indicated in the Plans, the price per cubic yard of 150.00 Dollars and Cents.	$ 6,750.00

13.	405 SF	For furnishing and constructing 4-inch thick sidewalk and ramp curbing to match existing per FDOT index No. 310, the price per square foot of 5.00 Dollars and Cents.	$ 2,025.00

Item No.	Estimated Quantity	Description	Total
14.	150 SF	For constructing new concrete curb and gutter per FDOT index No. 300, the price per square foot of 10.00 Dollars and Cents.	$ 1,500.00
15.	200 CY (Contingent Item)	For furnishing and placing suitable Backfill (A-24 or better) required for Culvert placement, the price per cubic yard of 250.00 Dollars and Cents.	$ 50,000.00
16.	280 TON	For furnishing and installing Rubble (Broken Stone), including filter fabric, at Culvert embankment for the rip-rap installation as per FDOT Standard Specification No. 530, the price per ton of 1200.00 Dollars and Cents.	$ 336,000.00

17.	25 CY	For furnishing and installing sand-cement rip rap bags at culvert pipe ends per Miami-Dade County DTPW BC 3.4 & BC 3.5 for straight end pipes, the price per cubic yard of 500.00 Dollars and Cents.	$ 12,500.00

Item No.	Estimated Quantity	Description	Total
18.	45 CY	For furnishing and constructing concrete endwall for three (3) 66” barrel culvert installation as per FDOT index 430-032, the price per cubic yard of 500.00 Dollars and Cents.	$ 22,500.00
19.	65 LF	For furnishing and installing concrete shoulder barrier as per FDOT index No. 521-001, the price per linear foot of 200.00 Dollars and Cents.	$ 13,000.00
20.	1025 SY	For milling (nominal 1 inch thick), surface course for permanent paving repairs, the price per square yard of 18.00 Dollars and Cents.	$ 18,450.00
21.	1025 SY	For constructing for Type “V” permanent paving repairs as per details provided in plans, the price per square yard of 9.00 Dollars and Cents.	$ 9,225.00

22.	8 each	For replacing pavement markings damaged, removed, or obliterated by the contractor's operation, the price per unit of 150.00 Dollars and Cents.	$ 1,200.00

Item No.	Estimated Quantity	Description	Total
23.	40 SY (Contingent Item)	For restoring sodded area, the price per square yard of 100.00 Dollars and Cents.	$ 4,000.00
24.	Lump Sum	For providing full Traffic Control during construction, Maintenance of Traffic, the lump sum price of 5000.00 Dollars and Cents.	$ 5,000.00
25.	2100 SF (Contingent Item)	For sheeting and shoring ordered left in place by the Engineer, the price per square foot of 10.00 Dollars and Cents.	$ 21,000.00
26.	670 CY (Contingent Item)	For removal, transport and legal disposal of unsuitable backfill materials, including tipping fees, the price per cubic yard of 100.00 Dollars and Cents.	$ 67,000.00

27.	**Sub-Total – Bid Items 1 through 26**	**$** 1,220,900.00	
Item No.	Estimated Quantity	Description	Total
28.	Dedicated Allowance	For providing uniformed, off-duty policemen for the purpose of maintenance of traffic, the aggregate sum of 50.00 Dollars and Cents.	$ 24,000.00
29.		For all cost of required permit fees, impact fees, if required by the Engineer, the sum of 3% of the Subtotal, Item 27 (0.03) x (Subtotal, Item 27) _____ Dollars and Cents.	$ 36,627.00
30.		For unforeseen conditions, for minor construction changes and for quantity adjustments, if ordered by the Engineer, the sum of 10% of the Subtotal, Item 27 (.10) x (Subtotal, Item 27) _____ Dollars and Cents.	$ 122,090.0

31.	**TOTAL BID – (Sum of Bid Item Nos. 27, 28, 29 and 30)**	$ 1,403,617.00	

Note: For a detailed description of each Quotation Item, refer to Section 01025 of the Specifications entitled "Measurement and Payment.

Darvin William JD, MBA, MPH

Interim City Manager, City of Opa-Locka

780 Fisherman Street

Opa-Locka, FL 33054

Subject: Revised price proposal for Sesame Street Culvert Replacement between NW 135th St. & Atlantic Ave (RFP NO: 23-1016200)

Dear Darvin,

I hope this letter finds you in good health and high spirits. I am writing to formally submit a revised price proposal for the Sesame Street Culvert Replacement between NW 135th St. & Atlantic Ave (RFP NO: 23-1016200) bid, which was previously tendered to your office on September 17,2023. I appreciate the opportunity to participate in this bid, and after careful consideration and further evaluation, I believe that the revised proposal will better align with the needs and expectations of our esteemed city.

Upon a thorough review of the project requirements, as well as discussions with city officials (Microsoft Teams meeting-Tuesday, October 31, 2023, 9:30 AM-10:00 AM) and with my team, and careful analysis of our cost estimates, I have identified several areas where we can offer a more competitive and cost-effective proposal without compromising the quality or integrity of our work. Our commitment to delivering value to the city remains unwavering, and we believe that the revisions we have made will better reflect our dedication to your community.

To facilitate a clear understanding of the changes we have made, we have prepared a detailed item-by-item comparison between the original and revised price proposals. The following table illustrates the differences:

SAFA CONSTRUCTION, LLC

26-A	Bonding Cost	0.00	36,000.00	See Note # 1
27	**Subtotal**	**1,220,900.00**	**1,200,000.00**	
28	Police (LS)	24,000.00	0.00	See Note # 3
29	Permit fee	36,627.00	0.00	See Note # 4
30	Unforeseen	122,090.00	0.00	See Note # 5
Total-Bid		**1,403,617.00**	**1,200,000.00**	

SAFA CONSTRUCTION, LLC
Phone: (954) 326-8295
Email: md.rahman@safaconstruction.net

Note for revisions in our proposal:

1) In the original bid, there was no separate line item for Bonding cost, so bonding cost was included in line item number 16, and in the revised price proposal bonding cost is shown separately in item number 26-A for clarification.
2) During the re-site visit to the construction site, we identified that unsuitable material in the canal would not be that much.
3) We feel that we do not police guard during construction. I have been working with the city past 10 years, I never felt that I needed a police guard to work in the city. So, the cost is deleted.
4) This is the city's project within its own city limit. So, the city can handle this issue internally as it was done for other projects.
5) Unforeseen conditions are unpredictable and non-measurable. The city can keep the cost for this line item internally as it was for other standard projects.

In this comparison table, we have outlined the specific items, their descriptions, the original pricing, the revised pricing, and the cost savings achieved in the revised proposal. We believe this breakdown provides transparency and demonstrates our commitment to offering the best value for the city.

We are confident that the revised proposal reflects our dedication to delivering a competitive and cost-effective solution for the city. Our team remains fully committed to collaborating closely with your office to ensure the successful execution of this project, should our proposal be accepted.

If you have any questions or require further clarification regarding the itemized comparison or any other aspects of the proposal, please feel free to contact me directly at (954) 326-8295 or via email at md.rahman@safaconstruction.net . We are eager to engage in discussions and provide any additional information or documentation as needed.

We would like to express our sincere gratitude for your consideration of our proposal and for your dedication to selecting the best value for the city. We are enthusiastic about the opportunity to contribute to the continued growth and development of our community and look forward to the possibility of working closely with your office to realize this vision.

Thank you for your time and attention, and I eagerly await your response.

Sincerely,

MD Shahinur Rahman, CGC, PMP, MS, PE (CA, FL)

Short Title:

RATIFICATION OF GRANT APPLICATION TRANSPORTATION ALTERNATIVES PROGRAM 2024 FLORIDA DEPARTMENT OF TRANSPORTATION (DISTRICT 6).

Staff Summary:

The City of Opa-locka has applied for a grant provided by the Florida Department of Transportation, which provides grants for Non-Motorized Transportation Alternatives under the Transportation Alternatives Plan to enhance mobility and provide accommodations for pedestrians and bicyclists. The amount of funding being requested is $1,000,000.00 with a required City match of $250,000.00 for a total project cost of $1,250,000.00.

DocuSign Envelope ID: 97220385-7013-4CC9-BE8B-5ADC6C6E1377

The City's goal is to implement the proposed enhancements to mobility in the downtown area of the City of Opa-locka Downtown Master Plan which consists of the following:

-Creation of Bikeways
-Addition of Traffic Calming Devices
-Pedestrian Crossing and Paths
-Traffic Signals
-Signs and Pavement Marking

The submission period for the Transportation Alternative Program Grant Application began November 16, 2023, and closes on December 6th, 2023. Due to the cancellation of the Regular Commission Meeting on November 22nd,2023, this agenda item was unable to be presented to the City Commission.
City Administration is now seeking ratification.

Financial Impact

If the City is approved to receive this grant, it will be received in FY 30 and in the interim will be incorporated into the City's Long-Term CIP Plan.

Proposed Action:

Staff recommends the City Commission ratify the submission of a grant application Transportation Alternative Application as part of the Opa-locka 2030 Comprehensive Plan adopted by the City Commission in 2021.

Attachment:

1. Submitted Application

TRANSPORTATION ALTERNATIVES SET-ASIDE PROGRAM (TA) FUNDING APPLICATION

DRAFT

A continuation of the Surface Transportation Block Grant, TA funding is by contract authority from the Highway Trust Fund, subject to the overall federal-aid obligation limitation determined by the Federal Highway Administration (FHWA). Projects must support surface transportation, be competitively solicited, and comply with the provisions of the FDOT Work Program Instructions and the Bipartisan Infrastructure Law (BIL), enacted as the Infrastructure Investment and Jobs Act (IIJA) [§ 11109; 23 United States Code (U.S.C.) 133(h)]. District representatives may be contacted for guidance.

PART 1 – APPLICANT INFORMATION

1. **Applicant Agency Sponsor Type.** Select the box indicating the agency of the person who can answer questions about this project proposal. Then complete applicable text fields. Note: State-recognized non-profit agencies may partner with an eligible governmental entity but are not eligible as a direct grant recipient.

Checkbox next to each of the following types of agencies that do not indicate text field. Document allows one selection.

- ● Local government (e.g., county, city, village, town, etc.).
- ○ Regional transportation authority or transit agency.
- ○ Natural resource or public land agency.
- ○ School district, local education agency, or school (may include any public or nonprofit private school). Projects should benefit the public and not just a private entity.
- ○ Recognized Tribal Government.
- ○ Other local or regional governmental entity with oversight responsibility for transportation or recreational trails, consistent with the goals of 23 U.S.C. 133(h).
- ○ Metropolitan / Transportation Planning Organization / Agency (collectively MPO) (only for urbanized areas with less than 200,000 population).
- ○ FDOT (only by request of another eligible entity, then enter the requesting entity). If "checked", enter the requesting entity in the space provided. (Word limit 5)

2. **Agency name of the applicant.** (Word limit 5).

   City of Opa-locka

3. **Agency contact person's name and title.** (Word limit 5).

   Adelina Gross CIP Manager

4. **Agency contact person's telephone number and email address.** (Word limit 5).

   305 953-2868 ext. 3001 agross@opalockafl.gov

PART 2 – LOCAL AGENCY PROGRAM (LAP) CERTIFICATION

LAP is FDOT's primary mechanism to provide governmental subrecipients with federal funds to develop transportation infrastructure facilities through cost-reimbursement (grant) agreements. This legal instrument (the grant agreement) will describe intergovernmental tasks to be accomplished and the funds to be reimbursed for selected projects. The FDOT Local Programs Manual and FDOT Procedure 525-010-300 provides details for local agencies to complete a certification process that is a risk-based assessment evaluating whether they have sufficient qualifications and abilities "to undertake and satisfactorily complete the work" for infrastructure projects. Non-profit organizations are not eligible for LAP certification, local agencies are not eligible for certification of Project Development and Environment (PD&E) or Right-of-Way (ROW) acquisition phases. FDOT is required to provide oversight on fee-simple and less-than-fee ROW acquisition phases, including license agreements, encroachment agreements, perpetual easements, temporary construction easements, and donations.

○ **LAP Full Certification**

Provide:

Approval Date: and Expiration Date:

Responsible Charge Name:

○ **LAP Project Specific Certification**

Provide:

Approval Date: Project FM(s) Number:

Responsible Charge Name:

○ **Not LAP Certified – A LAP Certified Agency will deliver the project on behalf of the uncertified Agency.**

Provide:

Sponsoring Agency Name: Contact Name:

Address: Phone:

○ **Not LAP Certified - FDOT District will administer the project.**

Provide:

FDOT Contact Name: Phone:

● **Not LAP Certified – the Agency will become LAP certified 1 year prior to the delivery of the LAP project.**

○ **Not Applicable – this is a Non – Infrastructure Project.**

PART 3 – PROJECT INFORMATION

1. **Project Name / Title:** (Word limit 15).
   City of Opa-locka Non-Motorized Improvements (Bicyclist and Pedestrian Infrast

2. **Is this a resubmittal of a previously unfunded project?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the year(s) of submittal(s) and include project title(s), if different, in the space provided. (Word limit 5).
   ○ Yes ● No

3. **Does this project connect a previously funded project(s)?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the Financial Management (FM) number(s) and provide a brief description of the other related FDOT-funded phases that are complete, underway, or in the FDOT 5-year Work Program. (Word limit 5).
   ○ Yes ● No

4. **Is funding requested for this same project from another source administered by FDOT?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate funding source(s) / application(s) submitted. NOTE: Contact your district representative to discuss if this same project is partially funded in the 5-year Work Program or if FDOT has received another application for funding it. (Word limit 5).
   ○ Yes ● No

5. **What are you proposing in this application?** In 200 words or less, provide a description of the project and what it will accomplish. The description should allow a person without prior knowledge of the project to clearly understand it. Summarize the purpose, need, project attributes, the relationship to surface transportation, how the project improves safety, and expected benefits.

   The City of Opa-locka is a 4.5 square mile community located in northwest Miami-Dade County. The proposed Transportation Improvements for cyclists will help to achieve the safety goals and make everyday travel better, Opa-locka is developing citywide interconnected corridors, parking, pedestrian and traffic signage, and programs. Designing our transportation system to better accommodate bicyclists and pedestrians will help to resolve multiple complex and interrelated issues, including traffic congestion, air quality, climate change, public health, and livability. Opa-locka recognizes that bicyclists and pedestrians are vulnerable road users making up about 76 percent of all traffic fatalities statewide. When involved in a traffic collision, cyclists are seriously injured or killed over 69 percent of the time. Vision and goals: Make bicycling safe, convenient, and accessible for all ages and abilities. providing equity, and safety, increasing the number and multimodal trips (mode shift), and being responsive and accountable to our community and county-wide needs providing accessibility for our underserved and pollution burdened residents who are more dependent on active transportation. The scope of work of this project is to incorporate bike lanes, signals, and dynamic pedestrian crossing with flashing beacons at the following corridors: Sharazad Blvd, Opa-locka Blvd, Ali Baba Ave, and, Perviz Ave.

REQUIRED UPLOAD: PROJECT INFORMATION SUPPORTING DOCUMENTATION including 1) Scope of Work clearly describing the purpose and need for this project and the desired outcome; detailed description of the existing conditions; and detailed description of the proposed project and major work item improvements (e.g., project limits (begin / end), width of sidewalks or trails and other components, materials, drainage, lighting, signing and pavement markings, etc.). 2) Intent to enter into a cost reimbursement agreement for delivering the project. 3) Signed PROJECT CERTIFICATION from the maintaining agency confirming the applicant is authorized to submit the proposal, the information is accurate, intent to enter into a Memorandum of Understanding or Interagency Agreement for ongoing operations and maintenance of the improved facility, and compliance with all federal and state requirements.

PART 4 – PROJECT LOCATION

1. **Indicate the municipality(ies) of the project location.** (Word limit 5).

   City of Opa-locka

2. **Indicate the county(ies) of the project location.** (Word limit 5).

   Miami-Dade County

3. **Roadway Classification**

   ○ Yes ○ No State roadway (on-system)

   ○ Yes ○ No Federal roadway

   ● Yes ○ No Local roadway (off-system)

4. **Indicate the roadway name(s) [including applicable state, federal, county road number(s), local roadway name, and roadway identification number (e.g., SR 5 / US 1 / CR 904 / Overseas Highway / ID number: 90040000)].** (Word limit 10).

   Opa-locka Boulevard, Ali Baba Avenue, Sharazad Boulevard, S Perviz Avenue

5. **Indicate the roadway beginning project limits (south or west termini), mile points, and crossroads at each end of each listed segment.** (Word limit 10).

   Sharazad Blvd. Perviz Avenue, Ali Baba Avenue Opa-locka Blvd.

6. **Indicate the roadway ending project limits (north or east termini), mile points, and crossroads at each end of each listed segment.** (Word limit 10).

7. **Indicate the total project length, in miles and linear feet.** (Word limit 10).

   3.28 lane miles and 17,380.40 linear feet

8. **Does the project involve the Florida Shared-Use Nonmotorized (SUN) Trail network?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the trailway identification number, beginning and ending mile points. (Word limit 5).

   ○ Yes ● No N/A

9. **Within the next five years, are non-FDOT funds being expended within the limits or adjacent to the proposed project?** If not, select "no" and indicate N/A in the space provided. If so, select "yes", and briefly explain. (Word limit 50).

   ● Yes ○ No Yes, local funds for ADA Access Improvements, sidewalk connections.

PART 5 – PROJECT TYPE

NOTE: Certain areas may not be prioritizing Non-infrastructure (NI) proposals or all eligible infrastructure activities (or may recommend bundling activities together). Contact your district representative for guidance.

1. **PROJECT CATEGORY** Select one box that best represents the project proposal. Then, complete either the "Infrastructure" or "NI" selections.

- **A. Infrastructure.** If so, select "yes", then select the most appropriate "infrastructure" eligible activity from listing below. (Pages range 5-6)

- **B. Non-infrastructure (NI).** If so, select "yes", then select the most appropriate NI eligible activity from the listing following the Infrastructure activities. (Page range 7)

5-A. INFRASTRUCTURE ELIGIBLE ACTIVITY

Select one box that best represents the project proposal). As applicable, complete infrastructure eligible text fields.

- **Pedestrian and / or Bicycle facilities** (Select this box for construction, planning, and design of off-road trail facilities or on-road facilities for pedestrians, bicyclists, and other nonmotorized forms of transportation).

Safe Routes for Non-Drivers (Select this box for construction, planning, and design of infrastructure related projects and systems that provide safe routes for non-drivers, including children, older adults, and individuals with disabilities to access daily needs).

Conversion of Abandoned Railway Corridors to Trails (Select this box for conversion and use of abandoned railroad corridors into trails for pedestrians, bicyclists, or other nonmotorized transportation users).

Scenic Turnouts and Overlooks (Select this box for construction of turnouts, overlooks, and viewing areas). If "yes", list any Florida Scenic Byways visible from the project or indicate N/A in text field. (Word limit 5).

Outdoor Advertising Management (Select this box for inventory, control, or removal of outdoor advertising). If "yes", list any Florida Scenic Byways within the project limits or indicate N/A in text field. (Word limit 5).

Historic Preservation and Rehabilitation of Historic Transportation Facilities (Select this box for historic preservation or rehabilitation of historic transportation facilities). If "yes", list any locally designated or National Register of Historic Places listed or eligible resources or indicate N/A in the text field. (Word limit 5).

Vegetation Management (Select this box for vegetation management in public transportation ROW to improve roadway safety, prevent invasive species, and erosion control). If "yes", list any Florida Scenic Byways within the project limits, or indicate N/A in text field. (Word limit 5).

Archaeological Activities (Select this box for archaeological activities related to impacts from transportation projects funded by FHWA). If "yes", list the State Site Number (aka Site File Number) for the archaeological site, or indicate N/A in the text field. (Word limit 5).

Stormwater Mitigation (Select this box for environmental mitigation activities addressing stormwater management, control, and water pollution prevention or abatement related to transportation projects).

Wildlife Management (Select this box for wildlife mitigation and reduction of wildlife mortality, or to restore and maintain connectivity among terrestrial or aquatic habitats).

Boulevards (Select this box for boulevards, defined as a walkable, low speed (35 mph or less) divided arterial thoroughfares in urban environments designed to carry both through and local traffic, pedestrians, and bicyclists. These may be high ridership transit corridors; serve as primary goods movement and emergency response routes; and use vehicular and pedestrian access management techniques that promote economic revitalization and follow complete street principles]. If "yes", list any Florida Main Street communities or Florida Trail Towns within the project limits, or indicate N/A in text field. (Word limit 5).

Recreational Trails Program [Select this box for recreational trails compliant with 62-S-2, Florida Administrative Code, and 23 U.S.C. 104 (b)]. If "yes", list the parks / recreational areas within the project limits, or indicate N/A in the text field. (Word limit 5).

Safe Routes to Schools (SRTS) [Select this box for SRTS projects, codified as 23 U.S.C. 208, that substantially improves the ability of kindergarten through 12th grade students (vulnerable road users) to walk and / or bicycle to school]. Traditionally includes sidewalks, traffic calming and speed reduction, traffic diversion improvements, pedestrian and bicycle crossings, on-street bicycle facilities, off-street bicycle facilities, and bicycle parking facilities at public schools. If "yes", list the benefiting schools that are within two miles of the project limits; total student enrollment; approximate number of students living along the route; and the percentage of students eligible for reduced meal programs, or indicate N/A in the space provided. (Word limit 10).

Other surface transportation eligible purpose (Only if within urbanized areas with a population greater than 200,000). If "yes", list the eligible activity or indicate N/A in the space provided. (Word limit 5).

5-B. NI ELIGIBLE ACTIVITY *** Note: For Infrastructure projects, skip this page.***

Select one box that represents the project proposal. Checkbox indicating NI eligible activity. Document allows one selection.

- ● **Vulnerable road user safety assessment as defined by Section 316.027 (b), F.S.**

- **Workforce development, training and education activities that are eligible uses of TAP funds.**

- **SRTS projects, codified as 23 U.S.C. 208.** This NI activity must be primarily based at the school and benefit students and / or their parents and have documented support from the school(s). If "yes", list the benefiting schools; total student enrollment and students served by project; approximate number of students living along the route; and the percentage of students eligible for reduced meal programs, or indicate N/A in space provided. (Word limit 10).

NI COMPONENTS As applicable, insert the number of each type of proposed activity. Numerical field indicating total number NI program would provide.

- Number of walk or bicycle audits.
- Number of bicycle skills / safety classes.
- Number of pedestrian skills / safety classes.
- Number of community demonstration projects.
- Number of community encouragement activities.
- Number of community challenges.
- Number of community workshops / stakeholder meetings.
- Number of classroom / educational classes receiving pedestrian / bicycle safety instruction / education.
- Number of school assemblies receiving pedestrian / bicycle safety instruction / education.
- Number of training sessions to implement the SRTS program (e.g., training for volunteer walking school bus leaders, training for bicycle train leaders, etc.).
- Number of after school programs receiving pedestrian / bicycle safety instruction / education.
- Number of bicycle rodeos.
- Number of pedestrian safety skills events.
- Number of schools with walking school bus programs (defined as planned route with meeting points, a timetable, and a schedule of trained volunteers).
- Number of schools with bicycle train programs (defined as a planned route with meeting points, a timetable, and a schedule of trained volunteers).
- Number of student-led leadership initiatives (e.g., student patrols, peer-led learning, etc.).

PART 6 – AREA CONDITIONS

Select applicable boxes describing the area and complete applicable text fields. Then, upload supporting documentation.

1. **Select one box that describes the geographic population size of the project area.**
   - ○ Non-Urban Area with a population of 5,000 or less
   - ● Urban Area with a population greater than 5,000 but no more than 50,000
   - ○ Urban Area with a population greater than 50,000 but no more than 200,000
   - ○ Urban Area with a population greater than 200,000

2. **Is the project within the boundary of an MPO*?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the MPO in the space provided. (Word limit 5).

   ● Yes ○ No Miami Dade County

3. **Is the project within the boundary of a Transportation Management Area (TMA)?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the TMA in the space provided. (Word limit 5).

   ● Yes ○ No Miami Dade County

4. **Is the project within a Rural Economic Development Initiative (REDI) community or designated as a Rural Area of Opportunity (RAO) as defined pursuant to Section 288.0656, F.S.?** If not, select "no", and indicate N/A in the space provided. If so, select "yes" and indicate the REDI / RAO in the space provided. (Word limit 5)

   ○ Yes ● No

5. **Indicate the United States Congressional District number(s) of the project location.** (Word limit 5).

   34

6. **Will the project address equity by providing benefits to traditionally underserved communities as determined by the U.S. Census?** These communities could include low-income residents, minorities, those with limited English proficiency, persons with disabilities, children, or older adults. If not, select "no", and indicate N/A in the space provided. If so, select "yes", and briefly explain how the project improves environmental justice (e.g., disadvantage community access point(s) and destinations the project benefits, median household income, free or reduced priced school meals and how SRTS projects benefit the students, etc.). (Word limit 10).

   ● Yes ○ No Investment in underserved, pollution-burdened communities that are most dependent on active transportation.

7. **Are there transit stops / shelters / support facilities within the project limits?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the identification number. (Word limit 5).

   ○ Yes ○ No Tri-Rail, MDC Transit Bus Routes

8. **Is the project within a high-crash pedestrian corridor (or an area with a history of crashes involving pedestrians)?**

   ● Yes ○ No

9. **Is the project within a high-crash bicycle corridor (or an area with a history of crashes involving bicyclists)?**

   ● Yes ○ No

10. **Would the project implement a bicycle or pedestrian action plan(s)?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and specify the name of the plan and date of adoption. (Word limit 5).

    ● Yes ○ No Opa-locka Master Plan and Miami-Dade TPO

Metropolitan / Transportation Planning Organization / Agency (MPO)

REQUIRED UPLOAD: AREA CONDITIONS SUPPORTING DOCUMENTATION (e.g., excerpt pages from adopted plans or studies, maps illustrating transit facilities and connectivity to the improvement, short statement of support with a signature of the school official and their contact information for SRTS projects, median household income by census tract for community benefiting, collision heat maps / crash data for area surrounding project limits, etc.).

PART 7 – PUBLIC INVOLVEMENT

Public involvement, engagement, and collaboration is a key component of the federal project development process and must be conducted in accordance with applicable rules and regulations in the event the project is selected for funding. Indicate which of the following are applicable (Select all that apply). Complete the text field or indicate N/A in the space provided. Then, upload supporting documentation.

1. **Does the greater community support the project, as demonstrated by recently adopted proclamations or resolutions expressing commitment and public engagement?** If "yes", explain the engagement and how the concept evolved based on public involvement. Indicate the resolution number, adoption date, and participating parties in the space provided. If "no", indicate N/A in the space provided. (Word limit 10).

   ● Yes ○ No Adopted City of Opa-locka Downtown Master Plan

2. **Was the project discussed at a regularly scheduled meeting of an advisory board of an appointed group of citizens, such as bicycle pedestrian advisory groups or similar committee that provides support toward the project?** If "yes", provide meeting information, including the date and type of advisory board meeting, and the input received. If "no", indicate N/A in the space provided. (Word limit 10).

   ● Yes ○ No

3. **Was there an advertised public meeting to discuss the project?** If "yes", provide a brief description, including the input received, how the concept evolved based on public involvement, date, and type of meeting. If "no", indicate N/A in the space provided. (Word limit 10).

   ● Yes ○ No

4. **Do recent community surveys indicate both need and support for the project and stakeholders will continue to be engaged in the implementation of the project?** If "yes", briefly explain. If "no", indicate N/A in the space provided. (Word limit 10).

   ● Yes ○ No MDC-TPO SMART STEP: Bycicle and Pedestrian Needs Study

REQUIRED UPLOAD: PUBLIC INVOLVEMENT SUPPORTING DOCUMENTATION (e.g., resolution, proclamation, regularly scheduled meeting agenda and minutes, public meeting advertisement, community survey, letters of support, etc.).

PART 8 – CONCURRENCY / CONSISTENCY

Is the project consistent with the applicable comprehensive plan(s), transportation plan(s), capital improvement plan(s), and / or the long-term management plan(s)? [Note: Board of County Commissioners functions as MPO in nonmetropolitan areas (Section 339.135(4)(c)1, F.S.)]. If not, select "no", and indicate N/A in the space provided. If so, select "yes", and use the text field to explain consistency, include MPO prioritization number. If a modification is required, indicate the meeting date for adoption. (Word limit 10).

● Yes ○ No MDC SMART STEP and Opa-locka Downtown Master Plan

REQUIRED UPLOAD: CONCURRENCY / CONSISTENCY SUPPORTING DOCUMENTATION (e.g., supporting resolution(s), excerpt from comprehensive plan(s), transportation plan(s), capital improvement plan(s), management plan(s), prioritization list, etc.).

PART 9 – ENVIRONMENTAL CONDITIONS

Select the boxes describing the Environmental Conditions. As applicable, complete the text field or indicate N/A in the space provided. Then, upload supporting documentation. Applicants for NI proposals may skip the Environmental Conditions section.

1. **Does the project involve lands identified by the Florida Wildlife Corridor Act of 2021 [Section 259.1055, Florida Statutes (F.S.)]?**

   ○ Yes ● No

2. **Does the project involve state-owned conservation lands?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the state-owned conservation lands. NOTE: Use of state-owned conservation lands is subject to coordination by the managing entity. (Word limit 5).

   ○ Yes ● No

3. **Does a railway facility exist within 1,000 feet of the project limits?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate railway facility. (Word limit 5).

   ● Yes ○ No TriRail (480 Ali Baba Avenue)

4. **Does the project physically cross a railway facility?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and indicate the crossing's railway identification number, and beginning and ending mile points. (Word limit 5).

   ● Yes ○ No Opa-locka Blvd. 528323J

5. **Would the project provide lighting at locations with nighttime crashes?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and describe the proposed lighting in the space provided. (Word limit 5).

   ● Yes ○ No

6. **Would the project implement an adopted Americans with Disabilities Act (ADA) transition plan?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and describe proposed ADA improvements in the space provided. (Word limit 5).

   ● Yes ○ No

7. **Is an Environmental Assessment for the project complete?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and describe any specific issues in the space provided. (Word limit 10).

   ○ Yes ● No N/A

8. **Is the project adjacent to locally designated or National Register of Historic Places (NRHP) listed or eligible resources?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and list resources, indicate if the resources have received Florida Department of State Historic Preservation Grant funds, and explain any preservation agreements, covenants, or easements in the space provided. If applicable, select "unknown". (Word limit 5).

   ○ Yes ● No ○ Unknown

9. **Are there any archaeological sites or Native American sites located within or adjacent to the project boundary?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and list State Site Number (aka Site File Number) for the sites. If applicable, select "unknown". (Word limit 5).

   ○ Yes ● No ○ Unknown

10. **Are there any parks, recreation areas, or wildlife / waterfowl refuges within or adjacent to the project boundary?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and list the facilities in the space provided. (Word limit 5).

    ○ Yes ● No

11. **Are there any navigable waterways adjacent to or within the project boundary?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and list the navigable waterways. (Word limit 5).

    ○ Yes ● No N/A

12. **Are there any wetlands within or adjacent to the project limits?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and describe in the space provided. Include permit types required and any obtained for the project. (Word limit 5).

    ○ Yes ● No N/A

13. **Is it likely that there are protected / endangered / threatened species and / or critical habitat impacts within the project limits?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and describe in the space provided. If applicable, select "unknown". (Word limit 5).

    ○ Yes ● No ○ Unknown N/A

14. **Are there any potential contamination / hazardous waste areas within or adjacent to the project limits?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and describe in the space provided. If applicable, select "unknown". (Word limit 5).

    ○ Yes ● No ○ Unknown N/A

15. **Are there any noise-sensitive areas near the project area?** If not, select "no", and indicate N/A in the space provided. If so, select "yes", and describe in the space provided. If applicable, select "unknown" (Word limit 5).

    ○ Yes ● No ○ Unknown N/A

REQUIRED UPLOAD for Infrastructure (not applicable for NI): ENVIRONMENTAL CONDITIONS SUPPORTING DOCUMENTATION (e.g., labeled photographs on maps depicting conditions, permits, copy of the entire study or environmental assessment, excerpt pages from adopted plans, etc.).

PART 10 – DESIGN / TYPICAL SECTIONS

Select the boxes describing the design status and complete the text fields. Then, upload supporting documentation. Applicants for NI proposals may skip the Design / Typical Section.

1. **Are signed and sealed design plans available for this project?**
   ○ Yes ● No

2. **If design plans are not at 100 percent, or do not meet current standards and / or reflect existing conditions, select the box identifying the status.** (Word limit 100).
   ● No design plans ○ 30% design plans ○ 60% design plans ○ 90% design plans
   ○ Other:

   As part of this program the City will issued an Invitation to Bid for qualified firms to provide architetural, engineering and design services. Conceptual Plans have been developed internally by CIty Staff.

3. **Briefly describe the design status in the space provided.** If design is at 100 percent, indicate the date of the plans. (Word limit 100).

   N/A

REQUIRED UPLOAD for Infrastructure (not applicable for NI): Typical Section(s) depicting existing and proposed features, dimensions, and ROW lines. If there are multiple segments, provide typical sections for each. If available, provide design plans.

PART 11 – OWNERSHIP / ROW STATUS

Select the boxes describing the Ownership / ROW Status and complete applicable text fields. Then, upload supporting documentation. Applicants for NI proposals may skip the Ownership / ROW Status section.

1. **Is ROW acquisition, defined as obtaining property not currently owned by the Local Agency through any means (e.g., deed, easement, dedication, donation, etc.), necessary to complete this project?**

   ● Yes ○ No

2. **Explain the ROW status (owned / fee simple, leased / less-than fee, and / or needs) along the project boundary, including when ROW was obtained and how ownership is documented (e.g., plats, deeds, prescriptions, certified surveys, transfers, easements). Provide information for verifying ownership (e.g., book / page number, transfer agreements, dates, etc.). If ROW acquisition is necessary before constructing the proposed project and / or the applicant agency is not the landowner, indicate the necessary coordination with other owners for all fee-simple purchases and / or any less-than fee / lease needs (including temporary construction and / or other easements and / or permits for drainage, railroad, utilities, etc.) necessary to secure ROW certification. Indicate the proposed acquisition timeline, expected funding source, the total number of parcels, type of acquisition, limitations on fund use or availability, and who will acquire and retain ownership of proposed land.** (Word limit 150).

The roads listed for this project are part of the City of Opa-locka Public Right of Way.
Sharazad Blvd. (Owner City of Opa-locka)
Opa-locka Blvd. (Owner City of Opa-locka)
Perviz Avenue (Owner City of Opa-locka)
Ali Baba Avenue (Owner City of Opa-locka)

REQUIRED UPLOAD for Infrastructure (not applicable for NI): OWNERSHIP / ROW STATUS SUPPORTING DOCUMENTATION including applicable ROW Certification including ownership verification documenting site control and related landowner supporting documentation. Site control documents must include an adequate legal description of the parcel(s) comprising the project site, such that staff can compare it to the boundary map submitted with the application and evaluate whether there is control of the project site (e.g., ROW Certification, ROW maps, plats, warranty deeds, prescriptions, certified surveys, easements, use agreement, etc.). Maps should clearly show the location of each ownership in relation to the project boundary and / or limits. NOTE: provide map documentation on 8.5" x 11" scale. DO NOT provide reduced copies of original plats and or maps that cannot be read at scale. If applicable, an exhibit visually depicting the new ROW anticipated for the project, together with a spreadsheet providing the tax identification number(s) of each impacted parcel and the approximate size of the new acquisition area for each impacted parcel.

PART 12 – PROJECT IMPLEMENTATION AND COSTS

Complete either the Infrastructure Table Summary with the overall project programming (phases, schedule, and estimated costs for the proposed work) or the NI Cost Narrative Table. Then, upload supporting documentation.

Not all phase types may be eligible for TA funds, and not all areas prioritize all phases. Local agencies are responsible for covering all unanticipated cost increases, including but not limited to price inflation and increases in the cost of construction; account for them using local funds. FDOT does not allow programming TA funds for contingency costs. The local agency must have the ability to pay for non-participating costs (e.g., utility relocation). Chapter 337.14, F.S. prohibits an entity from performing both design services and construction engineering inspection services (CEI) for a project wholly or partially funded by the FDOT and administered by a local government entity.

REQUIRED UPLOAD: PROJECT IMPLEMENTATION AND COSTS SUPPORTING DOCUMENTATION.
1) Either provide a detailed engineer cost estimate if the project is designed or if the project has not been designed or is a NI project, provide a detailed opinion of probable costs (including all pay items and a timeline for deliverable). Utilize the FDOT Basis of Estimates Manual to develop a detailed estimate with FDOT pay items for construction phase estimates.
2) As applicable, letter from local agency budget office committing local funds to the project.

***** Note: Applications for NI Projects to skip to page 15.*****

Infrastructure Project Phases / Work Types	Select phase(s) included in this request	INFRASTRUCTURE Table Summary Overall Project Programming (Cost Summary and Schedule)						
		Schedule (Month/Year)		Funding sources and costs ($)				
				Federal Funds		Non-Federal / Local Funds		Total Cost Estimate ($)
		Start (mm/yy)	End (mm/yy)	TA Program ($)	Other Federal ($)	Non-TA/ Local Funds ($)	Other ($)	
Planning Development (Corridor or Feasibility)

TRANSPORTATION ALTERNATIVES PROGRAM CERTIFICATION OF PROJECT SPONSOR

PROJECT NAME: City of Opa-locka Non-Motorized Improvements (Bicyclist and Pedestrian Infrastructure Improvements)

LOCATION: City of Opa-locka

PROJECT LIMITS: (from south or west limit)

(to north or east limit)

By checking the box you agree to do the following:

- ✓ Enter into a maintenance agreement with the Florida Department of Transportation (FDOT), as necessary, prior to the design phase.
- ✓ Comply with the **Federal Uniform Relocation Assistance and Acquisition Policies Act** for any Right of Way actions required for the project.
- ✓ Provide any required funding match, incur any additional expenses beyond the approved project costs in the LAP agreement, and are responsible for any non-participating items (e.g. utility relocations).
- ✓ Pursue or retain LAP certification and enter into a LAP agreement with FDOT.
- ✓ Comply with NEPA process prior to construction, including any necessary involvement with the State Historic Preservation Officer (SHPO), and other State and/or Federal agencies, prior to construction.

I further certify that the estimated costs included herein are reasonable and agree to follow through on the project once programmed in the FDOT's Work Program. I fully understand that significant increases in these costs could cause the project to be removed from the FDOT's Work Program.

RESOLUTION NO. 24-

A RESOLUTION OF THE CITY COMMISSION OF THE CITY OF OPA-LOCKA, FLORIDA, ACCEPTING THE PROPOSAL OF CHEN MOORE AND ASSOCIATES, INC. FOR CITYWIDE URBAN FOREST PLAN SERVICES, PURSUANT TO RFP NO. 23-1128200 AND FURTHER AUTHORIZING THE EXECUTION OF AN AGREEMENT WITH CHEN MOORE AND ASSOCIATES, INC. FOR SAID SERVICES, IN AN AMOUNT NOT TO EXCEED EIGHTY SEVEN THOUSAND, SIX HUNDRED SIXTY DOLLARS ($87,660.00) AND IN THE FORM ATTACHED HERETO AS EXHIBIT "A"; PROVIDING FOR ADOPTION OF REPRESENTATIONS; PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the City is seeking to update the City's existing street tree plan and to also expand the scope of services to include park trees, trees in easement areas, trees near power lines that are maintained by the City of Opa-locka and Florida Power and Light, and trees on private and other non-City of Opa-Locka property. The City of Opa-locka' s street tree plan will become the Urban Forest Plan; and

WHEREAS, the City's Urban Forest Plan is intended to be strategic in advancing social equity and contributing to an improved quality of life for residents by providing the benefits of an urban tree canopy; and

WHEREAS, on October 25, 2023, the City of Opa-locka ("City") released Request for Proposals (RFP) No. 23-1128200 to obtain Urban Forest Plan Services for the City; and

WHEREAS, on November 28, 2023, five (5) sealed proposal were received by the City Clerk's Office; and

WHEREAS, the Evaluation Committee reviewed the proposals and subsequently selected Chen Moore and Associates, Inc. as the most responsive responsible bidder; and

WHEREAS, Chen Moore and Associates, Inc. has proposed Eighty-Seven Thousand, Six Hundred Sixty Dollars ($87,660.00) for the project; and

WHEREAS, the City Commission finds that acceptance of Chen Moore and Associates, Inc. proposal for Citywide Urban Forest Plan Services and entering into an agreement with said company is in the best interest of the City of Opa-locka and its residents.

NOW, THEREFORE, BE IT DULY RESOLVED BY THE CITY COMMISSION OF THE CITY OF OPA- LOCKA, FLORIDA:

SECTION 1. The recitals to the preamble herein are incorporated by reference.

SECTION 2. The City Commission of the City of Opa-locka, Florida hereby accepts the proposal of Chen Moore and Associates, Inc. relating to Request for Proposals (RFP) 23-1128200, for Citywide Urban Forest Plan Services, and authorizes the execution of the Interim City Manager to enter into an agreement for same, attached hereto as Exhibit "A", in an amount not to exceed Eighty-Seven Thousand, Six Hundred Sixty Dollars (87,660.00).

SECTION 3. Sections of this Resolution may be renumbered or re-lettered and corrections of typographical errors which do not affect the intent may be authorized by the City Manager following review by the City Attorney and without need of public hearing, by filing a corrected copy of same with the City.

SECTION 4. This Resolution shall take effect upon adoption and is subject to the approval of the Governor or Governor's Designee.

PASSED and **ADOPTED** this _____ day of _____, 2024.

Short Title:

A resolution authorizing the Interim City Manager to accept the proposal of Chen Moore and Associates for Citywide Urban Forest Plan pursuant to RFP No. 23-1128200 and further authorizing the Interim City Manager to enter into an agreement with Chen Moore and Associates for said services.

Staff Summary:

The City is seeking to both update the City's existing street tree plan and expand the scope to include park trees, trees in easement areas, trees near power lines that are maintained by the City of Opa-locka and Florida Power and Light, and trees on private and other non-City of Opa-locka property. Thus, Opa-locka's street tree plan will become the Urban Forest Plan.

The City's Urban Forest Plan is intended to be strategic in advancing social equity and contributing to an improved quality of life by providing the benefits of urban tree canopy to all community members, which includes improvement of overall emotional and psychological health, and improvement of physical health.

The City Clerk received and certified five (5) proposal documents on November 28, 2023.

For over two decades, CMA staff have provided expertise in arboriculture, urban forestry, landscape design, and planning services to serve the needs of municipalities and other client types throughout Florida. They provided master plans and management plans for urban forest resources for a variety of projects throughout southeast Florida, including City-wide urban forest resources, City-wide Park systems, individual parks, and urban corridors.

Financial Impact:

Account	Description	Available	Project	Remaining Balance
44-541856	Comprehensive Urban Forest Plan	100,000.00	$ 87,660	$12,340

Proposed Action:

Staff recommends the City Commission approve the recommendation for Chen Moore and Associates and authorize the Interim City Manager to enter into an agreement with said company.

RFP NO: 23-1128200
CITYWIDE URBAN FOREST PLAN

The sealed proposal for Citywide Urban Forest Plan for the City of Opa-locka will be received by the City's Clerk Office, 780 Fisherman St, 4th Floor, Opa-locka, Florida 33054, **Tuesday, November 28, 2023**, by 2:00 pm. Any RFP Package received after the designated closing time will be returned unopened. The City will accept proposals by mail; however, the contractor must submit the proposal by the due date. In addition, the proposal may be submitted via www.demandstar.com (e-bid) by 2:00 pm.

The address to submit sealed proposal is listed below:

CITY OF OPA-LOCKA
Office of the City Clerk
780 Fisherman Street, 4th Floor
Opa-locka, Florida 33054

An original and six (6) copies for a total of seven (7) plus 1 copy of the Proposal package on USB Flash Drive in PDF format shall be submitted in sealed envelopes/packages addressed to the City Clerk, City of Opa-locka, Florida, and marked RFP for CITYWIDE URBAN FOREST PLAN.

Proposers desiring information for use in preparing proposals may obtain a set of such documents by visiting the City's website at www.opalockafl.gov or www.demandstar.com.

The City reserves the right to accept or reject any and all proposals and to waive any technicalities or irregularities therein. The City further reserves the right to award the contract to that proposer whose proposal best complies with the RFP NO: 23-1128200 requirements. Proposers may not withdraw their proposal for a period of ninety (90) days from the date set for the opening thereof.

Joanna Flores, CMC
City Clerk

RFP NO: 23-1128200
PART I
PROPOSAL GUIDELINES

1-1. Introduction: The City of Opa-locka seeks proposals for a CITYWIDE URBAN FOREST PLAN. The City is soliciting bids on behalf of the City Manager's Office for the Citywide Forest Plan Services under the laws of the State of Florida. These services must be efficient and economical, adhere to industry standards and best practices, and utilize the latest nonproprietary technology. The Contract will be awarded to the highest ranked Proposer, as described in the Evaluation Procedures Section below.

1-2. Proposal Submission and Withdrawal: The City of Opa-locka will be accepting proposals by mail, however it is Proposer's responsibility to submit Proposer's proposal by the due date. In addition, proposals may be submitted via www.demandstar.com (e-bid). The City must receive all proposals by 2:00 p.m. on Tuesday, November 28, 2023. The address to submit sealed proposals is listed below:

CITY OF OPA-LOCKA
Office of the City Clerk
780 Fisherman Street,4th Floor
Opa-locka, Florida 33054

To facilitate processing, please clearly mark the outside of the proposal package as follows: **RFP NO. 23-1128200 – CITYWIDE URBAN FOREST PLAN**.

This package shall also include the Proposer's return address. Proposers may withdraw their proposals by notifying the City in writing at any time prior to the deadline for proposal submittal. After the deadline, the proposal will constitute an irrevocable offer, for a period of 90 days. Once opened, proposals become a record of the City and will not be returned to the Proposer.

The City cautions Proposers to assure actual delivery of mailed or hand-delivered proposals directly to the City Clerk's Office at 780 Fisherman Street, 4th Floor, Opa-locka, Florida 33054 prior to the deadline set for receiving proposals. Telephone confirmation of timely receipt of the proposal may be made by calling (305) 688-4611 before proposal closing time. Any proposal received after the established deadline will not be considered and will be returned unopened to the Proposer(s).

1-3. Number of Copies: Proposers shall submit an original and six (6) copies (a total of 7) plus one copy on USB flash drive in PDF format of the proposal in a sealed, opaque package marked as noted above. The Proposer will be responsible for timely delivery, whether by personal delivery, US Mail or any other delivery medium.

1-4. Development Costs: Neither the City nor its representatives shall be liable for any expenses incurred in connection with the preparation of a response to this Request for Proposal. Proposers should prepare their proposals simply and economically, providing a straightforward and concise description of the Proposer's ability to meet the requirements of the RFP.

1-5. Inquiries: The City Clerk will receive written requests for clarification concerning the meaning or interpretations of the RFP, until eight (8) days prior to the submittal date. City personnel are authorized only to direct the attention of prospective Proposers to various portions of the RFP so that they may read and interpret such for themselves. No employee of the City is authorized to interpret any portion of this RFP or give information as to the requirements of the RFP in addition to what is contained in the written RFP document.

1-6. Addendum: The City may record its response to inquiries and any supplemental instructions in the form of written addenda. The City may mail written addenda up to three (3) calendar days before the date fixed for receiving the proposals. Proposers shall contact the City to ascertain whether any addenda have been issued. Failure to do so could result in an unresponsive proposal. Any oral explanation given before the RFP opening will not be binding.

All Proposers are expected to carefully examine the proposal documents. Any ambiguities or inconsistencies should be brought to the attention of the City's Purchasing Agent through written communication prior to the opening of the proposals.

1-7. Contract Awards: The City anticipates entering into an Agreement with the Proposer who submits the proposal judged by the City to be most advantageous.

The Proposer understands that this RFP does not constitute an offer or an Agreement with the Proposer. An offer or Agreement shall not be deemed to exist and is not binding until proposals are reviewed, accepted by appointed staff, the best proposal has been identified, approved by the appropriate level of authority within the City and executed by all parties. The City anticipates that the final Agreement will be in substantial conformance with this sample Agreement; nevertheless, Proposers are advised that any Agreement may result from the RFP may deviate from the Sample Agreement.

The City reserves the right to reject all proposals, to abandon the project and/or to solicit and re- advertise for other proposals.

1-8. Contractual Agreement: This RFP and Consultant/Contractor proposal shall be included and incorporated in the final award. The order of contractual precedence will be the Contract or Agreement document, original Terms and Conditions, and Proposer response. Any and all legal action necessary to enforce the award will be held in Miami-Dade County and the contractual obligations will be interpreted according to the laws of Florida. Any additional contract or agreement requested for consideration by the Proposer must be attached and enclosed as part of the proposal.

1-9. Selection Process: The proposals will be evaluated and assigned points. The firm with the highest number of points will be ranked first; however, nothing herein will prevent the City from assigning work to any firm deemed responsive and responsible.

The City reserves the right to further negotiate any proposal, including price, with the highest rated Proposer. If an agreement cannot be reached with the highest rated Proposer, the City reserves the right to negotiate and recommend award to the next highest Proposer or subsequent Proposers until an agreement is reached.

1-10. Public Records: Upon award recommendation or ten (10) days after opening, whichever occurs first, proposals become "public records" and shall be subject to public disclosure consistent with Chapter 119 Florida Statutes. Proposers must invoke the exemptions to disclosure provided by law in the response to the RFP and must identify the data or other materials to be protected and must state the reasons why such exclusion from public disclosure is necessary. Document files may be examined during normal working hours.

1-11. News Releases: The Proposer shall obtain the prior approval of the City Manager's Office for all news releases or other publicity pertaining to this RFP or the service, study, or project to which it relates.

1-12. Insurance: The awarded Proposer(s) shall maintain insurance coverage reflecting at least the minimum amounts and conditions specified herein. In the event the Proposer is a governmental entity or a self-insured organization, different insurance requirements may apply. Misrepresentation of any material fact, whether intentional or not, regarding the Proposers' insurance coverage, policies or capabilities may be grounds for rejection of the proposal and rescission of any ensuing Agreement.

- Evidence of General Liability coverage with limits not less than $1,000,000 per Occurrence/ $2,000,000 Aggregate (Including Policy Number and Policy Period);
- Evidence of Auto Liability coverage with limits not less than $1,000,000 per Occurrence/$1,000,000 Aggregate (Including Policy Number and Policy Period);
- Evidence of Workers' Compensation coverage with statutory limits and Employer's Liability coverage with limits not less than $100,000 (Including Policy Number and Policy Period);
- The City listed as an additional insured (this may be specifically limited to the specific job(s) the contractor will be performing);
- Minimum 30-day written notice of cancellation.

1-13. Licenses: Proposers, both corporate and individual, must be fully licensed and certified in the State of Florida at the time of RFP submittal. The proposal of any Proposer who is not fully licensed and certified shall be rejected.

1-14. Public Entity Crimes: Award will not be made to any person or affiliate identified on the Department of Management Services' "Convicted Vendor List". This list is defined as consisting

of persons and affiliates who are disqualified from public contracting and purchasing processes because they have been found guilty of a public entity crime. No public entity shall award any contract to or transact any business in excess of the threshold amount provided in Section 287.017 Florida Statutes for Category Two (currently $25,000) with any person or affiliated on the "Convicted Vendor List" for a period of thirty-six (36) months from the date that person or affiliate was placed on the "Convicted Vendor List" unless that person or affiliate has been removed from the list. By signing and submitting the RFP proposal forms, Proposer attests that they have not been placed on the "Convicted Vendor List".

1-15. Code Of Ethics: If any Proposer violates or is a party to a violation of the code of ethics of the City of Opa-locka or the State of Florida with respect to this proposal, such Proposer may be disqualified from performing the work described in this proposal or from furnishing the goods or services for which the proposal is submitted and shall be further disqualified from submitting any future proposals for work, goods or services for the City of Opa-locka.

1-16. Drug-Free Workplace: Preference shall be given to businesses with Drug-Free Workplace (DFW) programs. Whenever two or more proposals which are equal with respect to price, quality, and service are received by the City for the procurement of commodities or contractual services, a proposal received from a business that completes the attached DFW form certifying that it is a DFW shall be given preference in the award process.

1-17. Permits and Taxes: The Proposer shall procure all permits, pay all charges, fees, and taxes, and give all notices necessary and incidental to the due and lawful execution of the work.

1-18. Protests: Protests of the plans, specifications, and other requirements of the request for proposal and bids must be received in writing by the City Clerk's Office at least ten (10) working days prior to the scheduled bid opening. A detailed explanation of the reason for the protest must be included. Protests of the award or intended award of the bid or contract must be in writing and received in the City Clerk's Office within seven (7) working days of the notice of award. A detailed explanation of the protest must be included.

1-19. Termination for Convenience: A contract may be terminated in whole or in part by the City at any time and for any reason in accordance with this clause whenever the City shall determine that such termination is in the best interest of the City. Any such termination shall be affected by the delivery to the contractor at least five (5) working days before the effective date of a Notice of Termination specifying the extent to which performance shall be terminated and the date upon which termination becomes effective. An equitable adjustment in the contract price shall be made for the completed service, but no amount shall be allowed for anticipated profit on unperformed service.

PART II
NATURE OF SERVICE

I. INTRODUCTION

The City of Opa-locka (City) seeks proposals from qualified firms, consultants, or consultant teams to perform professional consulting and planning services to prepare a comprehensive citywide Urban Forest Plan in accordance with this Request for Proposals (RFP). The proposal seeks to both update the City's existing street tree plan and expand the scope to include park trees, trees in easement areas, trees near power lines that are maintained by the City of Opa-locka and Florida Power and Light, and trees on private and other non-City of Opa-locka property. Thus, Opa-locka's street tree plan will become the Urban Forest Plan.

The City's Urban Forest Plan is intended to be strategic in advancing social equity and contributing to an improved quality of life by providing the benefits of urban tree canopy to all community members, which includes improvement of overall emotional and psychological health, and improvement of physical health. USDA Forest Service maps of urban tree canopy coverage show that most of the City has between 0-12% tree canopy coverage. A focus of the Urban Forest Plan should be expanding the urban forest and creating a more equal distribution of trees across all the City of Opa-locka's neighborhoods. The assessment must include a social vulnerability assessment that is intended to guide the equitable implementation of Urban Forestry strategies, including its expansion.

A. PURPOSE OF REQUEST

The purpose of this Request for Proposals is to develop an Urban Forest Plan that accomplishes the following:

1. Creation of a Master Street Tree Plan. The proposal seeks to create a street tree plan expand the scope to include park trees and develop recommendations to promote an increase in the overall canopy, including trees not managed by the city.
2. Develop a Dynamic and Forward-focused Plan and Related Policies Based on the Needs of the City. The City is in need of a Tree Canopy Assessment and strategies for planting, maintenance, and pruning trees to meet the needs of the Community. Additionally, new revision/addition and/or creation of City Ordinances, and the creation of planning documents integrating Urban Forest activities and initiatives. The Urban Forest Plan will guide the City's operations and activities, including expanding and maintaining the tree canopy, for the next 10 years.
3. Review the Structure and Funding of Urban Forest Management. The City is currently looking to employ one full-time arborist within the Beautification Department. The Plan will propose future staffing and contract levels, effective organizational structures, and recommend funding mechanisms for a proactive Urban Forest Program that will provide a level of service necessary for a sustainable and thriving urban forest.

B. GUIDING PRINCIPLES

The City seeks to build upon the existing trees and expand its healthy and resilient tree canopy. Equity must be centered throughout all phases of the development of the Urban Forest Plan, including incorporation of racial equity, soliciting community engagement and input, and assessments of tree canopy alongside social vulnerability. The goal is to expand the urban forest and make the benefits of an urban tree canopy accessible to all neighborhoods, especially those with residents that are lower-income and communities of color. The Urban Forest Plan should be ambitious and achievable with the recommended program budget and staffing recommendations.

Incorporation of Equity and Indigenous Practices

The existing Community makeup and tree coverage is a result of historic development practices and exclusionary policies. With the disproportionate impacts on property value, wealth, and public health, it is essential that the Urban Forest Plan establish racial equity guardrails such that policies and practices moving forward do not continue to exacerbate existing gaps between the community. Proposals should describe how the Consultant Team plans to incorporate a Social Vulnerability Analysis into its recommended strategies and prioritize the benefits of tree shade to those communities that currently lack tree canopy, including increasing access to decision-making in the planning process. The diversity of languages and cultural backgrounds of residents should be incorporated into the outreach strategy and plan.

Focus on Drought Tolerant and Native Species

The Urban Forest Plan should identify trees well suited to Opa-locka's current and future climate. A focus on drought-tolerant, shade-producing, Florida native species suited to Opa-locka's changing climate is preferred. Trees with high carbon sequestration capacity are also preferred.

Integration with City plans

The Urban Forest Plan should complement and build upon existing City plans, including the Community Development, Community Redevelopment Association and Opa-locka 2030 Plan, particularly in holistically addressing green space and climate impacts across Opa-locka and include recommendations for complying with related State mandates and requirements, not limited to Water Efficient Landscape and Miami-Dade County and State of Florida regulations.

I. SCOPE OF SERVICES

The City is looking to move forward quickly upon contract execution with the selected Consultant to meet the targeted project milestones. The selected Consultant is expected to provide the deliverables and to facilitate or participate in all tasks that list the Consultant as the responsible party. Each task should be costed separately for the project team to decide what can be achieved with the budget. If it makes sense to combine tasks, they can be combined if the objectives are still met. Proposers may include additional, optional tasks that they feel should be included in the project to achieve the optimal outcome; however, these costs and hours must be listed separately in the budget and may not be approved.

Please note that **this project has a not to exceed budget of $100,000.00 including but not limited to additional services and tasks the Consultant may propose as optional tasks.**

Notwithstanding the inclusion of services in this RFP, the final scope of services negotiated between the City and the successful Proposer shall be set forth in the Professional Services Agreement ("Agreement") executed by and between the City and the successful Proposer.

1. Project Management

A. Coordination and Meetings. The selected Consultant's Project Manager will take the lead in coordinating all project activities, including coordinating with City of Opa-locka Project Manager, deliverables, submissions, permits, and similar coordination efforts consistent with the scope of services.

1. The Consultant shall develop a plan for regular meetings with City staff throughout the duration of the project as required to coordinate and execute the scope of services. The Consultant shall prepare and circulate meeting minutes from all coordinating meetings.
2. The Consultant shall develop a plan and schedule to conduct and present at public outreach meetings (using various forms of virtual platforms) to solicit input from, promote the project to, and garner support for the project by the public.
3. The Consultant shall present draft and final plan documents at relevant City Board and Commission and City Council meetings and support the Plan's adoption by City Council.

B. Project Schedule. The Consultant shall prepare and periodically update a project schedule with tasks and milestones. The Consultant shall break down the schedule by logical tasks with enough detail to track project progress. The schedule must reflect realistic review periods for tasks, such as reports, plans, and coordination.

C. Administration

1. The Consultant shall submit a consolidated monthly invoice that includes a
2. progress report reflecting the work completed with the invoice.
3. The Consultant shall maintain project files in accordance with its Work Plan.

D. Work Plan. The Consultant shall prepare a Work Plan, based on the agreed upon Scope of Work, that includes a list of deliverables, milestone submittal schedule, summary of organization responsibilities and contacts, and task budgets. The Work Plan shall be submitted to the City and approved prior to the first invoice.

2. Analysis of Current Status, Challenges and Opportunities

As part of the development of the Urban Forest Plan, the consultant will review all relevant material, including City policies and documents, to identify where the City is successfully meeting program goals, and where there are gaps and areas for recommended improvements.

A. Assess City Policies and Documents. The Consultant shall review and assess all relevant material listed in this section.

1. Community Development Master Plan

2. Municipal Code (e.g., Protection of Trees, Trees and Shrubbery, Landscaping, Preservation of Historical and Cultural Resources).

3. City Guidelines, Specifications and Standards (e.g., Street Design, Planning Permits, Greenstreet Guidelines, Neighborhood Design Guidelines, Tree Removal/Pruning Permits, Landmark Trees, Master Tree List, Parking Lot Shade Guidelines, Street Tree Planting Requirements, City Landscape and Tree Maintenance Specifications)

4. Climate Action and Resiliency Plan

5. Contractor technical specifications for public tree maintenance.

6. Maintenance and level of service for trees in city easements

7. Key Parties and Stakeholders (interviews required)

    a) City Council and Advisory Commissions

    b) City Staff and Other Public Agencies

    c) Non-Profit Groups

    d) Residents and Business Owners

    e) Others

8. Summarize current and future challenges and opportunities in terms of City policies and planning. Who manages/ interacts with trees in City of Opa-locka? What conflicts exist between public agencies/departments/residents with respect to tree management? What opportunities exist for improving city policies, procedures, and plans related to public and private trees?

B. Assess Program Structure, Function, and Budget

1. Current staffing and program resources/staffing/roles and responsibilities (e.g., in-house, tree maintenance contract)

2. Work conducted (i.e., planting, young tree care, mature tree care, hazard tree abatement, administration, special projects (e.g., removal/replacement programs, major corridor tree/landscape improvements), backlog of work, emergency response, levels of interdepartmental coordination, etc.

3. Budget allocated and current level of service.

C. Assess Current City Public Tree Resources (Streets, Easements, Open Space, and Parks)

1. Tree numbers and stocking levels (from existing inventory)

2. Species composition and age diversity (from existing inventory)

3. Species fitness for future climate and growing conditions (pests, drought, etc.)

4. Management needs

5. Current value – resource units and annual monetary benefits, benefit-cost ratios for street and park tree populations

6. Current public opinion – conduct outreach to determine public opinion concerning services provided by the City and preference for alternative future investments.

D. Assess Private and Public Trees Resources (Canopy Cover Analysis)

1. Tree canopy cover and available growing space (area and %) by census tract (for equity assessment)

2. Overall health of the canopy by census tract (if discernible from existing imagery).

3. Identify primary threats to urban forest health citywide.

4. Equity assessment (distribution of canopy cover and its health, as well as available growing space, in relation to socio-economic indicators of need from census tract data.

5. Planting and management needs to be prioritized by census tract.

6. Value-resource units and annual monetary benefits, benefit-cost ratios by census tract if available

7. Current public opinion – conduct outreach to determine public opinion concerning the extent, health and preference for alternative future investments in the City's urban forest canopy.

8. Provide an overall assessment of Opa-locka's existing urban forest ecology using a framework such as Nature Serve's Ecology Integrity Assessment Method, US Forest Service's Forest Landscape Assessment Tool or other appropriate framework.

3. Stakeholder Participation and Outreach

A. Develop and implement an outreach plan that identifies and engages stakeholders. Consultant team should expect to have a multilingual outreach process that supports engagement with a diversity of cultures and ethnic backgrounds.

B. Develop and provide content for project web pages to be uploaded by City staff and hosted on the existing City web site, which will be a resource for projectdocuments.

C. Collect input from stakeholders, including communities that may not be able to participate in web-

public comment, pop-up events at farmers markets and other spaces, community presentations, or student ambassadors.

D. Develop media messaging materials and a media outreach strategy to inform the public about the planning process as well as opportunities for residents to be involved in supporting the health of the urban forest, including planting and properly managing trees on private and public property.

E. Engagement is expected to be ongoing, substantial, and center neighborhoods where priority tree planting will likely occur.

F. The Project Manager can assist in connecting to local partners and community groups, as well as running some of the outreach events/pop-ups.

4. Urban Forest Plan Development

The consultant team will prepare the Urban Forest Plan document with input from City staff to encompass the determinations based on issues identified in the Scope of Work. The consultant team will develop the organization, narrative text, graphic layout, and a complementary web-based document. The Plan will retain and expand to include park trees and develop recommendations to promote an increase in the overall canopy, including trees not managed by the city.

A. Identify principles and key goals for the plan update. Work with the community to develop principles and goals for the updated Plan and the Urban Forest Program. Guiding principles for the plan implementation are outlined in the background. Identify major challenges for Opa-locka in implementing this work. The Consultant team should plan to address social equity in the prioritization of tree planting across neighborhoods and in the outreach process; incorporation of all partners; and acknowledgment in preparation of a future Green Infrastructure Plan.

B. Key performance indicators. Recommend measurable key performance indicators for tracking progress on Plan goals (considering existing city goals), such as tree planting numbers, net tree gain and tree canopy coverage, increased native biodiversity, number of environmental justice priority community events, number of volunteer hours, and others with citywide goals. Propose policies and strategies that support the achievement of these goals.

C. Tree species and management recommendations.

1. The Plan should identify recommended street tree species appropriate for planting in the public right of way and park trees for planting in parks that meet criteria such as drought tolerance, groundwater table, Florida natives, root growth (minimizing impacts to adjacent public sidewalks and private sewer laterals), and height (many of the City's residential neighborhoods still have overhead power lines), and future climatic conditions.
2. Develop a tree species matrix that includes ratings for CO_2 storage, air quality benefits in terms of ozone, nitrogen dioxide, particulate matter and sulfur dioxide, shade, habitat, pest risk, and other ratings as appropriate. Include mature examples of each species.
3. Provide the City and stakeholders with guidance and recommendations in regard to the state of urban forestry best practices in the following areas at a minimum:

    a) Tree care & health
    b) Tree monitoring
    c) Tree protection, removal, and mitigation for public and private trees
    d) Integrating urban forestry into land use planning
    e) Water conservation considerations
    f) Tree shade and urban heat island mitigation
    g) Public and private utility conflict mitigation

4. Identify strategies to reduce tree maintenance and sidewalk repair costs and minimize tree/utility conflicts.
5. Outline recommendations for best management practices for declining trees and removal of public trees and outline any proactive mitigation strategies to minimize the need for removals.
6. Outline recommendations for the preservation of existing trees on private property, including requirements for removal.
7. Recommend supplemental tools/policies/practices toward increasing tree planting programs including increasing the use of tree zones with automated irrigation systems within the disadvantaged communities.

D. Recommendations for Staffing Structure, Function, Budget and Revenue for Urban Forest.
1. Based on community input from outreach efforts, what aspects of the City's urban forest program pose the greatest challenges and opportunities? What potential future investments are most and least preferred?
2. Recommend optimal staffing (mix of in-house, contract, other) to improve service and efficiency.
3. Determine a recommended budget for urban forest management to meet the desired level of service and plan goals, including ongoing community engagement.
4. Identify potential sources of revenue or support to increase funding and resources available to the Urban Forest.
5. Evaluate the current tree maintenance contract and specifications and make recommendations to align with the overall goals of the Urban Forest Plan and recommended staffing and programmatic needs.
6. Provide a comprehensive list of all applicable resources with the required competencies including staffing, tools, and software.
7. Recommended urban forest management strategies applying but not limited to the following: Reliability Centered Management, Just In Time, Optimal Prune Cycle and address Cost of Deferring Maintenance, Tree Growth Analysis, Pest Pressure and Loads and Other Environmental factors such drought, poor soil conditions and pathogen loads.

E. Challenges for maintaining a healthy urban forest. Climate change, rising groundwater, drought, and potential challenges to maintaining a healthy and vibrant urban forest. The plan should identify these and other challenges and suggest creative solutions to address identified challenges.

F. Recommendation for ongoing community input on urban forest management. Tree planting and care will not be a City endeavor alone – it will require the participation and investment of the community and partners. We want to build community leadership around tree caretaking. Recommendations may address:

1. Recommended actions regarding partnerships, outreach, programming, and community events. This can include Tree Care Academy, best outreach/communication practices, demonstration projects, and volunteer tree planting programs in public areas and Arbor Day/tree festival/community planting days.

2. Recommendations to educate residents about the urban forest, how it supports the city' climate mitigation and adaptation goals and how residents can be involved in supporting the urban forest, including information on what residents are allowed or required to do with public trees.

3. Strategies to encourage and assist residents, businesses, and private property owners to plant and properly maintain trees on their own property (including provision of free or rebated trees and MDC or City rebates).

4. With limited staff capacity at the City, a tree planting and maintenance program will need to be supplemented and supported by a community network. Identify some possible collaboration structures for staff, community volunteers, horticulture students, community partners, and organizations to work together on the tree planting program.

5. Possible partnerships with local businesses and nurseries to further support the community.

6. Recommendations on applicable community engagement resources, including staffing, tools and software.

G. Changes to City policies and related plans. Identify any recommended changes to current City policies, planning, and documents based on assessment of current policies and plans. Identify any areas that might be subject to improvements.

H. Inventory. Provide recommendations on expanding the City's tree inventory to include all city trees.

I. Plan evaluation and updates. Provide recommendations for the ongoing evaluation of the effectiveness of the Plan and guidance for the timing and process of updating the Plan.

II. MINIMUM QUALIFICATIONS

1. Consultants must meet the following minimum qualifications in order to be considered responsive to this RFP:
    a. As of the submission deadline, the consultant shall have a minimum of three (3) years of experience satisfactorily providing the same or similar services requested under this RFP. Prior experience working with municipalities or other public entities ispreferred.
    b. As of the submission deadline, the consultant shall be registered with Florida State and be in good standing.
    c. The project team must have experience with the development of at least three (3) other urban forest or tree plans.
    d. The project team must include ISA (International Society of Arboriculture) certified staff and Arborist.

2. Any consultant that does not meet these minimum requirements shall not be eligible to be considered for placement on the list of qualified on-call consultants.
   The proposal shall include the following items:
3. **Letter of Interest (10 points, 3 page maximum).** Please include in the submittal a letter introducing the consultant and expressing the consultant's interest in developing the Urban Forest Plan. The letter of interest should also include all of the following:
4. Provide the name of entity, its mailing address, telephone, email address. Please describe theorganization.
5. Indicate that the consultant has the availability and time to dedicate the personnel and resources necessary to provide on-call consulting services.
6. Indicate that the consultant has the minimum qualifications listed in Section III above.
7. Indicate the intention of the consultant to adhere to the provisions described in the RFP.
8. If selected to provide consulting services, the consultant will be expected to sign a service provider agreement with the City.
9. Please identify the contact person responsible for the submittal, specifying the name, title, and contact information.
10. Please note that the person signing the letter of interest must be a legal representative of the consultant authorized to bind the consultant to an agreement in the event of an award.
11. **Relevant Experience of Key Personnel and the Firm (15 points, 15 page maximum).**
12. Key Personnel Experience. The submittal must identify the key personnel that are to be assigned if awarded a contract, detailing their qualifications, areas of expertise, a summary of their past experience performing similar services for the City of Opa-locka or neighboring jurisdictions in the Miami Dade County Area, and a resume of each key personnel, including experience working with City staff, local community groups and decision-makers, and regional partner agencies.
13. Firm Experience. The submittal must describe the firm's pertinent project experience, including a list of performed relevant projects, past performance, individual or team accomplishments, and examples of similar work for the City or neighboring jurisdictions in the Miami Dade County area, including experience working with City staff, local community groups and decision-makers, and regional partner

agencies.

14. General Firm Information. General firm information including the number of employees, location of firm headquarters, branch offices, and number of years in business may also be provided.
15. **Scope of Services (50 points).** The Proposer shall prepare a complete description of the scope of services which the Proposer intends to perform in order to achieve the Project Objectives. The Proposer may identify services which differ from the scope of services if the Proposer believes the changes will assist the City in more efficiently and effectively achieving the City's stated Project Objectives. **Note in the scope of services the project management timeline, milestones, and team meetings.**
16. **Fee Schedule (20 points).** (Budget not to exceed $100,000.00 including but no limited to additional and/or optional tasks and services:
17. Estimated fee by task (tasks should match the scope of services section)
18. Hourly billing rate schedule for all proposed staff
19. Types and estimated amount of expenses to be billed to the project.
20. Fees by sub-consultant, by task.
21. **Anticipated Timeline. (5 Points)** The proposal shall include a general timeline for the Scope of Services.
22. **Client References (Pass/Fail).** Consultant must provide a minimum of four (4) client references. Please complete and include the Client Reference worksheet. The consultant's submission of a completed constitutes the consultant's express consent for the City to contact the listed references to inquire regarding the qualifications of the consultant.

PART III

PROPOSAL REQUIREMENTS

3-1 RULES FOR PROPOSALS

In order to maintain comparability and enhance the review process, proposals shall be organized in the manner specified below and include all information required herein. The proposal must name all persons or entities interested in the proposal as principals. The proposal must declare that it is made without collusion with any other person or entity submitting a proposal pursuant to this RFQ.

3-2 SUBMISSION OF PROPOSALS

The proposal shall be submitted on 8 ½ "x 11" paper, portrait orientation, with headings and sections numbered appropriately. Ensure that all information is written legibly or typed. The following should be submitted for a proposing firm to be considered:

3.2.1 Cover Page - Show the name of Proposer's agency/firm, address, telephone number, name of contact person, date, and the proposal number and description.

3.2.2 Tab 1 - Table of Contents

Include a clear identification of the material by section and by page number.

3.2.3 Tab 2 - Letter of Transmittal

3.2.3.1 Limit to one or two pages.

3.2.3.2 Briefly state the Proposers understanding of the work to be done and make a positive commitment to perform the work.

3.2.3.3 Give the names of the persons who will be authorized to make representations for the Proposer, their titles, addresses and telephone numbers.

3.2.3.4 Provide an official signature of a Corporate Officer certifying the contents of the Proposer's responses to the City's Request for Proposal.

3.2.4 Tab 3 - General Information

3.2.4.1 Name of Business.

3.2.4.2 Mailing Address and Phone Number.

3.2.4.3 Names and contact information of persons to be contacted for information or services if different from name of person in charge.

3.2.4.4 Normal business hours.

3.2.4.5 State if business is local, national, or international and indicate the business legal status (corporation, partnership, etc.).

3.2.4.6 Give the date business was organized and/or incorporated, and where.

3.2.4.7 Give the location of the office from which the work is to be done and the number of professional staff employees at that office.

3.2.4.8 Indicate whether the business is a parent or subsidiary in a group of firms/agencies. If it is, please state the name of the parent company.

3.2.4.9 State if the business is licensed, permitted and/or certified to do business in the State of Florida and attach copies of all such licenses issued to the business entity.

3.2.5 Tab 4 – Project Approach

Describe in detail your proposal to fulfill the requirements of the scope of services listed in section 2.2 of this RFQ.

3.2.6 Tab 5 – Experience and Qualifications

3.2.6.1 Specify the number of years the Proposer has been in business.

3.2.6.2 Identify the Proposer's qualifications to perform the services identified in this RFQ as listed in section 2-2 of the Scope of Services.

Include resumes, not exceeding one page each, of all key personnel who will be assigned to the City.

3.2.7 Tab 6 – Schedule

3.2.7.1 Include a timetable that identifies the amount of time required to complete each component of the Program.

3.2.7.2 Indicate the earliest available start date for your project team.

3.2.7.3 Indicate the project completion date based on the date provided in 3.2.7.1.

3.2.8 Tab 7 – Pricing of Services

3.2.8.1 Fee basis should be an all-inclusive, base fee.

3.2.9 Tab 8 – References

3.2.9.1 List a minimum of three (3) references in Florida for which the proposer has provided elevator services. Include the name of the organization, brief description of the project, name of contact person telephone number and email address.

3.2.10 Tab 9 – Additional Forms Proposers must compete and submit as part of its Proposal all of the following forms and/or documents.

FAILURE TO SUBMIT ALL OF THE ABOVE REQUIRED DOCUMENTATION MAY DISQUALIFY PROPOSER.

PART IV
EVALUATION OF PROPOSALS

4-1 SELECTION COMMITTEE

A Selection Committee, consisting of City personnel, will convene, review, and discuss all proposals submitted. The Selection Committee will use a point formula during the review process to score proposals and assign points in the evaluation process in accordance with the evaluation criteria. The Proposer shall satisfy and explicitly respond to all the requirements of the RFQ including a detailed explanation of how the services shall be performed.

Each proposal will be reviewed to determine if the Proposal is responsive to the submission requirements outlined in the Solicitation. A responsive Proposal is one which follows the requirements of this Solicitation which includes all documents are submitted in the format outlined in this Solicitation, is of timely submission, and has the appropriate signatures as required on each document. Failure to comply with these requirements may result in the Proposal being deemed non-responsive. The Contract (s) will be awarded to the most responsive proposer whose Proposal best serves the interest of and represents the best values to the City of Opa-locka.

4-2 EVALUATION CRITERIA

The Committee may select and choose to invite any and/or or all firms to make a presentation and be interviewed by the Committee as part of the evaluation process for this Solicitation. The Committee's decision will be communicated by staff to all Respondents. The Respondent's presentation may clarify but may not modify their submitted proposal. Any discussion between the presenter (s) and Evaluation Committee during presentations are intended only for purposes of providing clarification in response to questions from the Committee.

Categories	Points
Category 1. Experience: in public and private sector (minimum of 5 years of experience). Qualifications of the Project Team.	15
Category 2. SOW: The ability to meet the defined scope of work, plan, project approach, and methodology. References: three (3) required.	50
Category 3. Letter of Intent: The letter introducing the consultant and expressing the consultant's interest in developing the Urban Forest Plan.	10
Category 4. Timeline: The proposal shall include a general timeline for the Scope of Services.	5
Category 5. Fee schedule: Cost of proposal	20
TOTAL	100

4-3 ORAL PRESENTATIONS

Proposers may be required to make individual presentations to the City Selection Committee in order to clarify their proposals. Only those firms with the highest rated scores in accordance with the stated criteria and their weights will be invited to give oral presentations. However, the City has the right to accept the best proposal as submitted, without discussion or negotiation.

If the City determines that such presentations are needed, a time and place will be scheduled for oral presentations. Each Proposer shall be prepared to discuss and substantiate any of the areas of the proposal submitted, and its qualifications to perform the specified services. During the oral presentations, the Proposers should relate their discussion to the evaluation criteria, which will include (but not be limited to) their approach to the project. The proposed Project Manager must be in attendance.

The Evaluation Criteria may be changed for the oral presentation evaluation phase. References and site visits (if completed) shall be included in the final evaluation criteria, along with other criteria and weights as determined by the Selection Committee. Finalists will be informed as to the revised criteria, if any, prior to their oral presentation.

Additionally, prior to award of an Agreement pursuant to this RFQ, the City may require Proposers to submit such additional information bearing upon the Proposer's ability to perform the services in the Agreement as the City deems appropriate.

4-4 FINAL SELECTION

The City of Opa-locka will select the firm that meets the best interests of the City. The City shall be the sole judge of its own best interests, the proposals, and the resulting negotiated agreement. The City's decisions will be final. Following the notification of the selected firm, it is expected that an Agreement will be executed between both parties. City staff will recommend award to the responsible Proposer whose Proposal is determined to provide overall best value to the City, considering the evaluation factors in this RFQ.

4-5 AWARD AND CONTRACT EXECUTION

After review by the Selection Committee of the proposals and oral presentations a recommendation will be made to the City Manager for submission to the City Commission for final approval. Upon Commission authorization, contract negotiations will be initiated with the first ranked firm. If those negotiations are unsuccessful, the City will formally terminate negotiations with the first ranked firm and will commence contract negotiations with the next ranked firm, etc. Upon successful contract negotiations with the prevailing firm, the remaining firms will be notified that the process has been completed and that they were not selected.

PROPOSER QUALIFICATIONS

The Proposer, as a result of this proposal, MUST hold a County and/or Municipal Contractor's Occupational License in the area of their fixed business location. The following information MUST be completed and submitted with the proposal to be considered:

1. Legal Name and Address:

   Name: _____

   Address: _____

   City, State, Zip: _____ Phone/Fax: _____

2. Check One: Corporation ( ) Partnership ( ) Individual ( )

3. If Corporation, state:
   Date of Incorporation: _____ State in which Incorporated: _____

4. If an out-of-state Corporation, currently authorized to do business in Florida, give date of such authorization:
   _____

5. **Name and Title of Principal Officers** **Date Elected:**

   _____ _____

   _____ _____

   _____ _____

   _____ _____

6. The length of time in business: _____years

7. The length of time (continuous) in business as a service organization in Florida:
   _____years

8. Provide a list of at least three commercial or government references that the bidder has supplied service/commodities meeting the requirements of the City of Opa-locka specification, during the last twenty-four months.

9. A copy of County and/or Municipal Occupational License(s)

Note: *Information requested herein and submitted by the proposers will be analyzed by the City of Opa-locka and will be a factor considered in awarding any resulting contract. The purpose is to ensure that the Contractors, in the sole opinion of the City of Opa-locka, can sufficiently and efficiently perform all the required services in a timely and satisfactory manner as will be required by the subject contract. If there are any terms and/or conditions that are in conflict, the most stringent requirement shall apply.*

PRICE PROPOSAL FORM

PROPONENT understands and agrees that the Contract Price is the lump sum to furnish and install all of the Work complete in place. Vendor's price will not be adjusted unless the CITY changes the scope of the Project after the Contract Date.

As such, the Vendor shall furnish all labor, materials, equipment, tools, superintendence, and services necessary to provide a complete, in place Project for the Proposed Price of:

LUMP SUM PRICE: $_____

CITY OF OPA-LOCKA

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

CITY OF OPA-LOCKA
DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by_____ the
(Name)
_____ of _____
(Title/Position) (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

E-VERIFY

Effective January 1, 2021, public and private employers, contractors and subcontractors will be required to register with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/sub-contractors) assigned by Vendor /Consultant/ Contractor to perform work pursuant to the contract with the Department. The Vendor /Consultant/ Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City; and

By entering into a Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If t contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination. The Contractor acknowledges it is liable to the City for any additional costs as a result of termination of the contract due to Contractor's failure to comply with the provisions herein.

E-VERIFY FORM

Definitions:

"Contractor" means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

"Subcontractor" means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.

Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/subcompanies/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City of Opa-locka; and

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

Citywide Urban Forest Plan

RFP 23-1128200

Questions and Answers

ADDENDUM-01

This addendum is to answer questions on the RFP 23-1128200 Citywide Urban Forest Plan solicitation.

Please see the response below:

Do we need to provide 3 client references (RFP page 26) or 4 client references (RFP page 28)? **Please provide 3 client references.**

Where can we find the Client Reference Worksheet (mentioned on RFP page 28)? It was not included in the RFP. **Please disregard the Client Reference Worksheet and provide the reference as a separate attachment.**

Are there any elevator surfaces for this project (3.2.9.1 RFP page 28)? This is a typing error there are no elevator surfaces for this project. It shall read as follows:

3.2.9.1 List a minimum of three (3) references in Florida for which the proposer has provided Forestry Assessment Services. Include the name of the organization, a brief description of the project, the name of the contact person, telephone number, and email address.

Can the City please confirm that arborist services do not have the pricing restrictions subject to CCNA? **At the moment, the City does not have an arborist in place and pricing is not subject to CCNA. The total budget for this project is not to exceed $100,000.00.**

The RFP indicates that we are to use the City's inventory. What form is that inventory in? Does it include GIS data and when was it last updated?

The City has a GIS Inventory for recently planted trees. The purpose of the assessment is to update the database with all current trees installed and proposed alternatives to the City.

City Board and Commission meetings to present draft and final documents: Will the City accept virtual meetings for this or will the meetings be required in-person? **Virtual Presentations are allowed during the Commission Meetings; The City makes the request that at least a Company Representative be present during the Final Report Presentation.**

Does the City have a current tree canopy and landcover dataset that will be used for "Assess Private and Public Trees Resources" task? **The City does not currently have a landcover dataset. This will need to be created.**

What format is the City's existing inventory data in and how old is it**? The current data is available through the GIS Platform with recently planted trees.**

Does the City have an anticipated timeline for this project? Deadline for completion? **April 2024**

Does the City require that forms are signed in wet-ink? **The forms can be signed with an ink pen.**

CITY OF OPA-LOCKA
CERTIFICATION

REQUEST FOR PROPOSAL

Re: RFP No. 23-1128200 Citywide Urban Forest Plan

Dear Selection Committee,

Chen Moore and Associates (CMA) is pleased to submit our qualifications for the City of Opa-Locka (City) for the preparation of a City-Wide Urban Forest Plan.

For over two decades, CMA staff have provided expertise in arboriculture, urban forestry, landscape design, and planning services to serve the needs of municipalities and other client types throughout Florida. We have provided mater plans and management plans for urban forest resources for a variety of projects throughout southeast Florida, including City-wide urban forest resources, City-wide park systems, individual parks, and urban corridors. Our team includes ISA Certified Arborists, ASLA Professional Landscape Architects, planners, and GIS specialists, with active memberships in Florida ISA, ASLA, and the Florida Urban Forestry Council (FUFC) - including a Board of Directors position with FUFC. In addition, our team includes a public relations subconsultant with whom we've worked with extensively on our master plan projects.

CMA staff have prepared urban forest management plans for Delray Beach, Wellington, and Lake Worth. We have also prepared full city-wide or partial city-wide tree inventories for the following municipalities in south Florida alone: Marathon; Palmetto Bay; Miami; Miami Beach; Doral; Surfside; Margate; Deerfield Beach, Coconut Creek; Wellington; Delray Beach; Lake Worth. With this experience, we fully understand the scope of work associated with this project and are well prepared to execute the deliverables.

Services for this project will be based out of Miami office. Our team includes Principal-in-Charge Cris Betancourt, PLA, AICP, Brian Voelker (Project Manager, ISA Certified Arborist), Jason Sutton (Senior Landscape Architect, ISA Certified Arborist), Brittany Bourgault (Landscape Designer), Jennifer Eve Cook (Associate Planner), Sara Benasat (Associate Planner), Charmaine Emanuels (Associate Engineer/GIS Specialist), and our trusted public relations subconsultant (ETC Institute) - please see attached resumes for staff background and experience. With the assemblage of this team of multiple, highly seasoned arborists, landscape architects, and planners, CMA is committed to providing an exemplary urban forest plan in a timely manner.

We look forward to the opportunity to present our qualifications and approach to this project in more detail to the selection committee. I am authorized to represent CMA and hereby certify the contents of this proposal. Should you have any questions, please do not hesitate to contact me at (786) 497-1500, pmoore@chenmoore.com, or 3150 SW 38th Avenue, Suite 950, Miami, FL 33146.

Respectfully submitted,

CHEN MOORE AND ASSOCIATES, INC.

Peter Moore, P.E., F.ASCE, FACEC, President

3. General Information

TAB 3

GENERAL INFORMATION

3.2.4.1 Name of Business.

Chen Moore and Associates

3.2.4.2 Mailing Address and Phone Number.

3150 SW 38th Ave, Suite 950
Miami, FL, 33146
+1 (786) 497-1500

3.2.4.3 Names and contact information of persons to be contacted for information or services if different from name of person in charge.

Brian Voelker, M.S., SPWS, C.A., CLI, M: 954.559.6362 bvoelker@chenmoore.com

3.2.4.4 Normal business hours.

Monday - Friday 8am - 5pm

3.2.4.5 State if business is local, national, or international and indicate the business legal status (corporation, partnership, etc.).

CMA is a Florida based corporation. We have offices in:

- Fort Lauderdale
- Miami
- West Palm Beach
- Orlando Area
- Jupiter
- Jacksonville
- Sarasota
- Gainesville
- Tampa
- Port St. Lucie

3.2.4.6 Give the date business was organized and/or incorporated, and where.

November 7, 1986, Plantation, Florida

3.2.4.7 Give the location of the office from which the work is to be done and the number of professional staff employees at that office.

3150 SW 38th Ave, Suite 950

Miami, FL, 33146

Staff: 14

3.2.4.8 Indicate whether the business is a parent or subsidiary in a group of firms/agencies. If it is, please state the name of the parent company.

N/A

3.2.4.9 State if the business is licensed, permitted and/or certified to do business in the State of Florida and attach copies of all such licenses issued to the business entity.

Please see the following page.

4. Project Approach

TAB 4

PROJECT APPROACH

As we understand it, the fundamental goal of the Urban Forest Plan (UFP) is to improve and expand the City's urban forest, and to create a more equitable distribution of trees across all the City's neighborhoods and socioeconomic groups. The UFP will evaluate the status of the City's urban forest, establish a clear set of priorities and objectives, and provide a framework for the management, maintenance, and enhancement of trees throughout the City. The following is a summary of our proposed work efforts towards providing the City with the UFP.

1. Project Management

Brian Voelker will serve as our Project Manager and lead technical advisor in the development of the UFP. Mr. Voelker is an ISA Certified Arborist, LIAF Certified Landscape Inspector, and Board Member with the Florida Urban Forestry Council; Mr. Voelker is well versed in the field of urban forest management and has presented on this topic on several occasions, most recently the March 2023 FUFC Urban Forestry Institute seminar. Project management efforts to be performed by Mr. Voelker will include:

- Administer regular project coordination meetings with City staff throughout the duration of the project. This effort will include scheduling of meetings, preparation of meeting agendas, attendance at meetings, and the preparation and distribution of meeting minutes to City staff.
- Administer public outreach meetings. This effort will include the following: coordination with City staff regarding scheduling and meeting venues; preparation of presentation materials for meetings (i.e. PowerPoint presentations); preparation of meeting minutes; preparation of report summarizing public input from meetings. These meetings will be in-person but will include the option of virtual attendance (e.g. via Zoom link).
- Preparation of draft and final UFP, incorporating input from the City, as well as feedback from public outreach meetings.
- Preparation of a work plan and project schedule:
  - CMA will prepare a work plan including each sub-task within the overall project scope, along with proposed completion dates for each sub-task. Adherence to each "milestone" date will ensure that the project remains on track with the overall deadline.
- Preparation of monthly invoices with progress reports (or estimated percent complete for overall project)

2. Analysis of Current Status, Challenges, and Opportunities

Assess City Policies and Documents

CMA will review existing City documents related to urban forestry, including the City's Landscape and Tree Protection and Conservation codes, the Community Development Master Plan, and the Climate Action and Resiliency Plan, to ensure that UFP goals and objectives are in conformance with the goals and objectives outlined in these documents. CMA will also directly coordinate with "stakeholder groups" (e.g., City staff, City Council and Advisory Commissions, non-profit groups, residents, etc.) to understand the unique and specific urban forestry management efforts/goals from each group. Gathering input from each of these groups will allow us to identify potential conflicts in management efforts and goals/objectives between the groups. Details for the approach for obtaining stakeholder input are included in Section 3 below.

Assess Program Structure, Function, and Budget

CMA will review and evaluate current the City's current tree maintenance efforts. This will include the following evaluation of maintenance efforts (i.e., level of training, skill sets, etc.) from both the City's in house staff and contracted arborist services relative to the actual urban forest maintenance needs identified in the UFP. CMA will also evaluate the City's current budget for tree maintenance efforts and identify budget modifications that may be required to incorporate all long term maintenance needs identified in the UMP.

This effort will also include the evaluation of potential grant funding opportunities to develop an improved maintenance department (i.e., funding for staffing, training, etc.).

Assess Current City Public Tree Resources (Streets, Easements, Open Space, and Parks)

Analyze individual tree data on City properties:

- Review existing tree data using GIS software to evaluate the following:
  - Species composition/resiliency (e.g., native vs. non-native, wind resistance, flooding and saltwater intrusion resistance).
  - General tree conditions by species, common defects.
  - Tree/infrastructure conflicts.
  - Tree sizes/ages relative to planting spaces (i.e., evaluate where trees may be outgrowing their spaces).
  - Presence of pests/diseases by species.
  - Maintenance requirements.
  - Calculate annual monetary benefits (using the i-Tree "Eco" program) and compare these benefits to annual maintenance costs.

Assess Private and Public Trees Resources (Canopy Cover Analysis)

CMA will perform canopy cover analyses using the i-Tree Canopy program. These analyses will include the following:

- City wide canopy cover analysis (area and % cover); this will include a calculation of structural values and annual ecosystem benefits (i.e., carbon sequestration, stormwater capture, pollutant uptake, etc.).
- Canopy cover analyses for individual census tracts, including canopy area and percent cover and annual benefits for each individual tract.
  - A tree equity analysis may then be performed through comparison of resulting values between census tracts. This will lead to the generation of a preliminary tree planting plan prioritized by census tracts with the lowest tree canopy cover.
- Provide an overview of primary threats to the urban forest (City-wide); this effort will include random field sampling for an evaluation of existing tree conditions and observed biotic and abiotic defects.
- Provide an overall assessment of the City's urban forest ecology using the Nature Serve's Ecology Integrity Assessment Method, US Forest Service's Forest

3. Stakeholder Participation and Outreach

Pending completion of Task 2 (analysis of current status, challenges and opportunities), CMA will develop and administer an outreach plan. We will work closely with our trusted public relations subconsultant (ETC Institute) to identify stakeholder groups (e.g., local partners and community groups) and engage with them through multiple outlets, which will include the following:

- Develop a publicly accessed, web-based portal (Google Drive folder or equivalent hosted by CMA) with content including:
  - Outline of UFP goals and objectives
  - Urban forest ecosystem and human health benefits
  - Guidelines on how residents can contribute to the success of the urban forest though the proper selection, installation, and management of trees on their own properties.
- Collecting input from stakeholder groups through surveys
  - CMA/ETC will conduct a pilot test with no fewer than 50 residents. The survey will only be administered to households within the City. A findings report will include an executive summary,

charts and graphs, benchmarking comparisons, priority investment rating analysis, and tabular data. Results will be consolidated and posted on the web portal.

  - CMA/ETC will then complete a full survey that is statistically valid and representative of the population of the City, both demographically and geographically.

- Prepare for and administer in person public outreach meetings. The intent of these meetings will be to gain feedback on the UFP goals and objectives from both City staff and the public. CMA will coordinate with City staff to verify the most suitable/appropriate venue options. CMA will prepare agendas and presentation materials (e.g., PowerPoint presentation) and record minutes from these meetings. Our proposed scope/fee will include up to six meetings but can be modified to include additional meetings upon request.

4. Urban Forest Plan Development

Pending completion of stakeholder input, CMA will prepare the draft UFP. The following list of proposed UFP components is based upon the RFP requirements, as well as CMA's extensive urban forestry experience and understanding of the unique efforts and challenges of managing trees in south Florida's urban areas.

- Understanding of the community vision for the urban forest:
  - This will include providing a summary of all City staff and public feedback on the UFMP provided during public meetings and from the public survey.
- Overview of the current status of urban forest resources (i.e., summary of data obtained in Section 2).
  - Address potential tree equity issues by prioritizing proposed tree plantings in census tracts with lower relative canopy coverage.
- Urban forest goals and improvement strategies (based on CMA's experience and City staff/public feedback):
  - Create tree canopy cover goals (City-wide percent cover and percent cover within each census tract).
  - Tree plantings strategies:
    - Estimates for #'s of trees required to obtain annual increases in percent canopy coverage over a three-to-five-year time period.
      - ◊ Discussion of available planting spaces/locations for these proposed plantings.
    - Design elements to accommodate large shade trees in urban spaces (e.g., suspended pavement systems).
    - Removal and replacement of nuisance/exotic trees.
    - Creation of a species selection guide developed by our certified arborists and landscape architects that address both resiliency (native, wind and flooding tolerant, disease/pest resistance) and aesthetics and community cohesiveness (i.e., acknowledging historic and current species assemblages by community). This guide will also include ecosystem benefits per tree species (e.g. CO_2 uptake, pollutant removal, etc.).
  - Tree Maintenance:
    - Develop tiered maintenance program based on tree conditions (e.g., removal and replacement of trees with an elevated risk of failure would be prioritized over remediation efforts [pruning, fertilization] for trees in fair or better condition).
  - Tree Planting and Maintenance Funding
    - CMA will work to identify grant funding opportunities for implementation of all tree canopy improvement strategies and proposed maintenance efforts identified in the UFP.

- Tree Protection Measures:
    - Ensure City's Landscape and Tree Protection and Conservation ordinances have the latest BMPs for tree protection and preservation incorporated and ensure that the UFMP goals and objectives align with the ordinance. The UFMP may include recommended updates to the ordinance if UFMP goals/objectives are not supported by or reflected in the ordinance.
    - Examine ordinance for expansion on or inclusion of various items:
        - ◊ Minimum soil volume requirements.
        - ◊ Inclusion of excessive root pruning under "tree abuse".
        - ◊ Infrastructure guidelines for tree protection (e.g., root barriers; at-grade or elevated sidewalk designs to avoid/minimize root impacts; etc.).
- Development of a Landscape Technical Manual (LTM)
    - The LTM would include the following components:
        - ◊ Species selection guide and species grading guidelines.
        - ◊ Tree installation Best Management Practices (BMPs).
        - ◊ Maintenance guidelines (pruning, fertilization).
        - ◊ Tree protection measures during construction.
        - ◊ Water conservation strategies for landscape establishment.
        - ◊ Tree mitigation guidelines.
        - ◊ Guidance for integrating urban forestry into land use planning.
        - ◊ Guidelines for mitigating tree conflicts with utilities.
        - ◊ Guidelines for tree planting to mitigate urban heat island effect.

- Future Planning
    - Set goals for future tree inventories and canopy cover analyses to evaluate urban forest resources relative to success criteria outlined in the UFP.
        - Identify programs/software for inventories, canopy cover analyses, and overall urban forest functional value assessments.
        - Identify potential public/private partnerships with non-profit groups with a focus on increased tree plantings and improved tree care on both municipal and private properties. This effort can include organizing and planning public events including tree planting/care educational seminars and tree giveaways.
        - Identify potential financial incentive programs to encourage public tree plantings on private properties.
        - Identify opportunities for agreements with outside (non-City) entities to provide long term tree maintenance on certain City properties.

5. Experience and Qualifications

EXPERIENCE AND QUALIFICATIONS

3.2.6.1 Specify the number of years the Proposer has been in business

3.2.6.2 Identify the Proposer's qualifications to perform the services identified in this RFQ as listed in section 2-2 of the Scope of Services

Founded in 1986, Chen Moore and Associates (CMA) specializes in civil engineering, water resources, water and sewer, landscape architecture, electrical engineering, transportation, planning and irrigation, environmental and construction administrative services. With the recent addition of Fred Wilson and Associates (opened in 1962) during the 3rd quarter of 2021, the combined firm has now officially been in business for over sixty (60) years. The firm commits to providing responsive quality services while meeting the schedules and specific project needs of our clients. The firm has its headquarters in Fort Lauderdale, Florida. CMA has offices throughout Florida, including regional offices in Miami, West Palm Beach, Orlando (Maitland), and Jacksonville. CMA has additional Florida offices in Sarasota, FL, Gainesville, FL, Tampa, FL and in Atlanta, GA. The firm commits to providing responsive quality services while meeting the schedules and specific project needs of our clients.

Landscape Architecture and Planning Services

- Parks and Recreation Planning and Design
- Master Planning
- Site Planning Design and Processing
- Irrigation Design
- Community Planning
- Urban Redevelopment
- Comprehensive Planning
- Campus Planning and Design
- Due Diligence and Feasibility Reports
- Land Use Entitlements
- Landscape Planning and Design

- Hardscape Feature Design
- Streetscape Design
- Greenway and Trails Design
- Wayfinding
- Lighting Design
- Graphic Design and Presentation
- Habitat Restoration

CMA's landscape architecture and planning team provides creative solutions for a diverse clientele. The team is currently working on healthcare, private development, and government projects. CMA is known and respected for our thorough understanding of site and permitting constraints prior to commencing a project. We are highly responsive and provide out-of-the-box solutions to our clients' needs.

Design Philosophy

Public landscapes, whether in the form of parks, streetscapes, or other municipal facilities, serve multiple purposes. They provide beautification, shade, habitat for wildlife, they improve water quality, and they can serve as educational spaces informing the public of our need to care for our natural resources. They improve our quality of life and enhance the urban experience. Our approach to landscape architecture is to understand a client's ability to maintain the spaces we create. The design and its implementation represent a fraction of the works anticipated life. We work closely with you to make certain inherited facilities can be maintained for the long-term benefit of your community. Landscapes and infrastructure should be sustainable socially, environmentally, and economically.

CMA believes parks play a vital role in our communities. Parks lay a healthy foundation for community development. They can catalyze community revitalization, engage the community, and support economic development through enhancement of property values and increased municipal revenue. Parks can promote tourism by providing venues for special events, festivals, and sports tournaments and often contain special facilities such as zoos, memorials, or significant cultural artifacts. Socially, parks create safer neighborhoods and provide an environment where people can connect with nature and benefit from physical activity, social interaction, and a cleaner environment raising their quality of life. Physically, our parks shape our environment and help to define our public realm by providing open space that preserves vital ecological functions, protects biodiversity, buffers incompatible land uses, and reduces public costs for stormwater management, flood control, and other forms of public infrastructure.

In the last five years, we have provided services on the following types of projects to public sector clients:

- Coastal Parks (requiring permitting through FDEP)
- Urban Parks (accommodating green markets, art, culture and community festivals)
- Active Parks with recreation facilities (Baseball, Soccer, Basketball, Volleyball, Tennis, Pickle Ball, Multi-Use Fields)
- Site Plan processing for community redevelopment projects and private

development sites
- Wayfinding Strategies
- Streetscape Design and Implementation
- Complete Streets Conceptual Design and Implementation
- Irrigation Studies and Implementation of Irrigation Central Control for municipalities and universities
- Urban Tree Canopy Studies
- Plans Review

Utility Design

CMA has worked with public, semi-public and private clients to provide a wide range of water and sewer consulting engineering services including large-scale master planning and modeling, existing system assessments, design and rehabilitation, and new site development design, permitting and construction. Our experience includes the planning, design, permitting and construction of over 100 miles of water main, 100 miles of gravity sewer, 40 miles of force main, over 250 pump stations (ranging from 100 gpm to 5,000 gpm), five large diameter mains in FDOT rights of way (20" to 48" force main) and 60 directional drills. The following are some examples of our utility capabilities:

- Water/Sewer Distribution/Collection/ Transmission System Modeling
- Master Planning
- Pump Station Rehabilitation and Design
- Water Supply, Treatment and Distribution
- Wastewater Collection, Transmission, Treatment, Re-use and Disposal
- Trenchless Technology Analysis
- Pipe Lining and Rehabilitation
- GIS Analysis
- Odor Management
- Government Agency Permitting and Coordination
- Cost Estimating

Stormwater Engineering, Planning and Management Services

The CMA Team is prepared to offer the City our complete breadth of stormwater services. Our team of local engineers can offer the City both traditional civil engineering support and an entire range of planning, modeling, and GIS support for your stormwater projects. A sampling of our stormwater experience includes:

- All Aspects of Stormwater System Design
- Modeling (Both Water Quantity and Quality)
- Geographic Information Systems for Stormwater Projects
- Floodplain Assessment and Management Plans
- Stormwater Master Planning
- Watershed Assessments
- Permitting Support
- Regulatory Support
- Government Agency Permitting and Coordination
- Public Outreach and Education
- Cost Estimating

Transportation Engineering and Streetscape Design

CMA understands that successful urban environments are composed of a number of elements that must be seamlessly integrated. Development must be pedestrian friendly and encourage street level activity. Vehicular circulation must be carefully orchestrated to calm traffic and provide a variety of discrete parking solutions that maintain the urban fabric and promote density. Historic structures must be preserved and civic spaces revived. Identity and clarity should be enhanced with streetscape improvements, attractive landscaping, and wayfinding systems

Great neighborhoods, and by extension, great

cities, are remembered for their streets rather than their buildings. CMA integrates this philosophy into our streetscape design. Great streets form the glue that holds a successful community together. Our philosophy of community and street design involves organizing a hierarchy of streets to respond to the varying urban use and density conditions and establishing appropriate standards for each street type. Some of the CMA transportation and streetscape design experience includes:

Streets and Highway Design

- Traffic signal design and analysis
- Street lighting design
- Master Planning
- Geometric Intersection Design
- Conceptual Design and Alternatives Analysis
- Maintenance of Traffic Design
- Pedestrian and Bicycle Pathway Design
- Operational and Safety Studies
- Land Use Plan Amendments
- Traffic Calming Design
- Circulation and Roundabout Design
- Corridor Planning
- Streetscape Design
- Hardscape Design
- Cost Estimating

Electrical Engineering

The firm engineers have a broad range of experience

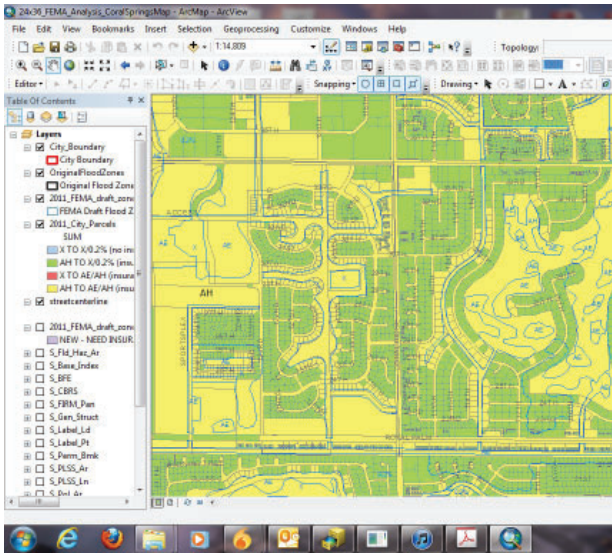
- Substation engineering services include:
- Physical station layout & design
- Substation Bus Design
- Substation Equipment Specifications (Autotransformers, HV Breakers, CCVTs, etc.)
- Design of incoming and outgoing transmission and distribution lines
- Design of lightning protection and grounding systems
- Complete site development (including design of foundations, grading and drainage, water/sewer utilities, control building and site access roads)
- Permitting and regulatory compliance such as Spill Prevention Control & Countermeasures (SPCC)
- Construction & bidding engineering services

In conjunction with substation design, we provide comprehensive engineering services for protective relaying and controls in new as well as in existing substations of varying complexity. The firm engineers have a broad range of experience implementing various protective relaying schemes associated with Transmission Lines, Distribution Lines, Power Transformers, Capacitor Banks and Substation Bus. The firm engineers recognize that each client has different requirements that require some flexibility and a detailed understanding of the specific protective fundamentals. We provide complete Protective Relaying and Control solutions tailored to meet our specific client's needs.

- Relay and controls, metering and communication engineering services include:
- Complete relay system coordination
- Comprehensive Protective Relaying & Controls Design (including drawings, specifications, settings and commissioning)
- Design of microprocessor-based, electromechanical and solid-state systems
- Design of relay upgrades for distribution automation
- SCADA Systems Design
- Communications Design (including fiber-optic, radio and microwave systems)
- Relay Settings, Test Plans and Commissioning Support

- ASPEN OneLiner Modeling
- Substation Bus Design
- Substation Equipment Specifications (Autotransformers, HV Breakers, CCVTs, etc.)
- Design of incoming and outgoing transmission and distribution lines
- Design of lightning protection and grounding systems
- Complete site development (including design of foundations, grading and drainage, water/sewer utilities, control building and site access roads)
- Permitting and regulatory compliance such as Spill Prevention Control & Countermeasures. (SPCC)
- Construction & bidding engineering services

Construction Administration Services



At CMA, the engineers work very closely with the in-house inspectors, allowing a different point of view when interpreting construction documents. Considerable experience has been gained due to the fact that all engineers involved in infrastructure design have had field experience performing construction management services. The lessons learned in the field are incorporated into design, and the engineers have the knowledge to make educated decisions about the acceptability of the work.

The CMA team realizes that even with the best planning, pre-investigation, design and communication, changes can occur during construction. The most effective way of dealing with change orders is to try to anticipate them, quickly provide alternative solutions that are acceptable to both the Client and Contractor, and negotiate with both entities to minimize additional costs. Often times, changes can be made on site without the need for the change order process. CMA has built a reputation of administering projects in a way which minimizes change orders and the costs associated with them. The following are services CMA commonly performs during construction:

- Bidding Assistance
- Preconstruction Services
- Value Engineering
- Scheduling
- GIS/GPS Report Integration
- Administration
- Testing
- Construction Monitoring
- Construction Engineering Inspections
- Construction Management
- Bond Releases

GIS Services

CMA understands the importance of having as-built information provided by the contractor after the installation of the infrastructure and having it be accurate. This is why CMA has designed a field application that our inspectors can use in the field to log the infrastructure information into GIS in real time from their smart phones. ARC GIS Online Maps are created for the project which includes the design information and parcel information. Through a series of drop boxes and fields the inspector can click on the line being installed and put the required detailed information such as date installed length of pipe, elevations and coordinates will be adjusted. The application also allows for pictures to be added to the points. This will not only make it easy for us to pull reports and updated maps quickly but it will also make it easy for us to check the contractor's as-

builts as they come in.

Grant Writing Abilities

CMA has a long history of working with municipalities to enhance projects with grant funds. Often, simply by being aware of available funding sources, CMA has assisted various clients with obtaining multi-year grants. Examples of three relationships are as follows:

- ***FEMA Hazard Mitigation Fund Grants (HMGP):*** In working with the City of Coral Springs, CMA has managed three separate HMGP grants for both hardening of public facilities and flood protection.
- ***Community Development Block Grants (CDBG):*** CMA has worked on over seven projects with the City of Dania Beach funded by CDBG. These include traffic calming, streetscaping, flood protection and solar street lighting.
- M***arine grants:*** For the City of Fort Lauderdale's 15th Street Marina Project, CMA assisted the City in obtaining Florida Inland Navigation (FIND) grants and a Broward Boating Improvement Program (BBIP) grant to double the scope of the project.

CMA also has experience with assisting our clients with obtaining grants and loans including:

- ARRA Compliance
- CDBG Compliance
- State Revolving Loan Loans
- FIND Grants
- FRDAP Grants
- FEMA HMGP
- FDEP 319H Grants

The firm has researched grant applications, coordinated with the grant project manager and has administered progress reports and additional accounting for our clients including the Towns of Hypoluxo and Davie. CMA administered $373,000 for the Town of Davie's 319 Grant. In addition, CMA helped secure $357,151 for the Hypoluxo Shores project and $686,483 for the Hypoluxo Point project from the Florida DepartmLicenses/Certificationsent of Environmental Protection.

Environmental Services

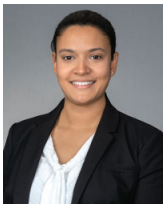
- Wetland delineations, function evaluation, monitoring, and mitigation design
- Environmental resource permitting (through federal, state, and local agencies) for a variety of project types:
  - Roadways, parks, shoreline projects, bridges, utilities, etc.
- Benthic resource surveys
- Protected wildlife assessments (including Florida bonneted bat)
- GPS data collection/mapping and GIS database development
- NEPA/PD&E document preparation and reevaluations
- Certified sUAS/drone pilot services
  - Videography
  - Wetlands monitoring
- Consulting arborist services
  - Urban forest management plans
  - GPS tree inventories
  - Tree removal permitting
  - Tree value estimates and tree grading
  - Tree Risk Assessment (ISA - TRAQ)
  - Analysis of tree canopy cover and ecological/ monetary benefits
  - Mangrove trimming oversight

Key Personnel

All individuals on our project team are committed to providing the City with a well planned, designed and implementable project. CMA recognizes the City of West Miami as an important potential client. We want to develop a solid relationship and become your "Trusted Advisor" for tree inventories. Our staff has been carefully selected to meet and exceed the City's expectations for the project. Please refer to our 330 resumes in Section E for detailed information, including our resumes, for the required information about our team.

Cristobal Betancourt, PLA, AICP is CMA's Vice President of Landscape Architecture and Planning. He has experience providing planning and landscape architecture design solutions for public and private sector clients. His team provides a full range of services starting with due diligence and master planning culminating in detailed site design. Cris is an experienced parks designer and is currently leading the redevelopment of Currie Park for West Palm Beach and the Parks and Recreation System Master Plan for the City of Miami. Cris will lead public engagement for the project and ensure that CMA's Project Manager receives sufficient resources and support to complete the project on time and budget. Cris will serve as Principal-in-Charge for this contract and his contact information is cbetancourt@chenmoore.com; telephone: (786) 497-1500 ext. 1078.

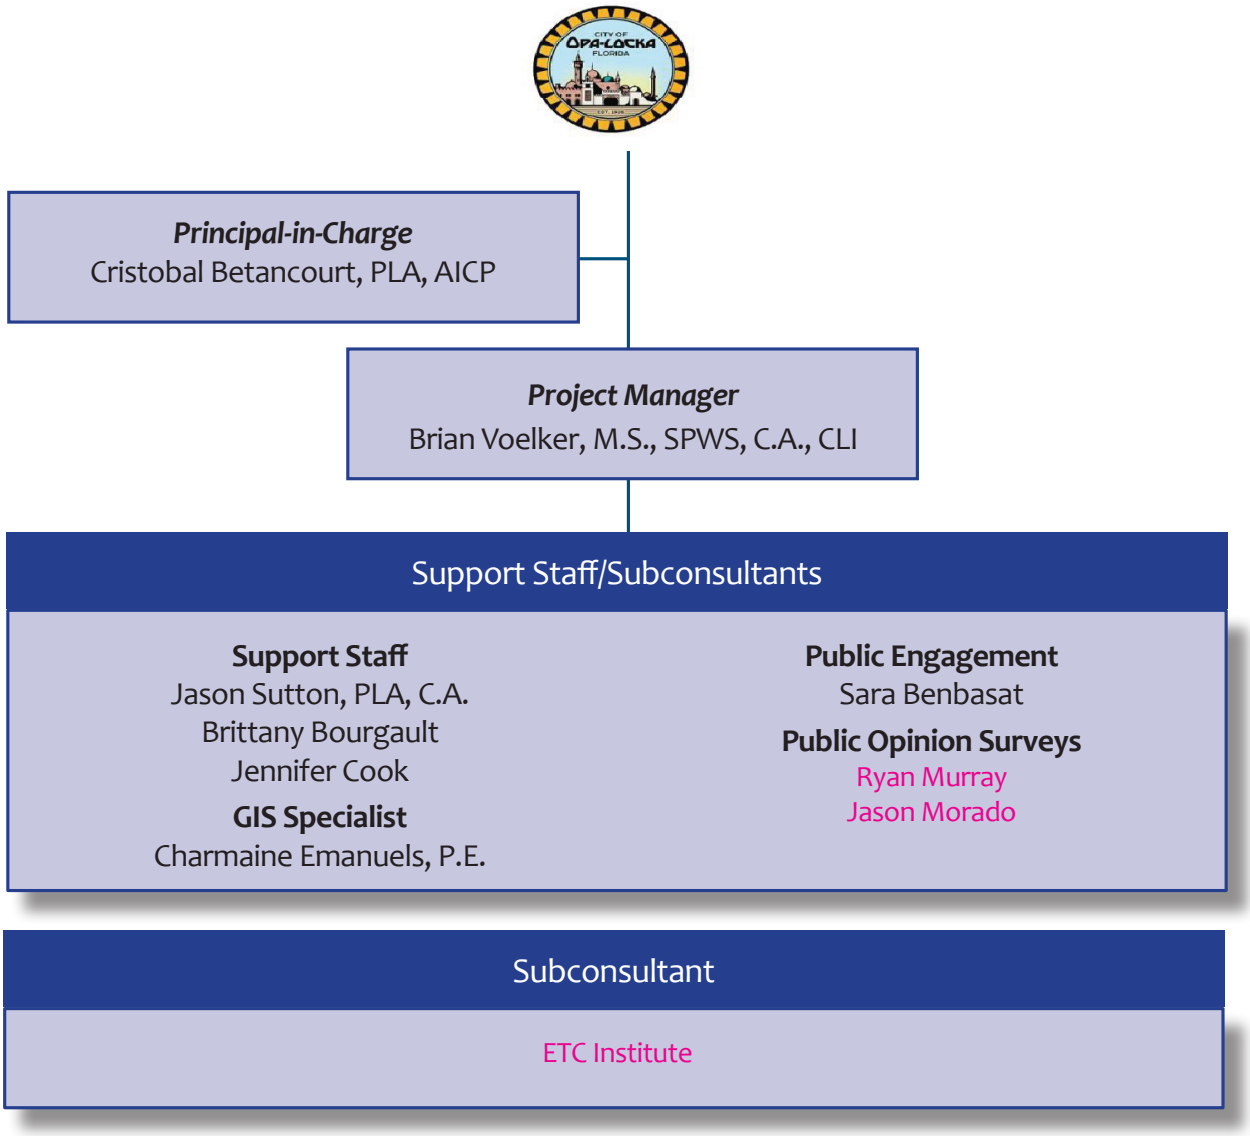
Brian Voelker, M.S., SPWS, C.A., CLI is a Senior Environmental Scientist specializing in natural resource assessments and permitting, as well as certified arborist services. He provides numerous ecological services to clients, including the following: wetland delineation, function evaluation, mitigation design, monitoring, and permitting; upland habitat assessments; coastal habitat assessments and permitting; marine and estuarine habitat assessments and permitting; protected wildlife assessments and permitting; GPS data collection/mapping and GIS database development; NEPA document preparation and oversight; sediment and erosion control monitoring. Brian will serve as Project Manager for this contract and his contact information is bvoelker@chenmoore.com; telephone (786) 497-1500 ext. 1285.



Jason SUtton, PLA, C.A. is a Principal Landscape Architect for CMA's landscape architecture team. He is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. He also brings experience with environmental and wildlife monitoring adding significant field knowledge to our team. Mr. Sutton is well versed in the use of low-impact development techniques specifically applied to site planning, and has extensive experience with parks and recreation facilities throughout Florida for public and private sector clients domestically and internationally, providing design, permitting, and construction observation services for many types of improvements, including numerous transportation projects; municipal parks; streetscapes; VA National Cemeteries; athletic fields; pedestrian, bicycle, and equestrian trails; site amenities; playgrounds; boating and aquatic facilities; resort properties; themed wayfinding; amphitheaters; landscape; hardscape; and irrigation.

Brittany Bourgault is a landscape architect for CMA's landscape architecture team. Her professional experience includes working closely with different municipalities throughout Florida, conducting code research and analysis while implementing code compliant site plan, masterplans, and landscape designs. She is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. She is also experienced with creative design solutions/ Cure Plans for landowners working with FDOT through right-of-way takings/eminent domain proceedings.

Jennifer Cook is an associate planner with CMA's landscape architecture team. She provides planning, design and production support to the team responsible for producing plan and section renderings and graphics, and realistic 3D renderings and fly-through videos. Ms. Cook is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. Ms. Cook is also a horticulture specialist, certified in permaculture design with an emphasis in master planning agricultural facilities. She is well versed in the use of low-impact development techniques specifically applied to site planning, and has experience with parks and recreation facilities throughout Florida for public and private sector clients, providing design, permitting, and construction observation services for many types of improvements.



Charmaine Emanuels, P.E. serves as a Project Engineerfor CMA's engineering team and has experience working on various aspects of civil engineering design, plan preparation, permitting efforts, and construction oversight while leading segments of the project design. Her experience includes utility coordination; performing modeling and simulation; site grading; pavement analysis; water distribution system; sanitary sewer collection system; lift station design; stormwater management system and drainage analysis; roadway design; maintenance of traffic and phasing; pavement marking; signage; and erosion control. She also prepares meeting agendas, meeting minutes, and estimates of probable cost including quantity takeoffs.

Sara Benbasat has experience with site plan development review in municipal planning. Ms. Benbasat also has contributed to staff reports, project proposals, conceptual renderings, and company marketing.

ETC Institute is a 102-person market research firm that specializes in the design and administration of market research for governmental organizations. Their major areas of emphasis include citizen satisfaction surveys, parks and recreation surveys, community planning surveys, business surveys, transportation surveys, employee surveys, voter opinion surveys, focus groups, and stakeholder interviews. Since 1982, ETC Institute has completed research projects for organizations in 49 states. ETC Institute has designed and administered more than 3,500 statistically valid surveys and their team of professional researchers has moderated more than 1,000 focus groups and 2,000 stakeholder meetings. During the past five years alone, ETC Institute has administered surveys in more than 700 cities and counties across the United States. ETC Institute has conducted research for more major U.S. cities and counties than any other firm.

Mr. Betancourt is CMA's Vice President of Landscape Architecture and Planning. He has experience providing planning and landscape architecture design solutions for public and private sector clients. His team provides a full range of services starting with due diligence and master planning culminating in detailed site design. He is well versed in the use of low-impact development techniques specifically applied to site planning, has knowledge of local municipal codes, and is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. Mr. Betancourt leads multi-discipline teams for parks and recreation facilities throughout Florida, providing design, permitting, and construction observation services for many types of improvements, including athletic fields; pedestrian, bicycle, and equestrian trails; site amenities; playgrounds; boating and aquatic facilities; themed wayfinding; amphitheaters; landscape; hardscape; and irrigation.

Project Experience

Currie Park Phase II - Architectural and Engineering Services. CMA is the prime consultant leading the redevelopment of Currie Park for the City of West Palm Beach. The project aims to enhance a public asset to provide a substantial public benefit increasing the health, welfare and economic vitality of the community. The 13.6 acre waterfront park currently consists of public open space including boat ramps with trailer parking, tennis courts, fishing pier, playground, a landmark memorial to commemorate the late Dr. Martin Luther King Jr., covered pavilions and restroom facilities. The Project is broken into two phases. CMA led the development Phase I which included Information Gathering, Public Engagement, and Visioning for the Project. In addition to Visioning, our team conducted a marina market analysis, developed a maintenance and operations plan, and identified public/private partnerships and other means of financing the construction and operation of Currie Park as part of Phase I services. The CMA team identified and assisted the City/CRA in applying for a $20.3 million Building Resiliency Grant offered through the Florida Department of Economic Opportunity. The project was awarded $16.74 million of the grant request. The Vision Plan was approved by the CRA Board and Commission on June 1, 2021.

City of Miami Parks and Recreation Master Plan. The City of Miami's Parks Master Plan will provide strategic and resilient recommendations for the provision of facilities, programs, services, maintenance and operations, park land acquisitions, and development. The updated plan will allow Miami Parks to satisfy accreditation requirements, align their future decisions in a strategic manner that will identify operational needs based on current assessments. The master plan will assist Miami Parks in a guiding direction to make necessary improvements in regards to how we manage facilities and operations, programming, staffing, administration, and management.

Florida Urban Forestry Council (FUFC) - Board of Directors)

Mr. Voelker is a senior scientist specializing in natural resource assessments and permitting, as well as certified arborist services. He provides numerous ecological services to clients, including the following: wetland delineation, function evaluation, mitigation design, monitoring, and permitting; upland habitat assessments; coastal habitat assessments and permitting; marine and estuarine habitat assessments and permitting; protected wildlife assessments and permitting; GPS data collection/mapping and GIS database development; NEPA document preparation and oversight; sediment and erosion control monitoring.

As an ISA Certified Arborist, Mr. Voelker provides numerous consulting arborist services to both public and private sector clients, including the following: GPS tree inventories and GIS tree database development; destroyed/damaged tree assessments; tree value estimates; tree grading; tree/utility conflict identification; hazard tree evaluations (risk assessment); analysis of tree canopy cover and ecological/monetary benefits; urban forest management plans; planting and maintenance bid packages, mangrove trimming oversight; tree removal permitting.

Project Experience
(The following projects represent Mr. Voelker's experience while with another firm)
City of Delray Beach City-Wide Tree Inventory and Urban Forest Management Plan. This project included a City-wide tree inventory of ±11,600 trees and the development of an Urban Forest Management Plan (UFMP). The UFMP provided an analysis of existing tree data and recommendations for tree management and future plantings to achieve canopy cover goals. The project also included presentations of UFMP findings to City staff and the City Commission.

Village-Wide Tree Inventory and Management Plan/Welllington. This project consisted of a three phase Village-wide inventory within streets and municipal properties (13,180 trees total). The tree inventory data and other sources were utilized to develop an Urban Forest Management Plan that outlined recommendations for management of the Village-owned trees and assisting the Village in achieving its canopy goals. The canopy coverage assessment included and analysis of tree benefits utilizing iTree.

Tree Inventory and Management Plan, City of Lake Worth, Palm Beach County, Florida. This project consisted of a City-wide GPS tree inventory of approximately 7,800 trees within the City's roadways and parks, a multi-year canopy coverage analysis, and the preparation of an urban forest management plan. Mr. Voelker managed the inventory and preparation of the urban forest management plan.

Mr. Sutton is a Principal Landscape Architect for CMA's landscape architecture team. He is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. He also brings experience with environmental and wildlife monitoring adding significant field knowledge to our team. Mr. Sutton is well versed in the use of low-impact development techniques specifically applied to site planning, and has extensive experience with parks and recreation facilities throughout Florida for public and private sector clients domestically and internationally, providing design, permitting, and construction observation services for many types of improvements, including numerous transportation projects; municipal parks; streetscapes; VA National Cemeteries; athletic fields; pedestrian, bicycle, and equestrian trails; site amenities; playgrounds; boating and aquatic facilities; resort properties; themed wayfinding; amphitheaters; landscape; hardscape; and irrigation.

Project Experience

University Dr-NW 40th to Sawgrass Expressway. Chen Moore and Associates is providing professional landscape architecture services for this off-system project for FDOT D4 as a subconsultant to DRMP. The project lies wholly within the city limits of Coral Springs. The scope of the project includes the conversion of an existing 4 lane road section to 6 lanes. This section of University Drive has a significant amount of existing tree canopy and is lined with multiple businesses and residential neighborhoods that will be impacted by the widening. The design goals are to limit the impact to the existing tree canopy, incorporate a proposed linear park and meandering shared use paths into the design, and develop a cohesive landscape theme for the corridor. The services being provided by CMA include community input, tree inventory and disposition plans, tree mitigation permitting, landscape, hardscape, and irrigation design.

I-4 Ultimate Project. CMA is part of the design-build team working to complete the I-4 Ultimate project. Our experienced staff, working with the Landscape Architect of Record, conduct field reviews to observe layouts and make recommendations on adjustments for utilities, sign view zones, stormwater management facilities, and other infrastructure. The complexity of the project requires adaptations of the design, which often changes to respond to field conditions and local preferences. This effort is ongoing throughout the Orlando metropolitan area from the resort areas southwest of downtown, to the quiet rest area north of Altamonte Springs.

Miami Dade County PROS.CMA is proving master planning, construction documents, permitting, and construction administration services for five (5) nature themed playgrounds for Miami Dade County Parks, Recreation and Open Space (MDC PROS). The projects are distributed throughout the County and include Highland Oaks Park, Glenwood Park, Area 226, The Women's Park and Oak Grove Park.

Charmaine C Emanuels, P.E.
Associate Engineer

Education
Bachelor of Science, Civil Engineering, Florida International University, 2019

Registration
Professional Engineer, Florida, 96867

Ms. Emanuels serves as a Project Engineer for CMA's engineering team and has experience working on various aspects of civil engineering design, plan preparation, permitting efforts, and construction oversight while leading segments of the project design. Her experience includes utility coordination; performing modeling and simulation; site grading; pavement analysis; water distribution system; sanitary sewer collection system; lift station design; stormwater management system and drainage analysis; roadway design; maintenance of traffic and phasing; pavement marking; signage; and erosion control. She also prepares meeting agendas, meeting minutes, and estimates of probable cost including quantity takeoffs.

Project Experience

NPDES Program Management. As a component of the City Engineer services, Chen Moore and Associates (CMA) assists the City with administering the National Pollutant Discharge Elimination System (NPDES) Program through the FDEP, which will include the following annual tasks:

- Assist the City with the management and/or implementation of current NPDES Program
- Review of existing NPDES documentation and existing NPDES ordinances
- Recommend implementation of additional procedures for future program years
- Suggest changes to the current NPDES program, which may include but are not limited to: institute permit review fees for all projects, including projects less than one acre; revise the City Ordinance that governs the NPDES program to allow for these fees and additional changes; and review contractor SWPPP logs on a monthly basis to ensure the required inspections are completed and the proper Best Management Practices (BMPs) are implemented.
- Prepare NPDES Annual Report for submittal to Broward County Respond to Requests for Additional Information (RAIs) from FDEP and Broward County
- Assemble various compliance documentation required by FDEP and Broward County
- Provide inspections of large construction sites (greater than one acre) after rain events and/or on a monthly basis. CMA conducts 30 such inspections during each fiscal year.
- Research all existing stormwater permits with SFWMD and Broward County Environmental Protection within the City limits.
  Identify all existing stormwater permits which include water quality treatment elements, such as exfiltration trench, dry retention areas, wet ponds, and swale areas, located within City property and City right-of-way.
- Incorporate all permitted water quality treatment elements, such as exfiltration trench, dry retention areas, wet ponds, and swale areas,

Brittany Bourgault
Landscape Designer

Hire Date
10/16/2019
Years with other firms: 12
Education
Bachelor of Science, Landscape Architecture, University of Florida, 2009
Associate of Arts, General Studies, Santa Fe Community College, 2005

Professional Affiliations
American Society of Landscape Architects

Ms. Bourgault is a landscape architect for CMA's landscape architecture team. Her professional experience includes working closely with different municipalities throughout Florida, conducting code research and analysis while implementing code compliant site plan, masterplans, and landscape designs. She is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. She is also experienced with creative design solutions/Cure Plans for landowners working with FDOT through right-of-way takings/eminent domain proceedings. Ms. Bourgault is well versed in the use of low-impact development techniques specifically applied to site planning, and has extensive experience with parks and recreation facilities throughout Florida for public and private sector clients, providing design, permitting, and construction observation services for many types of improvements, including commercial developments; site amenities; streetscapes; athletic fields; pedestrian, bicycle, and equestrian trails; site amenities; playgrounds; boating and aquatic facilities; themed wayfinding; amphitheaters; MUPDs and PUDs; landscape; hardscape; and irrigation.

Project Experience

Currie Park Phase II - Architectural and Engineering Services. CMA is the prime consultant leading the redevelopment of Currie Park for the City of West Palm Beach. The project aims to enhance a public asset to provide a substantial public benefit increasing the health, welfare and economic vitality of the community. The 13.6 acre waterfront park currently consists of public open space including boat ramps with trailer parking, tennis courts, fishing pier, playground, a landmark memorial to commemorate the late Dr. Martin Luther King Jr., covered pavilions and restroom facilities. The Project is broken into two phases. CMA led the development Phase I which included Information Gathering, Public Engagement, and Visioning for the Project. In addition to Visioning, our team conducted a marina market analysis, developed a maintenance and operations plan, and identified public/private partnerships and other means of financing the construction and operation of Currie Park as part of Phase I services.

City of Miami Commodore Trail Master Plan and Improvements. CMA is preparing a framework and design guidelines plan for the Commodore Trail corridor. This framework document is necessary to develop the Commodore Trail design identified within the City of Miami Parks and Open Space Master Plan and Miami-Dade County Transportation Planning Organization Bicycle Project Feasibility Evaluation. The project assignment is to work with city staff, community representatives and stakeholders to develop a master plan creating a cohesive trail along the corridor consisting of a protected bikeway, pedestrian walkway, street trees, landscaping, street furnishings, lighting, wayfinding, artistic features, and other corridor enhancements.

Jennifer Eve Cook
Associate Planner

Hire Date
04/25/2017
Years with other firms: 0
Education
Bachelor of Arts, Finance, FAU, 2010

Professional Affiliations
American Planning Association
Florida Recreation and Park Association

Certifications
Landscape and Horticulture Specialist
Permaculture Design and Master Planning

Jennifer Cook is an associate planner with CMA's landscape architecture team. She provides planning, design and production support to the team responsible for producing plan and section renderings and graphics, and realistic 3D renderings and fly-through videos. Ms. Cook is proficient in Florida's plant palette, local environmental conditions, and site-specific microclimates used to prepare aesthetic and functioning landscape designs. Ms. Cook is also a horticulture specialist, certified in permaculture design with an emphasis in master planning agricultural facilities. She is well versed in the use of low-impact development techniques specifically applied to site planning, and has experience with parks and recreation facilities throughout Florida for public and private sector clients, providing design, permitting, and construction observation services for many types of improvements.

Project Experience

Fort Myers Parks and Recreation Master Plan - RFQ 0001-23 - PP&D No. 2312. Recognizing that public spaces are the building block of healthy communities, CMA is honored to be part of the professional team preparing the City of Ft. Myers' Parks and Recreation Master Plan. The CMA Team is currently preparing the needs assessment study by conducting a detailed inspection of each park to identify deficiencies. CMA will also conduct a public engagement process to listen to residents and gather their input. Based on the needs assessment and the community feedback, CMA will prepare capital improvement initiatives to improve and enhance the City of Ft. Myers Parks and Recreation Program.

City of Miami Parks and Recreation Master Plan - RFQ 16-17-063 - PO 1808121/5. The City of Miami's Parks Master Plan will provide strategic and resilient recommendations for the provision of facilities, programs, services, maintenance and operations, park land acquisitions, and development. The updated plan will allow Miami Parks to satisfy accreditation requirements, align their future decisions in a strategic manner that will identify operational needs based on current assessments. The master plan will assist Miami Parks in a guiding direction to make necessary improvements in regards to how we manage facilities and operations, programming, staffing, administration, and management.

The City is home to over 147 beautiful parks, totaling more than 1,400 acres, 12 swimming pool facilities, 43 community centers, 4 gymnasiums, the Sandra DeLucca Developmental Center, the Little Haiti Cultural Center and Caribbean Marketplace, a Japanese Garden, Grapeland Water Park, and Melreese Golf Course. CMA is serving as the Prime Consultant for this Master Plan. The work to be performed under this contract would consist of professional services for the development of a parks and recreation master plan that will meet the Commission for Accreditation of Parks and Recreation Agencies (CAPRA) requirements.

Sara Benbasat has experience with site plan development review in municipal planning. Ms. Benbasat also has contributed to staff reports, project proposals, conceptual renderings, and company marketing.

Project Experience

City of Miami Parks and Recreation Master Plan. The City of Miami's Parks Master Plan will provide strategic and resilient recommendations for the provision of facilities, programs, services, maintenance and operations, park land acquisitions, and development. The updated plan will allow Miami Parks to satisfy accreditation requirements, align their future decisions in a strategic manner that will identify operational needs based on current assessments. The master plan will assist Miami Parks in a guiding direction to make necessary improvements in regards to how we manage facilities and operations, programming, staffing, administration, and management.

Manalapan Town Planning. The CMA planning team has been providing planning and zoning services to the Town of Manalapan since 2015. The team is responsible for site plan reviews, comprehensive plan updates and zoning code amendments.
The CMA planning team also prepared the Community Rating System report for the Town of Manalapan including the following information :

- Public Information
- Mapping and Regulations
- Flood Damage Reduction
- Warning and Response

In 2022, the CMA Team conducted a Comprehensive Plan Update to the Coastal Management element. The subject project included amendments to the policies.

Cooper City Landscape Master Plan - PO 2022-8134. Preparation of Landscape Master Plan for the public spaces of the City of Cooper City, FL - CMA shall work with the City to identify the public spaces and ROWs and work with City, stakeholders and engage with the public to receive input on the desired aesthetic for the community. CMA shall prepare a master plan for the City to be used as a design guidelines manual for how to move forward to create a unified and identifiable aesthetic to be applied throughout the City.

Preparation of Evaluation and Appraisal Report and Comprehensive Plan Amendments - PO 2023-00000296 - RFP No. 23-003. CMA is assisting the City of Dania Beach to update the Comprehensive Plan based on the Evaluation and Appraisal Review (EAR) according to Chapter 163.3191, Florida Statutes (F.S.). The proposed scope includes a detail review of the elements including Policy (Goals, Objectives and Policies) and Data and Analysis ensuring compliance with current Florida Statutes (F.S.); and, updates to reflect changes in the City's trends, vision and demographics.

Ryan Murray

Assistant Director of Community Research & Project Manager
ETC Institute
725 W. Frontier Lane, Olathe, KS 66061

Currie Park Phase II - Architectural and Engineering Services

Estimated Completion Date

2023

Client

City of West Palm Beach
Christopher Roog
401 Clematis Street, 4th Floor
West Palm Beach, FL 33402, FL 33062
(561) 822-1416

CMA is the prime consultant leading the redevelopment of Currie Park for the City of West Palm Beach. The project aims to enhance a public asset to provide a substantial public benefit increasing the health, welfare and economic vitality of the community. The 13.6 acre waterfront park currently consists of public open space including boat ramps with trailer parking, tennis courts, fishing pier, playground, a landmark memorial to commemorate the late Dr. Martin Luther King Jr., covered pavilions and restroom facilities. The Project is broken into two phases. CMA led the development Phase I which included Information Gathering, Public Engagement, and Visioning for the Project. In addition to Visioning, our team conducted a marina market analysis, developed a maintenance and operations plan, and identified public/private partnerships and other means of financing the construction and operation of Currie Park as part of Phase I services. The CMA team identified and assisted the City/CRA in applying for a $20.3 million Building Resiliency Grant offered through the Florida Department of Economic Opportunity. The project was awarded $16.74 million of the grant request. The Vision Plan was approved by the CRA Board and Commission on June 1, 2021.

CMA is currently planning Phase II activities which will include Design, Construction Documentation, Permitting, and Construction Administration. This scope of services is predicated on the approved Currie Park Master Plan developed by the CMA team and approved by the Community Redevelopment Agency Board and City Commission. The Design Program maintains the existing MLK Memorial and Boat Ramp facilities and adds new facilities such as Fitness Area and Sports Courts, waterfront promenade, living shoreline, native gardens, multipurpose lawn for cultural and special events, café/kiosk, restrooms, small watercraft launching area, and destination playground.

City of Miami Parks and Recreation Master Plan

Estimated Completion Date

2023

Client

City of Miami
Chris Evans
444 SW 2nd Avenue, 8th Floor
Miami, FL 33130
(305) 416-1300

The City of Miami's Parks Master Plan will provide strategic and resilient recommendations for the provision of facilities, programs, services, maintenance and operations, park land acquisitions, and development. The updated plan will allow Miami Parks to satisfy accreditation requirements, align their future decisions in a strategic manner that will identify operational needs based on current assessments. The master plan will assist Miami Parks in a guiding direction to make necessary improvements in regards to how we manage facilities and operations, programming, staffing, administration, and management.

The City is home to over 147 beautiful parks, totaling more than 1,400 acres, 12 swimming pool facilities, 43 community centers, 4 gymnasiums, the Sandra DeLucca Developmental Center, the Little Haiti Cultural Center and Caribbean Marketplace, a Japanese Garden, Grapeland Water Park, and Melreese Golf Course. CMA is serving as the Prime Consultant for this Master Plan. The work to be performed under this contract would consist of professional services for the development of a parks and recreation master plan that will meet the Commission for Accreditation of Parks and Recreation Agencies (CAPRA) requirements.

City of Miami Commodore Trail Master Plan and Improvements

Estimated Completion Date

2023

Client

City of Miami
Lorraine Rosado-Pietri
444 SW 2nd Avenue, 8th Floor
Miami, FL 33130
(305) 416-1300

CMA is preparing a framework and design guidelines plan for the Commodore Trail corridor. This framework document is necessary to develop the Commodore Trail design identified within the City of Miami Parks and Open Space Master Plan and Miami-Dade County Transportation Planning Organization Bicycle Project Feasibility Evaluation. The project assignment is to work with city staff, community representatives and stakeholders to develop a master plan creating a cohesive trail along the corridor consisting of a protected bikeway, pedestrian walkway, street trees, landscaping, street furnishings, lighting, wayfinding, artistic features, and other corridor enhancements. The framework and design plan will encompass 3.61 miles of the trail's 5.03 miles of publicly owned right-of-way beginning in the south at Cocoplum Circle and terminating at South Miami Avenue.

Village-Wide Tree Inventory and Management Plan/Welllington

Estimated Completion Date

2021

Client

Keith Jackson

1280 North Congress Avenue, Suite 101

West Palm Beach, FL 33409

(561) 791 4003

This project consisted of a three phase Village-wide inventory within streets and municipal properties (13,180 trees total). The tree inventory data and other sources were utilized to develop an Urban Forest Management Plan that outlined recommendations for management of the Village-owned trees and assisting the Village in achieving its canopy goals. The canopy coverage assessment included and analysis of tree benefits utilizing iTree. These services were performed for the Village as a subconsultant to Engenuity Group.

Please note that the work for this project was performed by Brian Voelker of CMA while working at a previous firm (E Sciences, Inc.).

City of Delray Beach City-Wide Tree Inventory and Urban Forest Management Plan

Estimated Completion Date

2022

Client

City of Delray Beach, Kent Edwards, Sustainability Officer

434 South Swinton Avenue

Delray Beach, FL 33444

(561) 243-7349

This project included a City-wide tree inventory of ±11,600 trees and the development of an Urban Forest Management Plan (UFMP). The UFMP provided an analysis of existing tree data and recommendations for tree management and future plantings to achieve canopy cover goals. The project also included presentations of UFMP findings to City staff and the City Commission.

Tree Inventory and Management Plan, City of Lake Worth Beach, Palm Beach County

Estimated Completion Date

2014

Client

David McGrew
1900 2nd Avenue North
Lake Worth Beach, FL 33461
(561) 586-7433

This project consisted of a City-wide GPS tree inventory of approximately 7,800 trees within the City's roadways and parks, a multi-year canopy coverage analysis, and the preparation of an urban forest management plan. Mr. Voelker managed the inventory and preparation of the urban forest management plan.

Please note that the work for this project was performed by Brian Voelker of CMA while working at a previous firm (E Sciences, Inc.).

CITY OF OPA-LOCKA

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

CITY OF OPA-LOCKA

DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by Peter Moore, P.E., F.ASCE, ENV SP, LEED AP the
(Name)

President of Chen Moore and Associates
(Title/Position) (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

E-VERIFY

Effective January 1, 2021, public and private employers, contractors and subcontractors will be required to register with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/sub-contractors) assigned by Vendor /Consultant/ Contractor to perform work pursuant to the contract with the Department. The Vendor /Consultant/ Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City; and

By entering into a Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If t contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination. The Contractor acknowledges it is liable to the City for any additional costs as a result of termination of the contract due to Contractor's failure to comply with the provisions herein.

E-VERIFY FORM

Definitions:

"Contractor" means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

"Subcontractor" means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.

Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) **All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and**

b) **All persons (including sub-vendors/subcompanies/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City of Opa-locka; and**

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED – OWNERS, LESSEES OR CONTRACTORS

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART
CONTRACTORS POLLUTION LIABILITY COVERAGE PART

SCHEDULE

Name Of Additional Insured Person(s) or Organization(s)
Blanket when specifically required in a written contract with the named insured.

SECTION III – WHO IS AN INSURED within the Common Provisions is amended to include as an additional insured the person(s) or organization(s) indicated in the Schedule shown above, but only with respect to liability caused, in whole or in part, by "your work" for that insured which is performed by you or by those acting on your behalf.

ALL OTHER TERMS AND CONDITIONS OF THE POLICY REMAIN UNCHANGED.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

ADDITIONAL INSURED – OWNERS, LESSEES OR CONTRACTORS – COMPLETED OPERATIONS

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART

SCHEDULE

Name of Additional Person(s) or Organization(s):	Location And Description Of Completed Operations
Blanket when specifically required in a written contract with the named insured.	Blanket when specifically required in a written contract with the named insured.
Information required to complete this Schedule, if not shown above, will be shown in the Declarations.	

A. Section III – Who Is An Insured within the Common Provisions is amended to include as an insured the person(s) or organization(s) shown in the Schedule, but only with respect to liability for "bodily injury" or "property damage" caused, in whole or in part, by "your work" at the location designated and described in the schedule of this endorsement performed for that additional insured and included in the "products-completed operations hazard".

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

PRIMARY AND NON-CONTRIBUTORY ADDITIONAL INSURED WITH WAIVER OF SUBROGATION

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART
CONTRACTORS POLLUTION LIABILITY COVERAGE PART
ERRORS AND OMISSIONS LIABILITY COVERAGE PART
THIRD PARTY POLLUTION LIABILITY COVERAGE PART

SCHEDULE

Name Of Additional Insured Person(s) or Organization(s)
Blanket when specifically required in a written contract with the named insured.

A. **SECTION III – WHO IS AN INSURED** within the Common Provisions is amended to include as an additional insured the person(s) or organization(s) indicated in the Schedule shown above, but solely with respect to “claims” caused in whole or in part, by “your work” for that person or organization performed by you, or by those acting on your behalf.

   This insurance shall be primary and non-contributory, but only in the event of a named insured’s sole negligence.

B. We waive any right of recovery we may have against the person(s) or organization(s) indicated in the Schedule shown above because of payments we make for “damages” arising out of “your work” performed under a designated project or contract with that person(s) or organization(s).

C. This Endorsement does not reinstate or increase the Limits of Insurance applicable to any “claim” to which the coverage afforded by this Endorsement applies.

ALL OTHER TERMS AND CONDITIONS OF THE POLICY REMAIN UNCHANGED.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

BUSINESS AUTO EXTENSION ENDORSEMENT – FLORIDA

This endorsement modifies insurance provided under the following:

BUSINESS AUTO COVERAGE FORM

GENERAL DESCRIPTION OF COVERAGE – This endorsement broadens coverage. However, coverage for any injury, damage or medical expenses described in any of the provisions of this endorsement may be excluded or limited by another endorsement to the Coverage Part, and these coverage broadening provisions do not apply to the extent that coverage is excluded or limited by such an endorsement. The following listing is a general coverage description only. Limitations and exclusions may apply to these coverages. Read all the provisions of this endorsement and the rest of your policy carefully to determine rights, duties, and what is and is not covered.

A. BROAD FORM NAMED INSURED

B. BLANKET ADDITIONAL INSURED

C. EMPLOYEE HIRED AUTO

D. EMPLOYEES AS INSURED

E. SUPPLEMENTARY PAYMENTS – INCREASED LIMITS

F. HIRED AUTO – LIMITED WORLDWIDE COVERAGE – INDEMNITY BASIS

G. WAIVER OF DEDUCTIBLE – GLASS

H. HIRED AUTO PHYSICAL DAMAGE – LOSS OF USE – INCREASED LIMIT

I. PHYSICAL DAMAGE – TRANSPORTATION EXPENSES – INCREASED LIMIT

J. PERSONAL PROPERTY

K. AIRBAGS

L. NOTICE AND KNOWLEDGE OF ACCIDENT OR LOSS

M. BLANKET WAIVER OF SUBROGATION

N. UNINTENTIONAL ERRORS OR OMISSIONS

PROVISIONS

A. BROAD FORM NAMED INSURED

The following is added to Paragraph **A.1.**, **Who Is An Insured**, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**:

Any organization you newly acquire or form during the policy period over which you maintain 50% or more ownership interest and that is not separately insured for Business Auto Coverage. Coverage under this provision is afforded only until the 180th day after you acquire or form the organization or the end of the policy period, whichever is earlier.

B. BLANKET ADDITIONAL INSURED

The following is added to Paragraph **c.** in **A.1.**, **Who Is An Insured**, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**:

Any person or organization who is required under a written contract or agreement between you and that person or organization, that is signed and executed by you before the "bodily injury" or "property damage" occurs and that is in effect during the policy period, to be named as an additional insured is an "insured" for Covered Autos Liability Coverage, but only for damages to which this insurance applies and only to the extent that person or organization qualifies as an "insured" under the Who Is An Insured provision contained in Section **II.**

C. EMPLOYEE HIRED AUTO

1. The following is added to Paragraph **A.1.**, **Who Is An Insured**, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**:

An "employee" of yours is an "insured" while operating an "auto" hired or rented under a contract or agreement in an "employee's" name, with your permission, while performing duties related to the conduct of your business.

2. The following replaces Paragraph **b.** in **B.5.**, **Other Insurance**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

b. For Hired Auto Physical Damage Coverage, the following are deemed to be covered "autos" you own:

© 2021 The Travelers Indemnity Company. All rights reserved.
Includes copyrighted material of Insurance Services Office, Inc. with its permission

(1) Any covered "auto" you lease, hire, rent or borrow; and

(2) Any covered "auto" hired or rented by your "employee" under a contract in an "employee's" name, with your permission, while performing duties related to the conduct of your business.

However, any "auto" that is leased, hired, rented or borrowed with a driver is not a covered "auto".

D. EMPLOYEES AS INSURED

The following is added to Paragraph **A.1.**, **Who Is An Insured**, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**:

Any "employee" of yours is an "insured" while using a covered "auto" you don't own, hire or borrow in your business or your personal affairs.

E. SUPPLEMENTARY PAYMENTS – INCREASED LIMITS

1. The following replaces Paragraph **A.2.a.(2)**, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**:

(2) Up to $3,000 for cost of bail bonds (including bonds for related traffic law violations) required because of an "accident" we cover. We do not have to furnish these bonds.

2. The following replaces Paragraph **A.2.a.(4)**, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**:

(4) All reasonable expenses incurred by the "insured" at our request, including actual loss of earnings up to $500 a day because of time off from work.

F. HIRED AUTO – LIMITED WORLDWIDE COVERAGE – INDEMNITY BASIS

The following replaces Subparagraph **(5)** in Paragraph **B.7.**, **Policy Period, Coverage Territory**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

(5) Anywhere in the world, except any country or jurisdiction while any trade sanction, embargo, or similar regulation imposed by the United States of America applies to and prohibits the transaction of business with or within such country or jurisdiction, for Covered Autos Liability Coverage for any covered "auto" that you lease, hire, rent or borrow without a driver for a period of 30 days or less and that is not an "auto" you lease, hire, rent or borrow from any of your "employees", partners (if you are a partnership), members (if you are a limited liability company) or members of their households.

(a) With respect to any claim made or "suit" brought outside the United States of America, the territories and possessions of the United States of America, Puerto Rico and Canada:

(i) You must arrange to defend the "insured" against, and investigate or settle any such claim or "suit" and keep us advised of all proceedings and actions.

(ii) Neither you nor any other involved "insured" will make any settlement without our consent.

(iii) We may, at our discretion, participate in defending the "insured" against, or in the settlement of, any claim or "suit".

(iv) We will reimburse the "insured" for sums that the "insured" legally must pay as damages because of "bodily injury" or "property damage" to which this insurance applies, that the "insured" pays with our consent, but only up to the limit described in Paragraph **C.**, Limits Of Insurance, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**.

(v) We will reimburse the "insured" for the reasonable expenses incurred with our consent for your investigation of such claims and your defense of the "insured" against any such "suit", but only up to and included within the limit described in Paragraph **C.**, Limits Of Insurance, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**, and not in addition to such limit. Our duty to make such payments ends when we have used up the applicable limit of insurance in payments for damages, settlements or defense expenses.

(b) This insurance is excess over any valid and collectible other insurance available to the "insured" whether primary, excess contingent or on any other basis.

© 2021 The Travelers Indemnity Company. All rights reserved.
Includes copyrighted material of Insurance Services Office, Inc. with its permission

(c) This insurance is not a substitute for required or compulsory insurance in any country outside the United States, its territories and possessions, Puerto Rico and Canada.

You agree to maintain all required or compulsory insurance in any such country up to the minimum limits required by local law. Your failure to comply with compulsory insurance requirements will not invalidate the coverage afforded by this policy, but we will only be liable to the same extent we would have been liable had you complied with the compulsory insurance requirements.

(d) It is understood that we are not an admitted or authorized insurer outside the United States of America, its territories and possessions, Puerto Rico and Canada. We assume no responsibility for the furnishing of certificates of insurance, or for compliance in any way with the laws of other countries relating to insurance.

G. WAIVER OF DEDUCTIBLE – GLASS

The following is added to Paragraph **D.**, **Deductible**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

No deductible applies under Specified Causes of Loss or Comprehensive coverage for "loss" to glass used in the windshield.

H. HIRED AUTO PHYSICAL DAMAGE – LOSS OF USE – INCREASED LIMIT

The following replaces the last sentence of Paragraph **A.4.b.**, **Loss Of Use Expenses**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

However, the most we will pay for any expenses for loss of use is $65 per day, to a maximum of $750 for any one "accident".

I. PHYSICAL DAMAGE – TRANSPORTATION EXPENSES – INCREASED LIMIT

The following replaces the first sentence in Paragraph **A.4.a.**, **Transportation Expenses**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

We will pay up to $50 per day to a maximum of $1,500 for temporary transportation expense incurred by you because of the total theft of a covered "auto" of the private passenger type.

J. PERSONAL PROPERTY

The following is added to Paragraph **A.4.**, **Coverage Extensions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

Personal Property

We will pay up to $400 for "loss" to wearing apparel and other personal property which is:

(1) Owned by an "insured"; and

(2) In or on your covered "auto".

This coverage applies only in the event of a total theft of your covered "auto".

No deductibles apply to this Personal Property coverage.

K. AIRBAGS

The following is added to Paragraph **B.3.**, **Exclusions**, of **SECTION III – PHYSICAL DAMAGE COVERAGE**:

Exclusion **3.a.** does not apply to "loss" to one or more airbags in a covered "auto" you own that inflate due to a cause other than a cause of "loss" set forth in Paragraphs **A.1.b.** and **A.1.c.**, but only:

a. If that "auto" is a covered "auto" for Comprehensive Coverage under this policy;

b. The airbags are not covered under any warranty; and

c. The airbags were not intentionally inflated.

We will pay up to a maximum of $1,000 for any one "loss".

L. NOTICE AND KNOWLEDGE OF ACCIDENT OR LOSS

The following is added to Paragraph **A.2.a.**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

Your duty to give us or our authorized representative prompt notice of the "accident" or "loss" applies only when the "accident" or "loss" is known to:

(a) You (if you are an individual);

(b) A partner (if you are a partnership);

(c) A member (if you are a limited liability company);

(d) An executive officer, director or insurance manager (if you are a corporation or other organization); or

(e) Any "employee" authorized by you to give notice of the "accident" or "loss".

M. BLANKET WAIVER OF SUBROGATION

The following replaces Paragraph **A.5.**, **Transfer Of Rights Of Recovery Against Others To Us**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

5. Transfer Of Rights Of Recovery Against Others To Us

We waive any right of recovery we may have against any person or organization to the extent required of you by a written contract signed and executed prior to any "accident" or "loss", provided that the "accident" or "loss" arises out of operations contemplated by such contract. The waiver applies only to the person or organization designated in such contract.

N. UNINTENTIONAL ERRORS OR OMISSIONS

The following is added to Paragraph **B.2.**, **Concealment, Misrepresentation, Or Fraud**, of **SECTION IV – BUSINESS AUTO CONDITIONS**:

The unintentional omission of, or unintentional error in, any information given by you shall not prejudice your rights under this insurance. However this provision does not affect our right to collect additional premium or exercise our right of cancellation or non–renewal.

THIS ENDORSEMENT CHANGES THE POLICY. PLEASE READ IT CAREFULLY.

BLANKET ADDITIONAL INSURED – PRIMARY AND NON-CONTRIBUTORY WITH OTHER INSURANCE

This endorsement modifies insurance provided under the following:

BUSINESS AUTO COVERAGE FORM

PROVISIONS

1. The following is added to Paragraph **A.1.c.**, **Who Is An Insured**, of **SECTION II – COVERED AUTOS LIABILITY COVERAGE**:

This includes any person or organization who you are required under a written contract or agreement between you and that person or organization, that is signed by you before the "bodily injury" or "property damage" occurs and that is in effect during the policy period, to name as an additional insured for Covered Autos Liability Coverage, but only for damages to which this insurance applies and only to the extent of that person's or organization's liability for the conduct of another "insured".

2. The following is added to Paragraph **B.5.**, **Other Insurance** of **SECTION IV – BUSINESS AUTO CONDITIONS**:

Regardless of the provisions of paragraph a. and paragraph **d.** of this part **5. Other Insurance,** this insurance is primary to and non-contributory with applicable other insurance under which an additional insured person or organization is the first named insured when the written contract or agreement between you and that person or organization, that is signed by you before the "bodily injury" or "property damage" occurs and that is in effect during the policy period, requires this insurance to be primary and non-contributory.

AMENDED WAIVER OF TRANSFER OF RIGHTS OF RECOVERY AGAINST OTHERS TO US

This endorsement modifies insurance provided under the following:

COMMERCIAL GENERAL LIABILITY COVERAGE PART
CONTRACTORS POLLUTION LIABILITY COVERAGE PART
ERRORS AND OMISSIONS LIABILITY COVERAGE PART
THIRD PARTY POLLUTION LIABILITY COVERAGE PART
ONSITE CLEANUP COVERAGE PART

SCHEDULE

Name of Person(s) or Organization(s)
Blanket when specifically required in a written contract with the named insured.

SECTION VI – COMMON CONDITIONS, item 17. Transfer Of Rights of Recovery Against Others To Us within the Common Provisions is amended by the addition of the following:

Solely as respects the person(s) or organization(s) indicated in the Schedule shown above, we waive any right of recovery we may have against the person(s) or organization(s) indicated in the Schedule shown above because of payments we make for “damages” arising out of your ongoing operations or “your work” performed under a written contract with that person(s) or organization(s) and included in the “products-completed operations hazard”.

However, this waiver shall not apply to “damages” resulting from the sole negligence of the person(s) or organization(s) indicated in the Schedule shown above.

ALL OTHER TERMS AND CONDITIONS OF THE POLICY REMAIN UNCHANGED.

CITY OF OPA-LOCKA

DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. **Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.**

2. **Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.**

3. **Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).**

4. **In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.**

5. **Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.**

6. **Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.**

This Certification is submitted by Peter Moore, P.E., F.ASCE, ENV SP, LEED AP **the**
(Name)

President **of** Chen Moore and Associates
(Title/Position) **(Company)**

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

CITY OF OPA-LOCKA

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

CITY OF OPA-LOCKA

DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by Peter Moore, P.E., F.ASCE, ENV SP, LEED AP the
(Name)

President of Chen Moore and Associates
(Title/Position) (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

E-VERIFY

Effective January 1, 2021, public and private employers, contractors and subcontractors will be required to register with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/sub-contractors) assigned by Vendor /Consultant/ Contractor to perform work pursuant to the contract with the Department. The Vendor /Consultant/ Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City; and

By entering into a Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If t contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination. The Contractor acknowledges it is liable to the City for any additional costs as a result of termination of the contract due to Contractor's failure to comply with the provisions herein.

E-VERIFY FORM

Definitions:

"Contractor" means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

"Subcontractor" means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.

Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) **All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and**

b) **All persons (including sub-vendors/subcompanies/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City of Opa-locka; and**

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9*.

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

A Proposal for a Citywide Urban Forest Plan

RFP NO. 23-1128200

City of Opa-Locka

November 28, 2023

November 28, 2023

Joanna Flores
City of Opa-locka
Office of the City Clerk
780 Fisherman Street, 4th Floor
Opa-locka, Florida 33054

Re: RFP NO. 23-1128200 – Citywide Urban Forest Plan

Dear Ms. Flores and the City of Opa-locka:

We are pleased to submit our proposal in response to the Citywide Urban Forest Plan Request for Proposals for the City of Opa-locka. Our company is an important part of the Wright Service Corp. which has been providing tree management services for 90 years. Specifically, CNUC provides high-quality urban forest management consulting services since 1999. Currently CNUC has approximately 500 staff throughout the United States, Canada, and the Caribbean who look at trees daily, collect data, develop management plans, provide program assessments, create technical reports, and author urban forestry BMP's and textbooks. Our urban forest planning and tree assessment work regularly include quantifying the tree population (e.g., species, size, condition, risk ratings, maintenance needs) and proposing potential planting locations; which we develop into management action through written plans.

Our proposal will result in a comprehensive Urban Forest Plan (UFP). We would use existing data to inform the current state of the urban forest. This will likely result in a recommendation for a next critical stage of addressing ways to promote the tree inventory through future tree assessments and the type of data to collect. We also propose a tree inventory add on and ***we structured our budget to complete the UFP and a new tree inventory within your budget***. Regardless, the existing tree inventory along with other community information from several community engagement approaches will support development of the UFP. Communication during the project is important! Prior to starting data collection, we always use our initial meeting to make sure all data and information is collected to best meet your needs. Certainly our proposal lays out what we will do, but communication throughout is vital. Thus, the existing tree inventory, community plans, current state of the urban forestry program, and community engagement is important to develop a future urban forest that is equitable for all community members.

Our experienced ISA Certified Arborists, Municipal Specialists, Board Certified Master Arborists, and Tree Risk Assessment Qualified personnel have worked with municipalities and utilities to inventory and assess tens of millions of trees. We are experienced in prioritizing the maintenance requirements of trees and understand the harm that can occur when they are not managed adequately. In our daily job duties, we have spent countless hours engaging community members about their trees, the value, and how to manage tree risk. These tree assessments often become written reports from a brief synopsis to complete management plans. We will proudly bring that understanding of trees to your community and complete your scope of work as a workable and practical plan.

On behalf of CNUC, thank you for giving us the opportunity to respond to this invitation to bid. ***We are national in scope and local at heart with work past and present in Florida***. We look forward to beginning a mutually rewarding partnership.

Sincerely,

Richard Hauer, BCMA, TRAQ, Ph.D.
Director of Urban Forestry

Letter of Transmittal: Letter of Interest

We appreciate the opportunity to provide details of our qualifications to successfully complete an Urban Forest Plan (UFP) as detailed in the Request for Proposals (RFP). To best meet the RFP Rules for Proposals and Submission of Proposals requirements, we have combined the Minimum Qualifications Part II – Nature of Service section with the Part III Proposal Requirements section. We did such for completeness, brevity, and to best respond. We read the details as described in the Scope of Services, and understand well what you want and how we are poised to carry out this work.

In brief, the City of Opa-locka is looking towards the future with *an urban forest that is assessable and equitable for all residents and visitors of the community.* To accomplish this vital vision, our plan within the Scope of Services section details our approach. Succinctly, this requires our coordination of meetings with city personal and undertaking successful community engagement. The community engagement component is really an important part of developing an equitable urban forest for all. Our review of the current state of the urban forest will address the existing governance through community plans, policies, and ordinances, along with other pertinent materials found during discovery. Our assessment of the current state of the urban forest resource will create a future plan for periodic assessment and monitoring through metrics to evaluate the tree population. We will relate the current state of the urban forest in this framework.

The example actions above will likely find areas for improvement and places that the community does well. As an example, the desire for an equitable urban forest is a positive position to reach towards. Addressing the future urban forest by considering what the impending climate might be, is important to create a resilient urban forest for what future environmental conditions. Undertaking a resource assessment of the tree population and locations where tree canopy exists on private and public lands is important to establish a baseline condition today. This information will then provide a metric to evaluate against as the urban forest develops towards the goals set in the UFP.

We are well positioned to develop the metrics to evaluate against, having led the 2014 baseline assessment of Municipal Tree Care and Management the United States. We are also leading the 2024 update of this work. Further, we authored the seminal textbook Urban Forestry: Planning and Managing Urban Greenspaces (Miller et al., 2015). This understanding of national and Florida specific work in conjunction with University of Florida researchers will help us inform you on how your program should be funded, staffing levels, and management of the urban forest resource. Our knowledge of community forestry programs will provide you with workable and action-based approaches to engage the community into what they want in the urban forest and how to best develop an urban forest across all lands. The following details will help you to better understand who we are and how we are qualified to lead your project.

Name of entity, its mailing address, telephone, email address: We are a company that is *national in scope and local at heart*. Our company work reaches across North America and beyond, however, we make a local bond with each client. Our national headquarters are 5930 Grand Ave, West Des Moines, IA 50266; (844) 764-2682. We also have local staff living in and working in Florida, and have

also completed urban forestry work within the state. Thus, we know the vegetation and urban forestry operations within Florida. Our resume section in the proposal names the key personnel who will conduct the work in your community. They bring a diversity of ideas and abilities that creates an exceptional team. And on site, our address is your community as we mobilize to undertake the resource assessments, community engagement, and meetings with city personnel. We are also a phone call, e-mail, or video conference away when needed. For this particular project, the overall project manager is Rich Hauer, 1420 Sand Hill Lane, Stevens Point, WI 54481; (715) 310-6939. We also will have a Florida expert through Luke Wholtmann.

B. Consultant availability, personnel and resources necessary to provide on-call consulting services: We will easily be able to accomplish the full scope of work and services as requested and proposed in our response. We have our municipal forestry team with adequate staffing to meet the current project. With approximately 500 employees within the CNUC team, we also have the ability to tap into additional staff. Our mobilized staff would have the ISA CA credential and have existing local knowledge. Writing an UFP will also occur easily, having been involved with over 100 plans, through development and editing. Thus, we know the time frame commitment, and also if needed work late into the day or the weekend to complete a job. Thus, we understand well the staffing level needed, time allotment required, and plan for any contingencies to be able to meet or exceed the required date to complete the work. Since, your timeline is important to use, and as we understand, important to put the proposed plans to work in April 2024.

C. Exceeding Minimum qualifications listed in Section III: Our brief resumes provided in our proposal response details our meeting and exceeding the International Society of Arboriculture Certified Arborist credential. In additional, we have an ISA Board Certified Master Arborist on the team, team members holding the ISA Municipal Specialist, and also have several on the team with the ISA Tree Risk Assessment (TRAQ) Credential. Overall skills and past projects are shown in Appendix A & B.

D. Intention of the consultant to adhere to the provisions described in the RFP: We attest we will adhere to all provisions as described in the RFP and as in our response.

E. Expected to sign a service provider agreement with the City: We sincerely believe we will exceed your expectations and will be honored to sign a provider agreement with the City of Opa-locka.

F. Contact person responsible for the submittal, specifying the name, title, and contact information: The team of the proposal will be collectively responsible to carry out our proposed scope of work. Project responsibility rests with: Richard J. Hauer, Ph.D, Director of Urban Forestry | e-mail: rhauer@cnutility.com | cell: (715) 310-6939

G. Person signing the letter of interest must be a legal representative of the consultant authorized to bind the consultant to an agreement in the event of an award: Within our urban forestry consulting team, Josh Bever, CNUC Senior vice-president, has contact signature authority to sign the letter of interest.

To close, when we start a project, we like to take a step back and frame the situation as what would we want if we were the community. Addressing this is rather simple as communication is first and foremost critical for project success, regardless of role. The data collection process is rather easy for us and developing an actionable plan is also for us a natural extension from a tree inventory, program and community assessment, and the resulting UFP. Thus, at the heart of selection of a firm, it really comes down to price and trust in us. We have developed a budget in mind with effectively and efficiently completing the scope of work. As for trust, our references can validate what we stated above. Our past body of work and diverse background shows us creating urban forestry methods and approaches that others implement in their work. We still consistently evaluate our approaches and improve or modify to fit a situation. And, we imagine by selecting us, you already have 100% confidence you will be happy with our project outcome. Completing the project within budget and scope is our pledge to you.

General Information

Our response to the general information request follows.

Name of Business: CN Utility Consulting

Mailing Address: 5930 Grand Ave, West Des Moines, IA 50266

Phone Number: (844) 764-2682

Names and contact information of persons to be contacted for information or services if different from name of person in charge: Same as above | Richard J. Hauer, Ph.D, Director of Urban Forestry | e-mail: rhauer@cnutility.com | cell: (715) 310-6939

Normal business hours: 8:00 am to 5:00 pm within a time zone, but variable according to task/job at hand.

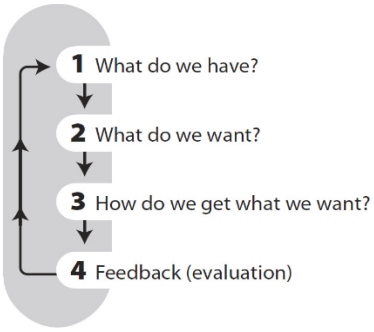
State if business is local, national, or international and indicate the business legal status (corporation, partnership, etc.): We are an international corporation with operations currently within North America and the Caribbean's

Give the date business was organized and/or incorporated, and where: Our firm is incorporated in Iowa since 1999.

Give the location of the office from which the work is to be done and the number of professional staff employees at that office: Our work will be completed remotely through company approved home offices. Some administrative tasks will occur at our corporate headquarters in West Des Moines, Iowa where more than 250 Wright Service Corp. employees work. However, most of our company staff historically works remotely through a home office or operating at a job location.

Indicate whether the business is a parent or subsidiary in a group of firms/agencies. If it is, please state the name of the parent company: CN Utility Consulting is a company within Wright Service Corp.

State if the business is licensed, permitted and/or certified to do business in the State of Florida and attach copies of all such licenses issued to the business entity: We are licensed and permitted to conduct work in the State of Florida and currently working within the state. Details are provided in the Appendix.



Project Approach: Scope of Services

This proposal describes the approach to develop a long-term Urban Forest Plan (UFP) to exceed the RFP details (Appendix C). The UFP will guide the continued maintenance of existing trees and propose ways to enhance the future urban forest across public and private lands. The result is an UFP that creates an equitable urban forest through a community-based vision, with strategies to get there. The plan will create goals based on community engagement and the state of the urban forest from the tree inventory. Measurable objectives will have actionable steps to complete to reach the desired goal endpoint.

Urban Forest Plan

The UFP will entail recommendations on program structure, governance, funding, community engagement, the tree resource, and other important UFP details described throughout the proposal response. The UFP will incorporate at least one Benchmark approach and key Criterion and Indicators to evaluate the success of growing the urban forest such as **(Clark and Matheny et al. 1997; Hauer and Peterson (2016); SFI U&CF Sustainability Standard)**. The UFP will follow the model of **Miller et al. (2015)** which articulates planning by:

- ☑ **What do we have** (e.g., inventory and assessment of the tree resources, history, environment, previous plans, ordinances, and other critical factors)
- ☑ **What do we want** (e.g., vision based on public engagement to discover their urban forest and greenspace wants and needs)
- ☑ **How do you get what we want** (e.g., strategic direction based on vision, goals, objectives as guided by what you have and what you want)
- ☑ **Feedback** (e.g., evaluation of program progress to meet goals and objectives and adapt as needed)

We believe that a successful UFP is one that is implemented via actionable ideas that a community can support. To that end, we use several iterative rounds of UFP draft development and revision. A workable UFP is not a last-minute task. Instead, we would start the draft development early on and refine based on City staff and the community comments. Several internal rounds within the project team would occur to draft our ideas based on the findings from tasks 1-5, detailed below.

We would keep key City personnel informed during our planned check-in-meetings. This will continue into the draft UFP stage that best reflects what we heard and learned up to that time. Our plan will be revised with suggestions for changes from the draft comments. While we could skip the public review part, we believe this is vital to proactively identify gaps and a desired direction for the plan to best meet what the community desires.

In addition to the UFP, we propose to develop a set of four infographic reports to complement the UFP (e.g., State of the Urban Forest, Urban Forest Value & Ecosystem Benefits, Tree Canopy Assessment, Key Actions to Growing the Urban Forest). These one-pager reports will highlight the most vital details we discover and provide easy to follow points to ponder. These will also be easy to follow for Opa-locka residents and be shared by your website.

Task 1 - Work Plan, Kickoff Meeting, and Project Management

A good plan results from excellent planning, communication, and collaboration. Overall co-project management occurs through Sarah Lilley and Liz Lingo taking the lead with supervising and assigning project staff and project

management. Their combined role is vital to ensure tasks and sub-tasks are completed as anticipated, ideally ahead of schedule. Rich Hauer will further oversee the project as a subject matter expert, and backup project manager. Weekly to bi-weekly meetings will occur to keep us on track. If deviations are needed, our team will respond with alternative plans to complete the final UFP by April 2024 (potentially flexible). If awarded the contract, a draft work plan would be submitted one week prior to a kickoff meeting. As an example of how we would develop subtasks for a task, the kickoff meeting task example is below.

Task: Kickoff Meeting

Subtasks: (1) schedule in-person meeting and virtual attendance option with assigned City staff; (2) develop meeting agenda with identified times and lead roles of the project team; (3) work with the City to ensure meeting applicable public meeting criteria; (4) submit work plan at least one-week in advance of meeting; (5) conduct meeting and identify recording method(s); (6) modify work plan as needed per meeting instructions and repeat until approved.

Goal: Overall goal is to review and modify the work plan as needed to accomplish the project.

Schedule: January 2024

KPI's Milestone: Draft work plan developed and modified resulting in final plan.

Project management is vital to ensure meeting budget targets, meeting deliverables, keeping all parties abreast with schedules, and other milestones. The team has extensive project management experience through hundreds of projects and assignments.

Task 2 - Community and Stakeholder Engagement

The inclusion of people in the decision-making process is both vital to making proper decisions and an important part of engaging people in their community. Existing public engagement is a start, with the **Comprehensive Development Master Plan & Land Development Regulation/Zoning Code** as an example to build upon. We will propose an approach in the UFP with how to engage the community to refine the UFP over time to instill what the community envisions. For this project and to fit your scope and complete the UFP in a timely manner, we will undertake a rapid assessment of community engagement and propose a system such as below for public engagement.

Internal Engagement and Foundational Work

An important milestone is **establishing and engaging appropriate governance** groups to be a part of the engagement component. To that end, potential Boards & Committees and Programs/Departments to engage include the Historic Environmental Preservation Board, Community Relations, Recreation and Activities Board, Planning and Zoning Appeals Board, Neighborhood Beautification, Economic Development through the Planning & Community Development Department, Public Service & Recreation, and the Neighborhood Improvement Program. These are logical as they promote the maintenance of existing grounds and the development of land. We also will identify groups and people who know how trees make a community a more vibrant and higher quality place to live and work. The work should also complement and **integrate into the Sustainable Opa-locka 20/30 Comprehensive Plan**.

Identification of Need and Structure for a Tree Commission

We will propose a method for developing a **Technical Advisory** ad hoc Committee is created to review UFP technical merits. We would develop a list of potential candidates to invite from the existing Boards & Commissions. We would further develop a list of potential external members to complement the member skills set. The group would be advisory and a

way to engage the community as we develop the UFP ideas. We would work with our identified Opa-locka point of contact to get final approval before inviting members. We would propose a 3- to 5-person technical advisory to further represent the interests of the community. Currently this role is served by the Historic Environmental Preservation Board, which may be the best place, but we will help verify this.

A potential outcome is evaluating if a **Tree Board or Tree Commission** would be important going forward to support your urban forestry work. Perhaps one exists, but we were unable to ascertain if such exists and if so wonderful, we have a group to work with. Ideally such a group could be 1 to 2 members from a tree technical background (e.g., state U&CF coordinator or industry professional, university specialist in arboriculture), 1 to 2 private industry members with credentials in arboriculture and urban forestry, an Opa-locka staff member, and 3 to 5 members of the community for a group with 5 to 7 members. We propose a structure to keep the Technical Advisory Committee in place as perhaps an ad hoc or subcommittee of an existing board or commission or as a new group to review benchmark outcomes annually.

Public Engagement by Focus Group, Community Event(s), and Survey

Outside of this project, we will identify a future **urban forestry focus group** approach to discover the community vision and potential strategies to make this happen. As an example, in our plan, we would propose an in-person day-long event. Prior pre-work will occur to develop a system to actively engage the Board & Commission member group(s) that best represents the City. The pre-work would ask participants to answer questions about their vision(s), strengths and weaknesses of current forestry operations, threats or challenges, and opportunities or approaches they might think would be important for developing the urban forest. This information would be the basis for a visioning statement and goals for the Opa-locka urban forest for the participants to review and modify during a working group meeting. These findings would further be used to bring to the community events for validation and verification.

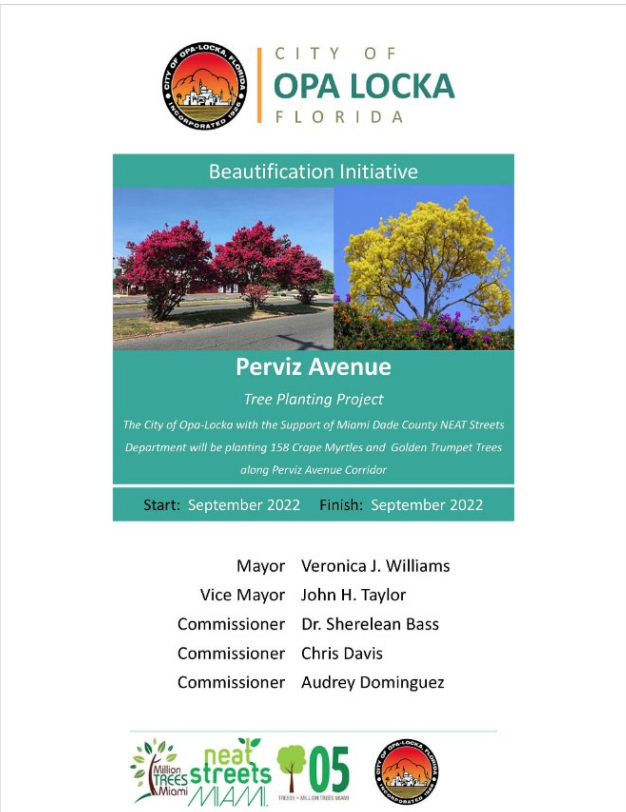
The findings from the Stakeholder Focus Group and proposed public opinion survey would help guide the technical group in the future. This group would be engaged to review and propose adherence to industry BMPs and guidance with tree selection, tree planting and establishment, relevant tree maintenance over the design life, and a risk assessment process to determine actions required for public safety. One advantage our team brings to the UFP development, we are an established part of developing industry standards and BMPs (ANSI A300 and ISA BMPs) and have developed several models and approaches for urban forestry assessment (Miller et al 2015, Hauer and Peterson 2016). Ultimately, we will help guide the process and provide guidance for a community developed and adopted process.

KPI's Milestone: Strategic Advisory Committee developed; Technical Advisory Committee developed; community engagement in-person meetings held; consumer survey conducted; future community engagement approaches developed.

Task 3 - State of the Urban Forest

The development of the UFP will be data driven while also reflecting the experience of local communities. As much as possible, the state of the urban forest must be understood in the historical context of how trees in Opa-locka have changed over time. Data itself cannot determine the state of the urban forest. Our team will bring expertise in typical ways of analyzing data about the urban forest, but also uses the local experience that City staff and the community have about their urban forest during initial rounds of community engagement through the process described in task 2. This information will be a central topic of the state of the urban forest and our approach described below.

Current Urban Forest Inventory: A tree inventory is a first step with assessing the current state of the urban forest. First and foremost, growing trees in Opa-locka faces challenges due to weather (e.g., summer storms, hurricanes, and other loading events), climate (e.g., temperature, and precipitation), and construction (e.g., new and redevelopment). Our CNUC team of employees has experience with plant assessment and selection for this environment as our inspection staff routinely assess vegetation from tropical to temperate locals. As part of the team, Rich Hauer was trained in urban forestry, botany, and tree biology. Luke Wholtmann has extensive experience working with plant communities in Florida and is an expert with Florida plant communities. Finally, Rich Hauer is a plant selection expert having taught and researched plant communities throughout the world as a professor teaching dendrology and woody plants courses for several decades, along with forest health. Thus, we will use our experience and the inventory to create a State of the Urban Forest with existing and proposed future plants, and we will propose a system for detecting changes with continued future tree measurements. We will undertake the follow assessment actions in this task:



- ☑ Conduct an analysis of the urban forest composition and identify tree species diversity, tree condition, maintenance requirements, tree health concerns, and create a framework for future assessments to identify trends. This assessment will also be compared to regional tree populations and national benchmark data we have developed that makes us unique. The system can also be updated with new trees.
- ☑ The existing inventory will create a summary of management needs of the urban tree population and potential costs. The management needs will also be prioritized as to what actions to take and when. This will be completed through a multiyear budget for management recommendations we develop.
- ☑ Identifying pest issues and the potential for pest issues based on the tree population will result in recommendations in an insect and disease recommendation section of the UFP. Our staff has expertise in plant health care and will propose controls to undertake, and species to plant for Opa-locka.
- ☑ The UFP will further identify and provide recommendations for potential tree planting needs. Site limitations and land use will dictate the potential to increase trees and tree canopy in the community. Our tree canopy assessment work described below will provide an insight into the current tree canopy state and a potential canopy target.
- ☑ An assessment of the ecosystem values of the tree population will occur using the i-Tree Eco system. The tree inventory system proposed as an add-on to the RFP has suitable information to complete an assessment. We also have proposed an approach in our tree inventory response to collect tree condition in a way that tree valuation using the Council of Tree and Landscape Appraisers systems is also possible. This approach will also provide an asset value of the public resource for inclusion in City financial reports. Tracking the tree population as an asset is important and would make Opa-locka one of few places that currently do such.

☑ A Tree Canopy Assessment (TCA) analysis is a popular way to see what you have, where it is located, and help develop targets to plan towards. We propose a sample point based TCA as an initial point to see what you have. A study we co-authored found a 14.3% canopy cover for Opa-locka (Salisbury, Koeser, Hauer et al., 2019). However, how canopy cover varies across the community is unknown. Our proposed sample point system also has an advantage in that we can train city staff to use this approach in-house to monitor your progress over time. The system is relatively easy needing only a few hours to train a person with rudimentary ArcMap GIS skills. A random sample of 2,000 locations would be assessed to detect ground layers as tree/shrub, grass/herbaceous, impervious, soil, agriculture, and water. The sample size will produce a high margin of certainty and will also allow disaggregation into various land uses, City council boundaries, and any other land management boundaries in a GIS shapefile. This work will also help direct the planting of trees.

☑ Finally, our plan will focus on the use of visual displays to illustrate findings. The use of illustrations, charts, graphs, and other visual means makes communicating information easy and an effective way to educate community members about the current state of the urban forest.

Tree Planting Program

Urban Forest Plan and Governance: We will gather current policy documents (ordinances, employee manuals, regulations, adoption of industry standards, etc.) and interview key City of Opa-locka staff and partners managing the urban forest. These interviews and our review of the documents will focus on using a standard Strengths, Weaknesses, Opportunities and Threats (SWOT) analyses. Ordinances Section 8.2, 15-3, 15-4, 21-122, and other locations within the municipal code pertain to trees. These would be reviewed to determine if they are still effective, for adherence to current professional standards (e.g., ANSI A300 and ISA BMPs), and identify any gaps.

Best Management Practices: We will use our knowledge of industry standards and best practices, experience in working with other cities, local community insight, and additional research to compare how Opa-locka' s urban forest and management compared to best practices. This will include the latest science, industry standards (such as ISA BMPS), and a wide variety of metrics of success, many of which are easily measurable. We will also work to align best practices with local community values to help support greater adoption and sustainability. In summary, this work will help with making better tree management decisions.

Future Data Collection and Tracking: While City staff and community members may ask questions that cannot be answered with current data, we believe that there is enough existing information available to give an accurate view of the urban forest. We plan to summarize the

current state of the urban forest using existing data and offer some options for future data collection and tracking. The end resulting system will be based on a solution that best works for you and will also allow you to use the data through your community tracking, dashboard, or potentially the Build Better Opa-locka online service request portal.

Task 4 – Vision, Goals, and Metrics

Once we have gathered information from the community engagement process, understand the state of the urban forest, and conducted SWOTs with City staff and external parities, we will focus on crafting UFP actions that have measurable outcomes. These will also consider ways to incorporate benchmarks and metrics into your community dashboard. In our experience, the most successful vision and goals are created in partnership with actively engaged staff, partners, and community members. We will encourage City staff and stakeholders to take ownership of the final vision and goals, with the active input and support of the consultant team.

Vision: The vision is community-driven and as much as possible will be linked to existing City plans and documents, informed through staff and partner interviews, and ultimately created by listening and collecting the community's thoughts. The vision should reflect an inclusive process and inspire action, providing a roadmap for how the community can work together to achieve its shared goals. It is important to engage a variety of City Departments and other stakeholders across the City to find a shared vision. Our team will also use the vision statement with infographics to display what the vison truly means.

Goals: The goal setting process will gather broad input from the community, including internal and technical stakeholders. Our team will help synthesize this input and support the City in consolidating and prioritizing specific and measurable goals that reflect the priorities of the community. We will work to ensure that the vision, goals, and metrics of success are all parts of a cohesive whole.

Metrics of Success: Like the vision and goals, we believe that the City should be empowered to set their own benchmarks for success, with support from our team. We will use our technical expertise to guide this process more closely and offer independent views on how data can be collected to answer specific questions and provide a system to track reaching identified goals. An example tree planting goal would include developing a scope of tree planting over a time period and tracking the success towards reaching the goal. As an example, a 20-factor urban forestry sustainability model would also be proposed for use to track the UFP progress.

Task 5 – Recommendations and Implementation Strategy

By this stage, we get to take all we learned from the previous tasks and integrate the developed community-envisioned goals with actionable

City of Opa-Locka Vision Statement: the City aspires to be a successful and financially stable full-service community that offers ample economic opportunities to its residents, boasts a vibrant and distinctive Downtown and healthy neighborhoods, and provides excellent services and a great quality of life to residents, businesses and visitors.

Example Urban Forestry Vision: Thinking forward by growing an equitable, resilient, and sustainable urban forest for all.

Goal: Identify potential planting locations and the cost to implement a tree and associated plants planting plan

Objective: Identify and allocate the resources required to full plant all locations within 7 years

Action: Mobilize staff and/or contractors to plant 20 acres of green space and 400 trees annually though 2030

ways to make them happen. As an example, engagement may tell us that a significant percentage of the community envisions a 30% overall canopy, but tree canopy densities might vary by neighborhood. A one-size-fits-all approach might not be the best approach. For example in industrial areas it might not be possible to hit that target. Other areas that are currently underplanted could make up for the challenging locations. Thus, a goal then is to maximize tree canopy where possible with a target to have green space assessable for all within a 5 minute walk. Having multiple rounds of engagement and touchpoints with the community will help us determine the best overall approach, including important nuances for diverse groups and various locations throughout the community. The State of the Urban Forest along with tree species tolerance to anticipated change in climate will drive tree preservation, maintenance, and selection of planting recommendations. The Miami-Dade tree canopy goals serve an example and an important connection to the region through the efforts undertaken by the resulting UFP (Exhibit 1).

What we learn through public engagement and our team's technical expertise will inform our recommendations and implementation strategy tasks. We will also work to understand the

dynamics within the various City departments and will be able to propose an integrative framework of governance for the best management of public trees along streets, within parks, and on private lands.

Task 6 – Draft and Completed Final Urban Forest Plan

As part of the final deliverables, we will provide a draft UFP for review. The review provides an examination for clarification, additions, and retractions from the draft. A final UFP will result in a long-term plan to guide urban forestry into the future.

In summary, the resulting outcomes from tasks 1 – 5 are used to identify key approaches to complete an UFP in task 6. Our team will consider various models to help guide the development of principles, goals, objectives, and assessment of the urban forest as below:

- ☑ The Miller et al. (2015) planning model
- ☑ The Hauer and Peterson (2016) benchmarks
- ☑ The Clark and Matheny et al. (1997) model

Exhibit 1 – Build an equitable tree canopy countywide.

- Set a bold goal: to achieve 30% overall tree canopy countywide by 2030, prioritizing areas that are currently well below our current countywide average of 19%.
- Expand the capacity of Adopt-a-Tree and the Million Trees Miami Campaign to deliver on their ambitious goals by connecting them to resources and facilitating their reach into every community across Miami-Dade.
- Leverage the ongoing Urban Tree Canopy Assessment update, due to be released in late 2021, to identify areas of the County where tree canopy is most needed.
- Take steps to make the County a Tree City USA and commit a meaningful amount of the County's budget to making this possible.
- Incorporate key equity goals, including making meaningful progress greening neighborhoods with significant heat-related public health challenges.

Source: THRIVE305 ACTION PLAN

Experience and Qualifications: Key Personnel and Firm

The project team exceeds the requested minimum criteria to conduct the Scope of Work. The project manager holds the ISA BCMA credential (WI-1521BM) and been involved with urban forestry work since 1986 through the field application of collecting data, developing data collection systems, and academic research testing and improving ways we manage the urban forest. The team has experience working within the State of Florida. Luke Wohltmann is a Florida State University graduate in Environmental Science and has worked through managing vegetation in Florida. Rich Hauer has completed work accessing community forestry programs through the 2014 Municipal Tree Care and Activities work, through contract and collaborative academic work with the University of Florida. This UFL work includes urban forest resiliency through evaluating the effects of hurricanes on the urban forest. We also investigated the effectiveness of tree ordinances upon tree canopy within Florida Communities with Opa-locka one of the 300 communities in our study (Salisbury, Koeser, Hauer et al., 2019). Most recently we investigated the equitable distribution of the urban forest throughout Florida and tested the 3-30-300 rule for proximity to urban tree attributes. Specially this involves a person having at least 3 trees within the view of their home, living within an area with 30% tree canopy, and have access to a public green space within 300 meters (e.g., ~ 1000 feet). We also have extensive work through urban forestry operations within the United States.

The project team members exceed the experienced background in tree assessments, program review, community engagement, and developing actionable reports. This experience has occurred through professional work and extensive formal training through various educational approaches. Thus, we value our collective background and our potential to put this expertise to work for you! We also have extensive experience with taking information pertinent to the situation and developing creative management plans to inform and create action to work towards improving a system. Our qualifications follow and are also detailed in Appendix B.

RICHARD HAUER, PROJECT MANAGER

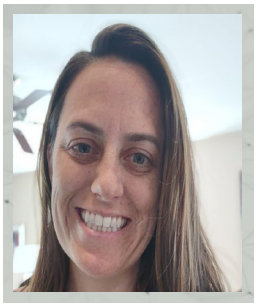
Dr. Hauer is CNUC's Director of Urban Forestry and brings over three decades of experience to the project team. As an early career professional, Rich gained experience as a practicing arborist and urban forestry consultant. These experiences later resulted in overseeing the Shade Tree Program in Minnesota. Rich has served as a Professor of Urban Forestry for the past two decades, and he remains professionally active as an Emeritus Professor of Urban & Community Forestry. He served as president of the Arboricultural Research & Education Academy, Minnesota Society of Arboriculture, and Wisconsin Arborist Association. Dr. Hauer also served as chair of many professional and academic committees. Rich is co-author of the *Urban Forestry: Planning and Managing Urban Greenspaces* textbook. Rich is active in the development and publication of urban forestry research with over 200 publications. He also speaks regularly at local to international conferences with over 500 professional talks. He is an associate editor of the Journal Urban Forestry & Urban Greening.

Education and Certifications

- Associate of Science, Horticulture Tech.
- Bachelor of Science, Urban Forestry

- Master of Science, Urban Forestry Tree Health and Biology Emphasis
- Doctor of Philosophy, Urban and Community Forestry Capacity Building
- ISA Board Certified Master Arborist
- ISA Certified Municipal Specialist
- 2023 Alex Shigo Education Award for Arboricultural Research, International Society of Arboriculture (ISA)
- 2022 Honorary Life Member Highest Award, Wisconsin Arborist Association
- 2018 L.C. Chadwick Award for Arboricultural Research, ISA
- 2017 Excellence in Teaching Award, University of Wisconsin Board of Regents
- 2016 Legacy Project of the Year Award, Society of Municipal Foresters
- Coauthor *Urban Forestry: Planning and Managing Urban Greenspaces*. Third ed. (Miller et al. 2015)

SARAH LILLEY, INVENTORY AND UFP SUPERVISOR



Sarah Lilley is CNUC's Supervisor of Research and Development and oversees municipal and utility projects across the US. She conducts training both for company staff and for clients' in-house teams and contractors and is proficient in the analysis of LiDAR data and GIS software systems. She has over seven years of arboricultural experience, and over ten in green industries, including utility corridor and municipally owned tree inventories. She has assessed thousands of trees, native and ornamental, across the country for risk and condition. She currently resides in coastal Connecticut and has experience conducting tree inventories throughout the US and spent her formative arboriculture years working and learning in southern California. *Sarah has excellent experience working with plants in a Southwestern US environment.*

Education and Certifications

- Bachelor of Science, Biology + Environmental Studies
- Certificate in Sustainability
- 2023 Graduate of the Green Communities Leadership Institute
- ISA Certified Arborist
- ISA Certified Utility Specialist
- ISA Tree Risk Assessment Qualified (TRAQ)

LIZ LINGO, ASSOCIATE URBAN FORESTRY CONSULTANT

Liz recently joined CNUC in 2023, having successfully led urban forestry and parks operations in the City of Rehoboth Beach, DE. As the City Arborist she developed their Urban Forest Management Plan and Tree Risk Plan. Prior that this, Liz was a Consulting Arborist working to improve and maintain trees within private landscapes. She also working for New York City Parks creating management plans, work schedules, and planting plans for restoration.

Education and Certifications

- BA in Environmental Science
- ISA Certified Arborist
- ISA Tree Risk Assessment Qualified (TRAQ)

PAOLA NANSEL, INVENTORY ARBORIST & URBAN FORESTER

Paola has worked with CNUC since 2022 and has already made a positive impact on the utility and municipal projects on which she has worked. With CNUC she has worked in California,

Washington state, South Dakota, Michigan, Indiana, and Wisconsin, quickly adapting to different forest compositions and project specifications. Paola studied Forest Engineering at the Universidade Federal do Paraná, with a year spent in an exchange program with the University of Idaho Forestry program.

Education and Certifications

- Bachelor of Science, Forest Engineering
- ISA Certified Arborist
- ISA Tree Risk Assessment Qualified (TRAQ)

LUKE WOHLTMANN, INVENTORY ARBORIST & URBAN FORESTER

Luke has worked with CNUC since 2021, after graduating with a Bachelor of Science in Environmental Science from Florida State University. He quickly moved from a field position to a supervisor position while working on a contract in Florida. He then took on a Traveling Field Specialist position, traveling to contracts in need of assistance. Luke is adaptable to different environmental conditions and scopes of work, and quickly becomes familiar with the local and ornamental trees in the areas where he has worked.

Education and Certifications:

- Bachelor of Science, Environmental Science
- ISA Certified Arborist
- OSHA General Industry

CHARLES ELMER, INVENTORY ARBORIST & URBAN FORESTER

Charles has worked with CNUC since 2023, making impactful contributions to our team from day one. He was instrumental to our inventory work with Commonwealth Edison (ComEd) and a tree failure study. Most recently he was co-leading an inventory project with Quincy, MA and Groton, CT. Prior to joining CNUC, Charles has developed community engagement plans, tree canopy assessments, and urban forest management planning approaches for communities.

- Bachelor of Science, Biological Systems Engineering
- M.S. in Environmental Science
- Programing ArcGis and R

Firm Experience

As with any proposal, selecting which past experiences you would like to highlight can be a challenge to pick from the many. In our references section in the proposal and on your reference form, we selected past clients that show a diversity of experiences. In addition to projects we present that show our national work, we have selected examples of Florida specific work in collaboration with the University of Florida. *This work also included the Mami-Dade county region, along with Florida statewide*. This work includes understanding trees and storms, hurricanes in particular, and how to develop a more resilient urban forest. We have conducted community engagement throughout Florida to address the equitable distribution of tree canopy. We further have been involved with tree canopy assessments in Florida. From this work we developed models to test the effects of tree ordinances on the trees and development and the effects up on tree canopy. These along with others involve our work with trees along streets, in parks, and within utility corridors. Throughout these locations that span a diversity of locations from rural to suburban to urban and even stand-alone communities, we inventory over one million trees a year. Regardless of location, we constantly consider the adjoining lands and ownership in decision making.

Our observations are made with tree identification, tree size, tree condition, tree risk, and many other details in mind, which at the end of the inventory our assessment is used to create meaningful reports to support decision making. Thus, through our work, hundreds of reports are made annually that range from simple reports detailing a few trees though a one-page assessment to reports exceeding a hundred pages in size. Within the urban forestry realm, Rich Hauer was the principal investigator for the 2014 and current ongoing ***Municipal Tree Care Activity Assessment of Communities in the United States.*** This report details the state of urban forestry in many suburban communities.

He also is author of over 200 publications that pertain to urban forestry projects, that again transect peri-urban to suburban to core city locations. We also provide our City of River Falls and State of Wisconsin clients as two recent examples and references of urban forestry projects at the municipal level in which tree inventories and urban forestry management reports were an outcome.

General Firm Information

Since 1999 our CNUC experience has evolved through complex projects throughout North America, all focused on vegetation management, rural to municipal forestry projects and consultation. While our headquarters reside in West Des Moines Iowa, we are ***National in Scope and Local in Heart***. Our consultants work throughout North America primarily through remote work locations at a field site and through remote home offices. Currently, our employees include over 500 people working throughout North America, including approximately 120 Certified Arborists. These locations provide experience and expertise in climates ranging from desert to humid climates that vary in precipitation from little to levels that naturally are conducive to natural forest communities.

Our staff also includes arborists and urban foresters that hold credentials as the International Society of Arboriculture Board Certified Master Arborist (BCMA), earned status as a Registered Consulting Arborist (RCA) from the American Society of Consulting Arborists, and numerous staff with the ISA Tree Risk Assessment Qualification (TRAQ) credential. We have long-term contracts in 28 states and two Canadian provinces. We also have developed hundreds of reports, ranging from those documenting a few trees at a site to much larger tree inventories, guidance for operations, and management plans. Appendix B provides three examples of relevant & current projects related to this project.

As a company, CNUC has contracts and support offices located across states (including Arizona) and in Canada, with company headquarters located in West Des Moines, Iowa. CNUC is part of Wright Service Corp. (WSC), incorporated in 1962 with Wright Tree Service starting in 1933 a vital part of the history. Collectively, we are part of over 6000 employees within WSC In addition to our urban forestry management planning work, we also conduct a variety of work such as tree care, utility pruning, tree inventory management, software programs, and environmental services.

For this proposal, we have collected a team of urban forestry and planning experts who have developed past works relevant to the proposed scope of work. Specifically, the project team has credentials through advanced degrees (B.S. to Ph.D.) in urban forestry and industry credentials (ISA Board Master Certified Arborist, Certified Arborist, Municipal Specialist, and Tree Risk Assessment Qualified). The team together has over 50-years' experience with urban forestry management across a variety of urban forestry landscapes within commercial, municipal, and utility forestry locations. The team has authored over 200 publications including urban forestry management plans, technical publications,

urban forestry textbooks, and Best Management Practice (BMP) guides to manage urban tree populations. This work includes tree inventories, management plans, ordinance development, tree planting and selection, tree risk assessment, and other work relevant to the care and management of trees in communities. Further, we have given over 500 presentations to community members, professional arborists and urban foresters, and related groups. Our project team would be proud to use this experience to accurately inventory your trees and develop an Urban Forest Management Plan.

Schedule: Anticipated Timeline

We are ready to start soon after a signed contract is approved by all parties (Exhibit 2). We tentatively believe a January 2024 start is likely with an anticipated December time period for city review of proposals and contract signing. However, we are ready to go as soon as a contract is agreed upon. A completion date is set

for April 2024 to meet your desired timeline for a UFP. In brief, our project starts with a kick-off meeting. We plan on this being an in-person meeting, having budgeted for two meetings with a virtual access also proposed. The goal is to review the agreed upon scope of services and determine a final plan of action. Throughout the project we will host periodic updates, this will mostly be remote through telephone, virtual video meeting, and other electronic means. Our community engagement plan will involve in-person approaches. And the project progresses through data collection, we will help you develop the vision. From this, we will propose the goals, objectives, action, and metrics to evaluate the UFP. A draft UFP will be developed, from which we will incorporate suggested changes into a final plan with an April 2024 target for completion.

Pricing of Services: Fee Schedule

To complete the proposed scope of service, we have developed an all inclusive budget. This includes our time, travel, and other expenses needed to complete the work. Thus, we propose to complete the work for $88,640 for an inclusive base fee. We have also proposed completing a tree inventory for an additional $9532. Appendix E provides further details on the pricing. In total both proposed scopes of work total $98,172

References: Clients

One of the challenges with showcasing experience for a project proposal is selecting which key examples to provide an example of our work to best align with your needs. These examples also provide an idea of our ability to conduct municipal tree inventories, conduct assessments, and develop reports. Further, they provide an example of our ability and expertise with benchmarking municipal forestry programs at local, state, and national levels.

We provide a list of three Florida specific references (Appendix B). In addition, we showcase a sample of work throughout the United States. We selected these examples of clients to contact and to get a sense of our abilities to successfully complete the scope of work. to inquire regarding the qualifications of the consultant.

Additional Proposed Service: Tree Inventory Project & Approach

Our proposed GIS-based tree inventory will provide critical information detailing tree species composition and distribution, their condition and maintenance needs, and associated site parameters. We have developed a budget to complete both the UFP and a tree inventory within your budget. Using the collected data, an assessment will easily lead into the UFP with results and recommendations to develop action and prioritized recommendations. Ideas include scheduling tree maintenance activities, project planting needs, identifying tree canopy projections, and ultimately increasing human comfort for Opa-locka residents and visitors. In addition, urban forest value is quantified, helping to understand the benefits that the trees provide, and providing the community a sense of pride with their trees and associated value.

COMMUNICATION PLAN

Communication is a key aspect to ensuring a successful collaboration. Upon contract award, a kickoff meeting will be scheduled between key staff to review the project scope, goals, inventory methodologies, and timeline. While this meeting can initially be held virtually, a second in-person meeting can be held when the inventory staff is assembled in your community, to finalize remaining details to create a vital connection with City project management.

Throughout the inventory, weekly updates will be provided to City staff with information on progress, any impediments encountered, proposed solutions, and any project aspects needing clarification. Additional communication may occur as necessary, via email, phone, or text, as City staff prefers, to ensure collaborative completion of data collection. We find this transparent approach is vital to project success and correct any issues that may arise.

TREE INVENTORY

For this project, trees, stumps, and vacant planting sites (e.g., where a tree previously existed or potential location) within the publicly owned rights-of-way and properties will be inventoried. Any existing tree inventory information for Opa-locka or neighboring communities will be an initial start for developing a new tree inventory. For example, knowledge of existing and anticipated tree species is vital to preplan and train for field work for identification and potential pests, maintenance issues, and other factors unique to Opa-locka. Example data to be collected includes details in Exhibit 3. A complete list of the collected tree inventory data will follow those specified in the RFP.

Exhibit 3. Tree parameters and associated values.

- **GPS Location**: unique GPS Coordinate ID
- **Street Address**: Consist with Parcel Data
- **Relative Location**: Consist with Parcel Data
- **Species**: common and scientific Latin name, referencing the i-Tree species list
- **Size (DBH)**: measured at 4.5’ above ground, nearest 1”

- **Condition Rating**: Propose CTLA 5% increments allows allocation into desired future system(s) such as i-Tree
- **Risk Level**: TRAQ based on the likelihood of failure, likelihood of impact, and consequences
- **Arborist Maintenance Requirements**: Specific pruning and removal action, finalized before data collection starts
- **Comments:** Additional information to guide tree management

Data Collection Approach

Our inventory arborists will be supplied with an iPad equipped with integrated GPS, as well as a forester's d-tape to measure each tree's DBH. Inventory data will be collected in the FieldNote tree inventory software produced by Terra Spectrum Technologies, which is a sister company of CNUC (terraspectrumtechnologies.com/fieldnote).

Data will be returned to the City in Shapefile, Geodatabase (.gdb), and csv formats. All collected tree inventory data will be provided to the City and will be considered the property of the City.

While performing tree inventory fieldwork, CNUC personnel will display proper identification: logoed clothing, personal protective equipment (PPE), and company ID badges. Safety is our number one core value, and all field personnel will be equipped with and required to use proper PPE including, but not limited to Class 2 reflective and logoed safety vests, safety glasses, and other appropriate safety equipment and attire required by local or state requirements.

Quality Assurance & Control

Quality work is holistic, beginning by having competent arborists in the field. Our reputation and extensive contacts in the industry provide an excellent opportunity to obtain highly qualified employees. We prefer to hire well-educated employees with a solid foundation in forestry principles (e.g., B.S. to Ph.D. trained in arboriculture, urban forestry, and related fields). As such, we look to hire employees with a degree in forestry or a related field, and with arborist certification by the International Society of Arboriculture.

Staff working on this project are trained both prior to the project and on-site to ensure accuracy and consistency in tree assessment, field measurements, data recording, species identification, and the use of the tools and technology applied to the project. Additionally, each staff member will be observed in the field while collecting data at the onset of the project and will be provided guidance and further training, as necessary to meet our Quality Assurance (QA) requirements. Supervisors who hold the ISA CA credential will conduct on-site

training, initial staff observations, remote and on-site data checks, and periodic field of work.

We welcome and encourage City staff to periodically perform on-site verification of collected data. CNUC staff will cooperate fully with City staff to achieve a high level of confidence in the accuracy of the data. CNUC assures that if any errant tree site location is detected, it is our responsibility to correct the data promptly.

Inventory Schedule

Our fieldwork can begin soon after being awarded a contract and be completed within the requested time. We would begin with a virtual introductory kickoff meeting upon contract reward, at which time we would create connections between the City and CNUC project teams, determine a protocol for proceeding with the inventory, and discuss any timeline and data collection expectations (Exhibit 4). Depending on the required inventory data fields and the time required to acquire GIS data from the City, it is

anticipated that fieldwork will take 6 to 7 weeks to complete with three to four inventory arborists collecting the data. The site project manager will hold the ISA Certified Arborist (CA) credential, and likely all staff will hold the ISA CA. Routine update meetings would continue throughout the project duration, either weekly, monthly, or on an as needed basis; the frequency of meetings can also adapt to the current project demands. If awarded, we anticipate completing an inventory by March 2024.

Quality control of the inventory data will occur throughout data collection. Progress towards meeting project goals will occur during the project. Delivery of the quality-controlled data set will occur within the requested scope of work period.

Goals: The goal setting process will gather broad input from the community, including internal and technical stakeholders. Our team will help synthesize this input and support the

Exhibit 4. Proposed inventory project schedule in 2024.

Project Milestone[1]	Anticipated Dates (2024)
Initial Meeting (Virtual)	January (mid)
Pre-Inventory Meeting	January (late)
Collection System	February (early)
Conduct Inventory	February (mid to late)
Final QA Data	March (mid)
[1] Anticipated dates contract finalization dependent	

City in consolidating and prioritizing specific and measurable goals that reflect the priorities of the community. We will work to ensure that the vision, goals, and metrics of success are all parts of a cohesive whole.

Metrics of Success: Like the vision and goals, we believe that the City should be empowered to set their own benchmarks for success, with support from our team. We will use our technical expertise to guide this process more closely and offer independent views on how data can be collected to answer specific questions and provide a system to track reaching identified goals. An example tree planting goal would include developing a scope of tree planting over a time period and tracking the success towards reaching the goal. A 20-factor urban forestry sustainability model would also be proposed for use to track the progress with the UFP.

SUMMARY

The City of Opa-locka enjoys the distinction as taking proactive steps to develop an urban forestry program. Your 2018 recognition as a Tree City USA is testament to your urban forestry goals, congratulations! Work to date with tree planting initiatives along with taking the step to hire a staff arborist & urban forester is important towards reaching your equitable urban forestry vision. Trees in the City of Opa-locka's is fitting considering the communities name is

derived from Opatishawockalocka which is an indigenous people's Seminole word, meaning "big island covered with many trees in the swamp". The tree planting and steps taking in 2023 will build upon these past efforts to greater a long-term plan to guide future growth of tree canopy and connect Peoples of today and the past!

The City of Opa-locka is taking an important step in urban forest planning to understand what you have (**tree inventory & assessment**), develop an idea of what you want (**stakeholder engagement**), and using an innovative urban forest plan (**action based**) to improve the community (**future growth**) with a resulting equitable tree canopy. Our plan will collect public tree data and help make informed decisions for all lands (public and private) through our proposed Urban Forestry Plan (UFP) proposal.

The trees that line streets and shade the public parks are not only appealing to the eye, but they also provide numerous benefits to residents and visitors. While beautiful and valuable, trees are living organisms which are injured, develop defects, and die, posing a risk as their likelihood of failure increases. Proactively assessing tree needs and tree maintenance is important to promote safety and urban forest growth to fully realize present and future tree benefits.

Our proposed plan addresses the tree inventory and UFP with sections devoted to our solution for each. We first will address the data collection process and our approach to keeping you informed as we collect, and quality assure the collected information is within industry standards. As a company, we are reviewers, developers, and voting members of the A300 tree care standards and ISA Best Management Practices, which sets us apart with expertise.

Next, we will address our approach to take your data and integrating it into your GIS system. We always work closely with a community before, during, and after data is collected with quality assurance and a final dataset best meets your needs and make sure it is in a format you want.

Finally, we address our approach to crafting an UFP that takes your current situation and makes recommendations based on community engagement. We know well how to develop relevant tree-based reports. We created industry benchmarking standards for municipal and utility systems. And as authors of textbooks used to teach and train people to understand urban tree populations, we also know the subject well.

We thank you for your review of our qualifications. We also wish you the best with selection of a firm that best meets your needs. We would like to be the group to work with you!

Appendix A – References

One of the challenges with showcasing experience for a project proposal is selecting key examples to provide an example of our work. These examples also provide an idea of our ability to conduct municipal tree inventories, conduct assessments, and develop reports. Further, they provide an example of our ability and expertise with benchmarking municipal forestry programs at local, state, and national levels.

CLIENT NAME	PROJECT DESCRIPTION AND STAFF	CLIENT PROJECT MANAGER
University of Florida **2018 – Present**	**University of Florida Trees, Storms, Tree Canopy Assessment and Ordinance Development:** These multi projects involved the development of urban forest management strategies to develop resilient urban forests against storms and development pressures. The outcome were technical and academic work the created methods for communities to adopt to develop healthier, sustainable, and equitable urban forests	**Andrew Koeser** Associate Professor Of Environmental Horticulture (813) 419-6589 akoeser@ufl.edu
Florida Power and Light **2016 – Present**	**Storm Mitigation in Response to Hurricanes:** A continued response project providing a to FPL in response to storms. Dispatch crews for emergency response assistance to help with evaluation and organization for storm response.	**Steve Jolly** System Forester (561) 713-4624 Brady.Yip@nexteraenergy.com
Florida Chapter ISA **2022 – Present**	**Technical Presentations:** Provided technical presentations on the growing of urban tree populations. Presentations included developing an urban forest that uses our senses and places to create an ideal state of the urban forest. Upcoming presentations in 2024 include crafting A300 Tree Care Standards of Practice to educate practitioners on the proper approaches for the care of tree populations forest	**Norm Easy** Executive Director Emeritus Phone: (941) 342-0153
City of Sioux Falls, SD, Parks & Recreation, Forestry Division **2021 – Present**	**Tree Inventory and Maintenance Assessment:** This project includes a multi-year tree inventory and projected scope up to 75,000 trees. We are invited back for the second year of the inventory with excellent feedback for staff expertise and data quality control The inventory includes tree height, tree diameter, tree condition, site parameters, GPS location, management recommendation, and other notable field observations in City owned golf courses, parks, and along streets.	**Bryan Peterson** Urban Forestry Specialist (605) 367-8222 bpeterson@siouxfalls.org

CLIENT NAME	PROJECT DESCRIPTION AND STAFF	CLIENT PROJECT MANAGER
City of River Falls, WI **2023 – Present**	**Ash Tree Inventory/Assessment and Emerald Ash Borer Management Recommendations:** This project involved a leaf-off assessment of the community ash tree population and assessment of tree suitability for treatment. A novel assessment was developed to rank trees based on state of EAB infestation, tree condition, site limitations, and other factors to rank trees from highest value to retain and to identify lower value trees that removal might be the better option.	**Mike Noreen** Conservation & Efficiency Coordinator/City Forester (715) 426-3467 mnoreen@rfcity.org
State of Wisconsin, Urban and Community Forestry Program **2018 – Present**	**State of the Urban and Community Forest, Tree Canopy Assessments, and Urban Forest Inventory/Assessments and Management Plans:** We investigated local U&CF capacity and outcomes to baseline & benchmark municipal urban forestry programs in Wisconsin since 1991. In our recent 2018 work, a total of 454 communities were assessed with recommendations created regarding urban forest management and urban forest management plans. More recently, we have been developing estimates of tree canopy throughout Wisconsin communities, assessing over 400 communities, testing AI systems and benchmarking this against human derived assessments. Most recently, we are completing tree inventory assessments of community tree populations in five communities and will develop a State of the Urban Forest that leads to recommendations for the urban forest management & operations.	**Laura Buntrock** Urban Forestry Policy & Partner Specialist State of Wisconsin Urban & Community Forestry Program (608) 294-0253 laura.buntrock@wisconsin.gov
TREE Fund **2014 – 2016** **2023 – present**	**Municipal Tree Care Operations:** This project created a national reference for municipal tree care in the United States. We addressed staffing, budgets, ordinances, community engagement, tree inventory systems, operations, and other details. The work can be found at Municipal Tree Care and Management in the United States: A 2014 Urban and Community Forestry Census of Tree Activities . We are in the process to update this work in 2024	**Heath Hupke** Grants and Development Manager TREE Fund (630) 369-8300 hhupke@treefund.org

Appendix B – Skills and Abilities of Staff

Combined Roles Through our Knowledge, Skills, and Abilities Assessment of the Project Team. Our experience is extensive in several ways, and we have skill sets that both complement each other's and provide many hands to complete a specific task.

Appendix C – Proposer Qualifications for Scope of Services to Complete

PROPOSER QUALIFICATIONS

The Proposer, as a result of this proposal, MUST hold a County and/or Municipal Contractor's Occupational License in the area of their fixed business location. The following information MUST be completed and submitted with the proposal to be considered:

1. Legal Name and Address:

   Name: CN Utility Consulting, Inc.

   Address: 5930 Grand Ave, West Des Moines, IA

   City, State, Zip: 50266 Phone/Fax: (844) 764-2682

2. Check One: Corporation (X) Partnership ( ) Individual ( )

3. If Corporation, state:
   Date of Incorporation: 2/20/2007 State in which Incorporated: Iowa

4. If an out-of-state Corporation, currently authorized to do business in Florida, give date of such authorization:
   2/20/2007

5. | **Name and Title of Principal Officers** | **Date Elected:** |
   |---|---|
   | Austin Kennedy – CEO & Secretary | 10/1/2023 |
   | Jonathan Hicks – SVP, CFO & Treasurer | 10/18/2022 |
   | Derek Vannice – President & COO | 8/1/2017 |
   | Josh Beaver - SVP | 10/18/2022 |

6. The length of time in business: 24 years

7. The length of time (continuous) in business as a service organization in Florida:
   24 years

8. Provide a list of at least three commercial or government references that the bidder has supplied service/commodities meeting the requirements of the City of Opa-locka specification, during the last twenty-four months. Orlanda Public Utilities (Vegetation Management), Florida Power & Light (Vegetation Management), Florida Chapter ISA (conference presenter), University of Florida (Urban Forestry Projects Collaboration)

9. A copy of County and/or Municipal Occupational License(s) We do not currently have a license for the City of Opa-locka but will apply for one upon award (or before). We do have authority to work in Florida and have existing work in the state.

Note: *Information requested herein and submitted by the proposers will be analyzed by the City of Opa-locka and will be a factor considered in awarding any resulting contract. The purpose is to ensure that the Contractors, in the sole opinion of the City of Opa-locka, can sufficiently and efficiently perform all the required services in a timely and satisfactory manner as will be required by the subject contract. If there are any terms and/or conditions that are in conflict, the most stringent requirement shall apply.*

I. SCOPE OF SERVICES

The City is looking to move forward quickly upon contract execution with the selected Consultant to meet the targeted project milestones. The selected Consultant is expected to provide the deliverables and to facilitate or participate in all tasks that list the Consultant as the responsible party. Each task should be costed separately for the project team to decide what can be achieved with the budget. If it makes sense to combine tasks, they can be combined if the objectives are still met. Proposers may include additional, optional tasks that they feel should be included in the project to achieve the optimal outcome; however, these costs and hours must be listed separately in the budget and may not be approved.

Please note that this project has a not to exceed budget of $100,000.00 including but not limited to additional services and tasks the Consultant may propose as optional tasks.

Notwithstanding the inclusion of services in this RFP, the final scope of services negotiated between the City and the successful Proposer shall be set forth in the Professional Services Agreement ("Agreement") executed by and between the City and the successful Proposer.

1. Project Management

A. Coordination and Meetings. The selected Consultant's Project Manager will take the lead in coordinating all project activities, including coordinating with City of Opa-locka Project Manager, deliverables, submissions, permits, and similar coordination efforts consistent with the scope of services.

1. The Consultant shall develop a plan for regular meetings with City staff throughout the duration of the project as required to coordinate and execute the scope of services. The Consultant shall prepare and circulate meeting minutes from all coordinating meetings.
2. The Consultant shall develop a plan and schedule to conduct and present at public outreach meetings (using various forms of virtual platforms) to solicit input from, promote the project to, and garner support for the project by the public.
3. The Consultant shall present draft and final plan documents at relevant City Board and Commission and City Council meetings and support the Plan's adoption by City Council.

B. Project Schedule. The Consultant shall prepare and periodically update a project schedule with tasks and milestones. The Consultant shall break down the schedule by logical tasks with enough detail to track project progress. The schedule must reflect realistic review periods for tasks, such as reports, plans, and coordination.

C. Administration

1. The Consultant shall submit a consolidated monthly invoice that includes a
2. progress report reflecting the work completed with the invoice.
3. The Consultant shall maintain project files in accordance with its Work Plan.

D. Work Plan. The Consultant shall prepare a Work Plan, based on the agreed upon Scope of Work, that includes a list of deliverables, milestone submittal schedule, summary of organization responsibilities and contacts, and task budgets. The Work Plan shall be submitted to the City and approved prior to the first invoice.

2. Analysis of Current Status, Challenges and Opportunities

As part of the development of the Urban Forest Plan, the consultant will review all relevant material, including City policies and documents, to identify where the City is successfully meeting program goals, and where there are gaps and areas for recommended improvements.

A. Assess City Policies and Documents. The Consultant shall review and assess all relevant material listed in this section.

1. Community Development Master Plan
2. Municipal Code (e.g., Protection of Trees, Trees and Shrubbery, Landscaping, Preservation of Historical and Cultural Resources).
3. City Guidelines, Specifications and Standards (e.g., Street Design, Planning Permits, Greenstreet Guidelines, Neighborhood Design Guidelines, Tree Removal/Pruning Permits, Landmark Trees, Master Tree List, Parking Lot Shade Guidelines, Street Tree Planting Requirements, City Landscape and Tree Maintenance Specifications)
4. Climate Action and Resiliency Plan
5. Contractor technical specifications for public tree maintenance.
6. Maintenance and level of service for trees in city easements
7. Key Parties and Stakeholders (interviews required)
    a) City Council and Advisory Commissions
    b) City Staff and Other Public Agencies
    c) Non-Profit Groups
    d) Residents and Business Owners
    e) Others
8. Summarize current and future challenges and opportunities in terms of City policies and planning. Who manages/ interacts with trees in City of Opa-locka? What conflicts exist between public agencies/departments/residents with respect to tree management? What opportunities exist for improving city policies, procedures, and plans related to public and private trees?

B. Assess Program Structure, Function, and Budget

1. Current staffing and program resources/staffing/roles and responsibilities (e.g., in-house, tree maintenance contract)
2. Work conducted (i.e., planting, young tree care, mature tree care, hazard tree abatement, administration, special projects (e.g., removal/replacement programs, major corridor tree/landscape improvements), backlog of work, emergency response, levels of interdepartmental coordination, etc.
3. Budget allocated and current level of service.

C. Assess Current City Public Tree Resources (Streets, Easements, Open Space, and Parks)

1. Tree numbers and stocking levels (from existing inventory)
2. Species composition and age diversity (from existing inventory)
3. Species fitness for future climate and growing conditions (pests, drought, etc.)
4. Management needs

5. Current value – resource units and annual monetary benefits, benefit-cost ratios for street and park tree populations
6. Current public opinion – conduct outreach to determine public opinion concerning services provided by the City and preference for alternative future investments.

D. Assess Private and Public Trees Resources (Canopy Cover Analysis)

1. Tree canopy cover and available growing space (area and %) by census tract (for equity assessment)
2. Overall health of the canopy by census tract (if discernible from existing imagery).
3. Identify primary threats to urban forest health citywide.
4. Equity assessment (distribution of canopy cover and its health, as well as available growing space, in relation to socio-economic indicators of need from census tract data.
5. Planting and management needs to be prioritized by census tract.
6. Value-resource units and annual monetary benefits, benefit-cost ratios by census tract if available
7. Current public opinion – conduct outreach to determine public opinion concerning the extent, health and preference for alternative future investments in the City's urban forest canopy.
8. Provide an overall assessment of Opa-locka's existing urban forest ecology using a framework such as Nature Serve's Ecology Integrity Assessment Method, US Forest Service's Forest Landscape Assessment Tool or other appropriate framework.

3. Stakeholder Participation and Outreach

A. Develop and implement an outreach plan that identifies and engages stakeholders. Consultant team should expect to have a multilingual outreach process that supports engagement with a diversity of cultures and ethnic backgrounds.

B. Develop and provide content for project web pages to be uploaded by City staff and hosted on the existing City web site, which will be a resource for project documents.

C. Collect input from stakeholders, including communities that may not be able to participate in web- public comment, pop-up events at farmers markets and other spaces, community presentations, or student ambassadors.

D. Develop media messaging materials and a media outreach strategy to inform the public about the planning process as well as opportunities for residents to be involved in supporting the health of the urban forest, including planting and properly managing trees on private and public property.

E. Engagement is expected to be ongoing, substantial, and center neighborhoods where priority tree planting will likely occur.

F. The Project Manager can assist in connecting to local partners and community groups, as well as running some of the outreach events/pop-ups.

4. Urban Forest Plan Development

The consultant team will prepare the Urban Forest Plan document with input from City staff to encompass the determinations based on issues identified in the Scope of Work. The consultant team will develop the organization, narrative text, graphic layout, and a complementary web-based document. The Plan will retain and expand to include park trees and develop recommendations to promote an increase in the overall canopy, including trees not managed by the city.

A. Identify principles and key goals for the plan update. Work with the community to develop principles and goals for the updated Plan and the Urban Forest Program. Guiding principles for the plan implementation are outlined in the background. Identify major challenges for Opa-locka in implementing this work. The Consultant team should plan to address social equity in the prioritization of tree planting across neighborhoods and in the outreach process; incorporation of all partners; and acknowledgment in preparation of a future Green Infrastructure Plan.

B. Key performance indicators. Recommend measurable key performance indicators for tracking progress on Plan goals (considering existing city goals), such as tree planting numbers, net tree gain and tree canopy coverage, increased native biodiversity, number of environmental justice priority community events, number of volunteer hours, and others with citywide goals. Propose policies and strategies that support the achievement of these goals.

C. Tree species and management recommendations.

1. The Plan should identify recommended street tree species appropriate for planting in the public right of way and park trees for planting in parks that meet criteria such as drought tolerance, groundwater table, Florida natives, root growth (minimizing impacts to adjacent public sidewalks and private sewer laterals), and height (many of the City's residential neighborhoods still have overhead power lines), and future climatic conditions.
2. Develop a tree species matrix that includes ratings for CO2 storage, air quality benefits in terms of ozone, nitrogen dioxide, particulate matter and sulfur dioxide, shade, habitat, pest risk, and other ratings as appropriate. Include mature examples of each species.
3. Provide the City and stakeholders with guidance and recommendations in regard to the state of urban forestry best practices in the following areas at a minimum:
    a) Tree care & health
    b) Tree monitoring
    c) Tree protection, removal, and mitigation for public and private trees
    d) Integrating urban forestry into land use planning
    e) Water conservation considerations
    f) Tree shade and urban heat island mitigation
    g) Public and private utility conflict mitigation
4. Identify strategies to reduce tree maintenance and sidewalk repair costs and minimize tree/utility conflicts.
5. Outline recommendations for best management practices for declining trees and removal of public trees and outline any proactive mitigation strategies to minimize the need for removals.
6. Outline recommendations for the preservation of existing trees on private property, including requirements for removal.
7. Recommend supplemental tools/policies/practices toward increasing tree planting programs including increasing the use of tree zones with automated irrigation systems within the disadvantaged communities.

D. Recommendations for Staffing Structure, Function, Budget and Revenue for Urban Forest.

1. Based on community input from outreach efforts, what aspects of the City's urban forest program pose the greatest challenges and opportunities? What potential future investments are most and least preferred?

2. Recommend optimal staffing (mix of in-house, contract, other) to improve service and efficiency.
3. Determine a recommended budget for urban forest management to meet the desired level of service and plan goals, including ongoing community engagement.
4. Identify potential sources of revenue or support to increase funding and resources available to the Urban Forest.
5. Evaluate the current tree maintenance contract and specifications and make recommendations to align with the overall goals of the Urban Forest Plan and recommended staffing and programmatic needs.
6. Provide a comprehensive list of all applicable resources with the required competencies including staffing, tools, and software.
7. Recommended urban forest management strategies applying but not limited to the following: Reliability Centered Management, Just In Time, Optimal Prune Cycle and address Cost of Deferring Maintenance, Tree Growth Analysis, Pest Pressure and Loads and Other Environmental factors such drought, poor soil conditions and pathogen loads.

E. Challenges for maintaining a healthy urban forest. Climate change, rising groundwater, drought, and potential challenges to maintaining a healthy and vibrant urban forest. The plan should identify these and other challenges and suggest creative solutions to address identified challenges.

F. Recommendation for ongoing community input on urban forest management. Tree planting and care will not be a City endeavor alone – it will require the participation and investment of the community and partners. We want to build community leadership around tree caretaking. Recommendations may address:

1. Recommended actions regarding partnerships, outreach, programming, and community events. This can include Tree Care Academy, best outreach/communication practices, demonstration projects, and volunteer tree planting programs in public areas and Arbor Day/tree festival/community planting days.
2. Recommendations to educate residents about the urban forest, how it supports the city' climate mitigation and adaptation goals and how residents can be involved in supporting the urban forest, including information on what residents are allowed or required to do with public trees.
3. Strategies to encourage and assist residents, businesses, and private property owners to plant and properly maintain trees on their own property (including provision of free or rebated trees and MDC or City rebates).
4. With limited staff capacity at the City, a tree planting and maintenance program will need to be supplemented and supported by a community network. Identify some possible collaboration structures for staff, community volunteers, horticulture students, community partners, and organizations to work together on the tree planting program.
5. Possible partnerships with local businesses and nurseries to further support the community.
6. Recommendations on applicable community engagement resources, including staffing, tools and software.

G. Changes to City policies and related plans. Identify any recommended changes to current City policies, planning, and documents based on assessment of current policies and plans. Identify any areas that might be subject to improvements.

H. Inventory. Provide recommendations on expanding the City's tree inventory to include all city trees.

I. Plan evaluation and updates. Provide recommendations for the ongoing evaluation of the effectiveness of the Plan and guidance for the timing and process of updating the Plan.

Appendix D – Disclosures and Scope Redactions and Additions

No redactions or additions are proposed.

Appendix E – PRICE PROPOSAL FORM AND ADDITIONAL AGREEMENTS

The proposed plan to complete the scope of work will include at least two travelling field inventory specialists and a project supervisor for quality control. These staff hold the ISA Certified Arborist credential. Project management oversight and technical detail expertise will also occur through an ISA Board Master Certified Arborist.

PRICE PROPOSAL FORM

PROPONENT understands and agrees that the Contract Price is the lump sum to furnish and install all of the Work complete in place. Vendor's price will not be adjusted unless the CITY changes the scope of the Project after the Contract Date.

As such, the Vendor shall furnish all labor, materials, equipment, tools, superintendence, and services necessary to provide a complete, in place Project for the Proposed Price of:

LUMP SUM PRICE: $ 88,640 for the Urban Forest Plan (UFP)
$ 9,532 for a Public Tree Inventory (Add-on Scope of Work)
$98,172 for both the UFP and Tree Inventory

SUBMITTED THIS 28 DAY OF November 2023.

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non- responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

Signature

CITY OF OPA-LOCKA
DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by Josh Beaver (Name) the Senior Vice-president (Title/Position) of CN Utility Consulting (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

Notary Public, State of Florida

(Printed Name)

My commission expires:

E-VERIFY

Effective January 1, 2021, public and private employers, contractors and subcontractors will be required to register with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/sub-contractors) assigned by Vendor /Consultant/ Contractor to perform work pursuant to the contract with the Department. The Vendor /Consultant/ Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City; and

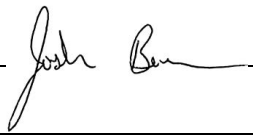
By entering into a Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If t contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination. The Contractor acknowledges it is liable to the City for any additional costs as a result of termination of the contract due to Contractor's failure to comply with the provisions herein.

E-VERIFY FORM

Definitions:

"Contractor" means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

"Subcontractor" means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.



Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/subcompanies/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City of Opa-locka; and

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

Exempt payee code (if any) _____

Exemption from FATCA reporting code (if any) _____

(Applies to accounts maintained outside the U.S.)

5 Address (number, street, and apt. or suite no.) See instructions.

PO BOX 818

Requester's name and address (optional)

6 City, state, and ZIP code

DES MOINES, IA 50304

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN,* later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number

			–		–				

or

Employer identification number

2	0	–	8	5	1	4	0	5	6

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

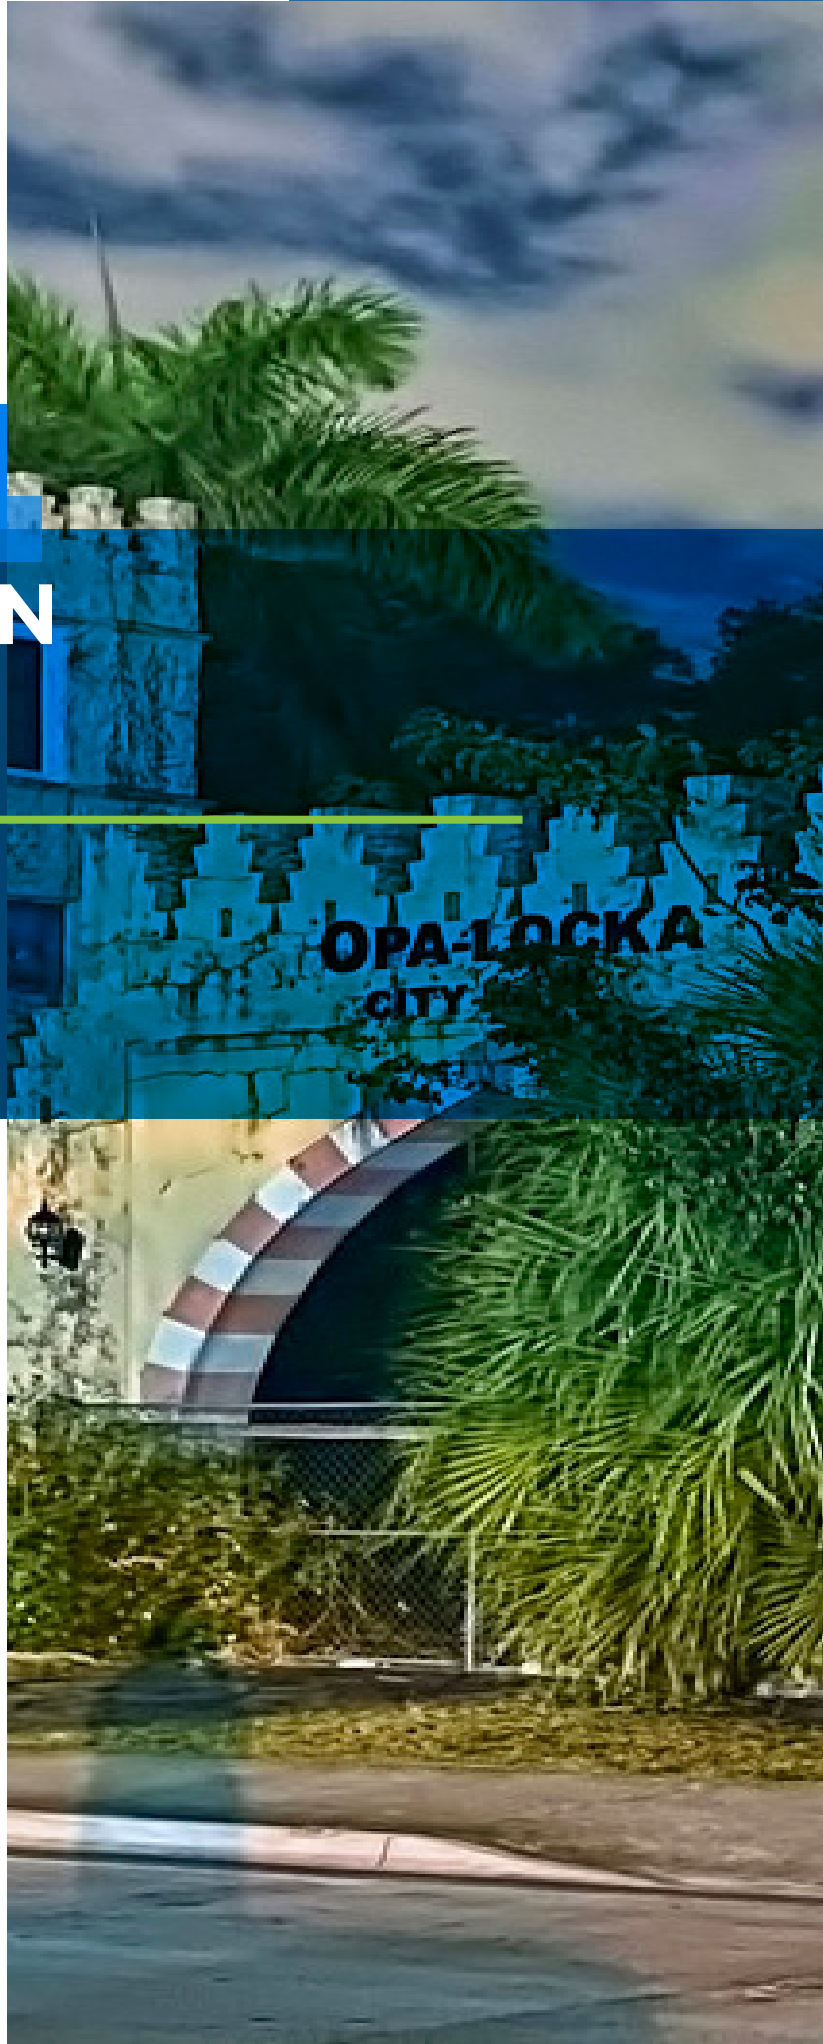
Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9.*

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.



If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

PROPOSAL FOR: RFP 23-1128200

CITYWIDE URBAN FOREST PLAN

City of Opa-locka, FL

November 28, 2023

SUBMITTED TO:
City of Opa-locka, FL
Office of the City Clerk
780 Fisherman St, 4th Floor
Opa-locka, FL 33054

PROPOSED BY:
PlanIT Geo, Inc.
P.O. Box 1334
Wheat Ridge, CO 80034

PROPOSER QUALIFICATIONS

The Proposer, as a result of this proposal, MUST hold a County and/or Municipal Contractor's Occupational License in the area of their fixed business location. The following information MUST be completed and submitted with the proposal to be considered:

1. Legal Name and Address:

   Name: PlanIT Geo, Inc.

   Address: P.O. Box 1334

   City, State, Zip: Wheat Ridge, CO 80003 Phone/Fax: 303-214-5067

2. Check One: Corporation (X) Partnership ( ) Individual ( )

3. If Corporation, state:
   Date of Incorporation: 9/1/2021 State in which Incorporated: Colorado

4. If an out-of-state Corporation, currently authorized to do business in Florida, give date of such authorization:
   6/23/2023

5. **Name and Title of Principal Officers** **Date Elected:**

Ian Hanou	1/12/2012 (LLC) and 9/1/2021 (Corp)

6. The length of time in business: 11 years

7. The length of time (continuous) in business as a service organization in Florida:
   9 years

8. Provide a list of at least three commercial or government references that the bidder has supplied service/commodities meeting the requirements of the City of Opa-locka specification, during the last twenty-four months.

9. A copy of County and/or Municipal Occupational License(s)

Note: *Information requested herein and submitted by the proposers will be analyzed by the City of Opa-locka and will be a factor considered in awarding any resulting contract. The purpose is to ensure that the Contractors, in the sole opinion of the City of Opa-locka, can sufficiently and efficiently perform all the required services in a timely and satisfactory manner as will be required by the subject contract. If there are any terms and/or conditions that are in conflict, the most stringent requirement shall apply.*

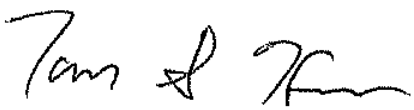
City of Opa-locka, FL
Office of the City Clerk
780 Fisherman St, 4th Floor
Opa-locka, FL 33054

Dear Evaluation Committee,



PlanIT Geo, Inc is pleased to submit our qualifications in response to the City of Opa-locka's request to provide a comprehensive Urban Forest Plan. We believe we are fully equipped, qualified, and prepared with ample time and resources to provide the City of Opa-locka with an informational, professional, and actionable project. PlanIT Geo exceeds the minimum qualifications for this project, having multiple ISA certified arborists, over 9 years experience having completed over 50 urban forestry plans, and are registered in Florida to do business. We look forward to this collaborative opportunity to work with the City on this important project.

PlanIT Geo is organized into four unique departments to provide specialized services: Software, GIS, Inventory, and Consulting. Each department contributes to different aspects of urban forestry projects when developing Urban Forestry Plans, tree ordinances, city tree inventories, tree canopy analyses, tree planting strategies, and other projects relating to trees in our communities. Just as the City of Opa-locka values the urban forest as the key to a healthy city, our team is driven to provide products and services that enhance and sustain it. We are committed to achieving the goals set forth in the City's RFP to develop a comprehensive and integrated Urban Forest Plan to help the City in being proactive in their urban forestry efforts.

Our team brings over 10 years experience and extensive knowledge in regional urban forest management planning, public outreach and engagement, programming, operations/policy auditing and guidance, tree inventories, risk assessments, tree preservation, canopy assessments, forestry recommendations, pest and disease management, and planting strategies. Our experience and dedicated team will provide accurate, clean, and manageable urban forest data through proven urban forestry processes and practices.

We will develop meaningful and actionable data to promote urban forest sustainability. Together, we will develop sound and project-specific data for the City to properly manage, budget for, and provide proactive maintenance on its tree assets. This project will enable the City to facilitate an urban forest that is healthy, safe, sustainable, and equitable for the future. We understand that a robust urban forestry program can only thrive with accurate data, effective planning, and the support and participation from the community. Our proposed approach consists of landcover and equity analyses, extensive public engagement, internal stakeholder interviews, research, program and structure assessment, and identification of challenges and recommendations. On behalf of the PlanIT Geo team, we are pleased to have this opportunity to submit our qualifications and approach. If you have any questions regarding our submittal, please feel free to call the Proposal Coordinator at the number listed below.

Respectfully submitted by,

Ian S. Hanou
CEO/Founder

CITY OF OPA-LOCKA, FL | URBAN FOREST PLAN NOVEMBER 2023 1

SECTION 1
PROJECT APPROACH

PROJECT UNDERSTANDING

The City of Opa-locka has a population of approximately 16,000 residents, covers approximately 5 square miles, and has a history of valuing its trees as a critical asset of Opa-locka's overall sustainability. Opa-locka considers its trees as a defining characteristic of the City, recognizing the myriad benefits and sense of place they provide. The City seeks to transform its street tree plan to become it's first Urban Forest Plan. The City's strategic plan is to update the City's existing street tree plan and expand the scope to include park trees, trees in easement areas, trees near power lines, and trees on private and other non-City of Opa-locka owned property. Strategic management of the City's trees will support these priorities by providing climate impact mitigation, strategic management, and benefits that are maximized equitably for the long-term for all residents of Opa-locka. The goal of the Urban Forest Plan or UFP is to create a comprehensive, equitable, sustainable, and integrated approach to urban and community forest management on both public and private property while aligning with the City's other important plans and opportunities for community equity.

Due to the desire to protect and manage the City's urban forest, the City of Opa-locka has placed priority on expanding the urban forest and creating a more equal distribution of trees across all the City of Opa-locka's neighborhood. Opa-locka seamlessly integrates City plans with public input and opportunities for the City's future while being committed to a beautiful, sustainable, and healthy environment. The City desires a Urban Forest Plan to address issues related to environmental justice, tree species, policies and procedures, and climate change in conjunction with sustainable forest management. The UFP will be strategic in advancing social equity and contribute to an improved quality of life by providing the benefits of urban tree canopy to all community members. This document will align with existing City plans and other community plans and documents, establish a centralized vision and focus for specific long-term goals and actions, provide insight into the community for continued education and engagement in tree maintenance and preservation for property owners, and continue to manage public and private interest in trees located in the City's urban forest. The planning process will include coordination with City staff and stakeholders to ensure goals and strategies in the UFP do not conflict with City policies and codes but rather support and complement Citywide goals and policies outlined in existing policies, plans and codes. Effective urban forest planning requires accurate and actionable information, including an understanding of current conditions, City, stakeholder, and forestry needs before significant management actions and planning initiatives are undertaken. It is our understanding that, in recognition of this fact, the City requires the services of a qualified and experienced community forest management consultancy to successfully create and integrate the City's plans. This project will use the findings from the City's current conditions, the goals and actions of the street tree plan, extensive internal consultations, external stakeholder exercises to gain input, messaging campaigns, and a final UFP.

PlanIT Geo commits to working collaboratively with the City to ensure this important project fulfills all of the City's stated objectives and requirements. With the data, tools, and management plan provided, the City will be emboldened with timely, comprehensive, and accurate information about its urban forest resources, management approaches, and program efficiencies and will be fully ready to take the next step toward a healthy, diverse, and expanding community forest.

KEY CONSIDERATIONS FOR URBAN FORESTRY PLANNING

Cities around the world, and specifically in the north central United States, face dramatically intensifying extreme weather events, climate impacts, and unavoidable pest infestations. Many of these impacts are already exceeding the designed capacity of city infrastructure to protect the health and safety of residents, businesses and neighborhoods, which in turn threatens the fiscal viability of cities and regions. In Opa-locka, these impacts are felt more heavily in some areas due to a significant amount of climatic events resulting from increased climate change impacts and lack of tree canopy coverage. Historically, Opa-locka has a low percentage of tree cover. Even with an existing robust community forest, the City still suffers from degrading ecological quality and inequitable canopy coverage. Due to these facts, the City has placed priority on preserving, restoring, and prioritizing natural areas and trees in order to reduce environmental and health impacts and improve canopy and the ecosystem as a whole. Trees and forested areas in communities can play a significant role in making cities resilient to weather and climate extremes, and in protecting human and ecosystem health and safety. To do so, trees must be consciously selected, planted and managed as the central component of a community forest where individual trees are managed as part of a greater system with the purpose of improving the urban environment and enhancing benefits from those trees and their canopy.

While this Plan will focus on management strategies for trees on public and private properties, the impact will be felt community-wide and achieving a equitable community forest requires a shared commitment from the City, its partners, and its residents. When making improvements to the community forest, efforts should be prioritized to improve environmental justice, equity, access, and levels of service for underserved and vulnerable areas. These considerations may include additional tree plantings for an equitable distribution of canopy cover and benefits, intensive tree management, diverse outreach approaches, cost-share programs, and unique stewardship opportunities.

Opa-locka's Urban Forest Plan is a crucial effort for improving land, air, and water quality, increasing tree canopy and tree diversity, and promoting community resilience and equity. A plan for the community forest will provide the guidance for strategic management, funding, and best practices resulting in long-lasting benefits.

STRATEGY & VISION

Planning and managing the legacy of Opa-locka's community forest, through applied science, best practices, and budget management is achievable with innovative and contemporary approaches. The City's UFP will apply the fundamentals of adaptive management and establish new measurable goals and actionable strategies as recommended by the Consulting Team, stakeholders, and City staff. The Plan will be a comprehensive, yet concise and actionable plan with a clear vision, intended for the City of Opa-locka to approve.

Our strategy to develop the Urban Forest Plan begins with the discussion to finalize the project's scope of work, budgets, and timelines. From there, the Consulting Team will meet with the City project lead to identify project management specifics such as the communications protocols, project teams, milestones, and key considerations. Decisions will be documented in a living work plan and PlanIT Geo's Task Tracker to enable effective communication, planning, and status tracking. To develop the UFP, our Consulting Team has established a project-proven iterative approach consisting of research deep dives, canopy data analyses, internal and external consultations, public outreach and engagement, recommendations development, strategy development, draft plans, presentations, delivery training, and protocols for monitoring and adapting the Plan. Each step in

the process is modular, enabling a continuous feedback loop to ensure the requirements of the deliverables and final Plan are met.

Our vision for Opa-locka's UFP project is to provide an enjoyable project experience that engages all members of the community resulting in strengthened partnerships, increased stewardship and a sustainable community forest that benefits current and future generations.

PROJECT MANAGEMENT AND COORDINATION

PlanIT Geo has carefully reviewed and considered the requirements of this project and all other current and planned projects and has determined that the firm has the capacity to fully commit to this project to meet the required timeline and desired outcomes. PlanIT Geo has never failed to complete comparably-sized and scoped Urban Forest Planning projects to the complete satisfaction of our clients using the staffing capacities and resources outlined in accepted proposals. Any changes in budgets have resulted from mutually-agreed upon changes in project scope which were not originally contemplated in the accepted proposals.

PlanIT Geo is confident in its capacity to complete this project on time, within budget, and as specified in both the City's RFP and in this proposal. In summary, our team is committed to the project in its entirety and will successfully complete the project requirements within the timeline as defined in the project negotiation phase.

Our project team has extensive experience providing local, regional, and statewide forest resources planning throughout the U.S. and within the Florida. We are quality driven, responsive, efficient and cost conscious of client budgets. Our team specializes in public sector work and includes staff that have worked with cities to increase awareness, stewardship, and support from the community and respective boards, commissions, and councils. The team has valuable knowledge of community forestry projects and the need for meaningful and informational public engagement processes.

Team meetings will be held monthly or bi-weekly depending on the City's decision on involvement on the project. Meeting minutes will be taken and shared after every meeting. Plans for public meetings will be put into place with discussion with the City's Project Manager. Draft and final plan documents will be presented at relevant City Board and Commission meetings and the team will support the Plan's adoption by City Council.

SCOPE OF WORK

This Urban Forest Plan project for the City of Opa-locka represents an important step in the better understanding the structure of its community forest, the challenges and opportunities, community viewpoints and priorities, approaches for inter-departmental coordination and efficiencies, and strategies for implementing best practices that support a equitable program. Our team will apply an iterative planning approach consisting of collaboration and interviews with City staff and external stakeholders; community engagement; benchmarking processes for program operations, costs, and coordination; and strategies for increasing and preserving trees and canopy cover. The tools and outcomes will support and update existing plans, invigorate guiding principles and resources, and inform stakeholders on the importance of the community forest.

An Iterative Approach to Apply the Fundamental Planning Process

The project will accomplish the following desired outcomes of a successful Urban Forest Plan:

I. Create a street tree plan expansion and develop recommendations to promote and increase canopy.
II. Develop a dynamic and forward-focused plan and related policies based on the needs of the City.
III. Review the structure and funding of urban forest management.
IV. Review existing conditions related to trees on public property, including structure and composition (derived from canopy analysis), functions and benefits, and issues and opportunities.
V. A public engagement process to identify community values, priorities, and goals related to trees and the community forest.
VI. A review of current forestry efforts, including programs, policies and procedures, staffing and allocated resources to identify gaps.
VII. Integrate with the City's current plans, strategies, and data, specifically the current street tree plan, and provide tools to monitor and assess progress of plan goals.
VIII. Guide climate mitigation strategies and adaptation, public health and well-being, ecological services, and other factors as critical elements of community resilience and equity.
IX. Develop a land cover and tree canopy dataset to assess current public and private tree resources for the City.

To accomplish the Scope of Work in the City's RFP, the steps involved are organized into the following tasks: **Task 1) Project Management; Task 2) Analysis of Current Status, Challenges, & Opportunities, Task 3) Stakeholder Participation & Outreach, and Task 4) Urban Forest Plan Development.**

DETAILED PROJECT TASKS

1) Project Management
A) Coordination & Meetings
B) Project Schedule
C) Administration
D) Work Plan
2) Analysis of Current Status, Challenges & Opportunities
A) Assess City Policies & Documents (+ Virtual Stakeholder Interviews)
B) Assess Program Structure, Function, & Budget
C) Assess Current City Public Tree Resources (+ Public Opinion Outreach)
D) Assess Private & Public Tree Resources (Canopy Analysis)
3) Stakeholder Participation & Outreach
A) Outreach Plan (+ Language Translations, $4k of costs)
B) Web Content
C) Stakeholder Input (non-web)
D) Media Messaging Materials
E) Priority Neighborhoods Engagement
F) Support City Project Manager
4) Urban Forest Plan Development
A) Identify Principles & Key Goals for the Plan Update
B) Key Performance Indicators
C) Tree Species & Management Recommendations
D) Recommendations for Staffing, Structure, Function, Budget & Revenue for Urban Forest
E) Challenges for Maintaining a Healthy Urban Forest
F) Recommendation for Ongoing Community Input on Urban Forest Management
G) Changes to City Policies & Related Plans
H) Inventory (recommendations)
I) Plan Evaluation & Updates
Other) Graphics, Maps, Complementary Web-Based Document

SECTION 1

RELEVANT EXPERIENCE

FIRM EXPERIENCE

PlanIT Geo, Inc is an urban and community forestry consulting and software firm with a mission to map the world's urban forests for a greener future by integrating experience with cutting edge technology and planning for urban forestry, parks, and arboriculture. PlanIT Geo has been in the urban forestry business since its establishment by CEO Ian Hanou on January 11, 2012 in Arvada, CO and has expanded to over 50 employees in 2023. PlanIT Geo has satellite offices all over the country, including but not limited to: Hershey, PA; St Petersburg, FL; Seattle, WA; and Tulsa, OK. PlanIT Geo provides contractual services including tree inventories and risk assessments using TreePlotter™ software, risk tree planning, tree inventory and management software, tree ordinance review, management plans, master plans, community plans, land cover mapping (LiDAR/multispectral imagery), tree canopy assessments, GIS analyses, and i-Tree studies. Over 500 communities, nonprofits, and state/local governments throughout the United States, Canada, and Australia have utilized our team to perform tree inventories, write tailored management plans, and conduct tree canopy assessments.

The PlanIT Geo Team provides customized forestry solutions, resources, and tools to local governments, nonprofits, universities, and private industries that guide these entities to a holistic approach in sustainable forestry and environmental equity. The PlanIT Geo Team has extensive knowledge of urban and community forestry practices in Oregon, having completed projects within the state in the last 3 years. PlanIT Geo has expertise in urban and community forestry management, tree asset management, environmental equity, sustainable solutions, and ecosystem diversity. The entire PlanIT Geo Team has a wide array of skill sets related to urban and community forestry and are committed to serve our clients with the highest quality of products available in the industry.

URBAN FORESTRY CONSULTING

In the past 9 years, PlanIT Geo has managed or continues to manage urban forest management / master / maintenance plan projects with budgets totaling over $2.3 million, engaging over 15,000 community residents, and interviewing 450+ city staff representing over 100 departments. Collectively, over 10.6 million people residing in the study areas will be positively impacted by the 50+ forestry planning projects completed to date. PlanIT Geo has completed urban and community forest management/master plans, pest and disease management plans, maintenance plans, risk tree plans, strategic planting plans, storm response and mitigation plans, and canopy action plans for the public, private, and nonprofit sectors. Chris Peiffer, the Director of Urban Forestry Consulting Services will be the project manager for the UFP project for the City of Opa-locka. The PlanIT Geo Team is ready upon award to begin the project at the anticipated date of April 2023.

KEY PERSONNEL EXPERIENCE

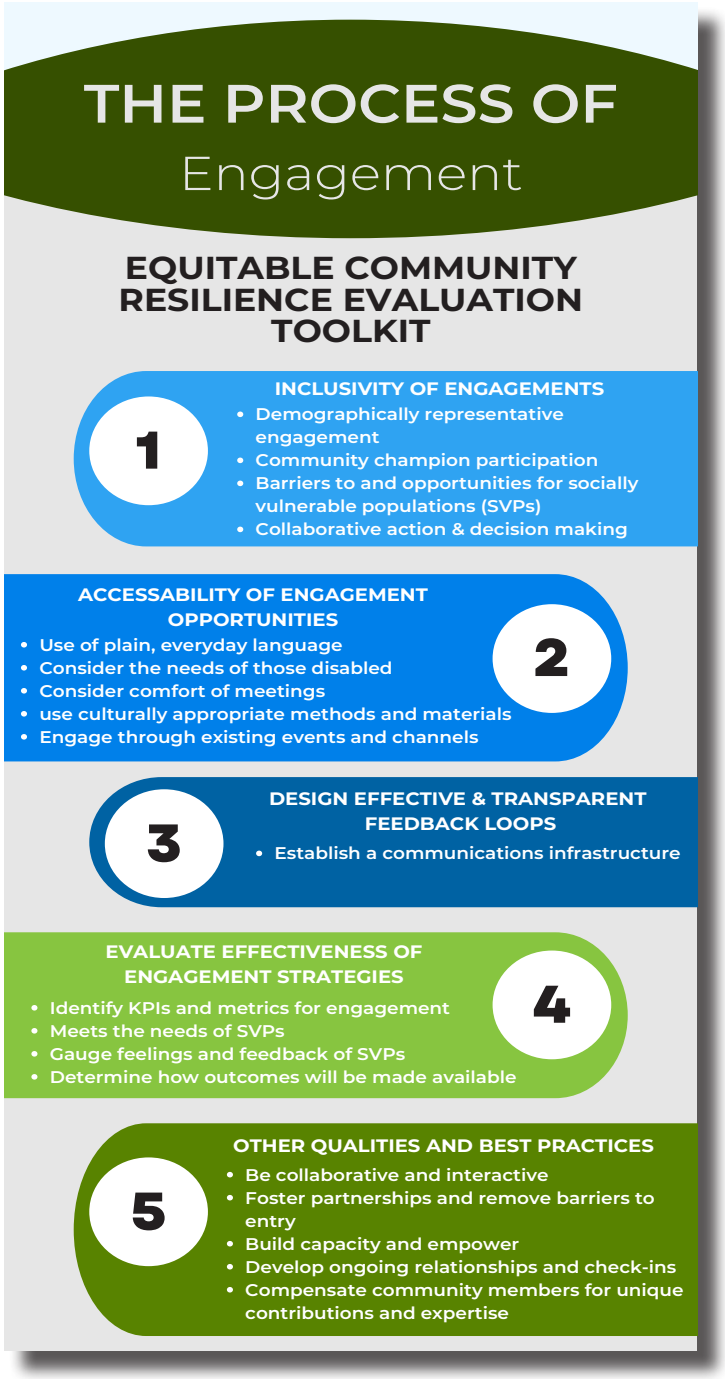
Alex Hancock - Project Manager

Alex is an ISA Certified Arborist with a background in urban planning, urban forestry, and sustainability. She is experienced in tree canopy cover analysis, climate action planning, zoning and land use planning, and public policy. Alex has a Bachelor's of Urban Planning and earned her Master's in Forest Resources and Conservation with a Graduate Certificate in Geospatial Analysis while working full-time as a City Planner.

Her most recent role as Sustainability Coordinator and Certified Arborist for the City of St. Petersburg, FL, Alex focused on programs for climate resilience, clean energy, waste reduction, environmental justice, and urban forestry. She was on a team that developed, published, and is implementing the Integrated Sustainability Action Plan (ISAP), which emphasizes equity as a primary focus of planning for a sustainable and resilient future. As a result of their work, the City was awarded as one of the 25 winning cities in the American Cities Climate Challenge. Alex completed St. Petersburg's first tree canopy analysis, which includes an historical vegetation analysis and ecosystem benefits calculated per City Council district. As a member of her local City Beautiful Commission's Urban Forestry Committee in St. Petersburg, Alex helped to develop a Citizen Forester program and recruited highly talented community members to inventory trees on public and private property.

Since joining the PlanIT Geo team, Alex has been applying these experiences and skill sets to support the development of urban forest management plans for communities. Specifically, she is directing the integration of urban forestry into sustainability planning for communities through public engagement, staff consultations, policy analysis, and plan development.

Andrea Starbird
Andrea is an ISA Certified Arborist and Municipal Specialist with expertise in managing and preserving urban trees as green infrastructure. In her previous roles as a consulting arborist and tree care project manager, Andrea developed deep insight into how land use and environmental regulations are implemented at the parcel level. She has provided expert arborist consulting services to a diverse clientele in both the public and private sectors; working with state and municipal project works and parks departments, university and corporate campuses, and residential customers, and has a keen understanding of stakeholder dynamics.



Driven by her commitment to environmental equity, she brings a collaborative, problem-solving approach to ensure policy supports the health and resiliency of our urban forests and the communities that benefit from them. As part of the PlanIT Geo team, she draws on her experience to provide comprehensive ordinance evaluation and meaningful public engagement to support tailored, actionable urban forest management plans.

Logan Johnson
Logan joined PlanIT Geo in June of 2023 as an Urban Forest Planner. He has a diverse professional background that spans arboriculture, urban forestry, and urban sustainability and resilience.
Through his experience as an arborist, and as an ISA Certified Arborist, he brings a breath of experience from arboricultural production operations, plant healthcare, and regenerative soil care. In addition to his arboricultural background, he has experience with Nature-based Solution projects, community and stakeholder engagement, climate action planning, assisting with GIS projects, carbon offsets, and other sustainability and climate problem solving.
Logan supports the Urban Forestry Consulting Services (UFCS) team in data analysis, support in technical writing, project management, and assisting with stakeholder or community engagement. He also supports the PlanIT Geo and the UFCS team in its growth and community and client assistance where needed.

The PlanIT Geo project team has extensive experience in Urban Forest Planning and everything included in creating a robust, actionable, informational, and sustainable plan. The team uses technology such as ArcGIS (Esri) to analyze tree data and Adobe InDesign to create professional looking and readable reports. All team members are ISA certified and are versed in municipal tree care standards, best management practices, sustainable practices, restoration principles and trends, and forestry management practices.

Our team also has experience and interest in climate resilience and environmental justice, including recommendations for both during planning and programming processes for plans such as this one. The team's involvement in public outreach, engagement, and workshops/events extends beyond the scope of this project. The team uses the Equitable Community Resilience Evaluation Toolkit to ensure all engagement and external stakeholder processes are meaningful and inclusive.

The following sections include tools, processes, documents, and experience the team utilizes on every project to project the most valuable outcomes to each specific City.

Standards, BMPs, and Resources Commonly Used:

- American National Standards Institute's (ANSI) A300, Z60.1, Z133, among others
- International Society of Arboriculture (ISA) Best Management Practices
- U.S. Forest Service's Urban Forest Sustainability and Management Audit System
- Vibrant Cities Lab and the Community Assessment & Goal-Setting Tool
- Vibrant Cities Lab's Climate & Health Action Guide (2020)
- A Model of Urban Forest Sustainability (Clark et al. 1997)
- Criteria and Indicators for Strategic Urban Forest Planning and Management (Kenney et al. 2011)
- Guidelines for Developing and Evaluating Tree Ordinances (USFS, 2001)
- Climate Adaptation Workbook (USFS, American Forests, and Northern Institute of Applied Climate Science)
- Climate-Ready Tree Study (E. Gregory McPherson, et al. 2019)
- i-Tree Suite of Tools (USFS and partners)
- Urban Forest Pest Readiness Playbook
- Guidelines for Developing and Evaluating Tree Ordinances (USFS, 2001)
- Municipal Codes and Ordinances (Center for Watershed Protection, USFS, 2018)
- Sustainable Forestry Initiative's Urban & Community Forestry Standards
- Arbor Day Foundation's Tree City USA reporting database (2020)
- A 2014 Community Forestry Census of Tree Activities (Hauer, et al. 2014)

Climate Resilience: Sister City Climate Analyses, native, drought tolerant and highly adaptable tree species lists, watering and irrigation plans, xeriscaping, green stormwater management, pest and

disease management protocols, severe weather planning and emergency management, wood utilization, carbon offsets, carbon services calculated from tree and canopy data, soil management, open space and natural area management protocols, water quality analyses based on tree and canopy data.

Environmental Justice: Equity Checklist, continuous feedback loop, coordination with city communications and local partners, language translations, analyses of tree canopy and sociodemographic data, pop-up events, childcare services, access to public transportation for public events, ADA compliant graphics and content

Community Participation and Outreach: effective planning process and successful implementation of the Plan cannot be achieved without the support from the community. The following provides special considerations that may be applied to this project:

- ◊ Identify policies and practices that exacerbate existing gaps between the community; incorporation of a Social Vulnerability Analysis; strategies for increasing access to decision-making in the planning process; diversity of languages and cultural backgrounds of residents incorporated into the outreach plan.
- ◊ Partnership with local organizations; internal engagement plan; coordination with City communications; alignment with existing efforts; consistent and inclusive messaging; equity and environmental justice strategies; diverse engagement strategies and activities; marketing and design; project/program branding.

RELATED PROJECT EXPERIENCE

Winter Haven, FL Urban Forest Management Plan
Date: September 2022 – May 2023 | **Budget:** $23,750
Scope of Services Provided: As a subconsultant to NRPS, Inc. Legacy Arborist Services, PlanIT Geo provided an analysis of public tree inventory data and the planting site inventory (collected by LAS) to develop data-driven strategies for the UFMP. The project included guidance for the reformation of the Urban Forestry Advisory Board, tree ordinance evaluation and recommendations / red-lining, a routine maintenance, planting, and removal program, an emergency preparedness plan, public outreach strategies, and public meetings. In addition, an interact Story Map was prepared.
Status: Completed

Fort Worth, TX and Texas Tree Foundation Urban Forest Master Plan
Date: August 2022 - Current**| Budget:** $93,863
Scope of Services Provided: The Urban Forest Master Plan ("UFMP", "Plan") was initiated by the City of Fort Worth— with support from Texas Trees Foundation (TTF) and donors— as a multifaceted approach for enhancing the urban forest, creating a proactive tree maintenance schedule, strengthening community resilience, implementing actions to address urban heat, and ensuring that public trees and their associated benefits are distributed equitably throughout the City. The teams assembled to complete the Plan include the prime consultant (TTF), PlanIT Geo as the planning subconsultant to TTF, engagement consultants consisting of MIG and J. Williams Group reporting to TTF, the Project Team consisting of consultants and City staff, the Steering Committee, Internal Stakeholders, and External Focus Groups. Together, a shared vision for the City's urban forest will be developed along with goals and the strategies that will create long-lasting impacts. The planning process consists of an internal outreach plan, questionnaires and interviews with City staff and elected officials, a public survey hosted on TTF's project website, focus group meetings, messaging campaigns, pop-up events, monthly Project Team meetings, quarterly Steering Committee meetings, analyses of tree inventories and canopy assessment data, benchmarking research, and a comprehensive urban forest audit. The findings from these

planning tasks were utilized to develop draft and final strategies relating to canopy goals, tree maintenance, storm response and recovery, partnerships and ongoing public engagement, updates to ordinances and policies, urban heat mitigation, pest and disease management, trees for stormwater management, reduction and resolution of tree and infrastructure conflicts, redressing tree inequities, tree preservation and planting, and other vital strategies identified. The strategies are guided by the Plan's overarching goals and vision and supported by indicators and targets, the implementation and monitoring plan, the financial plan, and the key performance indicator tracking tool. PlanIT Geo coordinated the final design of the Plan with MIG and supported MIG's engagement strategies by providing urban forestry context, data, and findings uncovered during the planning process. Final reporting includes a Phase 1 Technical Report and the final Urban Forest Master Plan along with an interactive KPI tracking tool.
Status: Completed

Los Banos, CA Urban Forest Management Plan
Date: February 2021 – November 2022 | **Budget:** $61,305
Scope of Services Provided: Once the inventory of 13,000 trees and 4,900 planting spaces was completed the data was reviewed and analyzed to assess the current status of the city's urban forest; determine the health, viability, and condition of the City's urban forest. The planning process consisted of benchmarking research, code redlining, tree canopy assessment and canopy goals, urban heat analyses, programmed pruning strategies, and public engagement. To shape the management plan, tree ordinances, planting lists, processes, standards, policies, and practices were reviewed. A new recommended Master Street Tree List was developed by reviewing tree species performance and changing climates. With input from City staff, the Tree Commission, community input, and benchmarking research, the ordinance review included revision to antiquated language, alignment with industry standards and best practices, canopy cover retention policies, no-net-loss, tree permitting processes, CalFire recommendations, and tree mitigation / replacement requirements. To implement the plan and to sustain a vibrant urban forest, recommended program structures, budgets, and activities were developed. Included a presentation of the draft to the Tree Commission and City Council and staff training to administer the UFMP. The final UFMP was adopted by City Council on November 2, 2022.
Status: Completed

Rochester, MN Urban Forest Master Plan
Date: June 2020 - June 2021 **| Budget:** $55,000
Scope of Services Provided: The purpose of this project is to utilize the data from the canopy assessment to develop a public engagement supported comprehensive Urban Forest Master Plan for Rochester, applicable for the period 2021-2041. This Plan will align with other City comprehensive plans and Rochester's infill development and transit-oriented development strategies. The Canopy Coverage Analysis enable City staff to use accurate and up-to-date Urban Tree Canopy (UTC) and Potential Plantable Area (PPA) metrics to establish canopy cover targets at various geographic scales, and to develop the strategies necessary to achieve these goals. To complete the Master Plan, public meetings, surveys, research, data analyses, benchmarking research, and program auditing will be conducted. This information will inform the development of goals, strategies, actions, and adaptive management measures to make this a living document for years to come.
Status: Completed

ALEX HANCOCK
Urban Forestry Climate Consultant, PlanIT Geo

Certifications
- *ISA Certified Arborist #FL-8295A*

Education
Master of Science in Forest Resources and Conservation - University of Florida (2017)
Graduate Certificate in Geospatial Analysis (2017)
Bachelor of Urban Planning- University of Cincinnati (2011)

Alex is an ISA Certified Arborist with a background in urban planning, urban forestry, and sustainability. She is experienced in tree canopy cover analysis, climate action planning, zoning and land use planning, and public policy. Her most recent role as Sustainability Coordinator and Certified Arborist for the City of St. Petersburg, FL focused on programs for climate resilience, clean energy, waste reduction, environmental justice, and urban forestry. Her team developed, published, and is implementing the Integrated Sustainability Action Plan, which emphasizes equity as a primary focus of planning for a sustainable and resilient future.

At PlanIT Geo, Alex applies these experiences and skillsets to support the development of urban forest plans for communities. Specifically, she is directing the integration of urban forestry into sustainability planning for communities through public engagement, staff consultations, policy analysis, and plan development.

Marysville, OH | Urban Forest Management Plan, 2023 (In progress)
Alex serves as team lead for the Marysville's UFMP, which included a research deep dive, staff surveys and meetings, analyses of existing tree inventory and canopy assessment data, benchmarking research, community engagement with public meetings and a survey, an urban forest audit, and strategies and recommendations relating to maintenance, planting, canopy goals, ordinances, funding, and program structure.

Westminster, CO | Urban Forest Management Plan, 2023-2024 (In progress)
Alex supported the development of City of Westminster's UFMP by completing a tree ordinance review with recommendations using industry standards, best management practices, and a benchmarking exercise that compared Westminster's code with five other cities in the region. Alex also implemented an assessment of the canopy cover in the City's open spaces and calculated an estimate of trees the City manages in open spaces based on urban tree canopy cover data.

San Leandro, CA | Trees Master Plan, 2022-2024 (In progress)
The Trees Master Plan includes an updated inventory of 20,000+ street trees and 2,000 park trees to develop strategies for a healthy and resilient tree canopy. Equity was centered throughout all phases of the development of the Tree Master Plan, including incorporation of racial equity and indigenous practices, soliciting community engagement and input, and assessments of tree canopy alongside social vulnerability. The Plan makes the benefits of an urban tree canopy accessible to all neighborhoods, especially those with residents that are lower-income and communities of color. Alex led the TMP's stakeholder and community engagement, and completed a Sister Climate City Assessment along with benchmarking to guide the update of a draft recommended tree species list.

- Lakewood, WA Tree Ordinance Evaluation (PlanIT Geo)
- Renton, WA Urban Forest Management Plan 10-Year Update (PlanIT Geo)

Andrea Starbird
Urban Forestry Consultant, PlanIT Geo

Certifications
- *ISA Certified Arborist, Municipal Specialist #PN-9084AM*
- *ISA Tree Risk Assessment Qualified*

Education
South Seattle State College - Certificates in Urban Forestry and Landscape Horticulture
Bachelor of Arts, Art History - Focus: Landscape Architecture & Public Space - University of Michigan - 2011

Andrea is an ISA Certified Arborist Municipal Specialist and urban forestry professional specializing in management and preservation of urban trees integrating emerging technology, industry best practices and collaborative problem solving among stakeholders. She has demonstrated success in building and fostering relationships while improving operational efficiency and project outcomes. Assisting customers in urban forestry planning and managing trees as infrastructure through an environmental justice and social equity lens. Her skills and experience include arboricultural practices, landscape design and architecture plan review, tree inventory, field inspections, advanced tree assessment, municipal planning, root infrastructure conflict mitigation, tree installation and maintenance, policy development, project management software, code analysis, city code, stakeholder meetings, public projects, i-Tree, tree impact assessment, landscape planning, hazard tree risk assessment, tree value and appraisal, ecosystem services, remote evaluation and assessment, mapping, technical writing, staff coordination, dispute resolution, public education, public speaking, process improvements

As part of the PlanIT Geo team, she draws on her experience to provide comprehensive ordinance evaluation and meaningful public engagement to support tailored, actionable urban forest management plans.

City of Issaquah Urban Forest Management Plan, 2023-2024 (PlanIT Geo)
Lead research of existing practices, ordinances, and policies and lead public engagement and meetings with the public, commissions, and City Council.

City of Wilsonville, OR Tree Manual, 2023 (PlanIT Geo)
Researched and drafted a manual that includes tree-related ordinances, processes, permitting, and communications to support a citywide vision of a sustainable urban forest.

Arborist Projects
Washington State Parks Department Risk Assessment, 2021 (Tree Solutions) Conducted advanced inspection of old-growth conifers in a randomized evaluation using emerging technologies to inform tree risk mitigation processes and best practices.

Microsoft Modernization, 2019-2022 (Tree Solutions)
Multi-billion-dollar campus redevelopment project. Co-project arborist responsible for tree preservation across a 74-acre site containing second-growth forest. Facilitated bi-weekly coordination meetings where project teams negotiated to reach a consensus on preservation approach.

Logan Johnson

Urban Forestry Planner, PlanIT Geo

Certifications

- *ISA Certified Arborist, Municipal Specialist #ID-8398A*
- *ISA Member*
- *Tree Care Industry Association: Tree Care Specialist Training Program*

Education

Masters of Environment, Urban Resilience and Sustainability - University of Colorado Boulder (2023)
Bachelor of Science in Biology, College of Charleston (2018)
Minor in Environmental Studies & Sustainability

Logan is experienced in assisting communities with tree, pest, and pathogen identifications, GIS analyses, urban forestry, urban planning, arboriculture communication, brokering community relationships, and stakeholder engagement through his previous work with the Trust for Public Land, Nature-based Climate Solutions, and as an Urban Forestry Consultant at PlanIT Geo. Logan has worked locally, specifically with the City of Westminster to identify tree canopy inequity gaps and canopy cover analysis, as well as Bolster tree planting efforts And strategic planning for urban forest resources. For NbS and TPL, Logan explored and researched nature-based solutions across several municipalities on how to best adapt NbS practices to urban landscapes, specifically through urban forestry solutions and initiatives. He is an ISA Certified Arborist and is experienced in both ArcGIS and the i-Tree software suite. As an Urban Forestry Consultant at PlanIT Geo, Logan provides urban forestry services for communities, organizations, and private firms. His expertise includes urban and community forestry management, planning, community education and engagement, and innovation. In this role, Logan works with small and large communities, statewide agencies, and non-profit organizations to enhance urban forest management through public engagement to develop strategic tree planting plans, tree inventories, management plans, canopy plans, tree conservation and restoration, tree and maintenance specs and ordinances, and regional plans.

Durango, CO CFMP (4 months, In Progress)

The Durango, CO Urban Forest Community Plan was started in 2023 as an opportunity for the City to grow and preserve its urban forest, while placing a focus around community engagement, resilience, and goal setting. Logan's role in this project has been to assist in the tree inventory analysis, community engagement, and technical writing.

Norwalk, CT UTMP (3 months, In Progress)

In 2023 the Norwalk, CT TMP started and was an opportunity to help the City of Norwalk create an effective plan to measure existing tree canopy, future canopy scenarios and goals, communicate tree benefits, and identify ways to equitably grow and preserve their urban forest. Logan's role in this project has and will be to assist in data analysis, ordinance review, communication of urban forest benefits through reports and community engagement. Additionally, he will be assisting with identifying strategies and goals for the community of Norwalk to equitably expand and preserve their urban forest.

Urban Forest Management Plan Project: As a subconsultant to NRPS, Inc. Legacy Arborist Services (LAS), PlanIT Geo provided an analysis of public tree inventory data and the planting site inventory (collected by LAS) to develop data-driven strategies for the UFMP. Alex led the majority of project tasks in this UFMP process. The project included guidance for the reformation of the Urban Forestry Advisory Board, a tree ordinance evaluation with recommended draft language, a routine maintenance, planting, and removal program, an emergency preparedness plan, public outreach strategies, and public meetings. In addition, an interactive Story Map was prepared.

City of Sanford, FL -

Contact Info: Elizabeth.Harkey@sanfordfl.gov | (407) 688-5000 ext.5416
Urban Forest Management Plan Project: As a sub-consultant to Earth Advisors, Inc., PlanIT Geo wrote the Plan which included an analysis and summary of tree inventory data, an assessment of the program's resources and structure, budget recommendations for tree management and planting, maintenance schedule, and recommendations. Also included an analysis of ecosystem benefits of the inventoried trees and tree and palm planting and maintenance best practices.

City of Boynton Beach, FL -
Contact Name: Rebecca Harvey - Former Sustainability Coordinator
Contact Info: Rebecca.Harvey@co.thurston.wa.us | (360) 463-8181
Public Tree Inventory Summary Report Project: To support the City's tree canopy cover goal and sustainability policies, PlanIT Geo's ISA Certified Arborists completed a public tree inventory of 11,309 trees and palms across public properties including street rights-of-way, facilities, and parks. The data from the inventory was analyzed Citywide, within street rights-of-way, by facility, and by park. In addition, analyses were conducted for trees and palms separately as the maintenance varies for these. Park trees and palms are also summarized separately since the management of trees and palms differs within parks and along streets. Additional analyses included location, growing space, status, species diversity, genera diversity, size classes, condition, observations, tree work needed, maintenance priorities, relative performance indices, and ecosystem benefits and services. To support implementation of the Report's recommendations, an interactive Public Tree Management Worksheet was prepared that lays out the timing and costs for each maintenance priority by tree size class across a 7-year maintenance cycle. Recommendations within the Report include strategies for maintenance, removals, and plantings, actions the City should take for its urban forestry program, and the guidance for public outreach and education.

Proposal Coordinator
Title

CITY OF OPA-LOCKA
DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by Ian Hanou (Name) the CEO (Title/Position) of PlanIT Geo (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

6 City, state, and ZIP code
Wheat Ridge, CO, 80033

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN,* later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number
			–			–				

or

Employer identification number
8	7	–	2	4	4	4	9	0	3

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9.*

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

DEAR SELECTION COMMITTEE,

Treesources, LLC and Local Office Landscape & Urban Design are pleased to submit our qualifications and proposal for the project known as Citywide Urban Forest Plan (City of Opa-Locka) as specified within the solicitation RFP No. 23-1128200. For participation in this process, we expressly state that our team will provide the service requested in the Request for Proposal (October 25th, 2023) and addendum No. 1 (November 14th 2023), in compliance with the terms in the Agreement, for the prices submitted with the Bid.

Treesources and Local Office Landscape & Urban Design have prepared a tailored response to the City of Opa Locka's request for an Urban Forest Plan. Results from our services will be critical to the City in understanding the urban canopy (existing, projected, and potential conditions), prioritized strategies for urban forest management, protocols for implementation and monitoring of goals, and the strategic advancement of social equity and improvements to the quality of life for Opa-Locka's residents.

Treesources provides expertise in green infrastructure and arboriculture projects. The firm strives to provide public and private sector clients with high-quality, professional, environmental and arboriculture consulting services. Treesources' staff includes ISA Certified Arborists and Scientists with extensive knowledge of local environments and the social considerations of urban forestry. Treesources is located in Miami, Florida, allowing the team to be responsive to the City of Opa-Locka and all project needs. Our full proposal expresses our commitment to community engagement. It includes the development of outreach workshops where our team will facilitate conversations about urban forestry and engage residents for their meaningful involvement in the outcome of the final plan.

Local Office Landscape & Urban Design is a landscape architecture and urban design firm based in Brooklyn, New York, but with extensive experience and presence in Florida and the Caribbean Islands. Local is a Hispanic, minority-led firm and brings their extensive knowledge of designing for extreme weather (hurricanes, heat, and droughts) into thoughtful placemaking. Local delivered Miracle Mile in Coral Gables, demonstrating that a carefully designed urban tree plan and other integrated green infrastructure strategies can mitigate even the biggest storms while revitalizing economic development.

Our team has extensive experience in tree and green infrastructure planning, ecological restoration, and environmental services within the region. We understand how important this contract is to maintaining schedules (with regard to associated potential associated projects and funding opportunities), controlling costs, and providing a comprehensive Urban Forest Plan. We are a team that embraces community participation, welcomes the challenge of solving complex environmental and social problems, and above all else, loves trees!

We look forward to the opportunity to present our approach to this project in more detail to the selection committee upon request. Should you have any questions regarding our team or proposal, please do not hesitate to contact me.

Licenses and Certifications

Our team is comprised of trained and experienced personnel. Our certifications and licenses include, but are not limited to, the following list.

- Small Business Enterprise (SBE) with South Florida Water Management District
- Equitable Distribution Program (EDP) with Miami-Dade County
- Pre-Qualification for Architectural & Engineering (AE), Environmental Engineering – Biology Services, with Miami-Dade County
- ISA Certified Arborist (Select Team Members)
- ASCA Registered Consulting Arborist (Select Team Members)
- Professional Mangrove Trimmer (Select Team Members)
- Florida Stormwater and Erosion Control Certified (Select Team Members)
- OSHA HAZWOPER 10-Hour and 40-Hour (All team members)
- S130-S190 Basic Wildland Firefighter (Select Team Members)
- A-312 Water Ditching and Survival (Select Team Members)
- USACE Qualified Monitor: Birds, FL Manatee, FL Bonneted Bat, Eastern Indigo Snake, and Turbidity (Select Team Members and Projects)
- PADI Open Water SCUBA (Select Team Members)

Federal Identification:
UEI: TVZ3D7PNCYB8 | CAGE: 9MVA4 | DUNS: 070741560

QUALIFIED STORMWATER MANAGEMENT INSPECTOR

The undersigned hereby acknowledges that

Alex Held

has successfully met all requirements necessary to be fully qualified through the Florida Department of Environmental Protection Stormwater Erosion and Sedimentation Control Inspector Training Program

07/26/2021

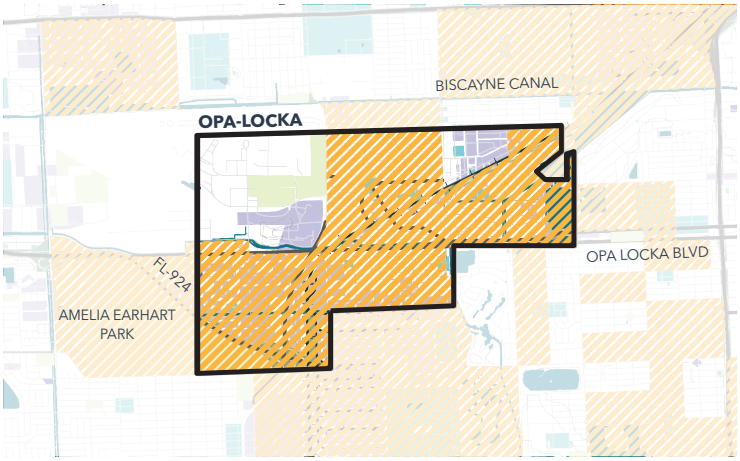
#0847
ISA Certified Arborist

“Through managing green infrastructure projects at every stage of their life-cycle, we are able to recommend, implement and manage tree canopy preservation that has generational impact.”
- Treesources

2. PROJECT APPROACH

STUDYING OPA-LOCKA
PROJECT APPROACH

An Equitable Approach to a Comprehensive Urban Foresty Plan



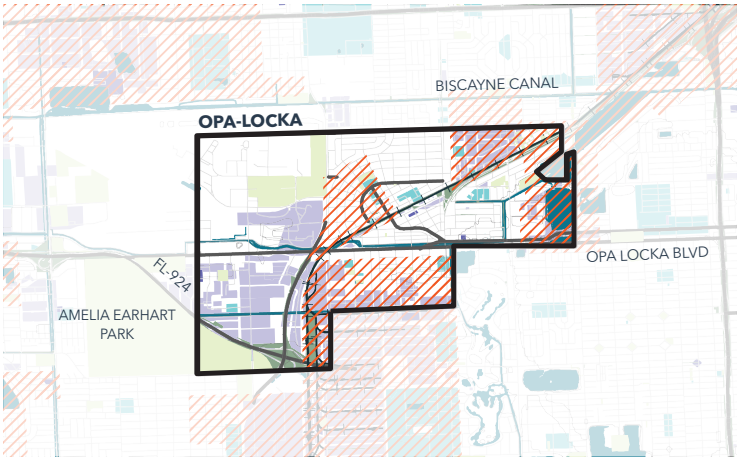
"Our vision is for the equitable creation of wealth and resilience, bolstering natural systems to protect against climate disturbances, integrating future technologies into our communities, and building diversity and collective ownership into the fabric of our cities. By tapping into local ecological and cultural knowledge, we develop strategies to add social and economic value, bringing prosperity to residents. Planning policy is used as an instrument to ensure the longevity and transparency of development processes, creating a framework for the ecology, the economy, and the community to flourish."

An Integrated Approach to Urban Forestry

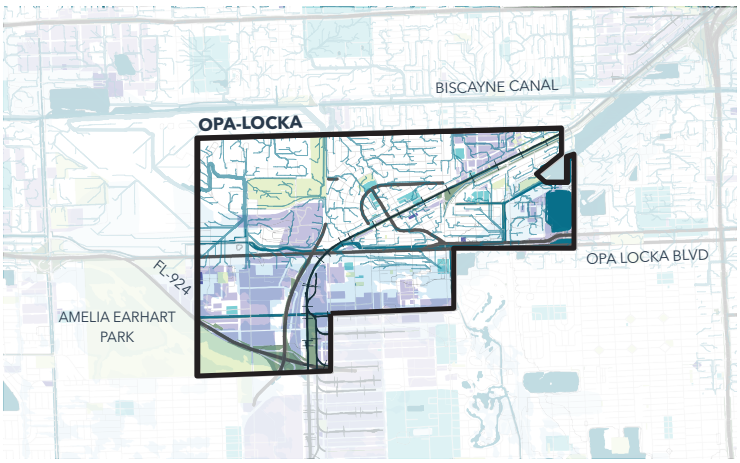
Our team has a diverse background, making us well-positioned to apply an integrated approach to urban forestry. An integrated urban forestry plan addresses multiple societal demands that include a variety of factors, including heat and flooding mitigation, soil health and protection, water conservation and management, biodiversity conservation, recreation, beautification, and quality of life. An integrated approach will develop and implement a meaningful community engagement plan to address local communities' specific needs and desires. Stakeholder and community engagement will drive our analysis and outcomes as we seek co-benefits to implement a robust urban forestry plan.

STUDYING OPA-LOCKA
PROJECT APPROACH

Build from Current Work In Opa-Locka
Our team is excited by the prospect of working on this Urban Forest Plan for Opa-Locka as we are familiar with many of the environmental and social conditions. Our current EPA-funded work with the local not-for-profit Waterkeeper identified six to eight green infrastructure pilot projects in Miami-Dade County. Opa-Locka has been identified as one of the priority areas. Priority area criteria were determined using three primary data sets: Environmental Justice Zones [EJ], high heat index, and frequent flooding. In addition to mapping these conditions across the county, we zoomed into each community exhibiting these conditions and performed finer-scaled analysis - including locations of institutions, parks, and critical landmarks. Our team would love to continue exploring opportunities to address the environmental and social risks in Opa-Locka through this exciting and important Urban Forest Plan Project.



Areas where EJ Index is inthe 98th Percentile or greater compared to the state



Consider Operations and Management from the Start:
Our team applies our extensive experience **building** landscapes in cities, including green infrastructure and tree planting, to inform our planning projects. Lessons learned working extensively with federal, state, county, and city agencies in Florida provide us with a solid, knowledge-based background to analyze existing data and make innovative yet pragmatic implementation decisions.

An integrated Urban Forestry Plan will rely on inter-agency coordination, extensive community and stakeholder engagement, and technical expertise. Technical expertise includes providing "tested" tree planting and urban forestry details and specifications that reduce operations and management fees. Our team understands that innovation cannot succeed without considering operations and maintenance from the start.

As part of our initial analysis and community engagement workshops, we will interview staff involved (across agencies) to care for trees and other landscapes (including parks) within Opa-Locka. These "City Conversations" will provide critical information in developing the Plan. In addition to the interviews, our team will research and share case studies demonstrating how other cities across the Nation operate, manage, and fund extensive, integrated urban forestry plans. The case studies will provide knowledge that will inform a proposed management plan for Opa-Locka and the policy changes needed to implement the Plan.

Areas where Urban Tree Canopy is less than 10%

Hydrology and areas of 1% flood risk

TASKS & KEY DELIVERABLES
SCOPE OF WORK

In translating the initial research into a strategic vision, this project will follow a phased approach requiring careful coordination and a streamlined process between stakeholders, the Client, and the Project Team. Here we have outlined our process for Tasks 1-4, from project management to completion, to provide an understanding of our design process and demonstrate how we can work with you to bring the Opa-Locka Urban Forest Plan to life.

Task 1 Project Management (Duration of the project)

Treesources [TS] will be the Project Lead. Martinez Held will be the Project Manager and the Project's primary contact. TS will provide and maintain a progress schedule and will submit project updates to the City per an agreed-upon methodology (e.g. email).

Treesources [TS] will work closely with our sub-consultant, Local Office Landscape and Urban Design [Local], to plan and coordinate a "kick-off" meeting with key staff from the City of Opa-Locka. During the kick-off, Project Goals will be established.

Treesources: Snapper Creek

TS/Local will review relevant material from the City and additional entities (as relevant to Urban Foresty Master Plan).

Initial inquiries include:

1. Determine if there are any conflicts between canopy goals and the existing plans/policies as reviewed;
2. Determine the existing and potential plans/policies that enable progress toward canopy goals;
3. Make recommendations to reach canopy goals and improve practices.

Task 1 Deliverables:

- 1 Kick-off Meeting
- Identify key staff at City and preliminary stakeholder list
- Determine frequency (and delivery) of progress reports/meetings
- Describe preferred formats for public engagement
- Finalize project schedule
- Organize and submit meeting minutes no more than five days after meetings

Task 2 Analysis of Current Status, Challenges, and Opportunities (Four months)

Working closely with the Client, our team will assess the Urban Canopy Cover and associated social, economic, and environmental relationships. Including, but not limited to, existing inventory analysis (structure, characteristics, species, concerns); ecosystem benefits; equity assessments and scores; value and appraisal (if possible with existing data); overall health of canopy (if discernible); urban forest vulnerabilities and threats.

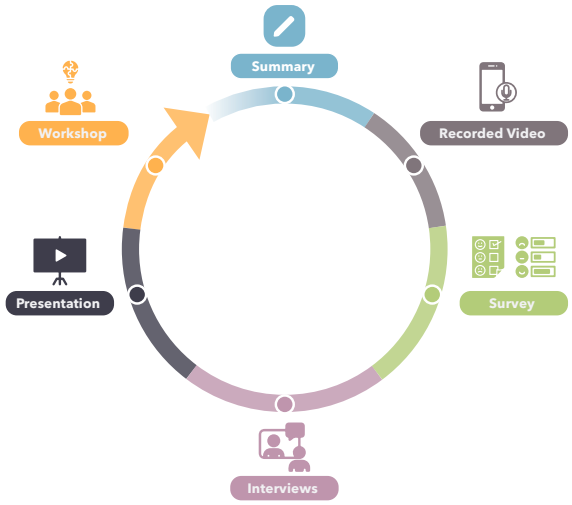
Treesources: Snapper Creek

TASKS & KEY DELIVERABLES
SCOPE OF WORK

In addition to the above, our team will also conduct the following:

- Remote sensing: We will use remote sensing technologies including LiDAR and aerial photography to collect data, including hydrology to visualize the direction and magnitude of stormwater across the study area.
- Field measurements: If necessary, our team is prepared to verify existing surveys, including tree inventories
- Our team will conduct a thorough analysis of the existing tree canopy in the Study Area, including loss of trees, hot spots, and risks to vulnerable populations. Heat and air quality will be analyzed in relationship to tree canopy. The following approaches will be considered: Remote sensing and GIS analysis: Our team will use remote sensing and GIS analysis to assess the extent and distribution of tree canopy cover within the Study Area. We will use satellite and aerial imagery to generate maps and data on tree cover.
- Risk analysis: Our team will assess natural hazards in critical locations, including areas with vulnerable populations and infrastructure. This involves analyzing data on flood hazard frequency, duration, magnitude, and impact and using this information to identify areas of high risk and to develop risk mitigation strategies.
- Risks: low lying elevations, damaged habitat such as wetlands and tree canopy, poorer communities and aging housing and infrastructure will be explored
- Assets: Intact habitats such as wetlands, parks, street trees, housing, roadways, power plants and other utility companies, etc.

Our team will also review and assess the City's organizational capacity. We will assess the City's existing program, structure, and budget via document review and interviews.



Task 2 Deliverables:

- Summarize recommendations on city codes, programs, and policies
- Develop challenges and opportunities maps
- Develop risk and asset assessments
- GIS maps and analysis
- We will consolidate all maps,charts, and other data into an Existing Conditions Technical Memorandum

Task 3. Community Engagement (Ongoing throughout the Project)

Community engagement will be routinely conducted throughout the project's lifespan. Engaging with the community will inform the research and Final Plan while facilitating communication on the project vision and design intent.

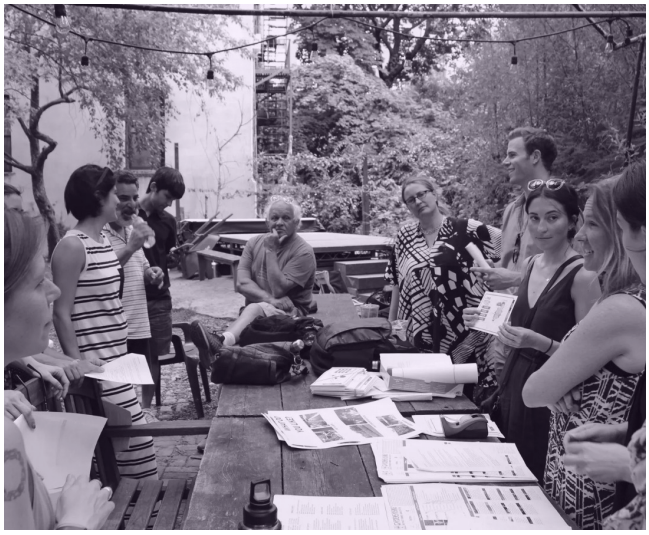
Our team will also work closely with the City of Opa-Locka, organizing and conducting public workshops. TS will lead the community engagement, with Local supporting the team with graphics and outreach as needed.

Our key strategies include:

Organize and Lead Public Workshops:
Assist with facilitating and leading up to three (3) neighborhood-focused public workshops: Generate and organize agenda, materials and meeting minutes for three (3) workshops.

- Workshop #1: Evaluate and discuss existing plans and data, review GIS analysis and impacts of flooding and heat and review critical infrastructure.

- Workshop #2: Workshop on urban forestry mitigation strategies and potential project concepts to flooding and heat in the planning study area.



- Workshop #3: Present draft final report and discuss implementation next steps with the community and stakeholders.

TASKS & KEY DELIVERABLES
SCOPE OF WORK

Outreach materials:
Our team will develop and provide all outreach materials in both English and Spanish. Staff from Local Office and Treesource speak conversational Spanish.

Task 3 Deliverables and Meetings:

- Assist in developing a digital platform for greater reach and participation
- Presentation quality materials for all meetings and events
- Agendas and meeting minutes for all events
- Hold a minimum of two (2) community meetings (with an offer to have multiple) with community groups.
- Provide summary to City and input findings into Plan.

Local Office: Community Engagement Meeting, NY

- Provide recommendations for ongoing community input on urban forest management
- Provide recommendations for changes to City policies and related plans
- Provide recommendations for expanding the City's tree inventory to include all City trees
- Provide recommendations for the ongoing effectiveness of the Plan and implementation phasing as needed.

The Urban Forest Plan will address a range of strategies and typologies for green infrastructure approaches such as reduction of effective impervious cover through the use of green stormwater infrastructure on public and private property to reduce flows to the system; opportunities for increased flood storage within the drainage area; and location of opportunities to increase urban canopy and green spaces aiding in flood reduction, water quality enhancement, and reduction of urban heat impacts. Other key approaches include the following:

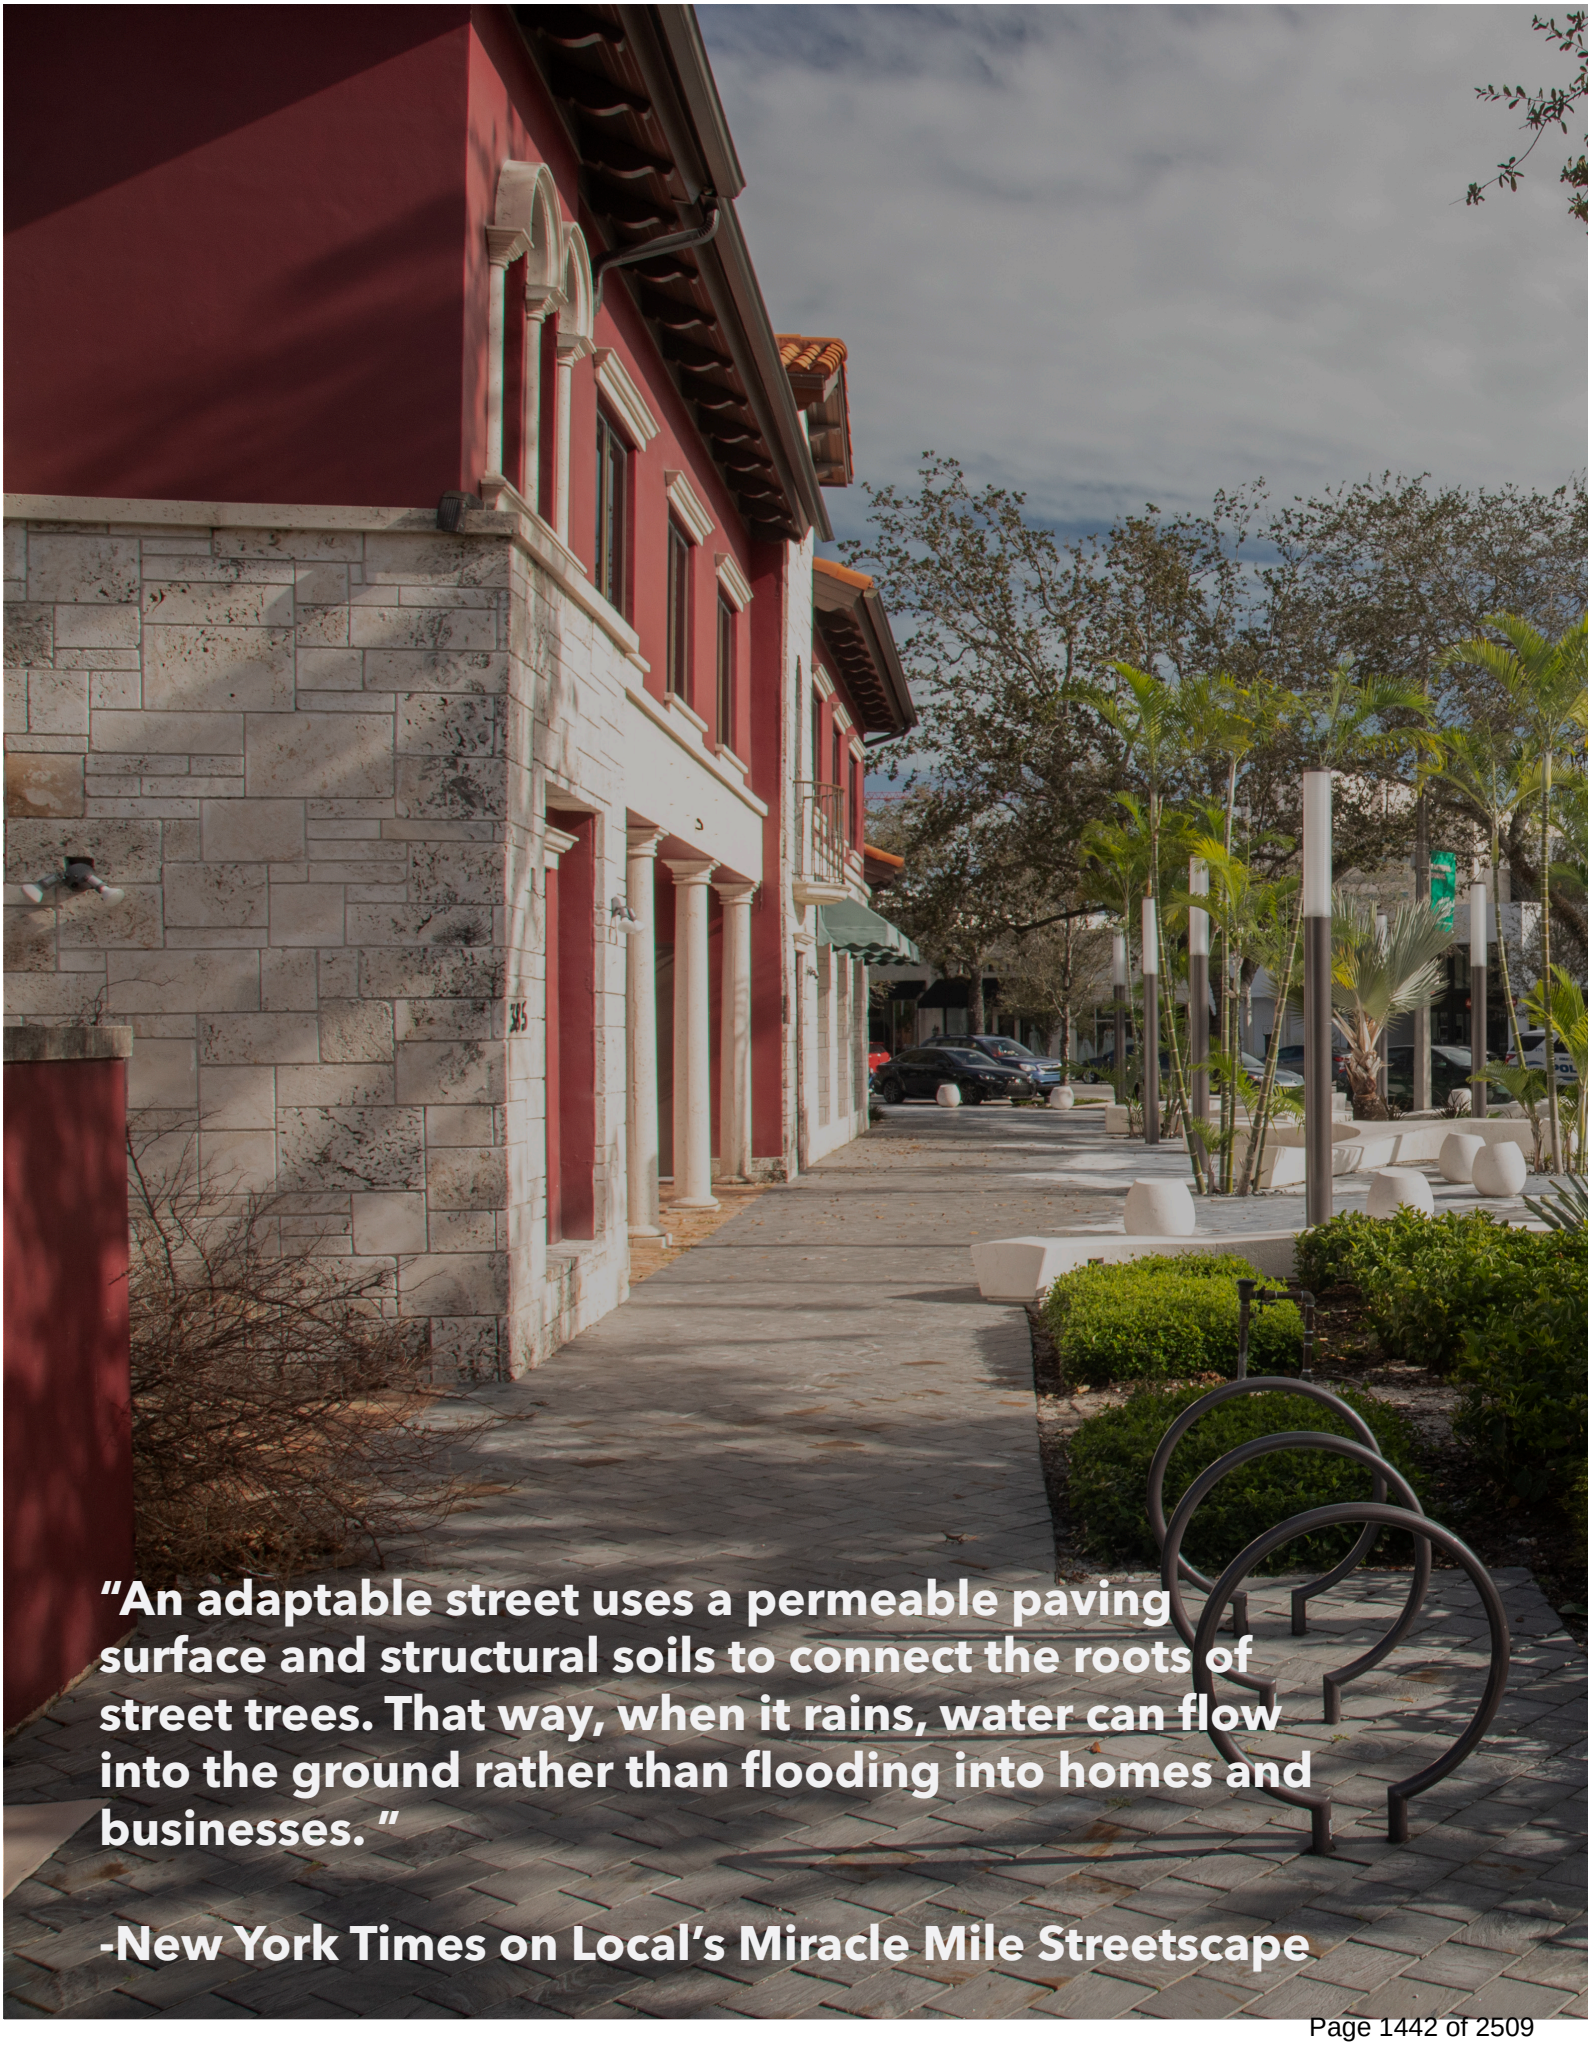
- Trees for Heat
- Trees for surface flooding
- Trees for Ground Water Management
- Trees for biodiversity
- Trees for mental health and quality of life

Task 4: Deliverables:

- Draft Urban Forestry Plan
- Final Urban Forestry Plan
- Draft and Final Plans will include: Urban Tree Canopy Analysis; Stakeholder input; and Master Plan

Task 4. Urban Forest Plan Development (5 months)

Our design team will work closely with the City of Opa-Locka to develop a comprehensive Urban Forestry Plan, with the goal of retaining and expanding park trees and developing recommendations to increase the overall canopy, including trees not managed by the City.



The following tasks will be included in our scope of work:

- Identify principles and key goals for the plan update:
- Include key performance indicators
- Identify recommended tree species and management recommendations
- Provide recommendations for Staffing Structure, Function, Budget, and Revenue for Urban Forests
- Provide a list of challenges and solutions for maintaining a healthy urban forest

Local Office: Beach Outfalls Pilot, NY

This page intentionally left blank.

“An adaptable street uses a permeable paving surface and structural soils to connect the roots of street trees. That way, when it rains, water can flow into the ground rather than flooding into homes and businesses. ”
-New York Times on Local’s Miracle Mile Streetscape

3. PROJECT EXPERIENCE

Our client list is diverse and includes non-profits, residential, HOA's, institutions, and government entities. Additional Project Experience, as well as budgets and references, beyond this page is available upon request.

Client: Miami-Dade Department of Transportation and Public Works
Project Type: Large-XL Tree Relocation and Care for Establishment Period
Project included the relocation of large, specimen-size native trees as part of a transportation project.
Duration: December 2022 **–** August 2023

Client: City of Hialeah
Project Type: Tree Planting and Care for Establishment Period
Our team is contracted to plant over 250 trees within the City of Hialeah's neighborhoods and parks.
Duration: August 7th, 2023 **–** In progress.

Client: Factory Town – Green Infrastructure Management
Project Type: Design and Tree Stewardship (Planting and Care for Establishment Period)
Our team has managed the tree resources within the Factory Town, an innovative campus and venue with the City of Hialeah. Management includes tree planting, relocation, maintenance, and tree health care. Our team has also designed and implemented several stormwater projects at Factory Town, including the design/build of a micro-Cypress Dome and linear bioswales to manage surface water onsite.
Duration: 2021 **–** Ongoing

Client: Pelican Harbor Seabird Station
Project Type: Florida Bonneted Bat Survey
Our experts conducted roost surveys for the Florida bonneted bat as part of the ecological evaluations performed pre-construction.
Duration: 2021

Client: FR-Aleman – Stormwater Improvements South of Fifth Miami Beach
Project Type: Arborist Report
Our experts conducted arborist surveys of over 500 trees for a large-scale project comprised of stormwater infrastructure improvements in the City of Miami Beach.
Duration: 2022

Client: PMG – E11even Hotel and Residences
Project Type: Arborist Report
Our experts conducted arborist surveys for new construction of a hotel and residences within downtown Miami.
Duration: 2022

Client: Bartlum Yards – Stock Island Marina and Residential Development
Project Type: Ecological Resource Evaluation and Arborist Report
Our experts conducted preconstruction surveys for potential presence of protected wildlife and habitat, including wetlands, essential fish habitat, and listed species. Additionally, we produced an arborist report which included coastal trees such as mangroves.

CULMER PLACE REDEVELOPMENT
MIAMI, FLORIDA

Project: Culmer Place Redevelopment

Program: Residential

Service: Resiliency Analysis and Landscape Design

Collaborators: HSQ GROUP, INC., Corwil Architects

Size: 13.65 Acres

Cost: $94,000 USD

Location: Miami, Florida

Status: In Progress

Reference: Kenneth Naylor, COO
Atlantic Pacific Communities
knaylor@apcommunities.com

Local Office led a group of engineers and architects to revitalize Culmer Place, an affordable housing community in hopes of alleviating the increasingly high demand for affordable housing in South Florida. This Miami Public Housing Apartment complex comprises of two, three, four and five-bedroom units in a two-story quadplex/townhouse-style buildings. Most of these units will be offered to those making at or around 60 percent of the area's average median income.

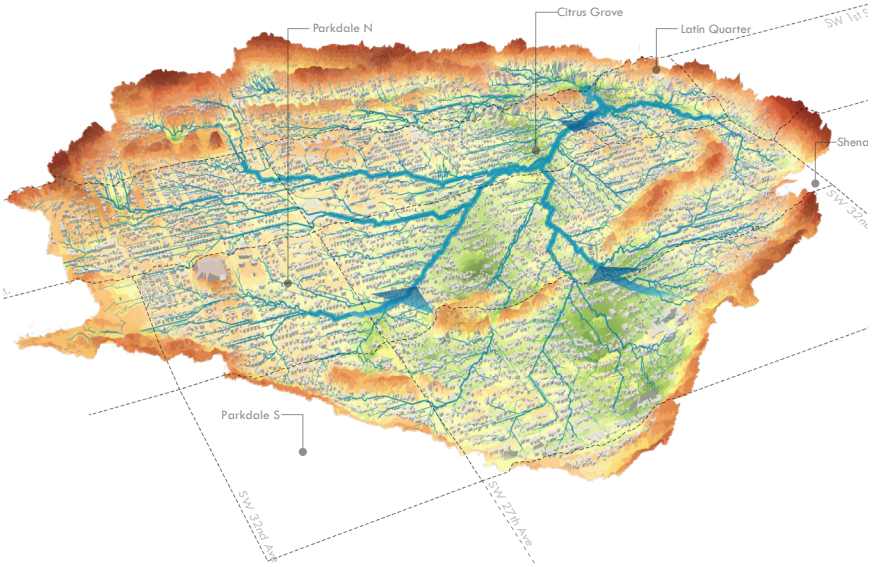
The team investigated the housing system's demographics, site ecology, hydrology, solar, and wind profiles, in order to design a landscape to meet the development's human and environmental needs. Green and blue elements are layered throughout a range of spaces to encourage the circulation of water and people across the site. This includes a dendritic internal path network, a medium size plaza space, a fenced pool area, and a redesigned streetscape-- all including raingardens to manage stormwater to natural drainage points based on site hydrology studies.

SOUTHWEST STREETSCAPES
MIAMI, FLORIDA

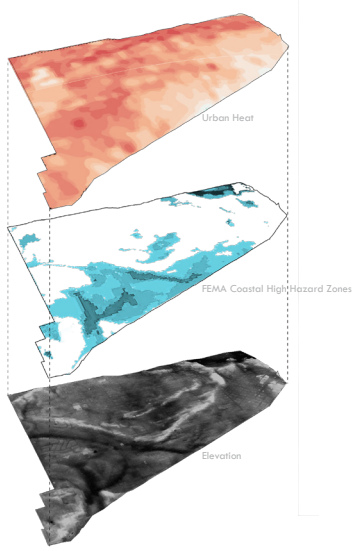
Project: South West Streetscape Master Plan

Program: Resiliency Analysis and Streetscape Master Plan

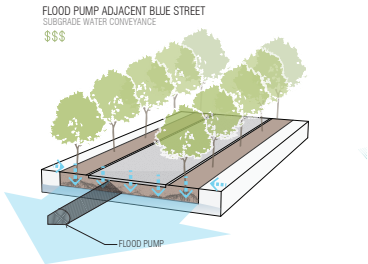
Service: Analysis and Design



Size: 7 sq mi



Cost: $500,000



Location: Miami, Florida

Status: on-going

Reference: Jennie Rogers
Principal, Curtis + Rogers Design Studio
tel +1 (305) 442-1774
jennie@curtisrogers.com

The city of Miami commissioned Local to create a streetscape and tree master plan for South West Miami. The project spans 3 districts and 13 neighborhoods, and focuses on water management and environmental justice to increase the city's resilience.

The masterplan responds to environmental analysis and proposes a rigorous tree-planting strategy to mitigate both the urban heat island effect and flooding, and includes a tree planting toolkit designed for the city of Miami. The topography, flood zones, and city hydrology were used to create a watershed model, which was overlaid with an urban heat map to determine priority areas. The socioeconomic analysis combined community demographic data including age, ethnicity, income, and home values to determine the most vulnerable populations. The overlaid drawings of socioeconomic vulnerability, heat islands, and flood corridors defined priority zones for infrastructure updates. These methods combine a green and blue infrastructure network that will increase the city's water retention capacity.

The masterplan proposal found that updating only 20% of the city's existing infrastructure would meet the city's water conveyance needs.

QUEENS GRID TREE DISPOSITION AND MASTER PLAN

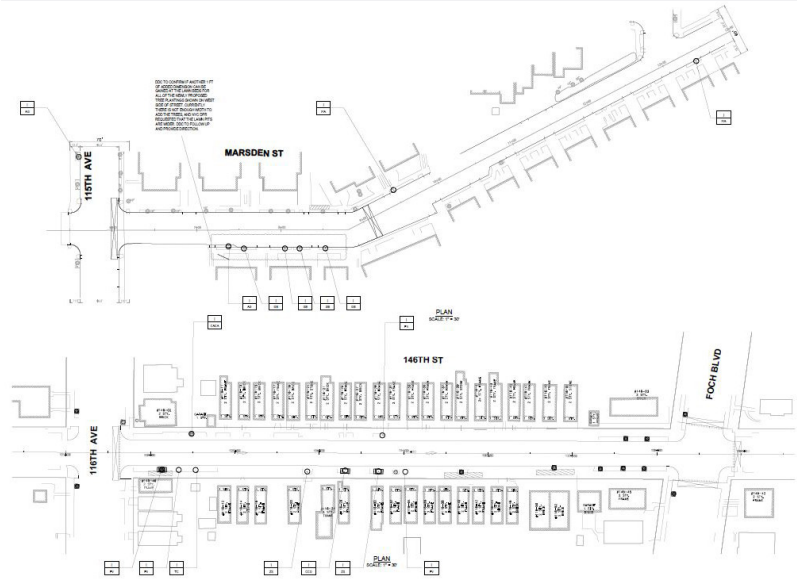
QUEENS, NEW YORK

Project: Queens Grid Urban Tree Plan

Program: Public

Service: Tree Disposition Plan, Tree Master Plan, and Constuction Documents

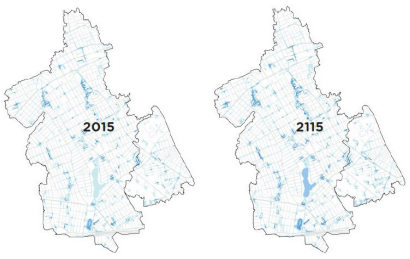
Collaborators: NYC Department of Design and Construciton; STV and Dewberry Engineering



Size: 13.65 Acres

Cost: $150,000 USD

Location: Queens, New York



Status: Construction Documentation Phase

Reference: Lisa Martusciello, (o) 646.388.5112
lisa.martusciello@stvinc.com

The New York City Department of Design and Constructed [DDC] commissioned our team, led by STV Engineering, to create a tree disposition and tree master plan for a residential area of Queens, New York. The project is part of a larger initiative by the NYC Department of Environmental Protection to address flooding and improve the quality of stormwater runoff. This area of Queens floods regularly, marking it a high priority for the City. The project includes full-road reconstruction throughout the neighborhood, presenting opportunities for our team to address water quantity, quality, and conveyance.

Our services included extensive area analysis, including Topography and Hydraulic analysis, to identify the direction of stormwater flows and areas of highest flooding. Our analysis also included mapping existing trees, identifying tree species, and the condition of the trees. This effort was an inter-agency collaboration with our engineering partners, DDC, the New York City Department of Transportation, and the NYC Parks and Recreation Department.

The second phase of our tree plan effort identified areas for new trees. New trees were proposed for sidewalk areas where trees have died or are in poor health, left-over and residual public spaces, highway and railway easements, and pocket parks in the study area..

ARVERNE VIEW RESILIENCY
FAR ROCKAWAY, NEW YORK

Project: Arverne View

Program: Neighborhood Master Plan

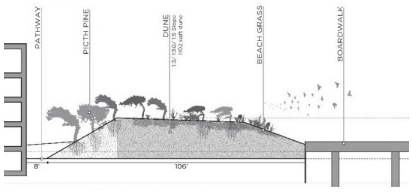
Service: Resiliency Analysis and Masterplan Design

Collaborators: L+M Development Partners Inc., Insight Civil Engineering, Steven Dubner Landscaping Inc., Bright Power

Agencies: HUD, FEMA, HDC

Size: 15 acres

Cost: $4 million USD



Location: Far Rockaway, New York

Status: Completed, 2018

Reference: Deborah Morris, Executive Director of Resiliency Planning
tel +1 (212) 863-6097
morrisd@hpd.nyc.gov

Local led the efforts in the planning and designing of a resilient affordable housing campus in Far Rockaway, New York; Arverne View. The team was tasked with addressing surge protection, rainfall management, and elevated groundwater management in this holistic resilient design.

The design approach was focused and strategic. Bioswales are strategically placed throughout the site to manage rainfall and groundwater ponding at low-lying areas. A barrier dune, planted with salt-loving species, mitigates saline summertime breezes while buffering the complex from the threat of a future sea surge. Large New England-native trees are planted in tight clusters to avoid wind corridors and protect from harsh winter airflows. A large solar battery provides energy resiliency to critical systems, common spaces, and elevators, should the backup systems fail.

The resulting design of Arverne View significantly relies on native species for protection, beauty and comfort, and provides a well-protected complex and landscape gathering areas, bolstering the sense of social resilience of this community.

This page intentionally left blank.

4. TEAM STRUCTURE

Community Involvement

Helping to build a better community.

Service is in our company DNA. We are proud to contribute to making our community a healthy, safe, and enjoyable place to live, work, and play through our work and community involvement. Our service work includes company beach cleanups, community workshops and green job skill-building, arts + science events, and more.

Our team makes long-term commitments to environmental efforts and our projects. We are keen to showcase our projects to the community via environmental education events when requested.

Our team is committed to inclusive collaboration and excellence. We understand the value of community and what it means to support each other. Treesources works diligently to attract, develop, and retain a diverse team that is representative of our community.

A Safety Culture

We begin everything with safety.

Safety is ingrained in everything we do. We care about the people we work with, and we take this responsibility very seriously. As early as the planning and design phase, we look for ways to make the work safer during project implementation. We review our plans for potential safety concerns and address them before the work begins. Training is developed and delivered on the job site and in the office to ensure we remain sharp and focused on our efforts.

Routine training and site-specific orientations are developed and delivered to prepare our team for the work. Concomitantly, we utilize and implement proven tools and tested industry standards for safety including, OSHA and American National Standard for Arboriculture Operations (ANSI).

IAN WOGAN

Florida Native Plant Society (FNPS) Executive Board Member

About
Ian Wogan is the President of Treesources. Ian has overseen daily operations of prescribed tree management (structural pruning, invasive tree removal, cabling and bracing, relocation, planting, etc), horticulture management and arboriculture consultation. Ian has led a wide range of arboriculture-based projects, including mangrove management, native habitat restoration, hurricane preparation and post-storm recovery efforts, tree mitigation, adaptive tree management strategies in the urban environment, specimen tree restoration and management planning and land-use/development consultation. Most recently, he has been working closely on projects within South Florida to guide solutions in the management, protection & restoration of the urban canopy.

Recent / Related Projects

Neighborhood Development Association, Miami Design District, City of Miami, Florida –
Responsibilities: Development and implementation of long-term urban tree health and management plan.

Factory Town, City of Hialeah, Florida –
Responsibilities: Arboriculture consulting, landscape design, tree relocation and planting.

GREEN Tree Planting, City of Hialeah, Florida –
Responsibilities: Project management, planting >250 trees in municipal parks and ROW.

Old Cutler Road Intersection Improvements DTPW, Miami-Dade County, Florida –
Responsibilities: Project management, relocation of large-XL trees from project to municipal and county park spaces.

Walter Meyer
Founding Principal

Walter is the Founding Principal of Local Office a practice he established in 2006. Walter is widely acknowledged implementing resilient infrastructure systems at all scales. His work includes the Parque del Litoral in Mayaguez, Puerto Rico, the first implementation of phytoremediation technology at the city scale. The project won the 2010 AIA Honor award in Puerto Rico and served as the site for the 2010 Central American Games. His current work includes advising the National Parks Service, the New York City Department of Parks and Recreation, and the Army Corps of Engineers on coastal resilience in New York.

In 2013, Walter was honored by the Obama administration as a 'Champion of Change' for the leadership he demonstrated in response and recovery efforts following Hurricane Sandy using alternate energy as a means of immediate relief and an engine for long-term economic recovery. In 2010, he was also recognized by the Congressional Hispanic Caucus for "leadership and innovation in the green economy."

Walter has taught at Columbia University's Graduate School of Architecture, Planning and Preservation (GSAPP), the Pratt Institute and Parsons School of Design.

Arvene East Urban Design and Infrastructure Plan
Queens, New York
Principal-In-Charge for a 45-acre coastal development that anticipates sea level rise and climate volatility situating the neighborhood above the 100-year flood plain and counters potential economic challenges by proposing a transit-oriented neighborhood with 1,200 units of housing and 160,000 square feet of retail. The landscape serves as a performative infrastructure with a connected network of bioswales capturing stormwater, flood storage capacity, and recreational paths. Solid waste water and compost feed an anaerobic digester that produces water for irrigation, electricity and green jobs. The development produces all its energy and is designed as a resilient hub for neighboring communities in times of disturbance.

Beach Green North
Queens, New York
Principal-In-Charge and Resilient Systems Designer for the first multi-family affordable housing complex to achieve Passive House standards in the country. The two buildings host 200-units with reduced energy demands and provide uninterrupted power while managing hydrological vulnerabilities through landscape infrastructure. In addition to guaranteeing residents stable electricity and comfortable temperatures during disturbances, residents benefit from reduced or negative utility bills, expanding the affordability of their units.

Miracle Mile Streetscape
Miami, Florida
Principal-In-Charge for the redesign of the four-block commercial and cultural heart of Coral Gables, Florida, known locally as "The Miracle Mile." The project transformed the monofunctional surface of the streetscape into a resilient infrastructure with creative grading and drainage solutions while preserving the existing monuments and mature live oaks on site. Constructed in 2017, the $20 million project was immediately tested by Hurricane Irma, a Category 4 storm. Despite rain intensity reaching seven inches per hour, the streetscape performed as designed and businesses were able to re-open the day after the storm while the surrounding districts experienced significant recovery periods.

Tricia Martin
Associate Principal

Tricia is a licensed landscape architect with over fifteen years experience working on complex urban sites ranging in scale from the region to a small lot. Her passion lies in developing projects that embrace complex urban problems and utilize landscape architecture is the agent for positive social and environmental change. Her recent work includes a vision for the next generation of streets with the Regional Plan Association (RPA).

In 2017, Tricia received an ASLA–NY Merit award for Garden Rising: Lower East Side Community Gardens Green Infrastructure Feasibility Study and a NYC Public Design Commission award for the American Airlines Flight 587 Memorial (a project she managed while working at Mathews Nielsen Landscape Architects)

Tricia graduated with a BA in Environmental Studies from the University of Vermont and received her Masters in Landscape Architecture from the University of Oregon where she received an ASLA Certificate of Honor. She has coordinated Urban Design studios at Columbia University's Graduate School of Architecture, Planning and Preservation (GSAPP) and led landscape architecture studios at City College. She is regularly invited to speak about issues related to green infrastructure and landscape urbanism and has served as President of the ASLA-NY Chapter from 2008 to 2011.

Arvene East Urban Design and Infrastructure Plan
Queens, New York
Project Manager to execute a 45-acre coastal development that anticipates sea level rise and climate volatility situating the neighborhood above the 100-year flood plain and counters potential economic challenges by proposing a transit-oriented neighborhood with 1,200 units of housing and 160,000 square feet of retail. The landscape serves as a performative infrastructure with a connected network of bioswales capturing stormwater, flood storage capacity, and recreational paths. Solid waste water and compost feed an anaerobic digester that produces water for irrigation, electricity and green jobs. The development produces all its energy and is designed as a resilient hub for neighboring communities in times of disturbance.

Brooklyn Greenway Green Infrastructure and Resiliency Guidelines
Brooklyn, New York
Principal for comprehensive stormwater management design guidelines and Resilience plan for the Brooklyn Greenway. The guidelines provide a holistic vision for development of the Greenway while addressing a range of issues influencing urban coastlines. The plan proposes to radically transform fourteen miles of Brooklyn's waterfront with a continuous bicycle and pedestrian corridor, creating the opportunities to address changing climate, rising sea levels, water quality and coastal habitat enhancements.

Far Rockaway Revitalization Plan
Principal-In-Charge and Design Lead for a revitalization plan for downtown Far Rockaway. The plan envisions a vibrant and sustainable through an analysis of the downtown area and surrounding neighborhoods. The recommendations included beautifying the streets and sidewalks and diversifying economic activity in the downtown, attracting residents, visitors, and business owners from the entire Rockaway peninsula. The project successfully integrates green infrastructure into sidewalks, parking lots, and a network of new open spaces and waterfront sites to manage stormwater, prevent flooding, and build resilience from storm surge.

Vincent Di Fusco
Technical Director

Vincent Di Fusco is the Technical Director at Local Office and a licensed landscape architect and certified Construction Manager with over 25 years of experience. His expansive skill set stems from successfully delivering high-quality landscapes throughout a wide range of project types while managing budgets, tight deadlines and diverse stakeholders. His past experience includes providing extensive construction management support to numerous capital projects for the NYC Department of Parks and Recreation (DPR), as well as Designer and Project Manager on numerous NYC based projects including The Central Park Conservatory Water Restoration, a Battery Park City Greenroof and Streetscape, and Hanover Square's British Memorial Garden.

Grove Central
Miami, Florida
Project Manager for a mixed-use development centered around a dynamic transit plaza in Coconut Grove. The plaza connects a new bus terminal to the Metrorail and adjacent commercial development. Integrating rain canopies, native trees, and shrub plantings into the urban design strategy to help infiltrate stormwater while an intricate paving pattern transitions from vehicular to pedestrian scale. The development features a spacious roof deck with a garden for residents, a barbecue area, views of Biscayne Bay, a sloped lawn with palm trees, and a pool deck. Limited space constraints were negotiated to maximize planting on the roof deck and facade of the adjacent parking garage. Station improvements required coordination with the existing Underline plans to facilitate connections between various transit modes. The process required coordinating state, county, and city planting restrictions and several rounds of permitting between entities.

Brooklyn Public Library Brownsville Branch
Brooklyn, New York
Project Manager for the redesign of a historic branch of the Brooklyn Public Library. The design includes a reconfigured fence alignment to provide a nook for the community. The Reading Garden features seating elements and immersive planting with a curated selection of native species. Permeable pavers and streetscape enhancements will be incorporated to increase landscape performance and green infrastructure.

Beach Green Dunes III
Queens, New York
Technical Lead for a climate-resilient, mixed use building development in the Rockaways; the final installment of a 3-part post-Sandy HUD funded pilot program. The project encompasses the building, green roofs, transit plaza, streetscape, and solar design. The plaza design is informed by restrictions of a DEP water easement. Stormwater is managed with a suite of green infrastructure measures, combining porous pavement, rain gardens and subgrade storage cells to promote infiltration to tree root networks.

Union Square Pavilion and Playground Expansion & Reconstruction
New York, New York
Project Manager for the award-winning $20 million construction of the North Expansion & Reconstruction of the Pavilion and Playgrounds. Provided CM responsibilities including the supervision of four prime contractors to execute the design intent and specifications while maintaining a cooperative management/contractor relationship. Additional roles included cost and schedule tracking, collaboration with the design team for modifications throughout the project, and preparation of regular reports to the Owner.

Eleanor Gibson
Designer

Eleanor is a Designer with several years of international experience working in Australia, Denmark and now the US. Her multidisciplinary background has allowed her to thrive on a range of scales including interior, architectural and urban. While her passions lie in large scale climate resilience and urban retrofits, she designs with a holistic understanding of the human scale and experience, regardless of project size.

Eleanor's prior experience includes collaborating at Bjarke Ingels Group (BIG) Copenhagen office as a Landscape Architect, where she worked on several large scale master plan projects, blending infrastructure and ecology into built form. As a student, she also worked at C.F. Møller Architects and Terroir Architects in Copenhagen, and Hassell in Sydney.

Eleanor received a Bachelor of Interior and Spatial Design degree from the University of Technology Sydney in 2015, a Bachelor of Architecture degree from the University of Sydney in 2016, and a Master of Architecture in Urban Design and Landscape Architecture degree from Aarhus Architecture School in Denmark in 2021.

Destination Streets
Miami, Florida
Designer for a downtown streetscape transformation, that incorporates green stormwater management into a newly pedestrianized plaza for retail, dining and events. The project responds to the needs of the surrounding businesses, formalizing the street's temporary pop-up events into a destination with year-round programming. The street experience is unified with a suite of modular and movable furniture, including seating, lighting, bike parking and waste receptacles. The paving pattern responds to the site's microtopography, creating shaded community 'rooms' within the established tree canopy.

Baja California Regional Master Plan
Baja California, Mexico
Landscape Architect for a 600 acre development and ecological strategy aimed to create a vibrant destination for the tech creative community. The project establishes a new form of nature-driven development in an area known for gated resorts and golf courses. The master plan concept was driven by analysis of the site's topography and unique climate, creating several distinct, inherently site-specific neighborhoods. In-depth climate analysis was used to develop a landscape strategy of greener micro-climates within a desert landscape and generating a self-sustaining water and energy supply for the region.

Education Esbjerg Neighborhood Master Plan
Esbjerg, Denmark
Landscape Architect for a new educational institution and campus on the preexisting reclaimed land island of Esbjerg Strand, accommodating 950,000ft² of education, residential and mixed-use program. The master plan responds to existing site conditions of noise, wind, tides, and sunlight to sculpt a dynamic perimeter block, where all interior spaces have park or sea views. Public promenades on the ground and roof invite life into the area and create a lively destination for both locals and visitors.

JACK KRANES
STUDIO ASSISTANT

Education
Bachelor of Arts
Marine Affairs
Rosenstiel School of Marine, Atmospheric, and Earth Science
University of Miami

Language
English

Skills and Qualifications
Proficient in ArcGIS, Google Suite, Microsoft Office Suite, WordPress
Experienced in maintaining and collecting data from YSI EXO2 Multiparameter Water Quality Sonde, both stationary and handheld models

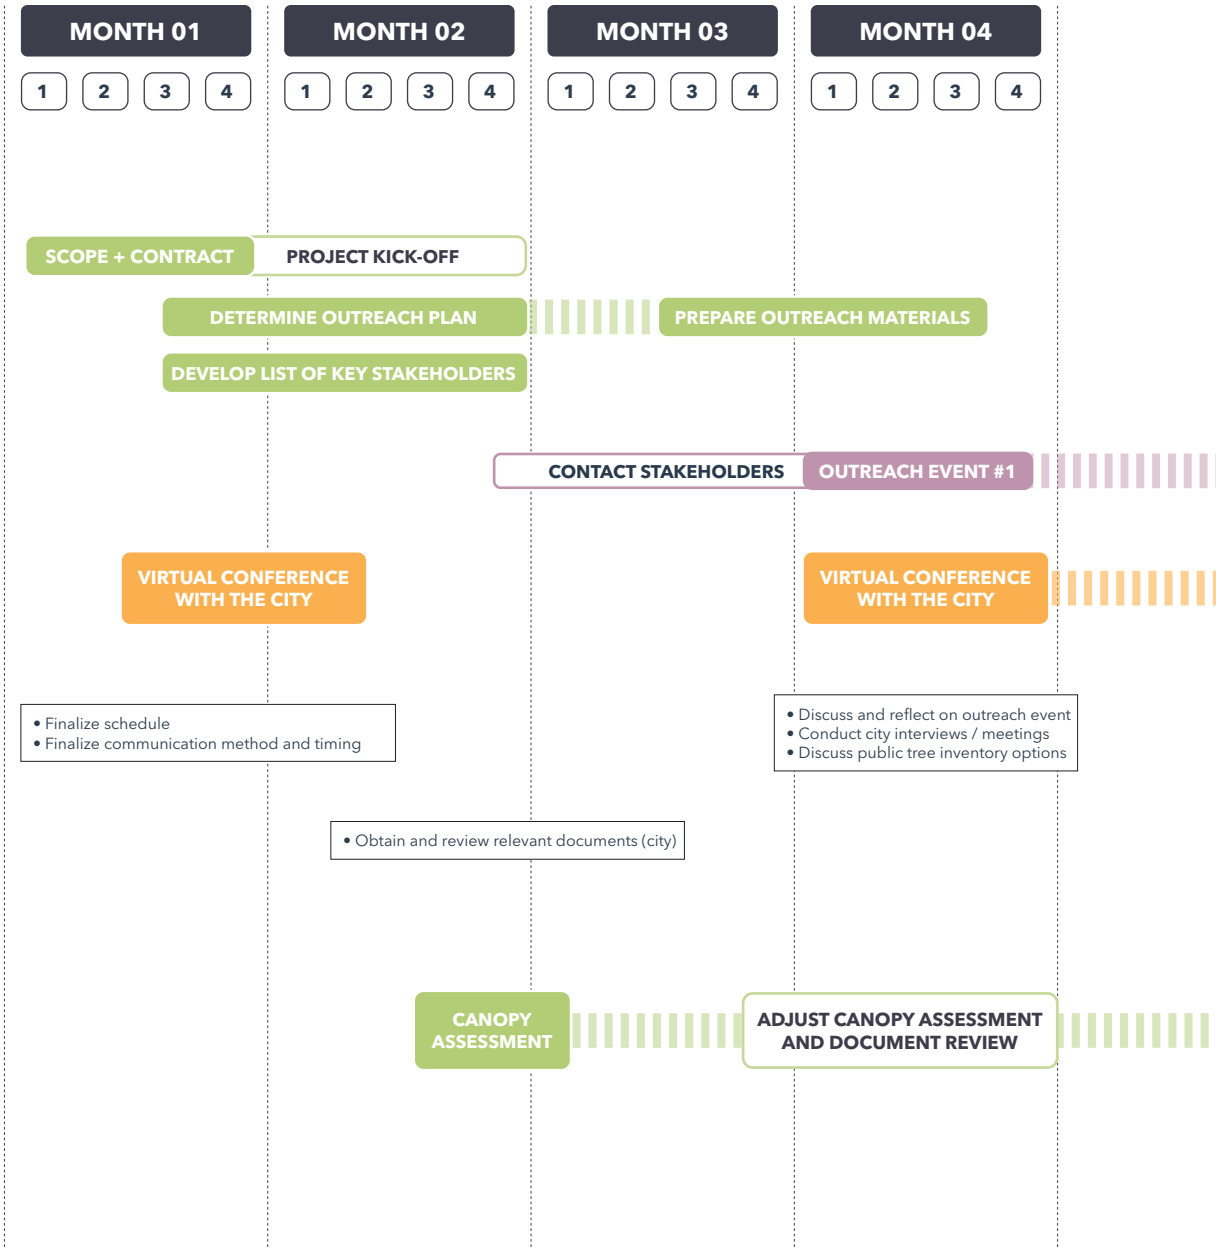
Jack Kranes
Studio Assistant

Jack's interest in urban design stems from a fascination with the connection between the natural and human-made world. He is passionate about broadening the public's understanding of green infrastructure and implementing sustainable designs within the public realm. His prior experience includes biodiversity and water quality research at the Hudson River Wetlab, as well as the non-profit organization Miami Waterkeeper where he conducted environmental policy advocacy and GIS analysis of water pollution issues in Miami-Dade County.

Jack received his Bachelor of Arts Degree in Marine Affairs from the University of Miami.

Miami Waterkeeper
Miami, FL
Policy Analyst for the nonprofit Miami Waterkeeper. Conducted research on multiple projects related to the health of Miami-Dade County's aquatic environment, including polluted stormwater runoff, green infrastructure design, and the municipal sewage system. Used ArcGIS and Microsoft Office in tandem to construct reports that present data and textual information in an accessible manner for multiple audiences.

Hudson River Park Trust
New York, NY
Field Science Assistant at the Hudson River Park Trust's Wetlab. Oversaw operation of flow-through aquarium system, including day-to-day animal care, tank cleaning, and pipe maintenance. Lead aquarium's open hours, educating over 5,000 members of the public over the course of the Wetlab's open season. Conducted research on a daily basis related to six seperate projects throughout the Hudson River Park, including biodiversity surveys and water quality testing.



Long Island Aquarium
Riverhead, NY
Prepared daily food intake for an array of mammals, both marine and terrestrial, using a strict diet program for each organism to ensure health and keep habitats clean. Participated in multiple behavioral training sessions with the animals each day.

7. ADDITIONAL FORMS

PROPOSER QUALIFICATIONS

The Proposer, as a result of this proposal, MUST hold a County and/or Municipal Contractor's Occupational License in the area of their fixed business location. The following information MUST be completed and submitted with the proposal to be considered:

1. Legal Name and Address:

   Name: Treesources, LLC

   Address: 2360 Overbrook St.

   City, State, Zip: Miami, Florida, 33133 Phone/Fax: 305-799-6319

2. Check One: Corporation (x) Partnership ( ) Individual ( )

3. If Corporation, state:
   Date of Incorporation: 11/12/2019 State in which Incorporated: Florida

4. If an out-of-state Corporation, currently authorized to do business in Florida, give date of such authorization:
   _____

5. **Name and Title of Principal Officers** **Date Elected:**
   Ian Wogan, Owner 11/12/2019
   _____ _____
   _____ _____
   _____ _____

6. The length of time in business: 4 years

7. The length of time (continuous) in business as a service organization in Florida:
   4 years

8. Provide a list of at least three commercial or government references that the bidder has supplied service/commodities meeting the requirements of the City of Opa-locka specification, during the last twenty-four months.

9. A copy of County and/or Municipal Occupational License(s)

Note: *Information requested herein and submitted by the proposers will be analyzed by the City of Opa-locka and will be a factor considered in awarding any resulting contract. The purpose is to ensure that the Contractors, in the sole opinion of the City of Opa-locka, can sufficiently and efficiently perform all the required services in a timely and satisfactory manner as will be required by the subject contract. If there are any terms and/or conditions that are in conflict, the most stringent requirement shall apply.*

PRICE PROPOSAL FORM

PROPONENT understands and agrees that the Contract Price is the lump sum to furnish and install all of the Work complete in place. Vendor's price will not be adjusted unless the CITY changes the scope of the Project after the Contract Date.

As such, the Vendor shall furnish all labor, materials, equipment, tools, superintendence, and services necessary to provide a complete, in place Project for the Proposed Price of:

LUMP SUM PRICE: $ 98,000.00

SUBMITTED THIS 27th DAY OF November 2023.

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

CITY OF OPA-LOCKA
DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by Ian Wogan (Name) the Owner (Title/Position) of Treesources, LLC (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

E-VERIFY

Effective January 1, 2021, public and private employers, contractors and subcontractors will be required to register with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/sub-contractors) assigned by Vendor /Consultant/ Contractor to perform work pursuant to the contract with the Department. The Vendor /Consultant/ Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City; and

By entering into a Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If t contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination. The Contractor acknowledges it is liable to the City for any additional costs as a result of termination of the contract due to Contractor's failure to comply with the provisions herein.

E-VERIFY FORM

Definitions:

"Contractor" means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

"Subcontractor" means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.

Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/subcompanies/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City of Opa-locka; and

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

CITY OF OPA-LOCKA
DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by Ian Wogan (Name) the Owner (Title/Position) of Treesources, LLC (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

CITY OF OPA-LOCKA

CERTIFICATION REGARDING DEBARMENT, SUSPENSION PROPOSED DEBARMENT AND OTHER MATTERS OF RESPONSIBILITY

1. The Proposer certifies, to the best of its knowledge and belief, that the Proposer and/or any of its Principals:

A. Are not presently debarred, suspended, proposed for debarment, or declared ineligible for the award of contracts by any Federal agency.

B. Have not, within a three-year period preceding this offer, been convicted of or had a civil judgment rendered against them for: commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, state, or local) contract or subcontract; violation of Federal or state antitrust statutes relating to the submission of offers; or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, tax evasion, or receiving stolen property; and

C. Are not presently indicted for, or otherwise criminally or civilly charged by a governmental entity with, commission of any of the offenses enumerated in paragraph 1-B of this provision.

2. The Proposer has not, within a three-year period preceding this offer, had one or more contracts terminated for default by any City, State or Federal agency.

A. "Principals," for the purposes of this certification, means officers; directors; owners; partners; and persons having primary management or supervisory responsibilities within a business entity (e.g., general manager; plant manager; head of a subsidiary, division, or business segment, and similar positions). This Certification Concerns a Matter Within the Jurisdiction of an Agency of the United States and the Making of a False, Fictitious, or Fraudulent Certification May Render the Maker Subject to Prosecution Under Section 1001, Title 18, United States Code.

B. The Proposer shall provide immediate written notice to the Contracting Officer if, at any time prior to contract award, the Proposer learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.

C. A certification that any of the items in paragraph (a) of this provision exists will not necessarily result in withholding of an award under this solicitation. However, the certification will be considered in connection with a determination of the Proposer's responsibility. Failure of the Proposer to furnish a certification or provide such additional information as requested by the Contracting Officer may render the Proposer non-responsive.

D. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render, in good faith, the certification required by paragraph (a) of this provision. The knowledge and information of a Proposer is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

E. The certification in paragraph (a) of this provision is a material representation of fact upon which reliance was placed when making award. If it is later determined that the Proposer knowingly rendered an erroneous certification, in addition to other remedies available to the Government, the Contracting Officer may terminate the contract resulting from this solicitation for default.

AS THE PERSON AUTHORIZED TO SIGN THE STATEMENT, I CERTIFY THAT THIS FIRM COMPLIES FULLY WITH THE ABOVE REQUIREMENTS.

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):

Exempt payee code (if any) _____

Exemption from FATCA reporting code (if any) _____

(Applies to accounts maintained outside the U.S.)

5 Address (number, street, and apt. or suite no.) See instructions.

3109 Grand Avenue, #297

Requester's name and address (optional)

6 City, state, and ZIP code

Miami FL 33133

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

Sign Here	**Signature of U.S. person** ▶		**Date** ▶ January 5th 2023

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9*.

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

Letter of Transmittal

November 28, 2023

City of Opa-Locka
Office of the City Clerk
780 Fisherman Street, 4th Floor
Opa-Locka, Florida 33054

To Proposal Review Team:

Urban Canopy Works (UCW) is excited to submit to the City of Opa-Locka, Florida the following proposal for the *Opa-Locka Urban Forest Plan*. We have partnered with Dudek, an environmental, planning, and engineering firm, to bring a full suite of expertise to this project. This letter and subsequent proposal documents our team's approach, scope of work, fees, timeline, expertise and experience.

Project Approach

While a more specific Scope of Work can be found in the next section, we want to first highlight four aspects of an approach and philosophy that the UCW team plans to apply to *Opa-Locka's Urban Forest Plan*. We have developed an approach to ensure that the Opa-Locka project is:

Equity-centered and community-focused to be easy for the public to understand and engage in for the foreseeable/ongoing future. It is encouraging to see that Opa-Locka is already prioritizing this community-based approach. We must maintain this community engagement focus throughout the plan. To do this, we have developed a process that:

- Creates a channel for **two-way communication and education between all parties** throughout the progress of plan development.
- Uses terms **understandable by all** (not technical jargon), and incorporates a multilingual approach. Urban forests are for real people, not just those in the "tree world."
- **Connects the urban forest to what people really care about** - creating a healthier, safer and more connected environment for Opa-Locka residents.
- Creates **tangible goals that mean something to the community**, and thus spur action during plan implementation and beyond.

Experienced in Florida urban forestry. Our experience includes a number of communities in Florida specifically, and familiarity with state law and local tree species.

Based on solid communications practices. The UCW team has proven expertise in urban forestry strategy planning, and will use that expertise to analyze and assess Opa-Locka's urban forest. However, *we are also experts in communications and facilitation*, which is as (if not more) critical in urban forestry planning, especially knowing that the majority of tree canopy is usually privately owned. This is an area we see as

lacking in many planning efforts, yet it is critical to real progress in the coming years. For this reason, we are proposing to produce the following as part of this initiative:

- A more **educated and engaged community** ready to dive into implementation at the completion of this effort.
- **A media and engagement outreach strategy that works for everyone.** Website content is an important part of this strategy and will be included, but web-based engagement doesn't work for all members of the community.
- **Focused on unique needs of the Opa-Locka climate**, now and in the future, trees are one of the most effective ways to reduce urban temperatures, decrease air pollution, and increase quality of life in cities.
- A **better understanding of the existing urban forest** itself - what we have now and what we want to achieve. This includes examining not just the trees themselves (via canopy cover and inventory data), but also what the community sees and what they want for the future of Opa-Locka.
- A **clear path forward** covering a long-term time frame (with 3-5 year measurable benchmarks). This includes defining community goals, and a well-defined path to work toward those goals.

Dedicated time and resources to this project. The founders of UCW left large corporate consulting firms to start the company specifically to be able to dedicate their time and focus on fewer clients. This allows us to understand and address the unique needs and issues that matter most to the people that live there, doing better work for each community. Together with Dudek staff, our team will put the Opa-Locka project first throughout the project timeline.

This approach will create a plan process and final product best suited to Opa-Locka's needs and desires (as expressed in the Request for Proposal). Each of these key aspects are interwoven throughout the full Scope of Work.

The Team

UCW will be the lead working through all aspects of the project, with our partner Dudek managing the canopy analysis and public outreach efforts.

About Urban Canopy Works

Urban Canopy Works (UCW) is a women-owned, Cincinnati-area based small business dedicated to the advancement of trees and the tree canopy in our urban and developed areas. We connect our passion for trees with a clear sense of purpose about our work. We are dedicated to contribute, serve others, and make a difference. We have years of experience working in multiple states helping communities with urban forest planning efforts.

The UCW team is ISA Certified and has been leading urban forestry planning initiatives for over 10 years across the country. We commit to be responsive to the City of Opa-Locka's needs and can deliver customized solutions based on our extensive experience in urban forestry.

About Dudek

Dudek assists municipalities on a broad range of projects that improve communities, infrastructure, and the natural environment. From planning, design, and permitting through construction, we move projects

through the complexities of regulatory compliance, budgetary and schedule constraints, and conflicting interested parties. We have a long history of providing environmental services to municipalities and have experience in the local environmental resources and agency policies pertaining to resource management, development impact assessment, and mitigation.

Dudek offers clients a diverse urban forestry practice with expertise in a variety of urban and wildland forestry specialties. Our certified and licensed arboriculture and forestry professionals bring experienced, valuable insight to tree management issues, providing creative approaches to difficult and controversial projects. Among our specialties are urban forest master plans (UFMPs), arborist and forester reports documenting tree assets within a project area, health and condition assessment reports, and appraised value reports; we also offer training on tree maintenance and pruning.

Dudek has built a reputation for providing exemplary environmental, planning, regulatory, engineering, construction management, operations, and funding expertise, offering municipalities a cost-effective way to accomplish short- and long-term goals.

General Information on Each Firm

Urban Canopy Works, LLC
817 Dayton Street
Newport, KY 41071
Business Hours: Monday - Friday 9-5 EST

UCW is a single member LLC founded in 2018, based in the State of Kentucky, working nationally.

Primary Contact: Rachel Comte, Owner, 859-638-2044 or Rachel@UrbanCanopyWorks.com
Secondary Contact: Mindy Mohrman, Consulting Urban Forester, 850-559-4653
Mindy@UrbanCanopyWorks.com

Dudek
605 Third Street
Encinitas, CA 92024
Business Hours: Monday - Friday 9-5 PST

Dudek is an employee-owned firm based in the State of California, with offices nationwide, including one in Lake Worth Beach, FL.

Primary Contact: Ryan Allen, Principal in Charge
760.942.5147 or rallen@dudek.com

License number: F19000002431
Issue date: 5/21/2019. UCW will also register with the state if a contract is awarded.

The following pages contain our proposal for working with the City of Opa-Locka to develop the Urban Forest Plan. With the help of our team of forward-thinking, community-focused experts, UCW will be able to guide the Opa-Locka community through this important initiative.

Sincerely,

Rachel Comte
Owner, ISA Certified Arborist, Urban Planner
ISA Certified Arborist/TRAQ - OH-6296A

Scope of Work

The following scope of work is based on UCW's understanding of the goals that the City of Opa-Locka has expressed for their *Urban Forest Plan* (UFP). Using the available data and resources combined with our experience and knowledge in municipal arboriculture, urban planning, and public engagement, UCW proposes to develop the UFP in three phases - Project Launch, Discovery, and Plan Development. These phases incorporate all the elements discussed in the RFP Scope of Services, and are described in more detail below.

Phase 1: Project Launch

Task 1 from the RFP Scope of Services

This planning and kick off phase begins the project with a series of tasks:

- **Internal Kick Off Meeting (virtual).** Once under contract, UCW will set up an initial Zoom call between the City of Opa-Locka and the UCW team for introductions, to talk through project schedules, benchmarks, communication protocols, and understanding of expectations. We will also coordinate any logistical items, define a steering committee, set regular project management meetings (monthly), and start the conversation on each of the items below.
- **Information and Data.** Initiation of the process of information exchange and data sharing, including canopy and tree inventory data, any relevant city or regional plans, information on existing and past programs, etc.
- **Website Content.** Initial online project content will be developed, to be hosted on the City's website. Content will be updated regularly throughout the project (described further in the Discovery phase).
- **Engagement Planning.** As a group (UCW team and City), we will work together during this phase to further refine and plan out specifics for a strategic public outreach plan. The plan will serve as a roadmap, highlighting strategies and tasks designed to help the City of Opa-Locka achieve the project's public outreach goals and objectives. Our team will also develop and maintain a stakeholder database throughout the project's duration. This database will include stakeholder name, contact information, preferred method of contact, and potential key concerns and/or areas of project interest. Additionally, a comprehensive database of additional contacts will be developed, including neighborhood and homeowners' associations, businesses schools, and cultural organizations, advocacy groups, and community-based organizations.

Phase 2: Discovery

Tasks 2 and 3 from the RFP Scope of Services

This phase is a significant portion of the work and involves not just analyzing facts and figures, but going beyond the hard data to learn and gain insightful perspectives from the community. UCW believes in community engagement as a critical part of information gathering, issue solving, and goal-setting. The creativity and power that comes from involving others with diverse backgrounds and perspectives has

proven to make urban forest management planning projects more successful by being responsive to the real needs and desires of the community.

In our experience, proactive, responsive urban forest management planning initiatives begin with asking citizens and internal and external stakeholders probing questions on their biggest challenges, what is going well in Opa-Locka, what is missing, and what the definition of success might look like. By obtaining this kind of input, the UCW team works to ensure that the City's plan "leads with a need." This phrase, and the upfront, transparent, honest community engagement it represents, is critical to ensuring that the resulting *Urban Forest Plan* is both inclusive and responsive to the citizens' needs, as well as addressing the needs of the urban forest itself.

Discovery happens in multiple ways - through data and statistical analyses, group stakeholder engagement, targeted one-on-one interviews, and broader public engagement efforts, each described in more detail below.

Review and Analysis of Existing Information/Data

Multiple existing data sources will be used to assess the existing urban forest, as well as start to uncover gaps in knowledge.

Assess City Policies and Documents. UCW will review the City's comprehensive plan, climate action plan, and municipal code, along with any other relevant planning documents or efforts. We will examine the existing tree protection code, including development code / zoning regulations and procedures as well as any other policies, guidelines, specifications or standards in place that impact trees in Opa-Locka. Review of these policies and regulations will look for gaps or changes that can be made to aid in reaching overarching urban forestry goals. Interviews will be conducted as part of the engagement work described below.

Operations Reviews. UCW will conduct a comprehensive review of the internal plans and operations including resources, budget, and staffing structure of relevant departments that impact the management of trees to look for areas of improvement, best roles, opportunities for partnership, and potentially additional funding sources.

City of Opa-Locka Public Tree Inventory. Data on Opa-Locka's publicly-owned trees will be used to examine species and age diversity, as well as challenges in conditions or suitability (based on availability of data), and management needs.

Planting Strategies. Existing planting practices of the City, and other potential players, will be examined. Potential planting strategies for Opa-Locka will be explored based on potential planting areas identified in the Urban Tree Canopy Analysis to address the priority concerns of climate change and equitable distribution of canopy.

Canopy Cover Analysis. Our team (led by Dudek) will conduct a canopy analysis that includes all trees within City limits, including public and private property, open space, natural resource areas, creek and riparian areas, golf courses, and other areas defined by the project team and the City. This analysis will focus on the City's existing canopy cover, which consists of the area of the City covered by trees when viewed from above. For this task, Dudek will utilize publicly available canopy and land use data generated by using GIS layers from Miami/Dade County's Urban Tree Canopy Assessment. High resolution spatial imagery will be used to assess all land cover classification types including trees, shrubs, bare earth, impervious surfaces, and water.

The resulting canopy cover study will provide information on the distribution of trees and tree density on all identified study areas and analyze whether trees are equitably distributed throughout the City.

Equity and Tree Canopy. The first step to developing a sustainable urban forest that achieves equitable canopy cover will be to determine areas of the City where tree resources are needed and where an injection of these resources would provide the greatest community net benefit. To determine these areas, our GIS specialists will overlay the UTC with data provided by the City, such as heat exposure areas, disadvantaged communities, council districts, and land use types. These data will inform the analysis and help determine if specific areas are lacking tree canopy and whether these deficits are impacting certain parts of the community more than others. Strategic areas for tree planting opportunities will be identified. The City's Tree Equity Score will be calculated using a method developed by the nonprofit American Forests which evaluates existing tree canopy, population density, income, employment, race, age, and surface temperature data at the neighborhood scale.

Impact of Climate on the Sustainability of Opa-Locka's Trees. UCW will utilize the U.S. Forest Service's climate models (Tree Atlas) along with available tree data to determine how the impact of a warming climate is expected to change the makeup of Opa-Locka's trees under various climate change scenarios.

Community Engagement

UCW and Dudek are proposing multiple activities to engage the public during development of the plan. Dudek will take the lead on most of the content creation and public engagement. UCW will take the lead on the Stakeholder workshops.

Steering Committee. Our experience has shown that it is most effective if the community-at-large is involved in the plan's development from the beginning, and not just simply in engagement events or to help during the post-plan implementation work. Described already in Phase I - Project Launch, UCW will work with the City to establish a steering committee of stakeholders as yet another avenue to engage the community throughout the UFP process. This team often becomes highly invested in the plan, will spearhead implementation, and can leverage financial and political support for recommended action steps.

Two Groups in Engagement Defined. Our experience has shown that it is valuable to engage the community on a variety of levels. We use the term *Stakeholders* and *Broader Public* to describe two primary groups to create engagement during the UFMP process, as defined below.

Stakeholders are considered members of the community that directly engage with trees or the natural environment in their professional or leadership roles, often as part of an entity or organization. Example: Citizen Committees, representatives from neighborhood groups, relevant City staff, representatives from community non-profits, utilities, educators, elected officials, County staff, representatives from the local development industry, landscape architect trade group, and anyone else that may engage with trees on a regular basis.

Broader Public is a term we used to refer to any Opa-Locka resident that is interested or has perspective to provide.

One-on-One Interviews. A series of 15 one-on-one interviews (virtual) with select stakeholders is also an important part of the Discovery process, allowing for individual conversations that often reveal additional and important information and lead to new ideas.

"Discovery Through Self Assessment" Stakeholder Workshops (3). Discovery also occurs through open, facilitated discussions with stakeholders. The UCW team will utilize the stakeholder database developed during project launch to plan these workshops. We have found that a series of sequential two hour workshops is most effective.

Each workshop is structured to spend a small portion of the time reviewing and explaining findings from data/plan analyses and sharing examples of what other communities are facing and how they are taking action. The primary use of the workshop time, however, is to hear directly from the stakeholders about

existing challenges and hurdles facing Opa-Locka, priorities and goals for the future, and dreaming and brainstorming imaginative solutions to these challenges - all led by a trained facilitator.

These workshops (together with the data analysis previously detailed) provide a systematic and guided method for the community to self-evaluate how sustainable Opa-Locka's urban forest is. UCW uses a matrix (at right) that can aid in assessing the sustainability of an urban forest. This matrix, once completed, will also serve to develop benchmarks to measure the future progress of the action steps in the master plan.

Indicators of a Sustainable Urban Forest		Assessed Performance Level		
		Low	Mod.	Good
The Trees	Urban Tree Canopy Cover			
	Equitable Distribution			
	Age Distribution

Each stakeholder workshop has a unique, but sequential topic, and is focused on accomplishing specific goals:

- *Workshop 1: The Trees.* The first workshop starts to delve into the data, first looking at what is known about the trees and tree canopy. Then group discussion follows to explore the challenges facing Opa-Locka in this area, brainstorming on potential solutions, and starting to tease out future goals from the group.

- *Workshop 2: The Players.* The second workshop focuses on the human element - both those individuals active in the urban forest and those within the community who are not yet engaged or are under-represented. Group discussion often centers on how to better engage the community.

- *Workshop 3: The Management Approach.* Finally, the last workshop delves into the management approach, which is heavily focused on local management practices and policies. This last workshop often includes discussions on broader topics that have emerged throughout the discovery process overall.

Our job during this phase is to *facilitate* the community's exploration of the issues and aid in developing imaginative solutions with all those involved. Our team will encourage and support this discovery phase with expertise in arboricultural and urban forest management best management practices. We will frame and bring context to Opa-Locka's issues with our knowledge of what challenges other cities in the country are experiencing and what solutions they are pursuing.

Reaching the Broader Public

Public outreach is key both in the development of a plan, but also to facilitate implementation after a plan has been completed. The public engagement plan is flexible, and we can talk about options together once we get started. At first glance, UCW and Dudek is proposing the following efforts:

Website. Website content will be a critical component of a robust outreach plan. This material will be developed by Dudek and will provide accurate and timely updates to inform community members of important project information and opportunities to provide input throughout the project. Community members will be able to access project information, such as FAQ's, maps, and a schedule, as well as the opportunity to provide their contact information to receive electronic project updates. The content will be updated on an ongoing basis throughout the project, and can ultimately be used to house the final plan and provide a place to monitor/ track progress in the coming years.

Community Outreach Materials. Our team's marketing and graphics experts will prepare multilingual outreach materials that will communicate the value of the City's urban forest through infographics. With input from key stakeholders and the City, we will identify strategic media outlets for these outreach materials such as social media, e-newsletters, local television, newspapers, and other venues to engage the public in the UFP process.

Social Media. Our team's marketing and graphics experts will create social media content for the City to disseminate information about the UFP process and public engagement opportunities. Social media content will be uniquely designed to fit the City's branding.

Public Meetings. Engaging the community at in-person events helps the consulting team better understand public perspectives and priorities related to tree and urban forest management. In-person outreach efforts will be open to all, and specifically targeted to communities who experience challenges in participating in web-based outreach activities, such as a virtual meeting or online survey. Our team will work with the City and interested parties to identify and reach these communities through existing public events, such as a farmers' market, community events, or neighborhood association meetings. Dudek will support these events by coordinating with the City and providing outreach and engagement materials. *The City will provide staff or coordinate volunteers to attend the events in-person.*

We recommend four (4) public outreach events. The first two (2) outreach events are recommended to be held during the initial information gathering phase of the project to better understand the community's interested parties' opinions of trees and provide information about the UFP process. Hard copies of the online survey will be made available for in-person engagement. The second round of two (2) public outreach events will occur during the public comment period of the draft UFP and will highlight the UFP's key findings, guiding principles, and the strategic plan for future urban forest management, to encourage discussion and feedback of the Plan findings and goals.

These engagement events ensure reflection of community values in the UFP prior to finalization, allowing for adjustment once a draft is developed. Interested parties will be encouraged to provide written comments to further refine the draft UFP. Following the public outreach events, we will deliver a summary report to the City on the public input received.

Online Survey. Online surveys typically result in significantly higher public input than surveys conducted during community meetings. As such, we will develop a multilingual online survey using the SurveyMonkey platform. Questions will consist of topics related to urban forest values, perceived benefits of trees, and ways the City can support community tree planting efforts. Demographic questions will be included to assess whether the survey is equitably distributed and representative of the City's community members. If

desired, Dudek will work with the City to distribute paper surveys to a random sample of households to gain input from residents that may not have access to the internet. Results of the surveys will be compiled in an electronic file, summarized, and included in the UFP. The City will be responsible for promoting the survey to collect as much input as possible.

Public Input from Previous City Initiatives. Our team is aware that any previous planning efforts that have taken place in Opa-Locka included a public input component. We are aware of the public's "planning fatigue" that can result from ongoing engagement. For this reason, UCW works to access input already provided by the public through other City plans. This can be relevant to an urban forest plan as trees play a significant role in reaching sustainability and livability goals, which is often a topic in city plans.

Phase 3: Plan Development

Task 4 from the RFP Scope of Services

In this last phase, the findings from the data analysis, document review, stakeholder workshops, interviews, and other public feedback are synthesized to create plan goals and an initial draft of the proposed plan narrative and recommendations, which will be presented to the City of Opa-Locka and select stakeholders for review, amendment, and approval.

Goal Setting. The purpose of this strategic plan is to reach key goals, based on the knowledge of the urban forest as it exists today and as defined by the community during the discovery process. The path forward will include goals that are measurable and achievable and address the issues and desires identified by the City and community. We will gather as a group, virtually, to review canopy data and develop goals based on key performance indicators such as long- and short-term tree planting scenarios and metrics required to achieve a canopy cover goal. The focus will be on ensuring that distribution of canopy is equitable, addresses climate change concerns, and mitigates heat impacts through maintaining and growing a healthy urban forest.

Narrative & Recommendations. At this point of the strategic planning process, the UCW team will take the newly set goals, together with findings, challenges, opportunities, potential resources and other feedback from the Discover work and develop a "Plan Narrative & Recommendations" document. This is a 3-5 page document that will summarize the story we propose telling in the plan, along with a set of recommendations or action steps to reach the plan goals. This will include management recommendations for better urban forest health and more efficient operations, and recommendations for ongoing community input and education. This can be reviewed and feedback provided by the Opa-Locka team. This document must be approved before work can begin on writing the full plan itself.

Plan Creation. Once both the Goals and Narrative & Recommendations are approved, we will begin the process of writing the full plan. This will take the form of two documents. The official plan, which will be a concise summary of findings, goals, and action steps, and written as succinctly as possible, using terms that the lay person will understand, tying trees to real-world concerns facing Opa-Locka residents. A longer accompanying "supporting document" will document all the detailed findings, detailed recommendations, etc.

Editing Process. A draft of the final plan will be presented to the City and other selected stakeholders for review. There are two rounds of edits included in this project. The Opa-Locka team is required to compile all edits into one version before submitting to UCW to implement changes.

Formatting. Once text edits are complete and final, the concise plan (estimated 20 pages) will be formatted in a graphic-heavy, easy-to-absorb, magazine like format (inDesign). The supporting document (60+ pages) will be formatted in Word.

Deliverables: Along with an electronic version of the final UFP and Support Document, the City will receive all PowerPoint presentations and meeting materials that were created, as well as any applicable data tables, mapping, and benchmarking information.

Fee Schedule

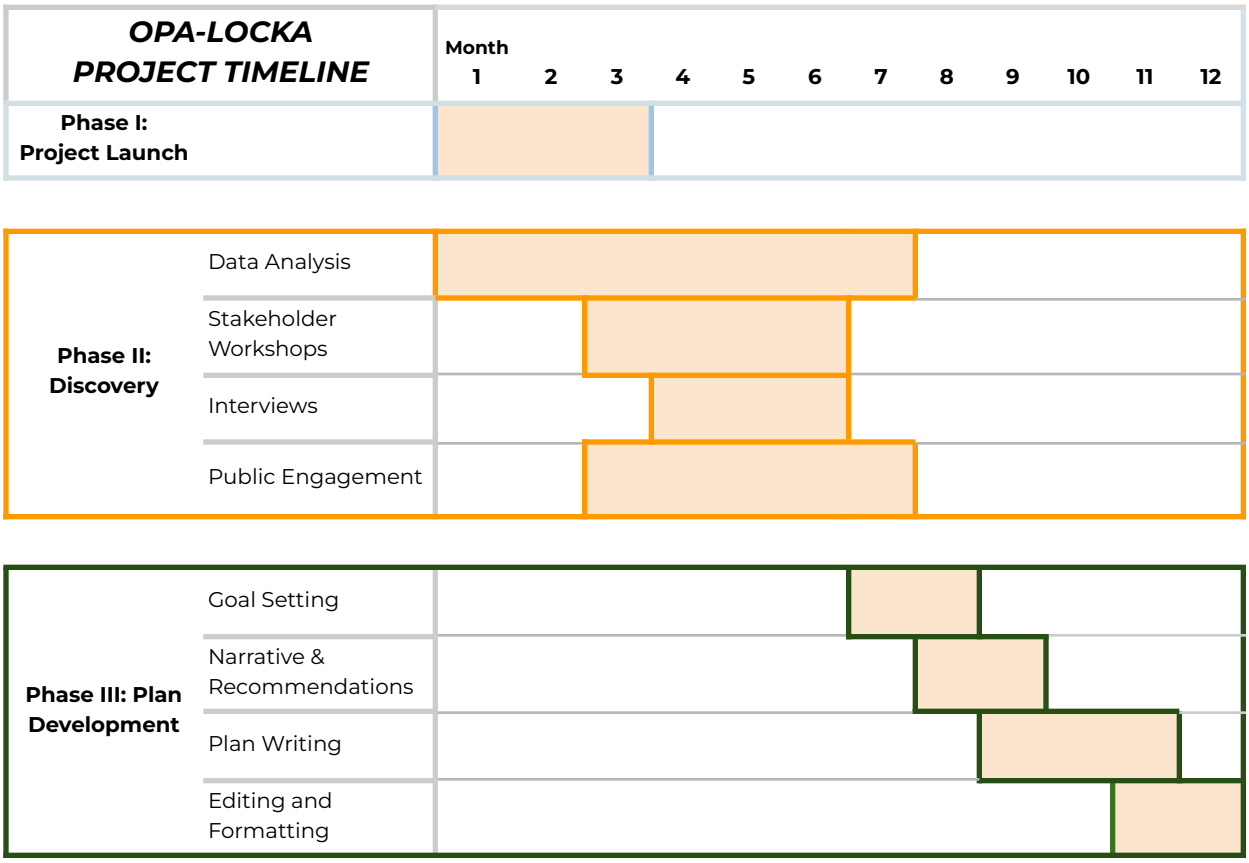
The cost as detailed in the Scope of Work are as follows:

Project Phase	UCW	Dudek	Total
Phase I: Project Launch	$3,000	$2,000	$5,000
Phase II: Discovery	$45,000	$20,000	$65,000
Phase III: Plan Development	$22,000	$8,000	$30,000
Totals	$70,000	$30,000	**$100,000**

The lump sum above includes all materials detailed, as well as travel expenses (flights, hotels). Work will be billed on a monthly basis based on percentage completed for each phase.

Hourly Rates

Rachel Comte (UCW) - $150/hr
Mindy Mohrman (UCW) - $150/hr
Ryan Allen (Dudek) - $210/hr
Rachel Conway (Dudek) - $125/hr
Alexandria Reed (Dudek) - $135/hr
Curtis Battle (Dudek) - $165/hr
Sarah Davidson (Dudek) - $120/hr



Client Responsibilities

The fees for this planning project are based on the City of Opa-Locka performing the following:

- Provide or otherwise make available all urban forestry data, budgets, GIS mapping, plans, reports, and relevant information at no charge and preferably in electronic format.
- Lead the invitation process for all stakeholders and interviewees.
- Handle all logistics for stakeholder and public meetings in terms of sending announcements/invitations, securing the meeting rooms, providing audio-visual equipment, providing refreshments (if desired), printing meeting materials, etc.
- Handle promotions for the survey and other engagement opportunities for the community.
- Staff public events with City staff or volunteers, utilizing material provided by consultants.
- Review the draft of narrative and plan and otherwise coordinate with UCW to be sure that the plan fills the City's expectations.
- Ensure all edits are submitted back to UCW in one combined document (multiple versions of edits will not be accepted) and done so in as timely a manner as possible.

Timeline

The following is a suggested timeline for the Opa-Locka project spanning a period of one year.

A few points to note regarding the project timeline:

- This can be adjusted based on the needs of the City of Opa-Locka and adjustments to scope.
- Holidays in November and December can significantly slow the progress of any project.
- Speed of the editing process timeline depends heavily on City's bandwidth to review and return edits in a timely manner.

UCW Team & Experience

UCW has teamed up with Dudek, an environmental, planning, and engineering firm headquartered in Encinitas, California. Our team of experts for this project will be responsive to the needs of the City of Opa-Locka and their partners and can deliver customized solutions based on our extensive national **experience in urban forestry strategic planning** and established **communication, outreach and facilitation skills**. Our full team is detailed in the UCW Team & Experience section of this proposal.

Project Team & Roles

Our team is made up of dedicated professionals with extensive experience in their respective fields. The core team members for this project will include both the talented UCW team members and select skillful partners**.**

- **Rachel Comte, principal of Urban Canopy Works**, will be the primary project lead and work on all aspects of the project.

- **Mindy Mohrman, consulting urban forester and urban planner at Urban Canopy Works,** will lead the discovery and analysis efforts of Opa-Locka's urban forest resource data and will review the management approach, regulations, structure and resources of the City. This includes conducting internal and external stakeholder interviews, participating in the public input process, and contributing to writing the final plan.

- **Ryan Allen, principal in charge at Dudek**, will lead the Dudek team of experts in the UTC analysis work, as well as outreach efforts, including developing the engagement plan, public meetings, media outreach, community outreach materials, and the online survey.

All team members will work together at the conclusion of the discovery phase to develop the plan itself in the final phase.

Team Profiles

RACHEL COMTE
Principal, Urban Canopy Works
ISA Certified Arborist/TRAQ, Urban Planner

Rachel Comte is an ISA Certified Arborist (TRAQ), urban planner, trained facilitator and communications expert. She is a leading authority on urban forestry master plans based on 10 years experience developing plans for cities across the United States. Rachel is passionate about making cities better, healthier places for people to live, and a substantial vibrant tree canopy is an essential part of this work.

Prior to founding Urban Canopy Works, Rachel served as the lead for urban forest master plans at Davey Resource Group. Between both organizations, she has managed the urban forestry master planning process for Boston (MA), Cleveland (OH), Columbus (OH), Charlotte (NC), Greenbelt (MD), Largo (FL) among others. She also led the Tree Canopy Action Plan policy project for the City of Charlotte (NC), managed in-depth urban tree canopy analysis projects for Louisville/Jefferson County (KY) and for Lexington-Fayette County (KY), and managed a large multi-year tree planting contract for the City of Philadelphia. Rachel performs tree risk assessments for the US Capitol Grounds every year, and serves as a consulting urban forester for multiple municipalities in the Cincinnati metro area.

Prior to her urban forest management experience, Rachel served in diverse roles throughout her career. She has almost 30 years' combined experience in project management, strategic marketing, consulting, landscape design, green infrastructure, and planning and urban forestry and has worked in the private, public and not-for-profit sectors. Starting in project management and marketing in Washington DC for a business lobby, she later held positions in the private sector in online marketing and communications, and served at the White House as a Special Projects Officer. Rachel transitioned into environmental planning after completing a graduate degree in urban environmental planning while working for a regional planning commission. She also worked for a non-profit to clean and plant abandoned urban lots to end blight and

encourage redevelopment. Rachel has conducted research in natural resource issues like economic impacts of restoring urban waterways, impact of fracking on communities, trends in land conservation, and trees' impact on stormwater mitigation.

Learn more about Rachel at www.urbancanopyworks.com/rachel-comte.html.

MINDY MOHRMAN
Consulting Urban Forester, Urban Planner at Urban Canopy Works
ISA Certified Municipal Arborist/TRAQ

Mindy Mohrman is an ISA Certified Arborist/Municipal Specialist and an Urban Forester and Urban Planner with 20 years of experience serving as a City Forester and Urban Planner in local governments. She focuses her work on practical, real-world solutions that achieve long term positive results. Mindy is a passionate believer that planning space for trees as part of the fabric of a city improves quality of life, defines a unique sense of place, and provides substantial health benefits.

Prior to joining Urban Canopy Works, Mindy served as the Urban Forester and Administrator of Comprehensive Planning for the Tallahassee-Leon County Planning Department in Tallahassee, Florida. There, she implemented comprehensive, long term urban forestry and natural resource programs and policies, including the development and implementation of the City's first Urban Forest Master Plan. Prior to Tallahassee, Mindy served as the Urban Forester for the City of Chesterfield (MO), where she implemented the City's first public tree inventory, street tree management plan, street tree planting program, and emerald action borer action plan. She has gained years of experience reviewing, revising, and improving tree preservation and planting code regulations and policies, including performing public outreach and engagement to ensure that the results of these regulations provided the benefits most important to the community.

Learn more about Mindy at www.urbancanopyworks.com/mindy-mohrman.html.

RYAN ALLEN
Principal in Charge, Dudek
ISA Certified Municipal Arborist/TRAQ

Ryan Allen is an urban forester with 15 years' experience providing strategic environmental planning to organizational programs. Mr. Allen's work deepens the positive impact on the communities he serves and increases organizational capacity. Mr. Allen has experience working with elected officials and staff and building and maintaining strategic partnerships. Mr. Allen is the practice lead for Dudek's Urban Forest Management Planning team, which has a goal to create a "healthy urban forest for our future." Since 2018, Mr. Allen has led the development of urban forest plans throughout California, including Los Angeles County, Fresno, Rancho Cucamonga, Alameda, San Mateo, Salinas, Temecula, and many others.

ALEXANDRIA REED
Data Scientist, Dudek

Alexandria Reed (she/her) is a data scientist with 5 years' professional experience as an environmental consultant specializing in data-driven environmental analysis, data visualizations, compliance, and project management. Ms. Reed is adept at utilizing statistical analysis, geospatial tools, and machine learning techniques to inform decision-makers and address complex environmental challenges. Her expertise

extends to utilizing R and GIS software for spatial data analysis, enabling the calculation of tree canopy cover and the creation of customized map layers for tree inventory systems. Furthermore, Ms. Reed plays a pivotal role in offering technical data support for a wide range of projects, including those related to urban forestry, wildlife distribution, water quality, and preliminary environmental analysis reports.

RACHEL CONWAY

Community Outreach Specialist, Dudek

Rachel Conway (RAY-chul CON-way; she/her) is an environmental scientist with 3 years' experience in urban forestry. She is experienced in all aspects of implementing tree planting programs from navigating city permits, planning, maintaining trees, and report gathering. She also assisted in the development of the City of New Orleans Urban Forest Master Plan. Ms. Conway has a wide skill set in urban forest data analysis, community engagement, environmental education, and climate change.

SARAH DAVIDSON

Creative Designer, Dudek

Sarah is a creative designer with 6 years' experience creating visually captivating work. Ms. Davidson's capabilities include publication layout, branding, illustration (including scientific and archaeological illustration), print work, social media, and other creative marketing collateral. Ms. Davidson has extensive experience working alongside environmental projects, specifically on projects with cultural and paleontological sensitivity. She has experience working on projects for City of Rancho Cordova, City of La Mesa, City of San Diego, and more. As a marketing professional, Ms. Davidson's goal is to create aesthetically appealing collateral that tells a visual story, while succinctly providing data and information.

CURTIS BATTLE

GIS Technician

Curtis Battle is a geographic information systems (GIS) technician with 11 years' experience in a wide variety of GIS platforms and techniques. Mr. Battle has expertise in ArcMap, ArcCatalog, and ArcPad; Trimble, Spectra, and Garmin GPS platforms; geodatabase construction and maintenance; quantitative geographic methods; cartography; species distribution modeling; remote sensing fundamentals and methods; Python programming; and cartography. He has provided GIS support for numerous environmental impact reports (EIRs); technical studies, including biological technical reports, vegetation mapping, and wildlife surveys; mitigated negative declarations; preliminary environmental analysis reports; initial studies; and mitigation monitoring and reporting programs.

Representative Projects

Knoxville (TN) Urban Forest Master Plan

Project Website: KnoxvilleTreePlan.org
Contact: Kasey Krouse, Urban Forester, City of Knoxville, 865-215-6113, kasey@knoxvilletn.gov
Project Length 14 months

The City of Knoxville has seen significant changes in canopy over the last ten years, and recognizes the value trees provide both in public health benefits and by reducing the effects of climate change, air pollution, and flooding. Trees Knoxville, a Knox County tree nonprofit organization, has partnered with the City of Knoxville, Keep Knoxville Beautiful, TN Division of Forestry and Knoxville Utilities Board, to lead the community in an urban forest master plan. This plan is currently in development, with expected completion in February 2024. More information can be found at the project website at www.knoxvilletreeplan.org.

City of Columbus (OH) Urban Forestry Master Plan

Project Website: ColumbusUFMP.org
Contact: Rosalie Hendon, Environmental Planner, City of Columbus, 614-724-3003, rfhendon@columbus.gov
Project Length 14 months

The City of Columbus made a decision to proactively manage, preserve and grow its urban forest through an urban forestry master plan (UFMP). This was a critical step for the city, especially in light of the exponential growth expected and existing public health challenges combined with a warming climate. At the time of the plan, tree canopy was not equitably distributed across the city, causing disparities in health, economic prosperity and overall quality of life. This plan was aimed at reversing this situation and providing more efficient and effective urban forest management services to citizens. This project engaged a 100+ member Advisory Group in multiple working meetings to assess the conditions of the existing urban forest and to determine the community's priorities. Input was also collected through the project website and a well-attended public open house. An internal operations review was conducted, as well as a full review of the policies, plans and codes in place.

Boston (MA) Urban Forest Plan

Project Website: City of Boston Website
Contact: Maggie Owens, Planner, City of Boston, 617-821-6884, maggie.owens@boston.gov
Project Length 15 months

In Boston, nearly 700,000 people depend on the many benefits provided by the trees in the urban forest. The Boston Urban Forest Plan is a strategic long-term investment in the health of the trees and canopy in Boston, and the City's diverse residents, and will likely have a regional effect. The development of an Urban Forest Plan was spearheaded by a team co-lead by Stoss Landscape Urbanism and Urban Canopy Works. UCW worked within a team to engage the public and City leadership in discovery and dialogue to improve Boston's urban forest, especially in the face of climate change and expected rise of heat and sea level. The entire project focused on building a plan with a primary lens of equity, based on science, and created and defined by the needs and desires of the community. This project was completed in 2023.

Final Thoughts

UCW delivers creative solutions to all our clients because of a simple and thoughtful approach we take to help cities and organizations define their vision and set their goals:

We **listen** first. You and your goals, needs, and mission are unique. We take the time to listen, ask questions, and learn from you so we can better understand the issues and focus on practical solutions.

Then **provide guidance**. Using our expertise and experience in combination with your insights and participation, we will guide you to find creative and strategic answers to your questions.

Ultimately, we **deliver creative and realistic solutions**. Because of the collaborative approach we take, our services are customized for you, your budget, and your resources. We deliver practical, realistic, and attainable solutions.

Together, Urban Canopy Works and Dudek will work with the City of Opa-Locka to lead the community through a process to develop and deliver an Urban Forest Plan that is guided by data, driven by community goals and concerns, and understandable and relatable to every resident.

CITY OF OPA-LOCKA
DRUG-FREE WORKPLACE CERTIFICATION FORM

Whenever two (2) or more bids/proposals, which are equal with respect to price, quality, and service, are received by the CITY OF OPA-LOCKA for the procurement of commodities or contractual services, a bid/proposal received from a business that certifies that it has implemented a drug-free workplace program shall be given preference in the award process. In order to have a drug-free workplace program, a business shall:

1. Publish a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of controlled substances is prohibited in the workplace and specifying the actions that will be taken against employees for violations of such prohibition.

2. Inform employees about the dangers of drug abuse in the workplace, the business's policy of maintaining a drug-free workplace, any available drug counseling, rehabilitation, and employee assistance programs, and the penalties that may be imposed upon employees for drug abuse violations.

3. Give each employee engaged in providing the commodities or contractual services that are under bid a copy of the statement specified in number (1).

4. In the statement specified in number (1), notify the employees that as a condition for working on the commodities or contractual services that are under bid, the employee will abide by the terms of the statement and will notify the employer of any conviction on or plea of guilty or no contest to any violation of Chapter 893, Florida Statutes or of any controlled substance law of the United States or any singular state, for a violation occurring in the workplace no later than five (5) days after such conviction.

5. Impose a sanction on, or require the satisfactory participation in a drug abuse assistance or rehabilitation program if such is available in the employee's community by any employee who is so convicted.

6. Make a good faith effort to continue to maintain a drug-free workplace through implementation of Section 287.087, Florida Statutes.

This Certification is submitted by Rachel Comte (Name) the Owner (Title/Position) of Urban Canopy Works, LLC (Company)

who does hereby certify that said Company has implemented a drug-free workplace program, which meets the requirements of Section 287.087, Florida Statutes, which are identified in numbers (1) through (6) above.

11/28/23 (Date) Rachel Comte (Signature)

PRICE PROPOSAL FORM

PROPONENT understands and agrees that the Contract Price is the lump sum to furnish and install all of the Work complete in place. Vendor's price will not be adjusted unless the CITY changes the scope of the Project after the Contract Date.

As such, the Vendor shall furnish all labor, materials, equipment, tools, superintendence, and services necessary to provide a complete, in place Project for the Proposed Price of:

LUMP SUM PRICE: $ 100,000

SUBMITTED THIS 28 DAY OF November 2023.

E-VERIFY

Effective January 1, 2021, public and private employers, contractors and subcontractors will be required to register with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/sub-contractors) assigned by Vendor /Consultant/ Contractor to perform work pursuant to the contract with the Department. The Vendor /Consultant/ Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City; and

By entering into a Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If t contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination. The Contractor acknowledges it is liable to the City for any additional costs as a result of termination of the contract due to Contractor's failure to comply with the provisions herein.

E-VERIFY FORM

Definitions:

"Contractor" means a person or entity that has entered or is attempting to enter into a contract with a public employer to provide labor, supplies, or services to such employer in exchange for salary, wages, or other remuneration.

"Subcontractor" means a person or entity that provides labor, supplies, or services to or for a contractor or another subcontractor in exchange for salary, wages, or other remuneration.

Effective January 1, 2021, public and private employers, contractors and subcontractors will begin required registration with, and use of the E-verify system in order to verify the work authorization status of all newly hired employees. Vendor/Consultant/Contractor acknowledges and agrees to utilize the U.S. Department of Homeland Security's E-Verify System to verify the employment eligibility of:

a) All persons employed by Vendor/Consultant/Contractor to perform employment duties within Florida during the term of the contract; and

b) All persons (including sub-vendors/subcompanies/subcontractors) assigned by Vendor/Consultant/Contractor to perform work pursuant to the contract with the Department. The Vendor/Consultant/Contractor acknowledges and agrees that use of the U.S. Department of Homeland Security's E-Verify System during the term of the contract is a condition of the contract with the City of Opa-locka; and

Should vendor become successful Contractor awarded for the above-named project, by entering into this Contract, the Contractor becomes obligated to comply with the provisions of Section 448.095, Fla. Stat., "Employment Eligibility," as amended from time to time. This includes but is not limited to utilization of the E-Verify System to verify the work authorization status of all newly hired employees, and requiring all subcontractors to provide an affidavit attesting that the subcontractor does not employ, contract with, or subcontract with, an unauthorized alien. The contractor shall maintain a copy of such affidavit for the duration of the contract. Failure to comply will lead to termination of this Contract, or if a subcontractor knowingly violates the statute, the subcontract must be terminated immediately. If this contract is terminated for a violation of the statute by the Contractor, the Contractor may not be awarded a public contract for a period of 1 year after the date of termination.

Company Name: Urban Canopy Works, LLC

Authorized Signature: Rachel Conte

Form **W-9**
(Rev. October 2018)
Department of the Treasury
Internal Revenue Service

Request for Taxpayer Identification Number and Certification

▶ Go to *www.irs.gov/FormW9* for instructions and the latest information.

Give Form to the requester. Do not send to the IRS.

Print or type. See Specific Instructions on page 3.

1 Name (as shown on your income tax return). Name is required on this line; do not leave this line blank.
Urban Canopy Works, LLC

2 Business name/disregarded entity name, if different from above
--

3 Check appropriate box for federal tax classification of the person whose name is entered on line 1. Check only **one** of the following seven boxes.

☑ Individual/sole proprietor or single-member LLC ☐ C Corporation ☐ S Corporation ☐ Partnership ☐ Trust/estate

☐ Limited liability company. Enter the tax classification (C=C corporation, S=S corporation, P=Partnership) ▶ _____

Note: Check the appropriate box in the line above for the tax classification of the single-member owner. Do not check LLC if the LLC is classified as a single-member LLC that is disregarded from the owner unless the owner of the LLC is another LLC that is **not** disregarded from the owner for U.S. federal tax purposes. Otherwise, a single-member LLC that is disregarded from the owner should check the appropriate box for the tax classification of its owner.

☐ Other (see instructions) ▶

4 Exemptions (codes apply only to certain entities, not individuals; see instructions on page 3):
Exempt payee code (if any) _____
Exemption from FATCA reporting code (if any) _____
(Applies to accounts maintained outside the U.S.)

5 Address (number, street, and apt. or suite no.) See instructions.
817 Dayton Street

Requester's name and address (optional)

6 City, state, and ZIP code
Newport, KY 41071

7 List account number(s) here (optional)

Part I Taxpayer Identification Number (TIN)

Enter your TIN in the appropriate box. The TIN provided must match the name given on line 1 to avoid backup withholding. For individuals, this is generally your social security number (SSN). However, for a resident alien, sole proprietor, or disregarded entity, see the instructions for Part I, later. For other entities, it is your employer identification number (EIN). If you do not have a number, see *How to get a TIN*, later.

Note: If the account is in more than one name, see the instructions for line 1. Also see *What Name and Number To Give the Requester* for guidelines on whose number to enter.

Social security number
[ ][ ][ ] - [ ][ ] - [ ][ ][ ][ ]

or

Employer identification number
8 2 - 4 8 5 2 0 6 5

Part II Certification

Under penalties of perjury, I certify that:

1. The number shown on this form is my correct taxpayer identification number (or I am waiting for a number to be issued to me); and
2. I am not subject to backup withholding because: (a) I am exempt from backup withholding, or (b) I have not been notified by the Internal Revenue Service (IRS) that I am subject to backup withholding as a result of a failure to report all interest or dividends, or (c) the IRS has notified me that I am no longer subject to backup withholding; and
3. I am a U.S. citizen or other U.S. person (defined below); and
4. The FATCA code(s) entered on this form (if any) indicating that I am exempt from FATCA reporting is correct.

Certification instructions. You must cross out item 2 above if you have been notified by the IRS that you are currently subject to backup withholding because you have failed to report all interest and dividends on your tax return. For real estate transactions, item 2 does not apply. For mortgage interest paid, acquisition or abandonment of secured property, cancellation of debt, contributions to an individual retirement arrangement (IRA), and generally, payments other than interest and dividends, you are not required to sign the certification, but you must provide your correct TIN. See the instructions for Part II, later.

Sign Here Signature of U.S. person ▶ Rachel Conklin Date ▶ 9/26/23

General Instructions

Section references are to the Internal Revenue Code unless otherwise noted.

Future developments. For the latest information about developments related to Form W-9 and its instructions, such as legislation enacted after they were published, go to *www.irs.gov/FormW9*.

Purpose of Form

An individual or entity (Form W-9 requester) who is required to file an information return with the IRS must obtain your correct taxpayer identification number (TIN) which may be your social security number (SSN), individual taxpayer identification number (ITIN), adoption taxpayer identification number (ATIN), or employer identification number (EIN), to report on an information return the amount paid to you, or other amount reportable on an information return. Examples of information returns include, but are not limited to, the following.

- Form 1099-INT (interest earned or paid)
- Form 1099-DIV (dividends, including those from stocks or mutual funds)
- Form 1099-MISC (various types of income, prizes, awards, or gross proceeds)
- Form 1099-B (stock or mutual fund sales and certain other transactions by brokers)
- Form 1099-S (proceeds from real estate transactions)
- Form 1099-K (merchant card and third party network transactions)
- Form 1098 (home mortgage interest), 1098-E (student loan interest), 1098-T (tuition)
- Form 1099-C (canceled debt)
- Form 1099-A (acquisition or abandonment of secured property)

Use Form W-9 only if you are a U.S. person (including a resident alien), to provide your correct TIN.

If you do not return Form W-9 to the requester with a TIN, you might be subject to backup withholding. See What is backup withholding, *later.*

PROPOSER QUALIFICATIONS

The Proposer, as a result of this proposal, MUST hold a County and/or Municipal Contractor's Occupational License in the area of their fixed business location. The following information MUST be completed and submitted with the proposal to be considered:

1. Legal Name and Address:

   Name: Urban Canopy Works, LLC

   Address: 817 Dayton Street

   City, State, Zip: Newport KY 41071 Phone/Fax: 859-638-2044

2. Check One: Corporation ( ) Partnership ( ) Individual (✓)

3. If Corporation, state:
   Date of Incorporation: — State in which Incorporated: Registered in KY

4. If an out-of-state Corporation, currently authorized to do business in Florida, give date of such authorization:
   Dudek License F19000002431 Issued 5/21/19

5. **Name and Title of Principal Officers** **Date Elected:**

Rachel Conte, owner	2018

6. The length of time in business: 5 years (UCW)
   43 years (Dudek)

7. The length of time (continuous) in business as a service organization in Florida:
   5 years (Dudek)

8. Provide a list of at least three commercial or government references that the bidder has supplied service/commodities meeting the requirements of the City of Opa-locka specification, during the last twenty-four months.

9. A copy of County and/or Municipal Occupational License(s) - attached

Note: *Information requested herein and submitted by the proposers will be analyzed by the City of Opa-locka and will be a factor considered in awarding any resulting contract. The purpose is to ensure that the Contractors, in the sole opinion of the City of Opa-locka, can sufficiently and efficiently perform all the required services in a timely and satisfactory manner as will be required by the subject contract. If there are any terms and/or conditions that are in conflict, the most stringent requirement shall apply.*

State of Florida
Department of State

I certify from the records of this office that DUDEK, INC. is a California corporation authorized to transact business in the State of Florida, qualified on May 21, 2019.

The document number of this corporation is F19000002431.

I further certify that said corporation has paid all fees due this office through December 31, 2019 and that its status is active.

I further certify that said corporation has not filed a Certificate of Withdrawal.

Given under my hand and the Great Seal of the State of Florida at Tallahassee, the Capital, this the Twenty-fourth day of June, 2019

RESOLUTION NO. 23-_____

A RESOLUTION OF THE CITY COMMISSION OF THE CITY OF OPA-LOCKA, FLORIDA, APPROVING ISSUANCE OF A REQUEST FOR PROPOSALS ("RFP") FOR THE REHABILITATION OF LIFT STATIONS 9 AND 16, WITHIN THE CITY; PROVIDING FOR INCORPORATION OF RECITALS; PROVIDING FOR AN EFFECTIVE DATE.

WHEREAS, the City of Opa-Locka ("City") desires to issue a Request for Proposals ("RFP") for the Rehabilitation of Lift Stations 9 and 16, within the City; and

WHEREAS, the scope of work will consists of furnishing all materials, labor, and equipment necessary to Upgrade Sewage Pump Stations No. 9 and, 16, including, but not limited to, excavation, demolition, and modification work including Abandon existing dry well; Remove dry well chimney; Remove existing pumps, valves, piping, fittings, emergency discharge connection, existing sewer clean out plug, existing concrete slabs; existing wet well top slab; Remove and Replace in kind to match existing 6'(feet) chain link fence; Remove and Relocate as required: existing water meter and connect the line to existing service; existing RTU antenna, existing electric box, existing concrete slab for electrical service; Relocate as required existing back flow preventer unit and water faucet, existing plug valve; furnish, installation, operation, and removal of temporary sewage effluent by-pass pumps, equipment and accessories; and

WHEREAS, it will also be necessary for the Contractor to also install a wet well concrete top slab / new valve vault structure concrete and concrete top slab; furnish and install aluminum access hatches for wet well and valve vault and emergency connection; furnish and install new wet well protecting coating; furnish and install two (2) 2.68 HP submersible pumps and related equipment; furnish and install bubbler control system and related equipment; furnish and install new meter and main disconnect; furnish and install the proposed power/control system inclusive of the necessary electrical panel, enclosure, telemetry system, and related equipment; install electrical conduits and junction boxes; install R.T.U. panel and S.C.A.D.A. equipment furnished by the Department; electrical work; mechanical work: furnish all materials, equipment, and supplies necessary for pump stations startup and testing; furnish and install sewage force main pipe and fittings; connection to existing sewage force main; replacement of any sod, sidewalk, pavement damaged during construction; site restoration; and other appurtenant and miscellaneous items for a complete, satisfactory and functional installation; and

WHEREAS, the City Commission authorizes the Interim City Manager to issue an RFP for the Rehabilitation of Lift Stations 9 and 16, within the City and further authorizes the spending of up to Three Thousand Dollars ($3,000.00) for advertising purposes, if deemed appropriate.

NOW, THEREFORE, BE IT DULY RESOLVED BY THE CITY COMMISSION OF THE CITY OF OPA- LOCKA, FLORIDA:

SECTION 1. The recitals to the preamble herein are incorporated by reference.

SECTION 2. AUTHORIZATION

The City Commission of the City of Opa-Locka hereby approves the issuance of a Request for Proposals (RFP), attached hereto as Exhibit "A", for the Rehabilitation of Lift Stations 9 and 16, within the City and further authorizes the spending of up to Three Thousand Dollars ($3,000.00) for advertising purposes, if deemed appropriate.

SECTION 3. SCRIVENER'S ERRORS

Sections of this Resolution may be renumbered or re-lettered and corrections of typographical errors, which do not affect the intent of this Resolution may be authorized by the Interim City Manager, following review by the City Attorney, without need of public hearing, by filing a corrected copy of same with the City Clerk.

SECTION 4. EFFECTIVE DATE

This Resolution shall take effect upon the adoption and is subject to the approval of the Governor or Governor's Designee.

PASSED and **ADOPTED** this _____ day of _____, 2024.

Short Title:

Request for Proposals - Lift Stations 9 and 16 Rehabilitation Project
Project No. TBA

Staff Summary:

The City of Opa-locka (City) seeks proposals from qualified General Contractors for the Rehabilitation of Lift Stations 9 and 16.

The project consists of furnishing all materials, labor, and equipment necessary to Upgrade Sewage Pump Stations No. 9 and, 16, including, but not limited to, excavation, demolition, and modification

work including Abandon existing dry well; Remove dry well chimney; Remove existing pumps, valves, piping, fittings, emergency discharge connection, existing sewer clean out plug, existing concrete slabs; existing wet well top slab; Remove and Replace in kind to match existing 6'(feet) chain link fence; Remove and Relocate as required: existing water meter and connect the line to existing service; existing RTU antenna, existing electric box, existing concrete slab for electrical service; Relocate as required existing back flow preventer unit and water faucet, existing plug valve; furnish, installation, operation, and removal of temporary sewage effluent by-pass pumps, equipment and accessories; furnish and install wet well concrete top slab / new valve vault structure concrete and concrete top slab; furnish and install aluminum access hatches for wet well and valve vault and emergency connection; furnish and install new wet well protecting coating; furnish and install two (2) 2.68 HP submersible pumps and related equipment; furnish and install bubbler control system and related equipment; furnish and install new meter and main disconnect; furnish and install the proposed power/control system inclusive of the necessary electrical panel, enclosure, telemetry system, and related equipment; install electrical conduits and junction boxes; install R.T.U. panel and S.C.A.D.A. equipment furnished by the Department; electrical work; mechanical work: furnish all materials, equipment, and supplies necessary for pump stations startup and testing; furnish and install sewage force main pipe and fittings; connection to existing sewage force main; replacement of any sod, sidewalk, pavement damaged during construction; site restoration; and other appurtenant and miscellaneous items for a complete, satisfactory and functional installation.

Financial Impact The FY 24 Budget allocates $700,000 for the rehabilitation of Pump Station 9 and $800,000 for the rehabilitation of Pump Station 16, with all funding being ARPA grant funding. Since this is only a request to issue an RFP for this project, there is no commitment of these funds at this time. However, to ensure broad distribution of this RFP, staff may choose to publish it in publications in addition to electronic distribution, at a cost not to exceed $3,000. This will be funded from the Non-Department Other Advertising Account (19-514380) which currently has available funding of $13,059.

Proposed Action:

Staff recommends the issuance of a Request for Proposals for the Comprehensive Rehabilitation of Pump Stations 9 and 16 at an issuance cost not to exceed $3,000.

STANDARD REQUIREMENTS FOR WATER AND SEWER CONSTRUCTION (GS 0.5-SHEET 1 OF 2)

1. ALL MATERIALS AND CONOSTRUCTION UNDER THIS PROJECT SHALL BE IN STRICT ACCORDANCE WITH THE REQUIREMENTS OF THE MIAMI–DADE WATER AND SEWER DEPARTMENT AND SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS AVAILABLE AND ON FILE WITH THE DEPARTMENT. SUBMIT SHOP DRAWINGS FOR ALL MATERIALS.

2. COVER OVER WATER OR SEWER FORCE MAINS SHALL BE 3'–0" MIN. UNDER RIGID PAVEMENT.

3. ALL MAIN LINE VALVES SHALL BE INSTALLED COMPLETE WITH 10" RISER PIPES AND NO. 3 OR 53 VALVE BOXES FIRE HYDRANTS AND SERVICE VALVES SHALL BE INSTALLED COMPLETE WITH 6" RISER PIPES AND NO. 2 VALVE BOXES.

4. ALL FORCE MAIN SERVICE CONNECTIONS INTO PRESSURE TRANSMISSION MAINS SHALL HAVE A SHUT OFF VALVE AT THE POINT OF ENTRY.

5. ALL GRAVITY SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH DEPARTMENT STANDARDS.

6. FIRE HYDRANT REQUIREMENTS (NUMBER AND LOCATION) SHALL BE AS REQUIRED BY THE MIAMI–DADE COUNTY FIRE DEPARTMENT OR THE APPROPRIATE FIRE AGENCY WITH INSTALLATION IN ACCORDANCE WITH DEPARTMENT STANDARDS.

7. CONTRACTOR MUST CALL M–DWASD INSPECTION DIVISION TO ARRANGE FOR A PRE–CONSTRUCTION MEETING 2 FULL BUSINESS DAYS PRIOR TO PROPOSED START OF CONSTRUCTION. CONTACT ONE CALL CENTER 48 HRS PRIOR TO EXCAVATION.

8. WORK PERFORMED UNDER THIS PROJECT WILL NOT BE CONSIDERED AS COMPLETE UNTIL FINAL ACCEPTANCE OF THE SYSTEM BY THE DEPARTMENT AND UNTIL THE FOLLOWING DOCUMENTS ARE RECEIVED AND APPROVED BY THE DEPARTMENT.
   a. EASEMENTS, IF REQUIRED.
   b. CONTRACTOR'S WAIVER AND RELEASE OF LIEN.
   c. ABSOLUTE BILL OF SALE.
   d. i. CONTRACTOR'S LETTER OF WARRANTY (I.E., LETTER AGREEMENT). ii. DEVELOPER'S CONTRACT BOND (I.E., CONTRACT AGREEMENT).
   e. "AS–BUILT" PRINTS 24"x36" SHOWING SPECIFIC LOCATIONS, DEPTH, ETC. OF All WATER AND SEWER FACILITIES AS LOCATED BY A LICENSED FLORIDA SURVEYOR, ALONG WITH PRINTS OF "AS–BUILT WHICH HAVE BEEN SIGNED AND SEALED BY A REGISTERED SURVEYOR. (No. OF PRINTS: 3–FOR WATER, 4–FOR GRAVITY SEWER AND 5–FOR FORCE MAIN OR PUMP STATION PROJECTS). THE DEPARTMENT RESERVES THE RIGHT TO REQUIRE SUBMITTAL ON ELECTRONIC MEDIA IN ACCORDANCE WITH SEC. 01775 "MAGNETIC MEDIA SUBMITTAL".
   f. H.R.S. LETTER OF RELEASE REQUIRED FOR All WATER PROJECTS.
   g. Bill OF SALE SKETCH (8 1/2"x11") FOR WATER AND SEWER, SEPARATELY.

11. All NEW CONNECTIONS FROM EXISTING DEPARTMENT MAINS TO BE MADE BY DEPARTMENT FORCES ONLY. THE CONTRACTOR TO EXCAVATE AT REQUIRED LOCATIONS, PROVIDE AND INSTALL MATERIAL WITH FITTINGS, PRIOR TO TAP.

12. AN APPROVED PAVING AND DRAINAGE PLAN MUST BE SUBMITTED TO MDWASD FOR All NEW SUBDIVISIONS PRIOR TO APPROVAL OF WATER AND SEWER PERMIT PLANS, UPON REQUEST.

13. UNLESS OTHERWISE SPECIFIED, All TAPS 20 INCHES AND SMALLER FOR CONNECTIONS TO EXISTING MAINS Will BE DONE BY DEPARTMENT FORCES. UNDER NO CIRCUMSTANCES Will THE CONTRACTOR BE PERMITTED TO TAP EXISTING MAINS IN THE SIZE RANGE SPECIFIED ABOVE. THE TAPPING SLEEVE AND TAPPING VALVE ARE FURNISHED AND INSTALLED BY THE CONTRACTOR UNDER THE SUPERVISION OF THE INSPECTOR.

"AS-BUILT" REQUIREMENTS FOR WATER AND SEWER CONSTRUCTION (GS 0.5- SHEET 2 OF 2)

1. AT THE COMPLETION OF ANY WATER AND SEWER JOB, EITHER DONATION OR CONTRACT, THE CONTRACTOR SHALL SUBMIT:

a. AS–BUILT PRINTS WHICH HAVE BEEN SIGNED AND SEALED BY A FLORIDA LICENSED PROFESSIONAL SURVEYOR AND MAPPER. (QTY. OF PRINTS, AS REQUIRED BY THE DEPARTMENT.)

2. "AS–BUILT" FORMAT:

a. 24"x36" PRINTS
b. LOCATION MAP SCALE SHOULD BE 1"=300' AND SECTION –TOWNSHIP–RANGE SHOULD BE SHOWN.
c. THE WORD "AS–BUILT" IN LARGE LETTERS.
d. TITLE BLOCK WITH DEPARTMENT DS, DW OR ER NUMBER AND PERTINENT INFORMATION.
e. PREFERRED SCALE TO BE I"= 40' HORIZONTALLY AND I"= 4' VERTICALLY*.
f. STREET NOMENCLATURE.
g. SEPARATE AS–BUILTS FOR WATER AND SEWER.
h. SEPARATE WATER AND SEWER PROFILE.
i. STATIONING STARTING WITH 0+00 AT PERMANENT REFERENCE POINT (I.E., CL,SL , ETC.) OR AS SHOWN ON DESIGN PERMIT PLANS, AND TO RUN CONTINUOUSLY TO END OF MAIN.
j. EASEMENTS, IF ANY, TIED TO PERMANENT REFERENCE POINT.
k. IDENTIFY ALL CONTROL LINES (I.E. BLDG. LINE, PROPERTY LINE, R/W, ETC).
l. ALL "PROPOSED" INFORMATION TO BE REMOVED FROM PRINTS, LEAVING ONLY "AS–BUILT" INFORMATION REFLECTED IN DRAWINGS.

3. WATER "AS–BUILTS" MUST INCLUDE:

a. PLANS SHOWING PIPE SIZE, MATERIAL AND OFFSET OF MAIN, DEFLECTIONS (IF ANY), STATION OF SERVICES, HYDRANTS AND FITTINGS AT THE MAINLINE (IF PERPENDICULAR TO IT), AND AT MAIN AND END OF SERVICES IF ANY, OTHER ANGLE, AND DEFLECTION OF PIPE, IF ANY.
b. PROFILE SHOWING TOP OF GROUND AND TOP OF PIPE ELEVATIONS AT EVERY 100' STATION AND AT ANY CHANGE IN GRADE (WITH CORRESPONDING STATION), PIPE SIZE AND PIPE MATERIALS REFERENCED TO PLAN.

4. SEWER "AS–BUILTS" MUST INCLUDE:

a. PLAN SHOWING MANHOLE NUMBER, PIPE SIZE AND PIPE MATERIAL OF PIPE, DEFLECTION, IF ANY (FORCE MAIN ONLY), AND LOCATION OF LATERALS WITH REFERENCE TO MANHOLE.
b. PROFILE SHOWING MANHOLE NUMBER (AS PER PLAN), RIM AND INVERT ELEVATIONS (IF MORE THAN ONE INVERT, LABEL NORTH, SOUTH , ETC), AND STATION STARTING AT EACH 0+00 AT DOWNSTREAM MANHOLE.

5. FORCE MAIN "AS–BUILT" SAME AS WATER MAIN ABOVE.
6. EACH AS–BUILT SHALL SHOW THE FLORIDA STATE PLANE COORDINATES (CURRENT READJUSTMENT) OF ALL THE MANHOLES AND VALVES AND OF AT LEAST TWO HORIZONTAL CONTROL POINTS PROPERLY IDENTIFIED AND LOCATED WITHIN THE PROJECT. OTHER SCALE MAY BE PERMITTED, BUT MUST BE APPROVED BY THE DEPA OF DRAWINGS.

RER-DERM WATER-SEWER GENERAL NOTES

1. A horizontal distance of at least 6 feet, and preferably 10 feet (outside to outside), shall be maintained between gravity or pressure sewer pipes and water pipes. The minimum horizontal separation can be reduced to 3 feet for vacuum-type sewers or for gravity sewers where the top of the sewer pipe is at least 6 inches below the bottom of the water pipe. When the above specified horizontal distance criteria cannot be met due to an existing underground facility conflict, smaller separations are allowed if one of the following is met:
   a) The sewer pipes are designed and constructed equal to the water pipe and pressure tested at 150 psi.
   b) The sewer is encased in a watertight carrier pipe or concrete.
   c) The top of the sewer is at least 18 inches below the bottom of the water pipe.

2. A vertical distance of at least 12 inches (outside to outside) shall be maintained between any water and sewer mains with sewer pipes preferably crossing under water mains. The minimum vertical separation can be reduced to 6 inches for vacuum-type sewers or for gravity sewers where the sewer pipe is below the water main. The crossing shall be arranged so that all water main joints are at least 6 feet from all joints in gravity and pressure sewer pipes. This distance can be reduced to 3 feet for vacuum-type sewers. When the above specified vertical distance criteria cannot be met due to an existing underground facility conflict, smaller separations are allowed if one of the following is met:
   a) The sewer pipes are designed and constructed equal to the water pipe and pressure tested at 150 psi.
   b) The sewer is encased in a watertight carrier pipe or concrete.

3. Air release valves shall be provided at high points of new force main sanitary sewers.

4. Gravity sanitary sewers constructed within a public wellfield protection area shall be C-900 PVC or Ductile Iron Pipe. The maximum allowable exfiltration rate of gravity sanitary sewers constructed in a public wellfield protection area shall be:
   a) Residential Land Uses. Fifty (50) gallons per inch pipe diameter per mile per day, based on a minimum two (2) hour test having a minimum of two (2) feet of positive head above the crown of the pipe.
   b) Non-Residential Land Uses. Twenty (20) gallons per inch pipe diameter per mile per day, based on a minimum two (2) hour test having a minimum of two (2) feet of positive head above the crown of the pipe.
   c) Any observed leaks or any obviously defective joints or pipes shall be replaced even when the total leakage is below that allowed.

5. The maximum allowable exfiltration rate of gravity sanitary sewers constructed outside a public wellfield protection area shall be one hundred (100) gallons per inch pipe diameter per mile per day, based on a minimum two (2) hour test having a minimum of two (2) feet of positive head above the crown of the pipe. Any observed leaks or any obviously defective joints or pipes shall be replaced even when the total leakage is below that allowed.

6. Forcemain sanitary sewers constructed within a public wellfield protection area shall be ductile iron, C-900 PVC, HDPE or reinforced concrete pressure sewer pipes.

7. The maximum allowable exfiltration/leakage rate of forcemain sanitary sewers shall be:
   a) Ductile Iron, C-900 PVC, HDPE and PVC Pipe. The allowable leakage rate specified in American Water Works Association Standard (AWWAS) C600-82 at a test pressure of 100 psi for a duration of not less than two (2) hours.
   b) Reinforced Concrete Pressure Pipe. Half (1/2) the allowable leakage rate specified in AWWA C600-82 at a test pressure of 100 psi for a duration of not less than two (2) hours.
   c) Any observed leaks or any obviously defective joints or pipes shall be replaced even when the total leakage is below that allowed.

8. The contractor shall verify nature, depth, and character of existing underground utilities prior to start of construction.

9. In no case shall a contractor install utility pipes, conduits, cables, etc. in the same trench above an existing water or sewer pipe except where they cross.

10. If any area of the work site is found to contain buried solid waste and/or ground or ground water contamination, the following shall apply:
    a) All work in the area shall follow all applicable safety requirements (e.g., OSHA, etc.) and notification must be provided to the appropriate agencies.
    b) Immediately notify the Environmental Monitoring and Restoration Division (EMRD). The EMRD can be contacted at (305) 372-6700.
    c) If contaminated soils and/or buried solid waste material is excavated during construction, then they require proper handling and disposal in accordance with the local, state and federal regulations. Be advised that the landfill owner/operator is the final authority on disposal and may have requirements beyond those provided by herein. If disposal within a Miami-Dade County owned landfill (Class I landfill) is appropriate and selected, please contact the Miami-Dade County Department of Solid Waste Management at (305) 594-6666 for information.
    d) The reuse of contaminated soils that are not returned to the original excavation requires prior approval of a Soil Management Plan from the Environmental Monitoring and Restoration Division. The EMRD can be contacted at (305) 372-6700.

11. Pumps must comply with the National Electrical Code (NEC) requirements for Class I, Group D, Division 1 locations (Explosion Proof).

12. The contractor is advised that a Tree Removal/Relocation Permit may be required prior to the removal and/or relocation of tree resources. Prior to removing or relocating any trees, the Contractor shall notify the Tree and Forest Resources Section of DERM at (305) 372-6574 or via e-mail at: tfrs@miamidade.gov , or contact the municipality with tree ordinance jurisdiction to obtain any required permits. Those trees not interfering with the construction shall be protected in place in accordance with the provisions of Section 24-49.5 of the Miami-Dade Code.

13. Please note that the demolition, removal, and/or disturbance of existing underground utilities that contain asbestos- cement pipes (ACP) are subject to the provisions of 40 CFR-61 Subpart M. Therefore, pursuant to the provisions of 40 CFR-61-145, a NOTICE OF DEMOLITION OR ASBESTOS RENOVATION form must be filed with the Air Quality Management Division (AQMD) of DERM, at least ten (10) working days prior to starting of any work. Note that the backfilling and burial of crushed ACP would cause these locations to be considered active disposal sites and subject to 40 CFR-61.154, and 40 CFR-61.151 a year after project completion.
    Existing standard operating procedures, as well as applicable federal, state and local regulatory criteria, must be followed and implemented to minimize any potential release of fugitive emissions, especially during project construction activities. The AQMD can be contacted via email at asbestos@miamidade.gov or 305-372-6925.

Rev. 4/30/2018

FOR ALL PROJECT WHERE REMOVAL OF UTILITY LINES IS PROPOSED

1– ALL EXISTING UTILITIES BEING REMOVED AND/OR RELOCATED MUST REMAIN IN EFFECT AND IN SERVICE, UNTIL SUCH TIME WHEN PROPOSED REPLACING UTILITIES HAVE BEEN INSTALLED AND IN SERVICE AND ALL RELATED SERVICES TO THE FIRST LINES HAVE BEEN TRANSFERRED TO THE LATTER ONES, BY M–DWASD FORCES AT OWNERS EXPENSES.

2– ALL ABANDONED OR REPLACED UTILITY LINES LOCATED IN PRIVATE PROPERTY SHALL BE REMOVED AND CAPPED AT MAIN, WHEN APPLICABLE, AFTER ALL INSTALLED SERVICES TO OR FROM THEM HAVE BEEN TRANSFERRED TO THE ALREADY INSTALLED AND IN SERVICE PROPOSED UTILITY LINES, ANY RELATED EASEMENT SHALL BE RELEASED AND VACATED AFTER REMOVAL OF LINES AND RESTORATIONS OF SITE, IF APPLICABLE, HAVE BEEN COMPLETED.

CITY OF OPA-LOCKA
LIFT STATION 16 REHABILITATION
OPA-LOCKA, FLORIDA
MIAMI-DADE FLORIDA

GENERAL NOTES

RUBEL SIDDIQUE, P.E.
FL LICENSE NO. 67239

Rubel Siddique — Digitally signed by Rubel Siddique Date: 2023.05.05 14:30:22 -04'00'

DRAWN BY: RS
CHECKED BY: RS
DATE: 09-05-2022
SHEET NO.
C-200

1. ALL MATERIALS AND CONSTRUCTION UNDER THIS PROJECT SHALL BE IN STRICT ACCORDANCE WITH THE REQUIREMENTS OF THE CITY OF OPA-LOCKA AND/OR MIAMI-DADE COUNTY WATER & SEWER DEPARTMENT (MD-WASD) AND/OR MIAMI DADE COUNTY PUBLIC WORKS DEPARTMENT (MD-PWD) AND/ OR THE FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) AND SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS AVAILABLE AND ON FILE WITH THE DEPARTMENT.

2. MINIMUM COVER OVER MAINS SHALL BE 3'-0". 2'-0" FOR SERVICE LINES, UNLESS SPECIFIC WRITTEN EXCEPTION IS ISSUED OR REQUIRED BY AN AUTHORIZED REPRESENTATIVE OF CITY OF OPA-LOCKA.

3. DETECTOR TAPE SHALL BE INSTALLED 18" ABOVE THE CENTERLINE OF MAINS AND SERVICES. TAPES SHALL BE GREEN CONTINUOUSLY MARKED "CAUTION WASTEWATER FORCE MAIN BURIED BELOW".

4. ALL VALVES SHALL BE INSTALLED COMPLETE WITH 10" RISER PIPES AND No. 53 C.I. VALVE BOXES AND LIDS.

5. LOW PRESSURE SEWER MAIN SHALL BE HDPE SDR-11. SERVICE LINES SHALL BE HDPE SDR-9.

6. ALL JOINTS FOR LOW PRESSURE HDPE MAIN SHALL BE BUTT-FUSION WELDED. ALL WELDING OF JOINTS SHALL BE IN STRICT CONFORMITY WITH THE RECOMMENDATIONS OF THE PIPE MANUFACTURER UNLESS OTHERWISE SPECIFIED IN WRITING.

7. CONTRACTOR MUST CALL THE CITY OF OPA-LOCKA INSPECTION DIVISION AND ALL OTHER APPLICABLE PERMITTING AGENCIES TO ARRANGE FOR A PRE-CONSTRUCTION MEETING AT LEAST 72 HOURS PRIOR TO PROPOSED START OF CONSTRUCTION.

8. CITY OF OPA-LOCKA PERSONNEL WILL INSPECT ALL FACILITIES APPROVED BY THE ENGINEERING DEPARTMENT. ALL OTHER REQUIREMENTS OF THE PERMITTING AGENCY SHALL BE IN ACCORDANCE WITH THEIR STANDARDS AND REQUIREMENTS.

9. WORK PERFORMED UNDER THIS PROJECT WILL NOT BE CONSIDERED AS COMPLETE UNTIL FINAL ACCEPTANCE OF THE SYSTEM BY THE DEPARTMENT AND UNTIL THE FOLLOWING DOCUMENTS ARE RECEIVED AND APPROVED BY CITY OF OPA-LOCKA:

*EASEMENTS, IF REQUIRED (WHETHER BY DEED OR PLAT SUITABLY RECORDED)
* CONTRACTOR'S WAIVER AND RELEASE OF LIEN
* CONTRACTOR'S LETTER OF WARRANTY (I.E. LETTER AGREEMENT)
* AS-BUILT 24" x 36" SHOWING SPECIFIC LOCATIONS, DEPTHS, ETC. OF ALL WATER FACILITIES AS LOCATED BY A LICENSED SURVEYOR, ALONG WITH TWO (2) PRINTS OF THE "AS-BUILT" WHICH HAVE BEEN SIGNED AND SEALED BY A REGISTERED SURVEYOR OR ENGINEER OF RECORD AND ENDORSED BY THE CONTRACTOR IN ACCORDANCE WITH MD-WSD STANDARDS.

10. ALL NEW CONNECTIONS FROM EXISTING CITY OF OPA-LOCKA MAINS TO BE INSPECTED BY CITY OF OPA-LOCKA FORCES PRIOR TO BACKFILL.

11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING ALL LOCATIONS, DIMENSIONS, ELEVATIONS AND THE LOCATIONS OF ALL UNDERGROUND STRUCTURES AND UTILITIES PRIOR TO THE START OF CONSTRUCTION. THE LOCATIONS SHOWN ON THE PLANS ARE NOT GUARANTEED ACCURATE OR CORRECT BY THE KNOWN UTILITY COMPANIES.

12. THRUST BLOCKS SHALL BE PROVIDED TO ALL BENDS, TEES AND PLUGS IN ACCORDANCE WITH MD-WASD STANDARD DETAILS.

13. PIPE INSTALLATION, CLEANING, FLUSHING, AND TESTING, AS PER CITY OF OPA-LOCKA AND STATE OF FLORIDA STANDARDS FOR THE INSTALLATION OF PRESSURE SEWER BY CUSTOMER DONATION PROJECTS.

14. THE CONTRACTOR IS RESPONSIBLE FOR THE COST OF INSPECTIONS FOR ANY CONSTRUCTION ACTIVITIES OCCURRING OUTSIDE NORMAL WORKING HOURS (8:00 a.m. TO 5:00 p.m.) SATURDAYS AND SUNDAYS AND HOLIDAYS EXCLUDED AND ARRANGEMENTS FOR INSPECTIONS OUTSIDE NORMAL WORKING HOURS MUST BE MADE A MINIMUM OF 48 HOURS IN ADVANCE OF THE CONSTRUCTION ACTIVITY.

15. ALL TRENCHES TO BE EXCAVATED AND BACKFILLED AS PER THE MD-WASD DETAIL GS-1.9.

16. SURFACE RESTORATION, PAVEMENT REPLACEMENT, SIDEWALK REPLACEMENT, TRENCH BACKFILLING AND COMPACTION SHALL COMPLY WITH THE APPLICABLE CURRENT MD-WASD, MD-PWD AND FDOT STANDARDS.

17. THE ENGINEER OF RECORD SHALL PROVIDE CITY OF OPA-LOCKA WITH A SIGNED AND SEALED PRESSURE TEST REPORT CERTIFYING PRESSURE TEST RESULTS.

18. FIELD LEAK TESTING OF POLYETHYLENE (PE) PRESSURE PIPING SYSTEMS USING HYDROSTATIC PRESSURE SHALL BE CONDUCTED BY THE CONTRACTOR FOLLOWING METHODS AND PROCEDURES NOTED ASTM DESIGNATION: F2164-13

19. A HORIZONTAL DISTANCE OF 10 FEET SHALL BE MAINTAINED BETWEEN WATER AND SEWER MAINS. WHEN A 10 FEET HORIZONTAL DISTANCE CRITERIA CANNOT BE MET DUE TO AN EXISTING UNDERGROUND FACILITY CONFLICT, THIS HORIZONTAL DISTANCE MAY BE REDUCED TO 6 FEET. IF THE WATER MAIN IS LAID AT LEAST 6 INCHES ABOVE THE TOP OF A GRAVITY SANITARY SEWER, THIS HORIZONTAL DISTANCE MAY BE REDUCED TO 3 FEET.

20. IN HIGHLY CONGESTED AREAS, WHERE EITHER WATER OR SEWER FACILITIES ARE EXISTING AND THE SEPARATION REQUIREMENTS CANNOT BE MET, SPECIAL CONSIDERATION MAY BE GIVEN SUBJECT TO A COMPLETE EVALUATION OF EXISTING AND PROPOSED CONDITIONS.

21. THE CONTRACTOR SHALL VERIFY NATURE, DEPTH, CHARACTER OF EXISTING UNDERGROUND UTILITIES PRIOR TO START OF CONSTRUCTION.

22.TRENCH EXCAVATION PROTECTION SHALL BE ACCOMPLISHED AS REQUIRED BY THE PROVISIONS OF PART 1926, SUBPART P, EXCAVATIONS, TRENCHING AND SHORING OF THE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATIONS STANDARDS AND INTERPRETATIONS.

23. ALL ABOVE GROUND PIPE & FITTING, VALVE BOXES, AIR RELEASE VALVE COVERS AND ANY OTHER MARKING DEVICE, SHALL BE COLOR CODED IN ACCORDANCE WITH THE UTILITY LOCATION & COORDINATION COUNCIL UNIFORM COLOR CODE AS SHOWN IN MIAMI-DADE COUNTY WATER & SEWER DEPARTMENT (MD-WASD).

NOTES FOR CONTAMINATED SITES

IF ANY AREA OF THE WORK SITE IS FOUND TO CONTAIN BURIED SOLID WASTE AND/OR GROUND OR GROUND WATER CONTAMINATION, THE FOLLOWING SHALL APPLY:

1. ALL WORK IN THE AREA SHALL FOLLOW ALL APPLICABLE SAFETY REQUIREMENTS (E.G., OSHA, ETC.) AND NOTIFICATION MUST BE PROVIDED TO THE APPROPRIATE AGENCIES.

2. IMMEDIATELY NOTIFY THE ENVIRONMENTAL MONITORING AND RESTORATION DIVISION (EMRD). THE EMRD CAN BE CONTACTE AT (305) 372-6700.

3. IF CONTAMINATED SOILS AND/OR BURIED SOLID WASTE MATERIAL IS EXCAVATED DURING CONSTRUCTION, THEN THEY REQUIRE PROPER HANDLING AND DISPOSAL IN ACCORDANCE WITH THE LOCAL, STATE AND FEDERAL REGULATIONS. BE ADVISED THAT THE LANDFILL OWNER/OPERATOR IS THE FINAL AUTHORITY ON DISPOSAL AND MAY HAVE REQUIREMENTS BEYOND THOSE PROVIDED BY HEREIN. IF DISPOSAL WITHIN A MIAMI-DADE COUNTY OWNED LANDFILL (CLASS I LANDFILL) IS APPROPRIATE AND SELECTED, PLEASE CONTACT THE MIAMI-DADE COUNTY DEPARTMENT OF PUBLIC WORKS AND WASTE MANAGEMENT AT (305) 594-1670 FOR INFORMATION.

4. THE REUSE OF CONTAMINATED SOILS IS PROHIBITED WITHOUT PRIOR APPROVAL FROM THE ENVIRONMENTAL MONITORING AND RESTORATION DIVISION. THE EMRD CAN BE CONTACTED AT (305) 372-6700.

5. A SUBSURFACE INVESTIGATION WAS CONDUCTED BY ENVIRONMENTAL REGULATORY COMPLIANCE, INC. (ERC) DATE MARCH 2022. THE REPORT STATED THAT THE PRESENCE OF SOLID WASTE MIXED WITH OTHER MATERIAL (CARBONATE AND SILICA SAND, LIMEROCK, AND ORGANIC MATERIAL) WILL NOT SUBSIDE BY THE INSTALLATION OF THE 2 INCH SEWER LINE.

DESIGN APPROACH

1. A SUBSURFACE INVESTIGATION WAS CONDUCTED BY ENVIRONMENTAL REGULATORY COMPLIANCE, INC. (ERC) DATE MARCH 2022. THE REPORT STATED THAT THE PRESENCE OF SOLID WASTE MIXED WITH OTHER MATERIAL (CARBONATE AND SILICA SAND, LIMEROCK, AND ORGANIC MATERIAL) WILL NOT SUBSIDE BY THE INSTALLATION OF THE 2 INCH SEWER LINE.

2. DUE THE UNDERLYING SOIL CONDITION OF THE SITE, HDPE PIPE WAS USED TO ADDRESS ANY CONTAMINATION ISSUES. ACCORDING TO THE PIPE MANUFACTURER, POLYETHYLENE IS NON-CONDUCTIVE AND IMMUNE TO GALVANIC AND ELECTROCHEMICAL EFFECTS. THUS POLYETHYLENE WILL NOT CORRODE IN THE MANNER OF METAL AND CONCRETE PIPING. PERFORMANCE POLYETHYLENE PIPES HAVE OUTSTANDING RESISTANCE TO A WIDE RANGE OF CHEMICALS AND ENVIRONMENTAL CONDITIONS, MAKING THEM IDEAL CANDIDATES FOR USE WITH CORROSIVE FLUIDS AND CHEMICALS, AND UNDER HARSH ENVIRONMENTAL CONDITIONS.

3. ALL THE JOINT IN THE HDPE PIPES WILL BE FUSED JOINT, THERFORE NO POSSIBILITY OF JOINT LEAKING.

NOTE:
ALL ELEVATIONS REFER TO NGVD 1929.
NAVD88 = NGVD29 - 1.55

GENERAL NOTES:

1. CONTRACTOR SHALL MAINTAIN FUNCTION OF SEWAGE PUMPING DURING CONSTRUCTION BY UTILIZING BY-PASS PUMPING SYSTEM, FITTINGS AND VALVES AS REQUIRED. CONTRACTOR SHALL SUBMIT A PLAN OUTLINING SEWAGE "BY-PASS" PROCEDURE TO THE ENGINEER FOR APPROVAL PRIOR TO COMMENCING WORK.
2. THE EXISTING UTILITIES SHOWN ON THIS PLAN ARE BASED ON THE CITY OF OPA-LOCKA WATER AND SEWER ATLAS, SURVEY AND SITE VISIT. CONTRACTOR MUST VERIFY SIZE, LOCATION, AND INVERTS OF ALL UTILITIES PRIOR TO COMMENCING WORK.
3. CONTRACTOR SHALL PERFORM ALL WORK WITHIN LEGAL PROPERTY AND EASEMENT, AND SHALL NOT DISTURB ADJACENT PROPERTY.
4. CONTRACTOR SHALL VERIFY EXISTING PIPING TO REMAIN BEFORE ORDERING PROPOSED PIPING/FITTINGS CONNECTING TO IT.
5. CARE SHOULD BE TAKEN TO AVOID DISTURBING ELECTRICAL SERVICE IN THE AREA UNDER CONSTRUCTION.
6. CONTRACTOR SHALL INCLUDE NECESSARY CUTTING, PATCHING, AND RESTORATION OF ALL EXISTING SURFACES TO MATCH SURROUNDING AREAS.
7. CONTRACTOR TO COAT ALL UNDERGROUND FITTINGS THOSE ARE IN DIRECT CONTACT WITH SOIL WITH TWO COATS OF BITUMASTIC OR APPROVED EQUAL.
8. ELEVATIONS INDICATED HEREON ARE IN FEET AND DECIMALS REFERENCED TO THE NATIONAL GEODETIC VERTICAL DATUM OF 1929 (NGVD 1929).
9. THE MINIMUM WET-WELL BOTTOM SLOPE SHALL BE 2:1 TO ALLOW SELF-CLEANING AND MINIMUM DEPOSIT OF DEBRIS.
10. THE ELECTRICAL SYSTEMS AND COMPONENTS IN RAW WASTEWATER WET WELLS SHALL COMPLY WITH THE NATIONAL ELECTRICAL CODE REQUIREMENTS FOR CLASS I, GROUP D, DIVISION 1.
11. THE STATION SHOULD BE EQUIPPED WITH MISSION M850 RTUs FOR REAL-TIME ALARMS AND STREAMING DATA OR APPROVED EQUAL. MONITOR/RECORD OPERATING HOURS BETWEEN MIDNIGHT AND FIVE (5) AM.
12. FLOW METER SHALL BE ABB ELECTROMAGNETIC FLOW METER DN150 (6") OR APPROVED EQUAL.
13. THE STATION WILL EQUIPPED WITH DEVICES TO MONITOR DISCHARGE PRESSURE (E.G. PRESSURE TANSDUCER) WITH HIGH AND LOW PRESSURE ALARM SET POINTS.

CONSTRUCTION NOTES:

1. THE STANDARD DRAWINGS PRESENTED ARE BASED ON MINIMUM OF 4" DISCHARGE FORCE MAIN.
2. CONTRACTOR SHALL VERIFY EXISTING UNDERGROUND UTILITIES IN APPLICATIONS, ELEVATIONS, AND QUALITIES PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL VERIFY EXISTING PIPING TO REMAIN BEFORE ORDERING NEW PIPE AND FITTINGS FOR CONNECTIONS. tHE CONTRACTOR SHALL INSPECT AND VERIFY ALL SITE CONDITIONS AND DIMENSIONS, AND COORDINATE WITH OTHER TRADES PRIOR TO CONSTRUCTION. WORK SHALL BE SCHEDULED ACCORDING TO SPECIFIED CONSTRUCTION SEQUENCE.
3. ATTENTION TO AVOID DISTURBING EXISTING ELECTRICAL SERVICE IN THE AREA UNDER CONSTRUCTION (FOR EXISTING FACILITIES ONLY).
4. ALL ELEVATIONS FOR UNDERGROUND UTILITIES SHOWN ARE T.O.P. ELEVATIONS UNLESS OTHERWISE SPECIFIED.
5. ALL PIPING, UNLESS SPECIFIED, TO USE DUCTILE IRON WITH LINING OF SEWER APPLICATION. FITTINGS AND CONNECTIONS UNDERGROUND TO USE MECHANICAL JOINT WITH RESTRAINTS; FITTINGS ABOVE GROUND OR IN VAULT TO USE FLANGE JOINT, OR MECHANICAL JOINT WITH RESTRAINTS
6. APPLY ALL UNDERGROUND FITTING WITH BOLT CONNECTIONS IN DIRECT CONTACT WITH SOIL WITH TWO COATS OF BITUMASTIC OR APPROVED EQUAL.
7. PROVIDE DIELECTRIC FITTINGS BETWEEN TWO DIFFERENT PIPING MATERIALS.
8. PIPE SUPPORTS SHALL BE HOT-DIP GALVANIZED AFTER FABRICATION.
9. PROPOSED WET WELL SHALL BE CYLINDRICAL TYPE MADE OF REINFORCED CONCRETE WITH DEPTH NO GREATER THAN 24 FEET.
10. ALL PUMP CONTROLS SHALL BE SET AS PER DESIGN REQUIREMENTS.
11. ALL PIPING FOR OUTSIDE DROP TO BE DUCTILE IRON WITH LINING OF SEWER APPLICATION. FITTINGS AND CONNECTIONS UNDERGROUND TO USE MECHANICAL JOINT WITH RESTRAINTS.
12. PUMP STARTUP SHALL BE PERFORMED WITH NO EFFLUENT DISCHARGING INTO THE WET-WELL. PUMPS OPERATING POINTS CALCULATED BY PUMP REPRESENTATIVE DURING THE DRAWDOWN TEST SHALL BE NO GREATER THAN 10% OFF THE PUMP CURVE. PROPOSED PUMPS SHALL HANDLE BOTH MAX, MIN AND AVERAGE OPERATING POINTS GIVEN BY THE ENGINEER OF RECORD.
13. THREE PRESSURE GAUGES ARE TO BE INSTALLED INSIDE THE VALVE BOX, ONE GAUGE BEFORE EACH CHECK VALVE AND ONE PRESSURE GAUGE ON THE FORCEMAIN SIDE. PRESSURE DIAL READER SHALL NOT EXCEED 20 PSI.

ELECTRICAL GENERAL NOTES

I. GENERAL REQUIREMENTS

A. DRAWINGS. THE DRAWINGS ARE TO BE CONSIDERED DIAGRAMMATIC, NOT NECESSARILY SHOWING IN DETAIL OR TO SCALE ALL OF THE MINOR ITEMS. UNLESS SPECIFIC DIMENSIONS ARE SHOWN, THE STRUCTURAL, ARCHITECTURAL, AND SITE CONDITIONS SHALL GOVERN THE EXACT LOCATIONS. CONTRACTOR SHALL FOLLOW DRAWINGS IN LAYING OUT WORK, CHECK DRAWINGS OF ALL TRADES TO VERIFY SPACES IN WHICH WORK WILL BE INSTALLED. WHERE HEADROOM OR SPACE CONDITIONS APPEAR INADEQUATE, CONTRACTOR SHALL, WITHOUT EXTRA CHARGE, MAKE FIELD MODIFICATION IN LAYOUT AS NEEDED TO PREVENT CONFLICT WITH WORK OF VARIOUS TRADES OR FOR PROPER EXECUTION OF THE WORK. SITE CONDITIONS SHALL GOVERN THE EXACT LOCATION OF ALL ELECTRICAL EQUIPMENT, DEVICES, WIRING, CONDUIT, ETC.

ONE COMPLETE SET OF DRAWINGS AND SPECIFICATIONS SHALL BE KEPT ON FILE AT THE SITE FOR THE SOLE USE OF MARKING AS-BUILT DATA. ALL CHANGES SHALL BE MARKED IN RED ON THESE PRINTS AS WORK PROGRESSES.

PRIOR TO EACH REQUISITION FOR PAYMENT, AS-BUILT PRINTS SHALL BE BROUGHT UP TO DATE FOR ACCEPTANCE BY OWNER'S REPRESENTATIVE.

THE COMPLETED SET OF AS-BUILT PRINTS SHALL BE DELIVERED TO THE ARCHITECT/ENGINEER PRIOR TO FINAL PAYMENT FOR INCORPORATION ONTO ORIGINALS.

RISERS ARE DIAGRAMMATIC AND DON'T INTEND TO SHOW EVERY BEND REQUIRED FOR THE INSTALLATION.

B. COORDINATION. CONTRACTOR WILL BE REQUIRED TO FURNISH, INSTALL AND/OR CONNECT WITH APPROPRIATE SERVICES ALL ELECTRICAL ITEMS SHOWN ON ANY OF THE ARCHITECTURAL, PLUMBING, AIR CONDITIONING SPRINKLER, INTERIOR DESIGN AND ELECTRICAL DRAWINGS WITHOUT ADDITIONAL EXPENSE TO THE OWNER. IF DISCREPANCIES, CONFLICTS, INTERFERENCES OR OMISSIONS OCCUR BETWEEN DRAWINGS, NOTIFY IN WRITING THE ARCHITECT/ENGINEER IN AMPLE TIME TO PERMIT REVISIONS BEFORE THE BIDS ARE SUBMITTED.

ELECTRICAL CONTRACTOR SHALL COORDINATE THE REQUIREMENTS OF PLUG AND CHORD TYPE EQUIPMENT WITH MANUFACTURER AND IS REQUIRED TO PROVIDE ELECTRICAL OUTLETS THAT WILL ACCEPT MANUFACTURER'S SUPPLIED PLUGS.

SEE MECHANICAL DRAWINGS FOR ELECTRICAL REQUIREMENTS AND LOCATION OF A/C UNITS AND ALL OTHER MECHANICAL EQUIPMENT (SOLENOIDS, VAV'S, THERMOSTATS, PUMPS, FANS, SMOKE DETECTORS, DUCT HEATERS, ETC.) THE CONTRACTOR SHALL PROVIDE ALL BRANCH CIRCUIT AND CONTROL WIRING AS INDICATED OR REQUIRED AND IN CONFORMANCE WITH N.E.C. ARTICLE 440 AND MANUFACTURER'S RECOMMENDATIONS. ALL PENETRATIONS SHALL BE MADE WEATHERPROOF DURING CONSTRUCTION AND AFTER FINAL INSTALLATION. A/C EQUIPMENT WIRING, BREAKERS, AND FUSES ARE BASED ON A/C EQUIPMENT SPECIFIED ON CONTRACT DRAWINGS. CONTRACTOR IS RESPONSIBLE FOR PROVIDING ALL WIRING, AND OVERCURRENT PROTECTION REQUIREMENTS IF EQUIPMENT USED IS DIFFERENT FROM THAT SPECIFIED. CONTRACTOR SHALL MAKE THESE CHANGES AT NO ADDITIONAL COST TO THE OWNER.

C. TEMPORARY SERVICE. TEMPORARY ELECTRICAL POWER AND LIGHTING SHALL BE FURNISHED, INSTALLED AND MAINTAINED FOR ALL TRADES REQUIRING SAME. SYSTEM SHALL CONSIST OF DISTRIBUTION SYSTEM, PANELBOARDS, GROUNDING, BRANCH CIRCUITS, SWITCHES, RECEPTACLES, OUTLETS. SERVICE SHALL BE ARRANGED FOR WITH POWER COMPANY, IF REQUIRED.

D. PERMITS. THE CONTRACTOR SHALL SECURE AND PAY FOR ALL PERMITS, STATE SALES TAX, FEDERAL EXCISE TAX, ROYALTIES AND OTHER TAXES OR FEES AS REQUIRED FOR INSTALLATION OF A COMPLETE SYSTEM AS OUTLINED HEREIN AND AS SHOWN ON THE PLANS. THE CONTRACTOR SHALL SECURE ALL NECESSARY LICENSES AND INSURANCE.

E. BASIS FOR BIDS. EQUIPMENT SPECIFIED SHALL BE ADHERED TO. HOWEVER, OWNER HAS FINAL DECISION ON THE TYPE AND QUALITY OF EQUIPMENT TO BE SUPPLIED.

WITHIN 30-DAYS AFTER THE CONTRACT HAS BEEN EXECUTED, A FORMAL REQUEST FOR THE SUBSTITUTION OF PRODUCTS IN PLACE OF THOSE SPECIFIED WILL BE CONSIDERED, UNDER THE FOLLOWING CONDITIONS:

THE REQUEST IS ACCOMPANIED BY COMPLETE DATA ON THE PROPOSED SUBSTITUTION SUBSTANTIATING COMPLIANCE WITH THE CONTRACT DOCUMENTS INCLUDING PRODUCT IDENTIFICATION AND DESCRIPTION, PERFORMANCE AND TEST DATA, REFERENCES AND SAMPLES WHERE APPLICABLE, AND AN ITEMIZED COMPARISON OF THE PROPOSED SUBSTITUTION WITH THE PRODUCTS SPECIFIED, WITH DATA RELATING TO CONTRACT TIME SCHEDULE, DESIGN AND AESTHETIC EFFECT WHERE APPLICABLE.

THE REQUEST IS ACCOMPANIED BY ACCURATE COST DATA ON THE PROPOSED SUBSTITUTION IN COMPARISON WITH THE PRODUCT SPECIFIED, WHETHER OR NOT MODIFICATION OF THE CONTRACT SUM IS TO BE A CONSIDERATION. IF REDESIGN BY THE ARCHITECT OR HIS CONSULTANTS IS REQUIRED TO ACCOMMODATE AN ALTERNATE PRODUCT OR SYSTEM, ALL COSTS OF THIS REDESIGN SHALL BE BORNE BY THE CONTRACTOR REQUESTING THE CHANGE. IF ADDITIONAL WORK IS REQUIRED BY OTHER CONTRACTORS TO ACCOMMODATE AN ALTERNATE PRODUCT OR SYSTEM, ALL ADDITIONAL COSTS OF THIS WORK SHALL BE BORNE BY THE CONTRACTOR REQUESTING THE CHANGE.

THE REQUEST SHALL BE ACCEPTED OR REJECTED SOLELY AT THE DISCRETION OF THE OWNER WITH ARCHITECT'S OR ENGINEER'S WRITTEN APPROVAL.

F. CODES & STANDARDS. THE WORK PERFORMED UNDER DIVISION 16 SHALL COMPLY WITH THE LATEST EDITION AND REQUIREMENTS OF THE FOLLOWING:

APPLICABLE LOCAL CODES AND ORDINANCES, NATIONAL ELECTRICAL CODE, AS AMENDED BY LOCAL CODE, ALL APPLICABLE FEDERAL AND STATE CODES,, REGULATIONS AND STATUTES, APPLICABLE ENERGY CODE, OCCUPATIONAL SAFETY AND HEALTH ACT (OSHA), NATIONAL FIRE PROTECTION ASSOCIATION (NFPA), NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION (NEMA), UNDERWRITERS LABORATORIES, INC. (UL), AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI), AMERICANS WITH DISABILITIES ACT (ADA).

G. MATERIALS & EQUIPMENT. MATERIAL AND EQUIPMENT SHALL BE NEW, STANDARD, CURRENT PRODUCTS OF MANUFACTURERS REGULARLY ENGAGED IN THE PRODUCTION OF SUCH EQUIPMENT, AND SHALL BE THE MANUFACTURER'S LATEST DESIGN.

ALL MATERIALS SHALL BEAR THE LABEL OF THE UNDERWRITERS LABORATORY FOR THE INTENDED USE OR SHALL BE MATERIALS APPROVED BY THE CODE ENFORCING AUTHORITIES AND THE ARCHITECT.

FOLLOW THE INSTALLATION DIRECTIONS AND RECOMMENDATIONS OF MATERIAL AND EQUIPMENT MANUFACTURERS.

ALL WORK SHALL BE PERFORMED BY WORKERS SKILLED IN THEIR RESPECTIVE TRADES AND ALL MATERIALS AND EQUIPMENT SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS. ALL WORK SHALL BE EXECUTED IN A NEAT AND WORKMANLIKE MANNER.

INSTALL EQUIPMENT, INCLUDING SWITCHES, CONTROLLERS, FIXTURES AND TRANSFORMERS SUCH THAT REMOVAL OR REPLACEMENT MAY BE READILY ACCOMPLISHED WITHOUT DAMAGE TO EQUIPMENT OR FASTENERS.

IDENTIFY ALL EQUIPMENT, INCLUDING SAFETY SWITCHES, STARTERS, TRANSFORMERS, PANELS, TERMINAL BOXES, MOTORS, SPECIAL OUTLETS, RELAYS. IDENTIFICATION SHALL CORRESPOND TO THE TERMINOLOGY ON THE CONTRACT DOCUMENTS.

EXAMPLES:
1. AHU #1 STARTER
2. TRANSFORMER T-4
3. EMERGENCY STOP STATION
4. PANEL BC

H. SUPPORTING DEVICES DEVICES, INCLUDING ANCHORS, FASTENERS, HANGERS AND SUPPORTS, SHALL BE OF A TYPE DESIGNED OR FABRICATED FOR THE PURPOSE, AND SHALL ADEQUATELY AND SAFELY SECURE THE MATERIAL AND EQUIPMENT AND PRESENT A NEAT APPEARANCE. USE DEVICES WITH CORROSION RESISTANT CHARACTERISTICS FOR THE ATMOSPHERIC CONDITIONS IN WHICH THEY ARE INSTALLED.

I. BACKBOARDS. USE 3/4" THICK EXTERIOR GRADE PLYWOOD, FIRE RETARDANT TREATED, OF WIDTH AND HEIGHT REQUIRED. PLYWOOD SHALL BE NEW AND PAINTED ON ALL SIDES AND EDGES. PAINT BACK SIDE WITH ASPHALTUM WHEN MOUNTED ON MASONRY.

PROVIDE BACKBOARDS FOR ALL GROUP-MOUNTED ELECTRICAL EQUIPMENT, AND FOR COMMUNICATIONS SYSTEMS AS CALLED FOR ON PLANS.

J. RACEWAYS & BOXES ROUTING OF RACEWAYS, INTERCONNECTING OUTLETS AND HOME-RUNS IS UP TO THE ELECTRICAL CONTRACTOR, BUT AFTER COMPLETION OF THE INSTALLATION, HE SHALL SUBMIT TO THE ENGINEER AS-BUILT DRAWINGS OF HIS WORK FOR FUTURE RECORD. DEVICE BOXES SHALL BE INSTALLED FLUSH, CONDUIT SHALL BE CONCEALED UNLESS OTHERWISE INDICATED. ALL CONDUCTORS SHALL BE IN CONDUIT. FOR UNDERGROUND/IN-SLAB LOCATIONS USE GALVANIZED RIGID STEEL (GRS) CONDUIT OR SCHEDULE 40 PVC CONDUIT WITH GROUND WIRE SIZED AS INDICATED OR REQUIRED BY N.E.C., STUB-UPS FROM UNDERGROUND/IN-SLAB PVC CONDUIT SHALL BE GRS. UNDERGROUND GRS SHALL BE COATED WITH TWO COATS OF BITUMASTIC #50 APPLIED WITHOUT THINNING. ALL SECTIONS OF METALLIC CONDUIT SYSTEM SHALL BE GROUNDED AND ELECTRICALLY CONTINUOUS. USE ELECTRICAL METALLIC TUBING (EMT) FOR INTERIOR CONCEALED WIRING AND ELSEWHERE AS PERMITTED BY THE N.E.C. USE FLEXIBLE METAL CONDUIT FOR FLEXIBLE CONNECTIONS IN ALL WET LOCATIONS. INSTALL A NYLON PULL-CORD IN ALL EMPTY RACEWAYS FOR FUTURE USE. SIZE ALL GUTTERS AND PULL-BOXES PER NEC 370 AND 374. ALL PULL AND JUNCTION BOXES SHALL REMAIN ACCESSIBLE AT ALL TIMES.

ALL JUNCTION BOXES SHALL HAVE THE TYPE OF SYSTEM AND VOLTAGE OF CONTAINED CONDUCTORS STENCILED ON THE OUTSIDE OF THE BOX COVER.

EXAMPLES: POWER 120/208 SOUND
POWER 277/480 CONTROL 120 V
T.V. FIRE ALARM

INSTALL EXPOSED CONDUIT PARALLEL WITH OR AT RIGHT ANGLES TO THE BUILDING LINES. CONDUIT IN CONCRETE MEMBERS AND SLABS SHALL BE LOCATED SO AS NOT TO AFFECT THEIR STRUCTURAL STRENGTH. CONCEAL ALL CONDUIT IN WALLS, ABOVE CEILINGS, IN OR UNDER SLABS OR IN FURRING, EXCEPT IN MECHANICAL AND ELECTRICAL ROOMS.

ROUTE RACEWAYS TO AVOID CONFLICTS WITH THE WORK OF OTHER TRADES.

ALUMINUM CONDUIT WILL NOT BE PERMITTED.
MINIMUM SIZE OUTLET BOX SHALL BE 4" SQUARE BY 1-1/2" DEEP UNLESS APPROVED OR INDICATED OTHERWISE.
USE CAST METAL OUTLET BOXES WITH GASKETED COVERS FOR ALL EXTERIOR AND FOR ALL DAMP LOCATIONS.
PROVIDE APPROVED FIRE STOPPING MATERIALS AT ALL CHASES TO PREVENT DRAFTS, AT PENETRATIONS INTO RATED SPACES, AND OTHER LOCATIONS AS REQUIRED BY CODES.

PROVIDE CABLE SUPPORTS IN ACCORDANCE WITH NEC ARTICLE 300.

PROVIDE EXPANSION FITTINGS IN CONDUIT RUNS CROSSING EXPANSION JOINTS IN THE STRUCTURE.

K. CONDUCTORS. UNLESS OTHERWISE INDICATED, ALL CONDUCTORS ARE #12 IN 1/2" CONDUIT. ALL CONDUCTORS SHALL BE COPPER. ACCEPTABLE INSULATION TYPES ARE TW, THW, THHN, THWN, AND XHHW, WITH USES AS RESTRICTED BY THE NEC. AMPACITIES OF CONDUCTORS IS TO BE BASED ON ARTICLE 310 OF THE NEC WITH UL LIMITATIONS: 60 DEG. RATING FOR SIZES #14 THROUGH #1; 75 DEG. FOR #1/0 AND LARGER. CABLES 3/0 AND LARGER SHALL BE TERMINATED WITH PRESSURE CRIMP CONNECTORS.

FOR 20 AMP BRANCH CIRCUITS GREATER THAN 100 FT. IN LENGTH, ONE WAY, UP TO 200 FT. USE #10 WIRE; OVER 200 FT., USE #8 WIRE.
INCREASE CONDUIT SIZE AS REQUIRED FOR THE LARGER CONDUCTORS. THIS SUPERSEDES WIRE SIZES CALLED FOR ON THE DRAWINGS.

CONDUCTORS SIZE #10 AND SMALLER SHALL HAVE INSULATION COLORED FOR PHASES A, B, C, AND N RESPECTIVELY AS FOLLOWS FOR 3 PHASE SYSTEM:

120/208 VOLTS: BLACK, RED, BLUE AND WHITE
120/240 VOLTS: BLACK, ORANGE (HIGH), BLUE AND WHITE
277/480 VOLTS: BROWN, ORANGE, YELLOW AND GRAY

ALL CONDUCTORS OF THE SAME PHASE IN PARALLELED FEEDERS OR SERVICES SHALL BE SOLIDLY CONNECTED TOGETHER AT THEIR TERMINATION IN A WIREWAY OR SPLICE BOX. MAKE CONDUCTOR LENGTH FOR PARALLEL FEEDERS IDENTICAL.

THE PHASE DESIGNATION OF ALL SECONDARY CONDUCTORS SHALL BE THE SAME AND SHALL BE INDICATED IN OR ON ALL 3 PHASE OUTLETS, TRANSFORMERS, PANELBOARDS, AND DISCONNECT SWITCHES, AND THEY SHALL BE CONNECTED WITH UNIFORM PHASE SEQUENCE.

MAINTAIN A, B, C PHASE RELATION LEFT TO RIGHT WHEN VIEWED FROM THE FRONT.

TAG ALL FEEDER CONDUCTORS AND IDENTIFY MAJOR CONDUITS IN OR AT WIREWAYS, PANELS, PULL BOXES, SWITCHBOARDS, MOTOR CONTROLLERS, CABINETS AND SIMILAR ITEMS TO ASSIST IN FUTURE CIRCUIT TRACING. CONDUCTOR TAGS SHALL BE NONCONDUCTIVE. IDENTIFICATION SHALL CORRESPOND TO THE CONTRACT DOCUMENTS.

COMMUNICATIONS, DATA, AND/OR WIRING WHICH IS NOT INSTALLED IN CONDUIT, AND WHICH IS ROUTED THROUGH ENVIRONMENTAL AIR SPACES, SHALL COMPLY WITH THE REQUIREMENTS OF NEC 300-22. PROVIDE TRAPEZE HANGER ASSEMBLY FOR PLENUM CABLES USING 3/8" DIAMETER HANGER ROD AND CHANNEL ASSEMBLY TO SUPPORT CABLE BUNDLES EVERY 4 FEET. ALL BUNDLES SHALL BE PROPERLY STRAPPED WITH SELF-LOCKING CABLE TIES. EXPOSED CABLES SHALL NOT LIE ON TOP OF CEILING TILES OR LUMINARIES.

L. GROUNDING. END-TO-END LIGHTING FIXTURES SHALL BE CONTINUOUSLY BONDED.

GROUNDING CONTACTS OF RECEPTACLES SHALL BE CONNECTED TO A SOLIDLY GROUNDED CONDUIT SYSTEM OR TO A SYSTEM GROUNDING CONDUCTOR (NOT THE SYSTEM NEUTRAL) BY A STRANDED COPPER WIRE NOT SMALLER THAN #12 AWG OR SHALL BE GROUNDED IN SOME OTHER APPROVED MANNER; THE RESISTANCE BETWEEN THE CONTACTS AND SERVICE GROUND SHALL NOT EXCEED 3 OHMS.

ALL CIRCUITS SHALL HAVE AN EQUIPMENT GROUNDING CONDUCTOR.

M. SAFETY SWITCHES/CIRCUIT BREAKER DISCONNECTS. SAFETY SWITCHES SHALL BE HEAVY DUTY TYPE KD, FUSIBLE, OR NON-FUSIBLE, WITH POLES, AMPERE, VOLTAGE AND HORSEPOWER RATINGS INDICATED AND SHALL HAVE SOLID NEUTRALS. LUGS SHALL BE U.L. LISTED FOR COPPER-ALUMINUM.

ENCLOSURES FOR SAFETY SWITCHES SHALL BE NEMA-1, GENERAL PURPOSE, EXCEPT THAT SWITCHES INDICATED (WP) WEATHERPROOF, SHALL BE NEMA-3R ENCLOSURES WITH SUITABLE GASKETS AND BONDING MEANS.

SWITCHES AND DISCONNECT SHALL BE AS MANUFACTURED BY SQUARE "D", OR APPROVED EQUAL.

CIRCUIT BREAKER DISCONNECTS MAY BE USED IN LIEU OF SAFETY SWITCHES PROVIDING THEY COMPLY WITH THE SAFETY SWITCH REQUIREMENTS AND ARE SUPPLIED WITHIN THEIR RATINGS AND A SCHEDULE IS SUBMITTED FOR APPROVAL.

P. MOLDED CASE CIRCUIT BREAKERS. CIRCUIT BREAKERS SHALL CONFORM TO APPLICABLE FEDERAL SPECIFICATIONS AND NEMA STANDARDS. CIRCUIT BREAKERS SHALL BE OF THE AMPERE RATING, VOLTAGE RATING, NUMBER OF POLES AND CLASS OR INTERRUPTING CAPACITY (I.C.) AS INDICATED. INTERRUPTING RATINGS ARE GIVEN IN ROOT MEAN SQUARE (RMS), SYMMETRICAL AMPERES BASED ON NEMA TEST PROCEDURES. LUGS AND TERMINALS SHALL BE U.L. APPROVED FOR COPPER-ALUMINUM. ACCESSORIES SHALL BE 120 VOLT. A.I.C. OF BREAKER TO BE INSTALLED ON EXIST. PANELS SHALL MATCH EXIST.

EACH CIRCUIT BREAKER SHALL HAVE A TRIP UNIT FOR EACH POLE WITH ELEMENTS PROVIDING INVERSE TIME DELAY UNDER OVERLOAD CONDITIONS AND INSTANTANEOUS MAGNETIC TRIP FOR SHORT CIRCUIT PROTECTION UNLESS INDICATED AS NON-AUTOMATIC. TRIP ELEMENTS SHALL OPERATE A COMMON TRIP BAR TO OPEN ALL ELEMENTS. BREAKERS USED FOR SWITCHING SHALL BE RATED FOR SWITCHING DUTY.

O. FUSES. FUSES SHALL CONFORM TO NEMA AND U.L. AND SHALL BE OF THE VOLTAGE, CLASS AND AMPERE RATING INDICATED.

FUSES FOR MAIN DISCONNECT DEVICES SHALL BE HIGH INTERRUPTING CAPACITY, TIME DELAY, OR TYPE SUITABLE FOR DEVICE. PROVIDE ONE SPARE SET MOUNTED INSIDE THE CUBICLE, FOR EACH MAIN DEVICE.

FUSES FOR MOTORS AND ENCLOSED SWITCHES, NEMA CLASS K-5, UNLESS INDICATED OTHERWISE, DUAL ELEMENT, TIME DELAY. BUSSMAN – FUSETRON, FRN AND FRS, OR EQUAL.

OTHER FUSES SHALL BE AS INDICATED.

P. WIRING DEVICES. DEVICES SHALL BE AS SPECIFIED IN CONTRACT DOCUMENTS.

INSTALL PLATES AND COVERS ON ALL OUTLETS. INSTALL ALL DEVICES UNIFORMLY IN EACH AREA.

PLATES SHALL BE AUGNED VERTICALLY AND HORIZONTALLY AND ALL EDGES SHALL BE IN FIRM CONTACT WITH SURROUNDING WALL FINISH.

MOUNTING HEIGHTS (TO CENTER LINE OF BOX):

GENERALLY MOUNT RECEPTACLES 18" AFF (ABOVE FINISHED FLOOR) UNLESS NOTED OTHERWISE.
MOUNT SWITCHES AND DIMMERS AT 48" AFF.
MOUNT OUTLETS OVER MIRRORS 8" HIGHER THAN MIRROR.
MOUNT OUTLETS OVER COUNTERS AND CENTERED IN THE BACK SPLASH WHERE IT OCCURS; RECEPTACLE SHALL BE HORIZONTAL.

ADJUST OUTLET HEIGHTS IN CERAMIC TILE WALLS TO BE ENTIRELY IN OR ENTIRELY OUT OF THE TILE. OUTLETS MAY BE HORIZONTAL TO MEET SPACE CONDITIONS.

TEST EACH SOCKET OF EACH OUTLET WITH A DEVICE INTENDED FOR THE PURPOSE.

ALL DEDICATED DATA EQUIPMENT BRANCH CIRCUITS SHALL FEED THIS TYPE OF EQUIPMENT ONLY AND SHALL CARRY A DEDICATED GROUNDING CONDUCTOR TO THE PANEL TO BE CONNECTED TO THE GROUNDING SYSTEM.

III DEMOLITION

REMOVE EXISTING RECEPTACLES, TELEPHONE, SWITCHES, AND ANY ELECTRICAL DEVICES IN WALLS TO BE DEMOLISHED. RELOCATE ANY OF THESE DEVICES AS INDICATED OR REQUIRED BY THE DRAWINGS. PROVIDE ARCHITECT WITH AS-BUILT DRAWINGS OF FINAL INSTALLATION FOR RECORD PURPOSES. CONTRACTOR IS NOTIFIED THAT NOT ALL EXISTING DEVICES MAY HAVE BEEN INDICATED ON THE DRAWINGS AND THAT SOME EXISTING ELECTRICAL DEVICES MAY NOT HAVE BEEN SHOWN IN THEIR ACTUAL LOCATION. CONTRACTOR IS REQUIRED TO VISIT SITE AND BECOME FAMILIAR WITH THE EXISTING CONDITIONS PRIOR TO DETERMINING THE WORK THAT NEEDS TO BE ACCOMPLISHED AS PART OF HIS/HER BID.

THE WORK SHALL INCLUDE THE FURNISHING OF ALL MATERIALS, CUTTING, EXTENDING, CONNECTING, REPAIRING, ADAPTING, AND OTHER WORK COINCIDENTAL HERETO, TOGETHER WITH SUCH TEMPORARY INSTALLATIONS AS MAY BE NECESSARY TO SATISFY THE DEMOLITION PROGRAM. APPROVAL SHALL BE SECURED FROM THE LANDLORD/ARCHITECT PRIOR TO CUTTING/DRILLING ANY STRUCTURAL SUPPORT.

ALL BUILDING CONSTRUCTION AFFECTED BY THE REMOVAL, RELOCATION, INSTALLATION OF ANY PIECE OF EQUIPMENT SHALL BE REPAIRED AND FINISHED AS REQUIRED TO MATCH EXISTING CONDITIONS OR AS DIRECTED BY THE ARCHITECTURAL DRAWINGS, SPECIFICATIONS, OR OWNER'S REPRESENTATIVE.

WHEN ELECTRICAL DEVICES ARE INSTALLED IN PARTITIONS OR CEILINGS TO BE REMOVED, THE ELECTRICAL CONTRACTORTRACTOR SHALL DISCONNECT THEM UP TO THE NEXT OUTLET TO REMAIN OR BACK TO THE PANELBOARD. IF EXISTING TO REMAIN OUTLETS ARE FED THROUGH DEMOLISHED PARTITIONS OR CEILINGS, THE CIRCUIT SHALL BE REARRANGED TO MAINTAIN CIRCUIT CONTINUITY. WIRE SHALL BE REMOVED BACK TO SOURCE FROM INACCESSIBLE RACEWAYS NOT REUSED. INSTALL BLANK PLATES ON FLUSH OUTLETS NOT REUSED. PLATE COLOR SHALL MATCH ADJACENT SURFACE AS NEAR AS POSSIBLE IN FINISHED AREAS.

ALL ELECTRICAL EQUIPMENT SHALL BE REMOVED FROM STRUCTURE TO BE REMOVED. ACCESSIBLE RACEWAYS, WIRES, BOXES, SWITCHES, AND OTHER ELECTRICAL ITEMS ASSOCIATED WITH THIS WORK SHALL BE REMOVED IF NOT REQUIRED FOR NEW EQUIPMENT TO CONTINUE IN SERVICE.

ALL MATERIAL REMOVED SHALL BE DISPOSED OF AS DIRECTED BY OWNER.

GENERAL ELECTRICAL NOTES

1. ALL ELECTRICAL WORK PERFORMED UNDER THIS CONTRACT SHALL COMPLY WITH NEC 2017, FBC 2020, LOCAL CODES AND ORDINANCES AND ALL STANDARDS OF CONSTRUCTION ESTABLISHED BY THE LANDLORD.
2. SUBMIT SHOP DRAWINGS FOR ACCEPTANCE BY THE ARCHITECT AND/OR ENGINEER BEFORE PROCEEDING WITH THE PURCHASE OR INSTALLATION OF THE EQUIPMENT AND MATERIALS. NO FACSIMILES OR FACSIMILE COPIES SHALL BE ACCEPTED.
3. ALL CONDUCTORS SHALL BE THW OR THWN COPPER. ALL EXPOSED CONDUITS SHALL BE RUN AS NEAT AS POSSIBLE. P.V.C. CONDUIT SHALL ONLY BE USED IN SLAB OR UNDERGROUND AT A MINIMUM DEPTH OF 24 INCHES.
4. FLEXIBLE CONDUIT SHALL BE USED FOR CONNECTION TO ALL VIBRATING EQUIPMENT SUCH AS MOTORS, ETC.
5. ALL ELECTRICAL EQUIPMENT SHALL BE APPROVED AS SAFE FOR USE IN THE U.S. WORKPLACE, AS PER A "NRTL" RECOGNIZED ORGANIZATION (U.L., C.S.A., ETC.)
6. ALL EQUIPMENT SHALL BE MOUNTED ABOVE FLOOD CRITERIA.
7. PRIOR TO BID, THE CONTRACTOR SHALL VISIT THE JOB SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS. NOTIFY THE ARCHITECT OR ENGINEER OF ANY DISCREPANCIES. THE CONTRACTOR SHALL QUALIFY THE BID ACCORDINGLY.
8. THE DESIGNATED NUMBERS ARE SHOWN ON THESE PLANS AS PER THE ORIGINAL DOCUMENTS OR SITE INVESTIGATION FOR THE EXISTING CONDITIONS AND ARE FOR IDENTIFICATION ONLY. CONTRACTOR SHALL VERIFY AND SHOW THE CIRCUIT NUMBERS ACTUALLY USED IN THE INSTALLATION ON THE "AS-BUILT" DRAWINGS.
9. CONTRACTOR SHALL WARRANT ALL WORK TO BE FREE OF DEFECT IN WORKMANSHIP AND MATERIALS FOR A PRIOR OF ONE YEAR AFTER ACCEPTANCE OF THE PROJECT.

ELECTRICAL NOTES:

1. ALL CONTRACTOR WORK SHALL BE IN ACCORDANCE WITH LOCAL CODES
2. CONTRACTOR SHALL SEAL OFF CONDUIT RUNS
3. CONTRACTOR TO MOUNT LIGHTNING ARRESTOR AT SWITCH DISCONNECT
4. CONTRACTOR SHALL VERIFY POWER SOURCE PRIOR TO ORDERING EQUIPMENT
5. NEUTRAL TO BE SUPPLIED FOR 230V-3 PHASE POWER.

PROJECT SPECIFICATIONS

FOR

LIFT STATION 16 REHABILITATION

LOCATION MAP

PREPARED BY:

SSN ENGINEERING

DECEMBER, 2023

SECTION 01010

SUMMARY OF WORK

PART 1 GENERAL

1.01 SCOPE OF WORK

A. This Section describes the project in general and provides an overview of the extent of the work to be performed under this Contract. Detailed requirements and extent of work is stated in the applicable Specification sections and shown on the Plans. The Contractor shall, except as otherwise specifically stated herein or in any applicable parts of the Contract Documents, provide and pay for all labor, materials, equipment, tools, construction equipment, and other facilities and services necessary for proper execution, testing, and completion of the work under this Contract.

1.02 CONSENT DECREE PROJECT

Not Applicable.

1.03 SPECIFICATIONS

A. The Specifications included in these Contract Documents establish the minimum performance and quality requirements for materials and equipment with the minimum standards for quality of the workmanship and appearance. Generally, there has been no attempt to separate the Specification sections into groups for the work of separate subcontractors, or for work to be performed by the various trades. Should there be any question as to the interpretation of any particular Specification section or part of Specification section, such question should be directed to the Department prior to the submittal of a proposal for the work under this Contract.

B. The work shown on the Plans is intended to be comprehensive and descriptive, not an exact and complete representation of the actual finished work. Installed work shall include fittings, joints, supports, nuts, bolts, and all other accessories required to provide complete and satisfactory systems as specified, even though some items may not be specifically shown on the Plans.

C. It is the intent of City to obtain a complete functional, satisfactory and legally operable installation under this project, and any items of labor, equipment or materials which may be reasonably assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the Plans or stated herein. The Contractor shall provide all materials for the project unless they are specifically called out in these specifications as being supplied by the Department. The Contractor shall also supply all other labor, material or equipment

required to preclude damage to or loss of functionality of any existing facility or system.

D. No request for additional compensation or Contract time (except for a non-compensable item extension at the sole discretion of the Engineer, whose decision shall be final) resulting from encountering utilities or structures not shown, or differing in location or elevation from that shown, will be considered. The Contractor shall explore sufficiently ahead of the Work to allow time for any necessary adjustments without delay to the progress of the installation. Cost due to delays occasioned by encountering utilities or structures which could have or should have been discovered by timely exploration ahead of the work shall rest solely with the Contractor.

1.04 REASONABLY IMPLIED PARTS OF THE WORK SHALL BE DONE THOUGH ABSENT FROM SPECIFICATIONS

A. Any part of the work which is not mentioned in the Specifications but is shown on the Plans, or any part not shown on the Plans but described in the Specifications, or any part not shown on the Plans nor described in the Specifications, but which is necessary or normally required as a part of such work, or is necessary or required to make each installation satisfactorily and legally operable, shall be performed by the Contractor as incidental work without extra cost to the City, as if fully described in the Specifications and shown on the Plans, and the expense thereof shall be included in the applicable unit prices or lump sum bid for the work.

1.05 DESCRIPTION OF WORK

A. The project consists of furnishing all materials, labor, and equipment necessary to Upgrade Sewage Pump Station No. 16, including, but not limited to, excavation, demolition and modification work including: Abandon existing dry well; Remove of dry well chimney; Remove of existing pumps, valves, piping, fittings, emergency discharge connection, existing sewer clean out plug, existing concrete slabs; existing wet well top slab; Remove and Replace in kind to match existing 6'(feet) chain link fence; Remove and Relocate as required: existing water meter and connect line to existing service; existing RTU antenna, existing electric box, existing concrete slab for electrical service; Relocate as required existing back flow preventer unit and water faucet, existing plug valve; furnish, installation, operation, and removal of temporary sewage effluent by-pass pumps, equipment and accessories; furnish and install wet well concrete top slab / new valve vault structure concrete and concrete top slab; furnish and install aluminum access hatches for wet well and valve vault and emergency connection; furnish and install new wet well protecting coating; furnish and install two (2) 4.60 HP submersible pumps and related equipment; furnish and install bubbler control system and related equipment; furnish and install new meter and main disconnect; furnish and install the proposed power/control system inclusive of the necessary electrical panel, enclosure, telemetry system and related equipment; install electrical conduits and junction boxes; install R.T.U. panel and S.C.A.D.A. equipment furnished by the Department; electrical work;

mechanical work: furnish all materials, equipment and supplies necessary for pump station startup and testing; furnish and install sewage force main pipe and fittings; connection to existing sewage force main; replacement of any sod, sidewalk, pavement damaged during construction; site restoration; and other appurtenant and miscellaneous items for a complete, satisfactory and functional installation.

B. Pumping Station No. 16 is located at NW 43rd Ave South of NW 133rd St in Section 29, Township 52, Range 41, Miami-Dade County, Florida.

C. It is the intent of the department to obtain a complete and working installation under this Project and any items of labor, equipment or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the Plans or stated herein.

1.06 TESTING

A. Testing procedures shall be submitted to the Engineer as Shop Drawings and will be subject to review and approval. The Department reserves the right to require test procedure and equipment changes and revisions to the extent considered appropriate by the Engineer whose decision shall be final. The Contractor is advised that all testing shall be carried out in accordance with the best practices of the trade, best management practices (bmp) and as recommended in writing by the engineering/technical/test staff of the manufacturer of the equipment and he should plan and price his test work accordingly. In no case will test recommendations of a manufacturer's sales or management groups be considered sufficient. All necessary temporary power sources, load banks, test materials, test instrumentation, qualified test personnel including manufacturer's representatives, fuels and lubricants shall be provided by the Contractor and shall be as approved by the Engineer and, if not approved, the Contractor shall change the item(s) to the satisfaction of the Engineer. Where required by the Engineer, testing shall be carried out utilizing Contractor-supplied power sources and load banks prior to any connection with FPL. The Contractor shall include in his prices bid all costs for testing and no extra compensation will be allowed.

B. Factory testing of equipment is in all cases required and test data from these tests shall be provided to the Engineer prior to shipment. The Department will decide when to send its personnel or representatives to the factory for witness testing of equipment. Travel expenses for Department personnel or representatives are paid for by the Department. Repeat tests due to unsuccessful tests will be borne by the Contractor. To establish a base line, the Bidder will assume that any piece of equipment with an invoice cost to the Contractor of one hundred thousand dollars ($100,000) or more will require witnessed testing. The City will in the Specifications try in all cases to note which items will require testing.

C. On site testing shall conform to the protocol previously approved by the Engineer, and shall include testing and calibration prior to energizing of individual cubicles followed by testing and calibration as a whole system or group of systems. The Contractor shall supply all material, equipment, power, time, and fully qualified

specialist personnel to perform all system integration work as necessary to provide systems that talk to one another and correctly react to one another, including systems that must communicate with, and react to existing systems, and systems being or to be installed by others. It is an absolute requirement that upon completion, all systems installed in the Work be able to correctly communicate and react to one another and to systems in existence, being or to be installed, external to the Work. Final testing and calibration will be performed with the equipment energized and will only take place when the Engineer is satisfied with the results of earlier tests. Full written reports of tests and results shall be furnished by the Contractor to the City. All costs for this testing, calibration, system integration and reporting, including the costs for factory and specialist personnel required during testing, calibration and system integration, shall be included in the prices bid and no extra compensation will be allowed. Any delays or costs occasioned by test procedures or results not being satisfactory to the Engineer shall rest solely with the Contractor and no extra time or compensation will be allowed. All on-site testing shall be witnessed by City, and the Contractor shall make timely arrangements and fully coordinate tests with the Engineer.

D. After installation is completed, the Contractor shall provide records of non-destructive electrical insulation tests performed by a certified institution approved by the Engineer, witnessed by the City personnel and attesting that the dielectric condition of the equipment and wiring is acceptable.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01011

SITE CONDITIONS

PART 1 GENERAL

1.01 SITE INVESTIGATION AND REPRESENTATION

A. The Contractor acknowledges that he has satisfied himself as to the nature and location of the work, the general and local conditions, particularly those bearing upon availability of transportation; disposal, handling and storage of materials; availability of labor, water, electric power, roads; disposal of water from construction; uncertainties of weather; the conformation and conditions at the ground; the type of equipment and facilities needed preliminary to and during the prosecution of the work and all other matters which can in any way affect the work or the cost thereof under this Contract.

B. The Contractor further acknowledges that he has satisfied himself as to the character, quality, and quantity of surface and subsurface materials to be encountered from inspecting the site and from evaluating information derived from exploratory work that may have been done by the City or included with these Contract Documents. Any failure by the Contractor to acquaint himself with all the available information will not relieve him from responsibility for properly estimating the difficulty or cost thereof under this Contract.

C. The Contractor acknowledges that by personal field observation or other means satisfactory to himself, performed prior to the bid, he has included in the prices bid all costs for dealing with all construction problems created by observable above or on grade features on or adjacent to the site of the work whether these features are shown on the Plans or described in the Specifications. In instances where the observable features indicate subsurface conditions which may affect the Project work, as for example, a pavement patch or catch basin gratings indicating respectively a utility or storm sewer not shown on the Plans, the Contractor acknowledges that he has made timely, diligent, inquiry of the Engineer or by other means fully satisfied himself prior to the bid as to the nature of, and costs created by, the subsurface condition and included all costs therefore in the prices bid.

1.02 INFORMATION ON SITE CONDITIONS

A. All information obtained by City regarding the site conditions, topography, subsurface information, ground water elevations, existing construction of site facilities as applicable, and similar data will be made available to the Contractor in the Contract Documents. Such information is offered as supplementary information only. Neither the Engineer nor MDWASD assumes any responsibility for the completeness or for the Contractor's interpretation of such supplementary information. Prior to bidding and after written approval from MDWASD, bidder

may make his own survey investigations to satisfy himself with site conditions at his own cost.

B. Subsurface investigations, including test borings, have been made to indicate subsurface conditions at locations in the Project.

C. Prospective bidders are advised, at their own expense, to make such subsurface investigation, by boring or test hole excavation, as may be desirable. However, such work is to be scheduled by appointment with the Engineer if on a City site or by notification to the City and properly permitted if in the public right of way.

1.03 DIFFERING SUBSURFACE CONDITIONS

A. In the event subsurface or latent physical conditions are found materially different from those indicated in these Documents, and differing materially from those ordinarily encountered and generally recognized as inherent in the character of work covered in these Contract Documents, promptly, and before such conditions are disturbed, notify the Engineer in writing of such changed conditions.

B. The Engineer will investigate such conditions promptly and following this investigation, the Contractor shall proceed with the work, unless otherwise instructed by the Engineer. If the Engineer finds that such conditions do so materially differ as to cause an increase or decrease in cost and time considered reasonable by the Engineer, the City will make the final decision regarding any adjustment in cost or time for completion.

C. In the event that site conditions differ from those expected by the Contractor, the Contractor shall proceed to complete the work as contemplated by the Plans and Specifications at his own cost and expense. If in the discretion of the Engineer, the difference in site conditions renders completion of the work as described by the Plans and Specifications impossible, the Engineer may alter the work, whereupon the Contractor shall be compensated for any extra work in accordance with Section 13 "Extra Work and Payment Therefore" of the General Covenants and Conditions; the Engineer shall not alter the work where the site conditions render the work more difficult or costly to perform, if such work is otherwise still possible as described in the Contract Documents.

1.04 EXISTING UTILITIES AND LOCATION SERVICES

A. Known utilities and structures adjacent to or encountered in the work are shown on the Plans. The locations shown are taken from existing records and the best information available from existing plans. However, it is expected that there may be some discrepancies and omissions in the locations and quantities of utilities and structures shown. Those shown are for the convenience of the Contractor only, and no responsibility is assumed by either MDWASD or the Engineer for their accuracy or completeness. **No request for additional compensation or**

Contract time (except for a non-compensable time extension at the sole discretion of the Engineer, whose decision shall be final) resulting from encountering utilities or structures not shown, or differing in location or elevation from that shown, will be considered. The Contractor shall explore sufficiently ahead of the work to allow time for any necessary adjustments without delay to the progress of the installation. Costs due to delays occasioned by encountering underground utilities or structures which could have or should have been discovered by timely exploration ahead of the Work shall rest solely with the Contractor.

B. Prior to proceeding with excavation the Contractor shall contact all utility companies and all other users of the right-of-way in the area to aid in locating their underground services. It shall be the Contractor's responsibility to contact utility companies at least three Normal Working Days before starting construction. The Contractor shall proceed with caution in the excavation and preparation so that the exact location of underground utilities may be determined. The Contractor shall comply with Chapter 556, F.S. "Underground Facility Damage Prevention and Safety Act", Chapter 553, F.S. "Florida Trench Safety Act, Part IV", Chapter 368, F.S., "Florida Gas Safety Law, Part 1, and OSHA Standard 1926.651.

C. It is the responsibility of the Contractor to ensure that all utility or other existing facilities, the stability of which may be endangered by the close proximity of excavation, are temporarily held in position while work proceeds in the vicinity of the facilities and that the utility or other companies concerned be given reasonable advance notice of any such excavation by the Contractor.

D. The Contractor shall take all reasonable precautions against damage to existing utilities. However, in the event of a break in an existing water main, gas main, sewer or underground cable, the Contractor shall immediately notify the responsible official of the organization operating the interrupted utility. The Contractor shall lend all possible assistance in restoring services and shall assume all cost, charges, or claims connected with the interruption and repair of such services, as determined by the Department.

1.07 CONTRACTOR'S RESPONSIBILITY FOR UTILITY PROPERTIES AND SERVICE

A. Where the Contractor's operation could cause damage or inconvenience to railway, telephone, fiber optic, television, electrical power, oil, gas, water, sewer, irrigation system, or any other utility, the Contractor shall make all arrangements necessary for the protection of these utilities and services.

B. Notify all utility companies that are affected by the construction operation at least 48 hours in advance. Under no circumstance expose any utility without first obtaining permission from the appropriate agency. Once permission has been granted, locate, expose, and provide temporary support for all existing underground utilities and utility poles where necessary. **Absolutely no extra compensation will be allowed for construction problems created by utility**

poles of whatever size, overhead electric, telephone or other lines, whether shown on the Plans or not. The Contractor is solely responsible for discerning such items in the field prior to bidding and including all costs for such work in the prices bid.

C. The Contractor and his subcontractors shall be solely and directly responsible to the owners and operators of such properties for any damage, injury, expense, loss, inconvenience, delay, suits, actions, or claims of any character brought because of any injuries or damage which may result from the construction operations under this Contract.

D. Neither the City nor its officers or agents shall be responsible to the Contractor for damages as a result of the Contractor's failure to protect utilities encountered in the work.

E. In the event of interruption to domestic water, sewer, storm drain, or other utility services as a result of accidental breakage due to construction operations, promptly notify the proper authority. Cooperate with said authority in restoration of service as promptly as possible and bear all costs of repair. In no event shall interruption of any utility service be allowed unless granted by the owner of the utility. In the event water service lines that interfere with trenching are encountered, the Contractor may, by obtaining prior approval of the water utility, cut the service, dig through, and restore the service with similar and equal materials at the Contractor's expense and as approved by the Engineer.

G. Replace, with material approved by the Engineer, at Contractor's expense, any and all other laterals, existing utilities or structures removed or damaged during construction, unless otherwise provided for in these Contract Documents and as approved by the Engineer.

1.08 INTERFERING STRUCTURES

A. Take necessary precautions to prevent damage to existing structures whether on the surface, above ground, or underground. An attempt has been made to show major structures on the Plans. While the information has been compiled from the best available sources, its completeness and accuracy cannot be guaranteed, and is presented as a guide. The Contractor is solely responsible for field verification of all locations.

1.9 FIELD RELOCATION

A. During the process of construction, it is expected that minor relocations of the work may be necessary. Such relocations shall be made only by the direction of the Engineer at the Contractor’s expense. If existing structures are encountered that will prevent construction as shown, notify the Engineer before continuing with the work in order that the Engineer may make such field revisions as necessary to avoid conflict with the existing structures. If the Contractor fails to notify the

Engineer when an existing structure is encountered, and shall proceed with the work despite this interference, the Contractor does so at his own risk.

B. Representatives of utility companies, the railroad companies, the traffic and transportation authorities, etc., shall be notified in accordance with the provisions set forth in the relevant sections of the Specifications and the permitting documents.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

NOT USED

END OF SECTION

SECTION 01016

SAFETY REQUIREMENTS AND PROTECTION OF PROPERTY

PART 1 GENERAL

1.01 CONTRACTOR'S RESPONSIBILITY FOR SAFETY

A. Conduct whatever work is necessary for safety and be solely and completely responsible for conditions of the job site, including safety of all persons (including employees) and property during the Contract period. This requirement shall apply continuously and not be limited to normal working hours.

B. Neither the Professional activities of the Design Professional, nor the presence of the Design Professional nor his or her employees and subconsultants at a construction site, shall relieve the Contractor and any other entity of their obligations, duties and responsibilities including but not limited to, construction means, methods, sequence techniques or procedures necessary for performing, superintending, or coordinating all portions of the Work of construction in accordance with the Project Documents and any health and safety precautions required by any regulatory agencies.

1.02 MANDATORY SAFETY TRAINING AT WATER AND SEWER TREATMENT PLANTS

A. The Contractor shall coordinate with the Construction Manager and thereafter the Water and Sewer Department Safety Office to arrange for a mandatory (PSM) Project Safety Management training for all his personnel who will be on site. This training must be completed prior to mobilization or any other work on site. The Contractor shall also be responsible that all on-site personnel of his subcontractors, at whatever tier, receive this training. The training normally takes about 2 to 3 hours and is held at the project site.

1.03 FEDERAL, STATE, AND LOCAL SAFETY REQUIREMENTS

A. Safety provisions shall conform to the Federal and State Departments of Labor Occupational Safety and Health Act (OSHA), and all other applicable Federal, State, County, and local laws, ordinances, codes, the requirements set forth herein, and any regulations that may be specified in other parts of these Project Documents. Where any of these are in conflict, the more stringent requirements shall be followed. Contractor's failure to thoroughly familiarize himself with the aforementioned safety provisions shall not relieve him from compliance with the obligations and penalties set forth therein.

B. All open excavations made in the earth shall be performed in compliance with the State of Florida Trench Safety Act, OSHA 29 CFR 1926 Subpart P (Chapter 90-96, Laws of Florida). The Contractor shall appoint a "competent person", in

accordance with Subpart P, who shall be present at the jobsite. A "competent person" shall mean one who is capable of identifying existing and predictable hazards in the surroundings, or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.

C. The Contractor shall familiarize himself with the "Underground Facility Damage Prevention and Safety Act", Florida Statute 556. The Contractor shall contact the Sunshine 811, at 1-800-432-4770, (or by submitting an internet ticket entry via www.sunshine811.com) at least forty-eight hours prior to any excavation. Failure to familiarize himself with the aforementioned safety provisions shall not relieve him from compliance with the obligations and penalties set forth therein.

D. Conduct operations in such a manner utilizing warning devices, such as traffic cones, barricades and warning lights that traffic, pedestrian and Department personnel are given adequate warning of hazards of the worksite as may be deemed necessary by the Department, Engineer of Record, and governing agency having jurisdiction over the work or political subdivision.

E. The Contractor shall be in compliance with all applicable provisions of the OSHA Code of Federal Regulations (CFR), including, but not limited to, the following:
   1. Process Safety Management (29 CFR 1910.119)
   2. Personal Protective Equipment (29 CFR 1910.132)
   3. Respiratory Protection (29 CFR 1910.134)
   4. Confined Space Entry Procedures (29 CFR 1910.146)
   5. Lockout/Tagout (29 CFR 1910.147)
   6. Industrial Truck / Forklift (29 CFR 1910.178)
   7. Electrical Safety (29 CFR 1910.301)
   8. Commercial Diving (29 CFR 1910.401)
   9. Air Monitoring (29 CFR 1910.1000)
   10. Asbestos & Lead Abatement (29 CFR 1910.1001, 1025)
   11. Blood Borne Pathogens (29 CFR 1910.1030)
   12. Crane Operations (29 CFR 1926 & ANSI)
   13. Fall Prevention Protection (29 CFR 1926.104)
   14. Welding and Cutting (29 CFR 1926.350)
   15. Scaffolding (29 CFR 1926.451)
   16. Excavation Protection (29 CFR 1926.650)
   17. Movement of Traffic (FDOT Index)

1.04 SAFE ACCESS BY FEDERAL, STATE, AND LOCAL GOVERNMENT OFFICIALS

A. The Contractor shall at all times provide proper facilities for safe access to the Work by authorized government officials.

1.05 CONSTRUCTION SAFETY PROGRAM

A. Develop and maintain for the duration of this Contract, a safety program that will effectively incorporate and implement all required safety provisions. The Contractor's Manual of Safety Practices outlining the firms policies on field safety procedures for employees shall be submitted to the Engineer for review before "Notice to Proceed" will be issued. The Contractor shall appoint an employee who is qualified and authorized to supervise and enforce compliance with the safety program.

B. Certain products specified in these specifications contain warnings by the manufacturers that under certain conditions, if instructions for use are not followed, a hazardous condition may exist. It is the Contractor's responsibility to instruct his workmen in the safe use of the product, or any product substitution.

C. The duty of the Engineer to conduct construction review of the Contractor's performance is not intended to include a review or approval of the adequacy of the Contractor's Safety Supervisor, the safety program, or any safety measures taken in, on, or near the construction site.

1.06 SAFETY EQUIPMENT

A. As part of the safety program, maintain at an office or other well-known place at the jobsite, safety equipment applicable to the Work as prescribed by the governing safety authorities, all articles necessary for giving first-aid to the injured, and establish the procedure for the immediate relocation to a hospital or a doctor's care of any person who may be injured on the jobsite.

B. Perform all necessary work to protect all personnel and the general public from hazards, including, but not limited to, surface irregularities or unramped grade changes, and trenches or excavations. Furnish barricades, lanterns, and proper signs to safeguard all persons and work.

C. The performance of all work and all completed construction, particularly with respect to ladders, platforms, structure openings, scaffolding, shoring, logging, machinery guards and the like, shall be in accordance with the applicable governing safety authorities.

D. During construction, construct and at all times maintain satisfactory and substantial temporary chain link fencing, solid fencing, railings, barricades or steel plates, as applicable, at all openings, obstructions, or other hazards. All such barriers shall have adequate warning lights as necessary, or required, for safety.

E. There shall be no oil dripping from equipment or oil spills.

1.07 STORAGE OF HAZARDOUS MATERIALS

A. The material shall be stored and handled in a proper and safe manner and upon its use, immediately dispose of the containers, cans, rags and remnants of the

material in a manner approved by the Department of Environmental Resources Management (DERM) at the Contractor's sole cost. The Contractor is not allowed to store empty containers at the site. In case of any violation, the Engineer will report such violation to DERM and the Contractor shall be subject to all penalties and fines as required by State and County regulations.

B. The Contractor is hereby cautioned that he cannot store any environmentally hazardous materials such as solvents, greases, lubricants or any other type of chemical substances at the Pump Station site. The Contractor shall be allowed to keep only such materials at the site for immediate use.

1.08 ACCIDENT REPORTS

A. If death, serious injuries, or serious damages are caused, report the accident immediately by telephone or messenger to the Engineer. In addition, the Contractor must promptly report in writing to the Engineer and the City all accidents whatsoever arising out of, or in connection with, the performance of the work whether on, or adjacent to, the site, giving full details and statements of witnesses.

B. If a claim is made by anyone against the Contractor or any subcontractor on account of any accident, promptly report the facts in writing to the Engineer and the City, giving full details of the claim.

1.09 TRAFFIC SAFETY AND ACCESS TO PROPERTY

A. Comply with all rules and regulations of the city, state, and county authorities regarding closing or restricting the use of public streets or highways. No public or private road shall be closed, except by express permission of the City and the controlling authority. Conduct the work so as to assure the least possible obstruction to traffic and normal commercial pursuits. Protect all obstructions within traveled roadways by installing approved barricades, signs, and lights where necessary for the safety of the public. The convenience of the general public and residents and the protection of persons and property are of prime importance and shall be provided for in an adequate and satisfactory manner.

B. Where traffic will pass over backfilled trenches before they are paved, the top of the trench shall be maintained with temporary asphalt that will allow normal vehicular traffic to pass over. Temporary access driveways must be provided where required. Access to businesses, schools and homes along the route of the work shall be provided by the Contractor at all times. Cleanup operations shall follow immediately behind backfilling and the worksite shall be kept in an orderly condition at all times.

C. Supply flagmen and guards or Police when they are required by regulation, when deemed necessary for safety, or required by the Engineer. Flagmen and Guards

shall be furnished with approved orange wearing apparel and other regulation traffic control devices.

1.10 FIRE PREVENTION AND PROTECTION

A. Perform all work in fire-safe manner. Furnish and maintain on the site adequate fire-fighting equipment capable of extinguishing incipient fires. Comply with applicable federal, local, and state fire-prevention regulations. Where these regulations do not apply, applicable parts of the National Fire Prevention Standard for Safeguarding Building Construction Operations (NFPA No. 241) shall be followed.

1.11 DECLARED STATE OF EMERGENCIES

HURRICANE

A. Hurricane Preparedness: During such periods of time as are designated by the United States Weather Bureau as being a hurricane alert, the Contractor shall perform all precautions as necessary to safeguard the work and property, including the removal of all small equipment and materials from the site, lashing all other equipment and materials to each other and to rigid construction, and any other safety measures as may be directed by the Engineer.

B. Prior to the Start of Work: The Contractor shall submit for approval, a Plan of Action for the specific actions to be taken on his particular projects during a hurricane watch and hurricane warning.

C. Upon Notification of a Hurricane Warning

1. Formal notification to the Contractors to implement their approved Plan of Action to protect the project and the public.
2. For construction projects at a Plant or Pump Station, a copy of the notifications will be provided to the Plant Superintendent or, for Pump Stations, to the Engineer. The Plant Superintendent or Engineer may notify the Construction Superintendent of any assistance he may need for the Contractor in order to secure the Plant or Pump Station.
3. For pipeline construction projects within the public right-of-ways, the Contractor will be notified by the Construction Manager Office to suspend his construction operations. The Contractor will backfill all open trenches, remove all construction equipment and materials from the right-of-way, remove unnecessary traffic barricades and signs, secure remaining barricades by "half burial" or "double sand bags".

POST DISASTER WORK

A. In the event of a disaster declaration by the Local or State governing authorities, the Department may choose to obtain the services of the Contractor to perform

work made an imminent priority for the disaster event. The compensation for the additional work caused by the disaster shall be negotiated between the Engineer and the Contractor with written approval provided by both parties prior to mobilizing at the designated location or locations. The value of the work performed shall be up to the amount of the original contract with contingencies and dedicated allowances.

1.12 JOINT SURVEY TO ESTABLISH AUTHENTICITY OF POSSIBLE DAMAGE CLAIMS

A. The Contractor shall maintain vertical and horizontal survey control points on all structures and improvements, located in the vicinity of the work prior to beginning work, and shall periodically check the points for movements with copies provided to the Engineer, of the survey notes for each survey and a copy of the layout of the survey control points.

B. After the contract is awarded and before commencement of work, the Contractor shall perform a thorough examination of existing buildings, structures, and other improvements in the vicinity of the work, as applicable, which might be damaged by his operations.

1. Examinations of existing structures, buildings, and other improvements in the vicinity of the work shall be done by the Contractor. The scope of the examination shall include cracks in the structures, settlement, leakage, and similar conditions. The City assumes no responsibility for pre-existing conditions of the structure.

2. Records in triplicate of all observations shall be prepared by the Contractor, photographs shall be taken by the Contractor signed and dated, with descriptive information and in the manner specified above. One signed copy of every document and photograph will kept on file in the office of the Engineer. Video recording also required.
3. The above records are intended to be used as indisputable evidence in ascertaining the extent of any damage which may occur as a result of the Contractor's operations and are for the protection of the Contractor and the City, and will be a means of determining whether and to what extent damage, resulting from the Contractor's operations, occurred during the Contract work.

C. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. Preconstruction videos and digital pictures shall be taken with date stamps of the entire area of work. A copy of all such notices shall be forwarded to the City.

1.13 TRAFFIC CONTROL AND USE OF PUBLIC STREETS

A. The Contractor shall be responsible for traffic control as specified hereinafter. Any reference to Miami-Dade County, its departments, or its published regulations, permits and data, shall be synonymous and interchangeable with other recognized governing bodies over particular areas of streets or their departments, published regulations, permits, or data. Abide by all applicable laws, regulations and codes thereof, pertaining to maintenance of public streets, detour of traffic, traffic control and other provisions as may be required for this project.

B. The Contractor shall be fully responsible for the maintenance of public streets, detour of traffic (including furnishing and maintaining regulatory and informative signs along the detour route), traffic control and other provisions, throughout the project as required by the Metropolitan Dade County Department of Public Works, Traffic Engineering Division (Traffic Division). Traffic shall be maintained according to corresponding typical traffic control details as outlined in the Dade County Public Works Manual. No street shall be completely blocked nor blocked more than one-half at any time, keeping the other half open for traffic without specific approval.

C. If required by the Traffic Division, employ the required number of uniformed off-duty policemen to maintain and regulate the flow of traffic through the construction area. The number of men required and the number of hours on duty necessary for the maintenance and regulation of the traffic flow shall be subject to their approval. If required for traffic control permits or agencies, the Contractor shall work odd or night hours, as required for traffic control reasons, and the cost of such work shall be considered as incidental to construction.

D. The Contractor shall provide all barricades and/or flashing warning lights necessary to warn motorist of the construction throughout the project.

E. Excavated or other material stored adjacent to or partially upon a roadway pavement shall be adequately marked for traffic safety at all times. Provide necessary access to all adjacent property during construction.

F. The contractor shall be responsible for the provision, installation and maintenance of all traffic control and safety devices, in accordance with specifications outlined in the Dade County Public Works Manual. In addition, provide for the resetting of all traffic control and information signing removed during the construction period.

G. Where excavations are to be made in the vicinity of signalized intersections, attention is directed to the fact that vehicle loop detectors may have been embedded in the pavement. Verify these locations by inspecting the site of the work and by contacting the Sunshine 811, at 1-800-432-4770, (or by submitting an internet ticket entry via www.sunshine811.com) . Any loop detector which is damaged, whether shown on the Plans or not, shall be repaired or replaced to the satisfaction of the Traffic Division.

H. Notify the Traffic Division 24 hours in advance of the construction date, and 48 hours in advance of construction within any signalized intersection.

I. Temporary pavement will be required over all cuts in pavement areas, and also where

traffic is to be routed over swale or median areas. When the temporary pavement for routing traffic is no longer necessary, it shall be removed and the swale or median area restored to their previous condition.

1.14 WORKING IN CONFINED SPACES

Where a Contractor needs to work in a confined space, the Contractor must comply with the General Industry, OSHA Confined Space Standard, 29 CFR 1910.146 or the equivalent Confined Space Standard in CFR 1926, Safety and Health Regulations for Construction Standards.

SECTION 01031

GRADES, LINES AND LEVELS

PART 1 - GENERAL

1.01 SCOPE

This work of this Section comprises the establishing of grades, lines and levels.

1.02 RELATED WORK

Section 01720 - Project Record Documents
Section 01725 - Project As-Builts

PART 2 - PRODUCTS

2.01 Materials:

Furnish all stakes, templates and other materials necessary for establishing and maintaining of the lines and grades necessary for control and construction of the Work and all incidental labor necessary for the prosecution of the Work.

PART 3 - EXECUTION

3.01 LAYOUT OF THE WORK:

A. GENERAL

1. The Engineer of Record, through retaining the services of a Professional Land Surveyor and Mapper, who is licensed in the State of Florida, shall furnish the Contractor with horizontal and vertical controls which shall be utilized as specified elsewhere herein to layout the work. The Professional Land Surveyor and Mapper, who is licensed in the State of Florida hired by the Contractor, shall verify all controls provided by the Engineer of Record and it shall be the responsibility of the Contractor to preserve same.

2. The Contractor shall retain the services of a Professional Land Surveyor and Mapper, who is licensed in the State of Florida who, shall furnish and set stakes, establishing line and grade and shall solely be responsible for the layout of the work as well as the recording of all as-built dimensions and elevations. The Contractor shall furnish all additional stakes, templates, and other materials for marking and maintaining survey points and lines given, and shall be responsible for their preservation. Should any of the horizontal and vertical control points set by the Engineer of Record be

destroyed or disturbed, they shall be reset by the Contractor's Florida Registered Land Surveyor and Mapper, at the Contractor's expense. All control points previously set by the Engineer of Record shall be verified by the Contractor's surveyor.

B. LAYOUT

As provided in Subsection 3.01-A, above, the Contractor through the services of his Florida Registered Land Surveyor and Mapper, shall establish the line and bench mark and other reference points for the pipeline or structure, as follows:

1. Structures: Will consist of baselines, stakes at building corners, centers and centerlines, auxiliary lines and two bench marks from which to establish the elevations. The Engineer of Record shall set a minimum of three horizontal and vertical control points which shall thereafter be maintained by the Contractor, without further help from the Engineer of Record, for use in establishing and checking the lines and grades as shown on the contract drawings.

2. Pipelines: Will consist of baselines, construction lines, centerlines, auxiliary lines and bench marks from which to establish the elevations. The Engineer of Record shall set horizontal and vertical control points at the beginning and end of the work and at a minimum distance of 1,400 ft. in between. When the total distance is less than 1,400 ft. control points shall be set at the beginning and end of the work.

3. The Contractor shall use this information to construct the structures and pipelines to the lines and grades shown on the project drawings and shall supply all equipment and personnel necessary to accomplish this end.

4. For pipelines, this will consist of establishing all points of bend (but not necessarily bevel pipe unless in close proximity to other facilities), valves, tees, crosses and other stations not more than 100 feet apart along the proposed centerline of the pipe, or along a stationed offset line as shown on the Plans, marked by a nail in a metal cap if in pavement, with the station painted nearby or by a nail in the top of a wooden stake driven flush with the ground with the station marked on the flag stake nearby, if not in pavement.

5. The Contractor shall supply the Department Inspector with a copy of the Florida Registered Land Surveyor and Mapper's layout of the work immediately upon its availability to his own forces.

6. The Contractor shall make his equipment and men available to the Inspector for spot checking the accuracy of the pipe laying. The Inspector shall require the Contractor to correct pipe alignment when necessary.

C. RECORD DRAWINGS:

1. During the entire construction operation, the Contractor shall retain the services of a State of Florida Registered Land Surveyor and Mapper who shall maintain records of

the installation, including all deviations from the Plans and Specifications by obtaining "as-built" dimensions and elevations.

2. The Surveyor shall prepare Record As-Built Drawings showing correctly and accurately all changes and deviations made during construction, including approved construction variances, to reflect the work as it was actually constructed.

3. Refer to Sections 01720 and 01725 for Department's criteria for developing project record documents and record As-Built drawings.

D. HORIZONTAL AND VERTICAL CONTROL FOR DESIGN

The following shall apply when establishing horizontal and vertical controls for design. They shall also be used for the development of construction drawings.

1. Survey stationing shall proceed from south to north and/or from west to east.

2. Baseline or centerline shall be tied to section corners, or to monument lines or to right-of-way lines.

3. Points along the survey line shall be referenced to perpetuate the alignment. Whenever possible, the reference points shall be established at right angles to the survey line and at intervals no longer than 1,400 feet. Reference points shall be shown on construction plans.

4. Centerline of side streets shall be established and set by nail and disc. Station and angle turned shall be given and shown on the plans.

5. All curve data (horizontal) shall be shown on Plans. Point of curvature and point of tangency shall be set in the field, reference P.C. and P.T. or P.I.

6. Easement lines shall be tied to baseline or centerline. Give station and angle turned.

7. Set centerline or baseline stations every 100 feet on the ground using iron rods in unpaved areas or P.K. nails on asphalt.

8. On vertical control refer to datum used (such as NGVD 88, NGVD 1929, City of Miami). Nationwide, surveys and as-builts are in the process of conversion to NAVD 88 from the NGVD 1929. The Department will accept NAVD 88 datum with a conversion factor on each page. The Florida Department of Transportation is using the NAVD 88 datum. Projects within FDOT roadway limits shall either use NAVD 88 datum or provide a conversion factor on each page if the NGVD 1929 datum is used. For projects using City of Miami datum provide a conversion factor on each page to the NAVD 88 datum.

9. Temporary bench marks (T.B.M.) and bench marks shall be established throughout the project at approximately 1,000 feet intervals. Show information on plans

10. Centerline shall be tied to baseline if different from each other.

11. Tie proposed pipe to centerline or baseline, not to right-of-way line. Right-of-way line shall be tied to centerline or baseline.

12. All survey information shall be shown on the plans.

13. All point of intersections and deflection angles shall also be shown. Angle can be submitted by bearings.

END OF SECTION

SECTION 01070

CUTTING AND PATCHING

PART 1 GENERAL

1.01 SCOPE OF WORK

A. Work Included: This section includes work required to provide complete, in place, cutting, fitting, and patching of new and existing work.

1. Do not imperil any work by cutting or altering work or any part of it.
2. Do not cut structural or reinforcing steel without the written consent of the Engineer.

1.02 DESCRIPTION OF WORK

A. Execute cutting (including excavating), fitting or patching of work, required to:

1. Make the several parts fit properly.
2. Uncover work to provide for the installation of ill-timed work.
3. Remove samples of installed work as specified for testing.
4. Install specified work in existing construction.

B. In addition to Contract requirements, upon written instructions from the Engineer:

1. Uncover work to provide for Engineer's observation of covered work.
2. Remove samples of installed materials for testing.

1.03 SUBMITTALS DURING CONSTRUCTION

A. Prior to cutting which affects structural integrity or safety, submit written notice to the Engineer and other Contractors, requesting consent to proceed with cutting.

B. All cutting and patching, to be performed at no additional cost to the Department.

C. Should conditions of work, schedule, indicate change of materials or methods, submit written recommendation to the Engineer, including:

1. Conditions indicating change.
2. Recommendations for alternative materials and/or methods.
3. Submittals as required for substitutions.
4. Submit written notice to the Engineer, designating time work will be uncovered, to provide for observation.

PART 2 PRODUCTS

2.01 GENERAL

A. Materials for replacement of work removed shall comply with applicable sections of these specifications for type of work to be performed. Materials not specified herein

shall be replaced as specified in Sub- Section 3.03 of this Section, Restoration.

B. Provide all tools and equipment required to accomplish cutting and patching.
C. Completely remove damaged or deteriorated concrete or other material.
D. Legally dispose of all demolition debris generated by the project. The Contractor shall pay for all loading, hauling, transportation and applicable tipping fees.

PART 3 EXECUTION

3.01 INSPECTION

A. Inspect existing condition of work, including elements subject to movement or damage during cutting, patching, excavating, and backfilling.

B. After uncovering work, inspect conditions affecting installation of new products.

3.02 PERFORMANCE

A. Execute fitting and adjustment of products to provide finished installation to comply with specified tolerances and finishes.

B. Execute cutting and demolition as specified below:

1. The cutting and removal of existing work necessary for modifications and installation of new work shall be made with a minimum of damage to the work that is to remain. Any damage done to existing facilities which are to remain shall be repaired at the Contractor's expense to the satisfaction of the Department.
2. When removing materials, or portions of existing structures, and when making openings in walls and partitions, the Contractor shall take all precautions and use all necessary barriers and other protective devices so as not to damage the structures beyond the limits necessary for the new work, and not to damage the structures or contents by falling or flying debris. Unless otherwise permitted, line drilling will be required in cutting existing concrete.
3. Surfaces of seals visible in the completed work shall be made to match as nearly as possible the adjacent surfaces.
4. Non-shrink grout shall be used for setting wall casting, sleeves, and leveling equipment bases. Doweling anchors into existing concrete and elsewhere as required shall be done with an approved type of epoxy material.
5. Debris created within facilities, which are to remain in service during the modification work, shall be removed daily. Operators of the Department and Contractor's employees shall not be subjected to hazardous areas, when performing their duties.
6. Follow other specific instructions for the modification work given in other sections of these specifications and as shown on the Drawings. Should these instructions conflict, the more stringent conditions shall prevail.

C. Restore work which has been cut or removed; install new products to provide completed work in accordance with the requirements of Contract Documents.

3.03 RESTORATION

A. Restore structures and surfaces damaged during the course of this Contract that are to remain in the completed work.

B. Restoration shall be done with new materials and appropriate methods as specified elsewhere in these specifications for new work of similar nature; if not specified, best recommended practice of manufacturer, or appropriate trade association.

C. Restore damaged work in such a way that there is a secure intimate bond or fastening between new and old work. Restored surfaces shall be finished to such planes, shapes, and textures that no transition between new and old work is evident in finished surfaces.

3.04 CLEANING

A. Remove from site all debris, rubbish, and extra material caused by cutting and patching.

END OF SECTION

SECTION 01340

SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES

PART 1 GENERAL

1.01 SCOPE OF WORK

A. The Department has established a "Pre-Approved Product List" for products to be used in the construction of water and sewer facilities. The "Pre-Approved Product List" lists manufacturer's product models pre-approved by the Department which meet the minimum requirements established in the Department's design and construction standards and specifications. However, not all products that may be used in the construction of water and sewer facilities that meet the Department's design and construction standards and specifications are listed in the "Pre-Approved Product List." The "Pre-Approved Product List" is not an exclusive collection of all qualified and approved products. For those products that are not on the "Pre-Approved Product List," the Contractor shall submit shop drawings as specified herein.

B. Contractors and suppliers can submit the "Pre-Approved Product List(s)" for the products that they intend to use in the construction of the water and sewer facilities for the Project. Products listed in the "Pre-Approved Product List" do not require the submittal of shop drawings to the Department. The "Pre-Approved Product List(s)" must be stamped, reviewed and initialed by the Contractor and by his engineer, if applicable, prior to submittal to the Department. A "Submittal Summary Sheet" must accompany all "Pre-Approved Product List" submittals. Both forms can be found in the Department website at www.miamidade.gov/water/pre-approved-product-list.asp.

B. Shop Drawings (including Pre-Approved Product List submittals) shall be submitted prior to any project construction activity. In a timely fashion, well before the contemplated ordering for fabrication of special order or long-lead items or construction use of any standard element of the work, the Contractor shall furnish Shop Drawings for the review and approval of the City.

C. It is the Contractor's sole responsibility, upon the first occasion of submittal of a particular element of the work, to submit Shop Drawings of an element which match and fulfill the requirements and intent of the Plans and Specifications. Any delays or costs caused, either directly or indirectly, by non-timely submissions; submission of items differing significantly from the intent of the Plans and/or Specifications; repeated submission of, or argument over, rejected elements or changes required for acceptance; arguments with the criteria or requirements of the Plans or Specifications; or any other such similar activities shall be at the expense of the Contractor.

D. It is the intent of the Contract Documents that the Contractor shall, in the first instance, submit Shop Drawings of elements which meet or exceed the requirements of the Contract Documents and fit with the other elements of the work and the existing conditions. Delays or the inability to obtain shop drawing approval may subject the Contractor to costs for liquidated or actual damages as specified in the Contract.

E. The approval of Pre-Approved product sheets, shop drawings and data will be general and shall mean that upon examination of the drawings, no variations from the approved project drawings and project requirements have been discovered, and approval will not relieve the Contractor of his responsibilities as defined above. The Department's review will not constitute an approval of dimensions, quantities and details of the material, equipment or item shown.

1.02 CONTRACTOR SUBMITTALS

A. The Contractor shall submit a minimum of four (4) hardcopies of the shop drawing submittal package to the Water and Sewer Department Document Control Section. PDF files of the entire submittal package along with the hard copies are encouraged to simplify the approval process.

B. The Shop Drawing submittal package shall include a transmittal, submittal registry and the pre-approved product list or shop drawing sheets stamped by the Contractor.

C. The Contractor shall meet with the Department Engineer (Construction Manager) the after Project Award to begin the shop drawing submittal process and establish a schedule for submittal and approval.

D. Where there is a deviation from the Specifications, the Contractor shall note it and state the reasons why a deviation is required.

1.03 DESCRIPTION OF WORK

A. Submit to the Engineer for review and approval, Shop Drawings, test reports and data on materials, equipment, and material samples as required for the proper control of work, and as specified in the Specification sections. Shop Drawings shall be submitted for all materials and equipment to be furnished.

B. After award of the project, the Contractor may begin providing submittals for approval. Submit to the Engineer a complete list of preliminary data on items for which Shop Drawings are to be submitted. Included in this list shall be the names of all proposed manufacturers furnishing specified items. Review of this list by the Engineer shall in no way expressed or implied relieve the Contractor from submitting complete Shop Drawings and providing materials, equipment, etc., fully in accordance with the Specifications. This procedure is required in order to expedite

final review of Shop Drawings.

C. Maintain an accurate updated Shop Drawing submittal log which shall include the following items:

1. Submittal Description and Number Assigned
2. Specification Section
3. Plans Sheet Number
4. Date to Engineer
5. Date Returned to Contractor (from Engineer)
6. Status of Submittal (Approved, Approved as Noted, Rejected/Resubmit)
7. Date of Resubmittal and Return (as Applicable)
8. Date Material Release (for Fabrication)
9. Projected Date of Fabrication
10. Projected Date of Delivery to Site
11. Status of O & M Manuals Submittal

1.04 CONTRACTOR'S RESPONSIBILITY

A. Furnish the Engineer with a schedule of Shop Drawings submittals, fixing the respective dates for the submission of Shop Drawings, the beginning of manufacture, testing and installation of materials, supplies and equipment. This schedule shall indicate those that are critical to the progress schedule.

B. Submit to the Engineer all plans and schedules sufficiently in advance of construction requirements to provide maximum time for checking and appropriate action from the time the Engineer receive them.

C. It is the duty of the Contractor to check and approve all plans, data and samples prepared by or for him before submitting them to the Engineer for review. Each and every copy of the Plans and data shall bear Contractor's stamp showing that they have been checked and approved. Shop Drawings submitted to the Engineer without the Contractor's stamp and approval shall be returned to the Contractor for conformance with this requirement before Engineer's review. **Shop Drawings shall indicate any deviations in the submittal from requirements of the Project Documents and the Contractor shall state the reason why a deviation is required.**

D. All submittals shall be accompanied by a submittal registry and transmittal letter containing the following information:

1. Date
2. Project Title and Number
3. Contractor's name and address
4. The number of each Shop Drawing, Data, and Sample submitted
5. Notification of Deviations from Project Documents
6. Submittal Log Number conforming to and referring to Specification Section

Numbers

E. Submit seven copies of Shop Drawings and of descriptive or product data submittals necessary to complement Shop Drawing. The Engineer will retain five sets.

F. After receiving approval by the Engineer, the Contractor shall be responsible for submitting the Shop Drawings to the Building Department. Shop Drawings of all premanufactured items and all other Shop Drawings are required to obtain approval prior to manufacturing or installing the submitted items. The Contractor shall also be responsible for contesting any interpretations by the Building Department that the City considers non-acceptable. The Contractor shall include in the bid prices, all costs for permits, fees and expenses associated with the submittals, including resubmittals (if any) of Shop Drawings to the Building Department. The Building Department as used in this paragraph shall be taken to mean the Miami-Dade County Building Department and/or other governing building authority appropriate to this project.

G. Do not begin any of the work covered by a drawing, data, or a sample returned as “Rejected/Resubmit” until a revision or correction thereof has been reviewed and returned to the Contractor, by the Engineer, with approval or approval “As Noted”. Be responsible for and bear all costs of damages which may result from the ordering of any material or from proceeding with any part of work prior to receiving Engineer's approval or approval “As Noted” of the necessary Shop Drawings.

H. Be fully responsible for observing the need for and for making any changes in the arrangement of piping, connections, wiring, manner of installation, etc., which may be required by the materials/equipment the Contractor proposes to supply, both as they pertain to the Contractor’s own work, work of others, or of other Divisions herein or Trades and clearly show such changes on the Shop Drawings.

I. When substitutions in materials or equipment are allowed, the Contractor shall make all necessary changes in adjacent or connected structures and equipment at his expense. Where contemplated changes, substitutions or appurtenant work require engineering design, in the opinion of the Engineer, the Contractor shall have such design services performed at his expense. Said engineering design services shall be of an extent satisfactory to the Engineer whose word shall be final and shall be performed by a Registered Professional Engineer licensed to practice in the State of Florida.

J. When substitutions in materials or equipment are allowed, the Contractor shall be solely responsible for all costs and time required by any differences in construction methods, fabrication or assembly required and no additional time will be allowed.

K. When a construction change, initiated by the Contractor or resulting from a change made by the Contractor, requires re-permitting as discussed in the preceding paragraph, the Contractor shall be responsible for all labor, material and equipment required to redraw the Plan sheet or sheets affected by the change to the satisfac-

tion of the Engineer of Record and the City. The costs for all work of this sort and all costs of re-permitting shall be borne by the Contractor and no extra com-pensation will be allowed.

L. Determine and verify:

1. Field measurements
2. Field construction criteria
3. Catalog numbers and similar data
4. Conformance with specifications
5. That installation and maintenance clearances are sufficient particularly when equipment or arrangement changes have been made

1.05 ENGINEER'S REVIEW OF SHOP DRAWINGS

A. Engineer's review of plans, data and samples, submitted by the Contractor will cover only general conformity to the Drawing and Specifications. The Engineer's review will not constitute an approval of dimensions, quantities, and details of the material, equipment, device, or item shown. The review of plans and schedules will be general, and shall not be construed:

1. As permitting any departure from the Contract requirements
2. As relieving the Contractor of responsibility for any errors, including detail, dimensions, and materials
3. As approving departures from details furnished by the Engineer, except as otherwise provided herein

B. Variations

1. If the plans or schedules, as submitted, describe variations per paragraph 1.03 C, and show a departure from the Contract requirements which Engineer finds to be in the interest of the City and to be so minor as not to involve a change in Contract price or time for performance, the Engineer may return the reviewed plans without noting an exception.
2. If the plans or schedules, as submitted, describe variations and show a departure from the Contract requirements which the Engineer finds to be minor enough to be corrected by redlining the submittal, the engineer will mark and return the submittal marked "Approved as Noted." The redlined corrections shall be as binding on the Contractor as would be a resubmission embodying the same corrections.

C. When reviewed by the Engineer, each of the Shop Drawings shall be stamped and dated to indicate it had been reviewed. Shop Drawings stamped "Revise and Resubmit" and with required corrections shown will be returned to the Contractor for correction and resubmittal.

D. Resubmittals will be handled in the same manner as first submittals. On resubmit-

tals the Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, to revisions and corrections required by the Engineer on previous submissions. The Contractor shall make any corrections required by the Engineer.

E. If the Contractor considers any correction indicated on the Shop Drawings to constitute a change to the Project Plans or Specifications, the Contractor shall give written notice thereof to the Engineer who will render a decision which shall be final. After the decision has been made, the Contractor shall without delay, provide the corrections to the plans.

F. When the Shop Drawings have been approved by the Engineer, the Contractor shall carry out the construction in accordance therewith and shall make no further changes therein except upon written instructions from the Engineer.

G. No partial submittals will be reviewed. Submittals not complete will be returned to the Contractor for resubmittal. Unless otherwise specifically permitted by the Engineer, all submittals shall be made in groups containing all associated items for systems, processes or as indicated in specific specifications sections. All plans, schematics, manufacturer's product data, certifications and other Shop Drawing submittals required by a system specification shall be submitted at one time as a package to facilitate interface checking.

1.06 SHOP DRAWINGS

A. When used in the Project Documents, the term "Shop Drawings" shall be considered to mean Contractor's plans for materials and equipment which become an integral part of the Project. These Shop Drawings shall be complete and detailed. Shop Drawings shall consist of fabrication, erection and setting drawings and schedule drawings, manufacturer's scale drawings, and wiring and control diagrams. Cuts, catalogs, pamphlets, descriptive literature, and performance/test data shall be considered only as supportive to required Shop Drawings as defined above.

B. Manufacturer's catalog sheets, brochures, diagrams, illustrations and other standard descriptive data shall be clearly marked to identify pertinent materials, product or models. Information which is not applicable to the Work shall be deleted by striking or cross hatching.

C. Shop Drawing shall have a submittal registry and display the following:

1. Project Title and Number
2. Name of Project Building or Structure
3. Number and Title of the Shop Drawing
4. Date of Shop Drawing or Revision
5. Name of Contractor and Subcontractor Submitting Drawing
6. Supplier/Manufacturer
7. Separate Detailer when Pertinent

8. Specification Title and Number
9. Specification Section
10. Application Project Drawing Number

D. If plans show variations from Contract requirements because of standard shop practice or for other reasons, describe such variations in the letter of transmittal. If no explanation of these variations is provided, the Contractor shall not be relieved of the responsibility for executing the work in accordance with the Contract, even though such plans have been reviewed and approved.

E. For all mechanical and electrical equipment furnished, provide a list including the equipment name, address of and telephone number of the manufacturer's representative and service company so that service and/or spare parts can be readily obtained.

F. All manufacturers or equipment suppliers who propose to furnish equipment or products shall submit an installation list to the Engineer along with the required Shop Drawings. The installation list shall include at least five installations where identical equipment has been installed and has been in operation for a period of at least five years, unless otherwise specified. Manufacturers and/or equipment which fails to meet the specified experience period will be considered if the manufacturer or supplier provides a bond or cash deposit which will guarantee replacement of the equipment or process in the event of failure or unsatisfactory service.

G. Only the Engineer will utilize the color "red" in marking Shop Drawing submittals.

1.07 REQUIRED INFORMATION

A. Submit, as applicable, the following for all prefabricated or manufactured structural, mechanical, electrical, plumbing, process system, and equipment work:

1. Shop Drawings or equipment drawings, including dimensions, size and location of connections to other work, and weight of equipment
2. Catalog information and cuts
3. Installation or placing plans for equipment, drives, and bases
4. Supporting calculations, signed and sealed by a Florida Registered Engineer when required, for equipment and associated supports, or hangers required or specified to be designed by equipment manufacturers
5. Signed and sealed calculations and plans by in-house Florida Registered Professional Engineer for structural systems, indicating compliance to the structural design criteria specified in the Plans
6. Complete manufacturer's specifications, including materials description and paint system
7. Performance data and pump curves
8. Suggested spare parts with current price information
9. List of special tools required for testing, checking, parts replacement, and maintenance. (Special tools are those which have been specially designed

or adapted for use on parts of the equipment, and are not customarily and routinely carried by maintenance mechanics)

10. List of special tools furnished with the equipment
11. List of materials and supplies required for the equipment prior to, and during startup
12. List of materials or supplies furnished with the equipment
13. Special handling instructions
14. Requirements for storage and protection prior to installation
15. Requirements for routine maintenance required prior to equipment startup
16. List of all requested exceptions to the Project Documents

1.08 SUBMITTAL REQUIRED FOR FOREIGN MANUFACTURED ITEMS

A. In addition to the submittal requirements stated above, suppliers of foreign manufactured items shall submit the names and addresses of companies within the United States that maintain technical service representatives and a complete inventory of spare parts and accessories for each foreign-made item proposed for incorporation into the Work. Failure to prove these capabilities shall be cause for rejection of the foreign manufactured items.

B. Foreign manufactured equipment and materials shall in all cases be clearly and permanently marked with the manufacturer's name and country of origin of the item. The name of the U.S. importing/supplying firm is not acceptable. Shop Drawing submittals of foreign-made items shall be accompanied by written information to include name and location (i.e. country, City, and street address) of the manufacturer. This requirement shall also apply to the foreign made elements of items assembled in this country from parts wholly or partially manufactured overseas.

1. The words, "Permanently Marked" as used in this paragraph shall mean; die stamped, cast-in, welded, or otherwise marked such that the removal of the marking by any mechanical or chemical means will result in obvious permanent damage to the surface marked. These markings shall be on surfaces which are not hidden by assembly.

C. Where specified elsewhere herein or at the sole discretion of the Engineer, whose word shall be final, supply verification of quality, suitability or other aspects, as directed by the Engineer, from a Professional Engineer licensed to practice in the State of Florida or the state where the supplying U.S. firm is located. The verification shall be signed, sealed, and dated. All costs for this verification shall be at the sole expense of the Contractor and no extra compensation will be allowed. Verification by foreign-based engineers, firms, manufacturers, etc. will not be acceptable. Verification by means of a very stringent foreign testing agency/standard (for example ISO 9000 series) may be acceptable. However, this shall again be at the sole discretion of the Engineer and the full burden of proof and satisfaction of the City shall rest with the Contractor. No extra time will be permitted due to the requirement for verification and the Contractor has the sole responsibility to make

his submittals with all necessary information in a timely fashion.

1.09 SAMPLES

A. Furnish for the approval of the Engineer, samples required by the Project Documents or required by the Engineer. Samples shall be delivered to the Engineer as specified or directed. The Contractor shall prepay all shipping charges on samples. Materials or equipment for which samples are required shall not be used in work until approved by the Engineer.

B. Samples shall be of sufficient size and quantity to clearly illustrate:

1. Functional characteristics of the product, with integrally related parts and attachment devices
2. Full range of color, texture and pattern
3. A minimum of two samples of each Item shall be submitted

C. Each sample shall have a label indicating:

1. Name of Project
2. Material or Equipment Represented
3. Name of Producer and Brand (if any)
4. Location in Project

D. Prepare a transmittal letter in triplicate for each shipment of samples containing the information specified herein in Paragraph 1.06 A. Enclose a copy of this letter with the shipment and send a copy of this letter to the Engineer. Approval of a sample shall be only for the characteristics or use specified and shall not be construed to change or modify any Contract requirements.

E. Approved samples of the hardware in good condition will be marked for identification and may be used in the work. Materials and equipment incorporated in work shall match the approved samples. Samples which failed testing or were not approved shall be returned to the Contractor at his expense, if so requested at time of submission.

1.10 SUBSTITUTIONS

A. Changes in products, materials, equipment, and methods of construction required by the Contract Documents, which are proposed by the Contractor after award of the Contract, are considered to be requests for substitutions. Where the Plans and/or Specifications designate the products of a particular manufacturer, the product specified has been found suitable for the intended use. Articles or products of similar characteristics may be offered for the approval of the Engineer, whose decision shall be final. Copies of complete descriptive data shall be fur-

nished regarding all materials furnished by the Contractor, consisting of Dimension drawings, catalog references, product data, cost, and other information necessary to clearly identify and evaluate each article. When substitutions are permitted, the Contractor shall make all necessary changes in adjacent, connected, or other structures and equipment at his expense.

B. Where engineer-recommended changes, substitutions or appurtenant work require engineering design, the Contractor shall have such design services performed. Those engineering design services shall be of an extent satisfactory to the Engineer, whose decision shall be final. Engineering services for engineer-recommended changes, substitutions or appurtenant work, shall be performed by a Registered Professional Engineer licensed to practice in the State of Florida.

C Unless specifically authorized by the Engineer in writing, no additional contract time will be allowed, and a decrease in time may be appropriate.

SECTION 01410

TESTING AND TESTING LABORATORY SERVICES

PART 1 GENERAL

1.01 SCOPE OF WORK

A. The City will employ and pay for services of an independent testing laboratory to perform testing as indicated in the Project Documents, and may at any time elect to have materials and equipment tested for conformance with the Project Documents.

B. Cooperate with the laboratory to facilitate the execution of its required services.

C. Testing laboratory inspection, sampling and testing will be required for, but not limited to, the following:

1. Soil Compaction
2. Cast-in-Place Concrete
3. Mechanical Work

1.02 CONTRACTOR'S RESPONSIBILITIES

A. Cooperate with laboratory personnel and provide access to Work.

B. Make available, at no cost to the City, adequate quantities of representative samples of materials proposed to be used and which require testing.

C. Provide to the laboratory the preliminary design mix approved to be used for concrete, and other materials mixes, which require control by the testing laboratory.

D. Furnish incidental labor and facilities:

1. To provide access to work to be tested
2. To obtain and handle samples at the Project site or at the source of the product to be tested
3. To facilitate inspections and tests
4. For storage and curing of test samples

E. Notify laboratory sufficiently in advance of operations to allow for laboratory assignment of personnel and scheduling of tests.

1.03 PAYMENT FOR TESTING

A. The City will pay for initial testing services required elsewhere in these Specifications.

B. When initial tests indicate non-compliance with the Project Documents, subsequent retesting occasioned by the non-compliance shall be performed by the same Testing Laboratory, and all costs thereof shall be paid for by the Contractor.

C. Inspecting and testing, performed exclusively for the Contractor's convenience, shall be the sole responsibility of and shall be paid for by the Contractor.

1.04 QUALITY ASSURANCE

A. Upon completion of each test and/or inspection, promptly distribute copies of test or inspection reports to the Engineer, the Contractor, to governmental agencies requiring submission of such reports, and to other persons as directed by the Engineer.

PART 2 PRODUCTS

2.01 TEST METHODS

A. Tests and Inspections will be conducted in accordance with the requirements of these specifications or, if not herein specified, in accordance with the latest standards of the American Society for Testing and Materials (ASTM), or other approved and recognized authorities as acceptable to the City.

B. Requirements for testing are described in various Sections of these Specifications.

PART 3 EXECUTION

NOT USED

END OF SECTION

SECTION 01710

CLEANING

PART 1 GENERAL

1.01 SCOPE OF WORK

A. This Section specifies the maintenance of the work site in a clean, orderly, hazard-free condition.

1.02 QUALITY ASSURANCE

A. Conduct cleaning and disposal operations in accordance with local ordinances and anti-pollution laws. Rubbish, volatile wastes, and other construction wastes shall be neither burned nor buried on the work site, and shall not be disposed of into storm drains, sanitary drains, streams or other waterways.

B. Final cleaning shall be accomplished either by workmen experienced in cleaning operations or by professional cleaners.

1.03 DISPOSAL REQUIREMENTS

A. Conduct cleaning and disposal operations to comply with local codes, ordinances, regulations, and anti-pollution laws. Do not burn or bury rubbish or waste materials on Project site. Do not dispose of volatile wastes, such as mineral spirits, oil, or paint thinner, in storm or sanitary drains, Volatile wastes shall be disposed in accordance with proper laws and be approved by the Department. Do not dispose of wastes into streams or waterways.

PART 2 PRODUCTS

2.01 ON-SITE WASTE CONTAINERS

A. Provide on-site waste containers for collection of waste materials, debris and rubbish. See Section 01100 - Special Project Procedures, Subsection 1.05 regarding Safety Requirements for environmentally hazardous materials.

2.02 CLEANING MATERIALS

A. Cleaning materials shall be as recommended by the manufacturer of the surface to be cleaned.

PART 3 EXECUTION

3.01 SAFETY REQUIREMENTS

A. Maintain work site in accordance with local ordinances and anti-pollution laws

applicable to work site cleanliness and in a neat, orderly and hazard-free condition until final acceptance of the work. Catwalks, accessible underground structures, work site sidewalks and walkways adjacent to the work site shall be kept free from hazards caused by construction activities.

B. Store volatile wastes including rags in covered metal containers, and remove from work site daily.

C. Prevent accumulations of wastes which create hazardous conditions.

D. Artificially ventilate spaces which are not naturally ventilated when volatile or noxious substances are present in those spaces.

3.02 CLEANING DURING CONSTRUCTION

A. Perform cleaning every workday for duration of the Work. Structures, grounds, and areas of the work site, access roads and adjacent public and private properties shall be maintained free from accumulations of waste materials and rubbish caused by construction operations on the work site. Place waste materials and rubbish in on site containers or as otherwise approved. Unneeded construction equipment shall be removed and all damaged repaired so that the public and property owners will be inconvenienced as little as possible.

B. Remove or secure loose material on open decks and on other exposed surfaces at end of each day's work or more often to maintain work site in hazard-free condition.

C. Prevent dislodgement of materials due to wind and other forces. Wet down dry materials and rubbish to lay dust and prevent blowing dust. Cover or wet excavated material leaving and arriving at the site to prevent blowing dust. Clean the public access roads to the site of any material falling from the haul trucks.

D. Empty on-site waste containers whenever necessary so that trash overflow does not occur. Legally dispose of contents at either public or private dumping areas.

E. Control the handling of materials, debris and rubbish; do not drop or throw from heights.

F. Immediately remove spillages of construction-related materials from hauling routes or the site.

G. Where material or debris has washed or flowed into or been placed in existing watercourses, ditches, gutters, drains, pipes, structures, or elsewhere during the course of the Contractor’s operations, such material or debris shall be entirely removed and satisfactorily disposed of during the progress of the work, and the ditches, channels, drains, pipes, structures, and work, etc., shall, upon completion of the work, be left in a clean and neat condition.

3.03 FINAL CLEANING

A. In addition to the cleaning performed above, in preparation for final inspection, remove grease, dust, dirt, rust stain from surfaces. Remove labels, fingerprints and other foreign materials from exposed exterior finished surfaces. Flush down all manhole covers and frames, valve boxes, and areas leaving such surfaces clean of all sand, laitances, etc.

B. In preparation for final acceptance or occupancy, conduct final inspection and cleaning of exposed exterior surfaces, and of concealed spaces.

C. Maintain cleaning operations until project has been finally accepted.

END OF SECTION

SECTION 01720

PROJECT RECORD DOCUMENTS

PART 1 GENERAL

1.01 DESCRIPTION

A. Scope of Work: For contracts where the work is performed at an on-site location maintain one record copy of:

1. Record Drawings. Record Drawings as used herein shall mean a drawing that accurately records constructed improvements and any field changes.
2. Record Specifications.
3. Addenda.
4. Change Orders and other modification of the contract.
5. Engineer's written orders or instructions.
6. Approved Shop Drawings, Product Data and Samples.
7. Field Test records.
8. Construction photographs.
9. As built dimensions and elevations as recorded by the Contractor's Florida Licensed Professional Surveyor and Mapper (PSM) on a daily basis.
10. Field Book. Survey Field notes taken by the Florida Licensed Professional Surveyor and Mapper’s survey crew (copy provided to the Engineer on a monthly basis).

B. The records listed above are to be made available to the Engineer at all times for all projects.

C. Related Requirements Described Elsewhere:

1. Section 01340: Shop Drawings, Product Data and Samples.

1.02 MAINTENANCE OF DOCUMENTS AND SAMPLES

A. Maintain documents in a clean dry, legible, condition and in good order. Do not use record documents for construction purposes.

1.03 REQUIRED MEASUREMENTS

A. Set-up and Verification: The Contractor’s Florida Licensed Professional Surveyor and Mapper is required to recover the design baseline and verify the elevations and coordinates on a regular basis as needed.

B. The Contractor is required to have a level instrument setup next to the construction site in order to control the vertical alignment of the pipe installation

prior to trench backfilling. The level shall be setup daily for use by the surveyor, Contractor's foreman and Department Engineer/Inspector. Any underground construction work that does not have a level properly setup will be stopped by the Department Engineer/Inspector.

C. The Contractor is required to have a survey crew record the field information on a daily basis when there is underground pipe installation. The survey crew shall be on-site as needed to record and verify the information before it is covered. Any underground construction work that does not have the information recorded by a survey crew will be stopped by the Department Engineer/Inspector. The Engineer/Inspector has the authority to order re-excavation of work that was covered without accurate survey measurements.

D. Field Book Information: The Florida Licensed Professional Surveyor and Mapper is required to have his crews make daily visits to the project site during underground pipe installation work to perform field measurements of the Contractor's daily installations. This information shall be recorded in field books. Copies of the field notes are required to be provided to the Construction Manager on a monthly basis. The surveyor's field notes of the surveyor shall be submitted to the Department along with partial as-builts plans (signed and sealed) on a monthly basis as a condition of payment.

1.04 PROJECT RECORDS

A. During the life of the Contract the Contractor shall retain the services of a Florida Licensed Professional Surveyor and Mapper (PSM) who shall maintain daily records of the installation, including all deviations from Plans and Specifications and for the purposes of preparing and submitting to the Department an as-built/record survey in compliance with:

1) Florida Statutes Chapter 472.027.

2) Florida Administrative Code Chapter 5J-17.050, 5J-17.051 and 5J-17.052

3) As further required by these Contract Documents.

B. The Measure and Recording of all information required in Subsection A above for all projects concurrently with construction progress. The services of the Florida Licensed Professional Surveyor and Mapper for the project shall be retained by the Contractor prior to the issuance of the Notice to Proceed. A letter from the Florida Licensed Professional Surveyor and Mapper shall be provided at the preconstruction meeting indicating that the Contractor has secured his services to perform all survey work for the duration of the project and prepare final as-builts plans.

C. Submit redlines, partially completed as-built plan sheets and fully complete as-built Plan sheets and certified copies of field book information to include raw data of the measurements all as required by and satisfactory to, the Engineer as

prerequisite for the acceptance of monthly payment applications.

D. Label each document "PROJECT RECORD" in neat large printed letters.

1. Record all information for pipeline projects and on-site projects concurrently with construction progress.

2. Do not conceal any work until as-built information is recorded by the Contractor's surveyor.
3. All locations for future connections or tie-ins shall be left unburied and uncovered until the Contractor's PSM measures and records the as-built information.

    a. All as-built and inspector information is to be made available to the Engineer on a daily basis for inclusion in the M-D WASD records.

4. Restrained pipe, end line valves, thrust blocks shall be left uncovered for the last complete length. Inline valves and tees shall be left exposed for 1 length on both sides plus the face end. Measure and record the elevation, horizontal and vertical alignment, and the inclination for these items.
5. For all projects, the Contractor's PSM shall maintain exact and extensive records of any deviations from Drawings and Specifications. These records shall be satisfactory to the Engineer, whose decision shall be final, and sufficient to allow the production of accurate as built Plans which correctly and completely portray the work as constructed.

6. For all projects, the Contractor's PSM shall record data as follows during the entirety of construction.

    a. For facility (e.g. a water or sewage plant, pumping station, or similar site, if so designated by M-D WASD) projects, record as-built dimensions and elevations every twenty-five feet (25') or portion thereof along pipeline and at every abrupt change in direction of the new line.
    b. For pipeline projects, constructed in the public right-of-way, record dimensions and elevations every one hundred feet or portion thereof along the pipeline and at every horizontal and vertical change in direction.
    c. In all cases, record locations and elevations for each valve, fitting, service line, fire hydrant, water sampling point, utility poles adjacent to the proposed line, overhead wires crossing the ditch line (approximate height above grade) and other appurtenances along the pipeline.
    d. The identity, dimensions, location, and elevation of any existing utility crossing the proposed line and so immediately adjacent to the new line as to be exposed by the excavation, shall also be

recorded. Locate, excavate, expose, and record the same data for any utility shown in the plans whose proximity to the proposed pipeline could affect the certification requirements of the new installation. Note that in instances of a very wide ditch due to ground conditions, the recording of data for adjacent, paralleling utilities shall only be required for lines which come within three feet of the outside of the pipe being installed, unless otherwise ordered by the Engineer who's decision shall be final.

e. Without exception, for all thrust blocks, the top elevation, outer dimension, thickness of the block, length and location of any sheet piling, if used, shall be recorded by the Contractor's PSM.

f. Specific locations and elevation of equipment, the buildings and miscellaneous items installed inside them shall be recorded as applicable and as required by the Engineer.

g. Without exception, where the substitution of another piece of equipment for that shown on the Plans has been allowed, the footprint, clearance, and elevation dimensions shall be recorded by the Contractor's PSM and these changes shall be accurately and thoroughly portrayed on the as-built plans.

h. Contractor's Licensed Surveyor shall prepare from the field data, as-built record drawings showing correctly, completely, and accurately the installation, embracing all changes and deviations made during construction, including all construction variances, to reflect the work as it was constructed.

i. Record Drawings shall be prepared as specified hereinafter.

j. Record Drawings and five (5) copies shall be signed and sealed by the Surveyor and shall be submitted to the Department for the Engineer's review within ten (10) calendar days following the completion date of successful pressure testing of all mains and appurtenances under this Contract.

k. If the Engineer determines that the Drawings are not acceptable, they will be returned to the Contractor with a cover letter noting the deficiencies and/or reasons for the disapproval. Contractor shall have ten (10) calendar days to correct all exceptions taken by the Engineer and resubmit as-built record drawings to the Engineer for final acceptance.

1.05 MECHANICAL, STRUCTURAL AND ELECTRICAL AS-BUILT RECORDS

A. The mechanical, structural and electrical information on as-builts for Pump Stations and Plant work shall be reviewed and signed and sealed by a Florida Registered Professional Engineer when designated as the responsible party for the corresponding portion of the as-builts.

B. The Engineer shall verify that all mechanical, structural and electrical information on the as-built the work was constructed as designed on the Design Plans. Any deviation shall be noted and approved by the Department.

C. Capital Improvement Projects contracted by the Department shall be certified by

the Construction Manager or Engineer of Record that the work was constructed as designed on the Design Plans with any deviation shall be noted and approved by the Department.

1.06 PROPERTY BOUNDARIES

A. The Florida Licensed Professional Surveyor and Mapper shall establish and maintain throughout the construction the property boundaries of pump stations and easements. The surveyor shall verify that the work of the project does not encroach into adjacent (abutting) property. Property corners lost during construction shall be reset at the first opportunity to ensure that the work is done within the designated limits.

B. The as-builts for pump stations or other Water and Sewer Department above ground facilities in an easement or designated property shall show all property corners, setbacks and dimensions of the structure and appurtenances. All information required of a boundary survey shall be contained on the as-built plans. A boundary survey signed and sealed by a PSM shall be a part of the as-built plans.

1.07 DRAWINGS

A. During the life of the Contract, maintain records of all deviations from the Plans and Specifications and prepare therefrom As-Built Record Drawings showing correctly and accurately all changes and deviations made during construction to reflect the work as it was actually constructed. It is the responsibility of the Contractor to check the As-Built Record Drawings for errors and omissions prior to submittal to the Department and certify in writing that the As-Built Record Drawings are correct and accurate, including the actual location of all piping, exposed and internal piping, and electrical/signal conduits in or below the concrete floor. Indicate the size, depth and voltage in each conduit.

B. Legibly Mark To Record Actual Construction: All data as previously specified for all installations by the Contractor’s PSM. For on-site structures and facilities work the Contractor’s Florida Registered Land Surveyor shall record:

1. Depths of various elements of foundation in relation to finish first floor and datum plane.
2. All exposed and underground piping and ductwork with elevations and dimensions and locations of valves, pull boxes, etc. Changes in location. Horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent reference points, plant survey grids, property lines and similar.
3. Location of internal utilities and appurtenances concealed in the construction shall be referenced to visible and accessible features of the structure. Air conditioning ducts with locations of dampers, access doors, fans and other items needing periodic maintenance.
4. Field changes in dimensions and details.
5. Changes made by Engineer's written instructions or by Change Order.

6. Details not on original Contract Drawings.
7. Equipment and piping relocations.
8. Major architectural and structural changes in structures, including tanks.
9. Architectural schedule changes according to Contractor's record and shop drawings.
10. Record Drawings shall be prepared as specified hereinafter.

C. Specifications and Addenda: Legibly mark each section to record:

1. Manufacturer, trade name, catalog number and Supplier of each product and item of equipment actually installed.
2. Changes made by Engineer's written instructions or by Change Order.

D. Approved Shop Drawings: Provide record copies for system diagrams and drawings together with each element of process equipment, piping, electrical system and instrumentation system.

1.08 SUBMITTALS

A. Accompany submittal with transmittal letter in duplicate, containing:

1. Date
2. Project title and number
3. Contractor's name and address
4. Title and number of each Record Document
5. Signature of Contractor or his authorized representative.

B. Record Drawings with five copies which have been signed and sealed by the surveyor shall be submitted to the M-D WASD for the engineer’s review. Drawings shall conform to recognized drafting standards. As-built drawing shall be submitted on 24-inch by 36-inch bond paper. These materials shall be submitted to the MD-WASD for the Engineer’s review as a prerequisite for payment during the course of construction as previously specified and final, complete sets of documents within ten calendar days following the completion date of successful testing of all mains, equipment and appurtenances under this Contract. Final payment will not be made until the five sets of as-built record drawings (with AutoCAD file) and five sets of prints have been approved and accepted by the Engineer.

1. In cases where a portion of a pipeline system or parts of a process system are put into service, the above conditions shall apply for the in-service portion and monthly payments shall be withheld until the as-built drawings are accepted by the Engineer.
2. As-Built Record Drawings, as prepared by the Contractor’s Florida Licensed Professional Surveyor and Mapper and submitted by the Contractor, shall comply with following criteria and standards:
   a. Title block must show the Contract or Project Title (as applicable); Contract number; MD-WASD ER, PCTS, RPQ numbers; Contractor’s name; Engineer of Record’s name;

Surveyor's name and address; date; location; and where appropriate to the work, size and type (i.e. water main, sanitary gravity main, sanitary force main) of main.

b. Baselines or centerlines must be tied to section corners, monument line and right-of-way lines.

c. Pipeline must be tied to baseline or centerline with stations and offsets.

d. Baselines or centerlines must show bearings or deflection angles, or delta, radius, chord and arc length for curves.

e. Show all horizontal curve data, including point of curvature (PC) and point of tangency (PT) stations or radial bearing.

f. Stationing must be the same as shown on construction drawings and must be tied to Section corners, centerline intersections and all other pertinent control points within the Project. All such pertinent points shall have their stationing shown and where there is dual stationing for a point, both stations shall be called out.

g. Indentify all streets by name or number and show stationing at all intersecting streets.

h. Refer to vertical datum plane and identify the location, elevation and source supplying the bench mark used.

i. Tie easement lines to survey baseline or platted centerline and right-of-ways.

j. Show horizontal and vertical locations of all fittings, deflections, or at any significant change of direction, and at a maximum of 100-foot intervals along the pipeline for off-site (e.g. in the public right-of-way) and at maximum 25- foot intervals for on-site (e.g. on a facility such as a pump station or plant work.

k. On all pipe fittings of 36-inch diameter or over, (i.e. tees bends, crosses, wyes, increasers/decreasers, bevels) elevations must be taken at the end and center points to reflect the true elevation and altitude of the fitting.

l. Elevations of natural ground or pavement over the pipeline must be shown at each position where the pipe elevation is shown and at intervening high and low points.

m. Manhole rim and valve box rim elevations must be shown.

n. Show all invert and bottom elevations in manholes and valve vaults or boxes. Show all invert and bottom elevations together with pipe size, and where it can be determined, pipe material, for existing structures having pipes which cross the pipe line being constructed.

o. Locations and elevations together with diameter, thickness and material of all casings.

p. Location, top and bottom elevations of all sheeting left in place.

q. Coordinate values used inside plants shall be the local, the City established coordinate systems referenced to the property boundary.

r. State plane coordinate values for all new valves and manholes; on existing valves and manholes at points of connection or closest to the point of connection and the point of connection

itself.

3. Certification: The Contractor shall certify on as-built record drawings all other actual constructed details and information as may be required by the City including but not limited to:

   a. Pipeline must be identified by type of pipe material, manufacturer, type of joint and type of joint restraint.
   b. Valves shall be identified by size, type, end condition; and n valves 16-inch or larger, the manufacturer's name and number of turns required to open or close the valve.
   c. Show calculated pipeline percent of grade between manholes of gravity systems.
   d. Types and sizes of sheeting and piling together with measured and complete; location, dimensional, , and elevation data on any pile caps, tie backs, anchors, whalers or other appurtenant structures left in place.

C. Digital Records: The City requires the submittal of as-built drawings in AutoCAD for Windows format and in PDF format. Graphical information contained on magnetic media shall be the same as provided on plan sheets. Digital Records shall be delivered to the City Project Manager containing a list of all files and data being provided. The AutoCAD file shall be compatible with the Department system and capable of being uploaded without external reference files.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

NOT USED

END OF SECTION

SECTION 01 78 40 (01725)

PROJECT AS-BUILT/RECORD DRAWINGS

PART 1 GENERAL

1.01 SCOPE

A. This Section shall serve to set requirements for As-Built/Record Drawings submitted to Miami-Dade Water and Sewer Department (Department").

B. As-Built/Record Drawings shall be submitted prior to placing any mains in service. The approved Final As-Built/Record Drawings are required for Substantial Completion and Conveyance of new water or sewer infrastructure. The infrastructure shall have As-Built/Record Drawings in the format and information specified herein, as recorded by a Professional Surveyor and Mapper (PSM) and prepared in accordance with these guidelines as part of the construction and inspection process.

1.02 RELATED WORK SPECIFIED ELSEWHERE

A. The work shall proceed in accordance with the following specification sections, bound herein:

1. Section 01 31 19.13 (01150) – “Preconstruction Conference”
2. Section 01 42 16 (01005) – “Defined Terms”
3. Section 01 71 23 (01031) – “Grades, Lines and Levels”
4. Section 01 77 00 (01700) – “Contract Closeout”

1.03 GENERAL

A. The Contractor shall retain the services of a Florida Registered Professional Surveyor and Mapper as a prerequisite to receiving a Notice To Proceed (NTP).

1. Prior to receiving the NTP the Contractor shall provide a letter from the PSM indicating that the Contractor has secured his services to perform all survey work for the duration of the Project, and to prepare final As-built/Record Drawings.
2. Prior to receiving the NTP the Contractor shall provide a copy of the insurance policy declaration page of the surveying company, and the professional Liability insurance coverage.
3. The Surveyor shall attend the Preconstruction Conference. It is the Contractor’s responsibility to have the services of the PSM by the Preconstruction Conference and the PSM in attendance.
4. Donation projects require the Survey Company or PSM to carry professional liability insurance coverage. A copy of the insurance policy including the declaration page shall be provided with the Final As-Built/Record Drawings.

B. The Florida Registered PSM shall maintain records of the installation, including all deviations from Plans and Specifications, and for the purposes of preparing and submitting to the Department an As-Built/Record Drawing in compliance with:

1. Florida Statutes Chapter 472.027.
2. Florida Administrative Code Chapter 5J-17.
3. As further required by the Contract Documents.

1.04 AS-BUILT SUBMITTAL PACKAGE

A. The Final As-Built/Record Drawing shall be submitted by the Contractor prior to performing the pressure test of the main to be placed into service. The Department is required to have as-built record documentation of all mains in operation.

B. Donation Projects As-Built Package-Submittal Prior To Pressure Testing and Certification

1. A set of signed and sealed As-Built/Record Drawings (DWFX or PDF file), signed and sealed field book information, electronic field raw data shall be submitted using the applicable Department's system.
2. As-Built/Record Drawings in digital format DWG.
3. Bill of Materials, Bill of Sale Sketch (completed and signed by the Contractor).
4. Easement(s) legal description and sketch (signed by the owner if part of the project). All surveys for right-of-ways, easements, properties, topographical, boundaries and other special purposes.

C. Monthly submittals (for WASD contract projects)

1. A set of signed and sealed As-Built/Record Drawings (DWFX or PDF file), signed and sealed field book information, electronic field raw data shall be submitted using the applicable Department's system.
2. As-Built/Record Drawings in digital format DWG.
3. Final As-Built/Record Drawings shall be submitted as a prerequisite for the last progress payment.
4. Easement(s) legal description and sketch (signed by the owner if part of the project). All surveys for right-of-ways, easements, properties, topographical, boundaries and other special purposes.

D. **Final submittal** shall consist of corrected As-Built/Record Drawings and Documents in digital format (DWG and PDF files), to be submitted using the applicable Department's system and the following sets of signed and sealed hard copies:

1. Two sets for water main projects,
2. Two sets for gravity and force main sewer projects,
3. For pump stations:
    a. Five sets for donation projects.

b. Three sets for contracts.

4. PSM's signed and sealed copy of the Field Book.

5. For donations, a copy of the insurance policy of the PSM, and the surveying company, including the declaration page.

E. As-Built/Record Drawings signed and sealed by the Florida Registered Professional Surveyor and Mapper and/or Engineer of Record or designated Florida Registered Professional Engineer must comply with format requirements.

F. Platted Lots Requirement

1. In lieu of recorded plats, 1 copy of a tentative plat signed by a representative of the Miami-Dade County, Department of Transportation and Public Works, Plats Division may be acceptable for As-Built/Record purposes. The Plats Division representative shall attest that the lot and block numbers, street names, easements, and other pertinent data shown are as will be recorded in the plat's final form. In this case, the submitter is responsible to provide a copy of the recorded plat to the Department's New Business office before any water meters are set on the Project.

1.05 AS-BUILT/RECORD DRAWINGS FORMAT AND GENERAL SUBMITTAL REQUIREMENTS

A. Size shall be 24" X 36".

1. Preferred scales are 1"=20' for contracts and 1"=40' for donations horizontally, and 1"=2' for contracts and 1"=4' for donations vertically. Other scales may be permitted but must be approved by the Department prior to preparation of the drawings.

2. Provide separate As-Built/Record Drawings and easements for water and sewer conveyances. Where water and sewer are shown on the sewer As-Built/Record Drawings, print dash the water on the sewer As-Built/Record Drawings and show only sewer As-Built information. The same applies for the water As-Built/Record Drawings.

3. Any deviations from the design plans must be approved by the Department.

B. Quality of As-Built/Record Drawings

1. To ensure that As-Built/Record Drawings may serve their intended purposes, they shall be prepared with consideration for quality. The Inspector and As-Built Reviewer will consider the following elements to ensure the quality of As-Built/Record Drawings:

a. Accuracy: The Contractor is required to have a survey crew record the field information as necessary when there is underground pipe installation. The Florida Registered Professional Surveyor and Mapper shall be responsible for providing measurements in accordance with the standard of practice established in Chapter 5J-17 of the Florida Administrative Code, pursuant to Section 427.027, Florida Statutes. The approved final As-Built/Record Drawing will be used as part of the Department's GIS and Record System. In addition, the horizontal

accuracy shall not exceed 1 foot in 7,500 feet, a commonly value accepted for suburban areas. The elevations shall be based on a closed level between two-benchmarks and shall not exceed the calculated value of a closure in feet of plus or minus 0.05 feet times the square root of the distance in miles.

b. Appearance: As-Built/Record Drawing shall be prepared in a professional manner consistent with common drafting standards for layout, lettering and line work.

c. Understandability: As-Built information shall be portrayed in a manner that is readily understandable by someone not familiar with the specific job.

d. Clarity: Preparer shall endeavor to present As-Built information clearly without "cluttering" the drawing. Do not include or show trees, shrubs, traffic lights or signs, landscaping, etc.

1.06 CERTIFICATION

A. As-Built/Record Drawings shall include a signed, sealed and dated certification statement by the responsible Florida Registered Professional Surveyor and Mapper, that all measurements were recorded under his direction and that they are accurate.

B. Final As-Built/Record Drawings that contain electrical, mechanical or structural work (pump stations, sewage flow meters, etc.), shall be signed and sealed by the Engineer of Record to indicate As-Built conditions.

C. Certifier shall be fully responsible for the accuracy of the As-Built/Record Drawings. As-Built/Record Drawings shall not contain any statement that the information was obtained from another party other than a Professional Surveyor and Mapper under his direction (e.g. a statement such as "As-Built information provided by Contractor" shall not be permitted).

D. The Contractor shall certify on the As-Built/Record Drawings that the As-Built/Record Drawings are correct and accurately depict what was constructed in the field, in addition that all As-Built field information submitted to the EOR or designated Florida Registered Professional Engineer and/or PSM reflects actual field As-Built project conditions, such as:

1. Valves must be identified by size, type, and end condition. On valves 16-inch or larger, the manufacturer’s name and number of turns required to open or close the valve.

2. Pipeline must be identified by type of pipe material, manufacturer, type of joint and type of joint restraint.

3. Types and sizes of sheeting and piling together with location, dimensional, and elevation data on any pile caps, tie backs, anchors, whalers or other appurtenant structures left in place.

4. External wiring has been terminated inside the panel at the designated “terminal boxes” in accordance with the approved electrical schematic and/or shop drawings.

5. The electrical control panel has been installed and its components match approved shop drawings and are in compliance with the Department's Standards and Specifications.

6. The electrical power and control diagrams are current and reflect all approved plans and/or field modifications made, if any.

7. The electrical control panel and associated electrical equipment are safe to energize and operate.

E. The electrical control panel manufacturer shall certify that:

1. The installed control panel has been inspected at the job site.

2. The control panel and its components match approved shop drawings and are in compliance with project's plans and specifications.

3. The control panel and its components have not been modified, changed or altered in any way, shape or form as to void the Underwriter Laboratory (UL) listing.

4. The electrical control panel and its components are safe to energize and operate

1.07 QUALITY ASSURANCE

A. Contractor's Responsibility

1. As-Built/Record Drawing preparation and submittal shall be the responsibility of the Contractor. The final As-Built/Record Drawings shall be completed and submitted to the Department prior to pressure testing, pending to show only portions of the Project not authorized to be done before certification of the system, such as interconnections, abandonments, cut and plugs, etc.; those activities shall be reflected on the final As-Built/Record Drawing and resubmitted within ten (10) County calendar days after a successful test. Testing will not be considered complete until As-Built/Record Drawings, field book data and other record documents are submitted and approved by the Department.

2. As-Built/Record Drawings shall be checked by the Contractor for errors and omissions prior to submittal to the Department.

3. For Donation Projects: A Bill of Materials (on Department form) shall also be certified as correct by signature and presented at the time of As-Built submission. Quantities shown on the Bill of Materials shall match installed and As-Built quantities, not quantities proposed, bid or bought nor scaled distances or quantities.

B. Professional Surveyor and Mapper Responsibility

1. The PSM shall be responsible for all locations, measurements and associated information on the As-Built/Record Drawings.

2. Infrastructure being shown on As-Built/Record Drawings shall have been located under the direction of a Florida Registered Professional Surveyor and Mapper.

3. As-Built/Record Drawings shall meet the requirements established in these specifications.

1.08 PHASING

A. Phasing of projects must be approved by the Department and such approval communicated to the Inspections Unit. Where phasing is approved the following additional requirements for As-Built/Record Drawings shall apply:

1. The phase number must appear prominently on each sheet.

2. A prominent phase line shall be drawn at the junctures of the submitted phase with any previous or subsequent phases. The phase line shall be labeled and the phase numbers on either side of it identified.

3. Work in previous or subsequent phases shall be "hatched" out or dashed in plan and profile and labeled "Not a Part" to clearly eliminate it from the As-Built/Record Drawings.

4. Clearly show what is part of the present phase and what is part of previous or subsequent phases at the tie-in points or phase lines. Make certain that this matches what was previously submitted with any earlier phases.

5. Unless otherwise authorized, phases shall end at a valve for water and force mains, and at a manhole for gravity sewers.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

3.01 GENERAL

A. If construction drawings are used to create the As-Built/Record Drawings, all "proposed" construction related information such as “equal to”, “typical”, “approximately”, “shall”, etc. shall be removed from As-Built/Record Drawings, leaving only "As-Built" information reflected on the drawing. Do not remove any information on materials installed. The construction drawings need to be adjusted accordingly to reflect constructed as-built information.

B. Site location sketch shall be provided showing the Project site and surrounding area with all streets clearly named, its own north arrow and a readable scale. The section, township and range shall also be provided therein.

C. Provide separate water and sewer profiles.

D. When the main crosses a utility or structure, the two points providing the clearance shall be identified, measured and recorded. This shall apply to all utilities (water, sewer, sewer laterals, water services, gas, electric, storm, telecommunication, duct banks, etc.).

E. All mains shall be stationed, and all facilities and infrastructure labeled. As-Built/Record Drawings shall show stations for all services. As-Built lengths and distances for service runs shall also be given.

F. Stations shall run along the baseline.

G. For water mains, force mains and gravity sewers use one continuous stationing system.

H. Where different stationing systems cross, show the equation station.

I. Label with station and offset all valves, fittings, services, outlets, manholes, deflection points and other components in the line. The labels, stations and offsets shall coincide, plan and profile.

3.02 REQUIRED INFORMATION AND MEASUREMENTS

A. Set-Up Verification

1. The Contractor's Florida Registered Professional Surveyor and Mapper is required to recover the design baseline and verify the elevations and coordinates on a regular basis as needed.

2. The Florida Registered Professional Surveyor and Mapper shall establish and maintain throughout the construction the property boundaries and easements of pump stations and any other Department's facilities and infrastructure. The PSM shall verify that the work of the Project does not encroach into adjacent (abutting) property. Property corners lost during construction shall be reset at the first opportunity to ensure that the work is done within the designated limits. The PSM shall note on As-Built/Record Drawings any Department approved encroachments into pump station site (fencing, driveways, etc.).

3. The Contractor is required to have a level instrument setup next to the construction site in order to control the vertical alignment of the pipe installation prior to trench backfilling. The level shall be setup daily for use by the PSM, Contractor's foreman and Department Engineer/Inspector.

4. The Contractor is required to have a survey crew record the field information on a daily basis when there is underground facilities and infrastructure installation. The survey crew shall be on-site as needed to record and verify the information before it is covered. Any underground construction work that does not have the information recorded by a survey crew will be stopped by the Department Engineer/Inspector. The Engineer/Inspector has the authority to order re-excavation of work that was covered without accurate survey measurements.

B. Field Book Information

1. The Florida Registered Professional Surveyor and Mapper is required to have his crews make daily visits to the Project site during underground pipe installation work to perform field measurements of the Contractor's daily installations. This information shall be recorded in field books. Copies of the field notes are required to be provided to the Construction Manager/Inspector

on a monthly basis. The PSM's field notes shall be submitted to the Department along with final As-Built/Record Drawings (signed and sealed) as a condition of conveyance (for donation projects), or monthly basis as a condition of payment and at substantial completion (for contract projects) before applying for final payment. Electronic field raw data is acceptable.

C. As-Built/Record Drawings Content Requirements and Procedures

1. The following shall be made a part of any As-Built submittal for water or sewer, where applicable:

a. Project name, Project identification number and the words "As-Built/Record Water" or "Record Drawing Water" or "As-Built/Record Sewer" or "Record Drawing Sewer", all prominently displayed. PMS's or Engineer's name, company, address, phone number and certification statement shall also be displayed.

b. All applicable permit numbers for the Project shall be shown on the cover sheet.

c. Graphic and numeric scale, north arrow and any symbol legend needed.

d. All involved streets shown with centerlines, right-of-way lines, widths and names, with matching plat, if applicable, subdivision name, phase line and number. (Phasing to be nearest valve and manhole in limits of phase area). Show station at all intersecting streets.

e. All involved lots and blocks shown and correctly designated (to match plat).

f. All control lines identified (i.e. centerline, section line, monument line, property line, etc.). Identify all streets by name or number.

g. Baseline shall be tied to centerlines, boundary lines, section corners, or to monument lines or to right-of-way lines. Baselines must show bearings or deflection angles, or delta, radius, chord and arc length for curves.

h. Pipeline shall be tied to a baseline that is easily identified on the existing or proposed right-of-way. Baseline shall not be on top of the main except for gravity sewers installed on centerlines.

i. Show all horizontal curve data, including point of curvature (PC) and point of tangency (PT) stations or radial bearing.

j. Stationing shall proceed from south to north and/or from west to east. Stationing shall be the same as shown on construction drawings and must be tied to section corners, centerline intersections and all other pertinent control points within the Project. All such pertinent points shall have their stationing shown and where there is dual stationing for a point, both stations shall be called out.

k. Horizontal Control

1) The PSM shall show on the As-Built/Record Drawings the Florida State Plane Coordinate (current readjustment - NAD 83,

FLA East Zone 901) with at least two physically located horizontal control points within the Project limits.

2) For As-Built/Record Drawings within Department facilities with relative coordinates, a coordinate conversion equation needs to be included on every sheet.

l. Vertical Control

1) As-Built/Record Drawing shall use the same datum as per approved design plans.

2) Nationwide, surveys and As-Built/Record Drawings are in the process of conversion to NAVD 88 from the NGVD 1929. The Department will accept NAVD 88 datum with a conversion factor to NGVD 1929 on each page.

3) For projects using City of Miami datum provide a conversion factor on each page to NGVD 1929 datum.

m. Easements

1) Easements, if any, shall be clearly shown with size, coordinates for each corner and tied to the property line. The easements shall be separate for water, sewer, force main and pump stations.

2) Existing easements with Official Record Book (ORB) information must be shown.

3) Easements are required for any infrastructure not in the public right-of-way. An easement may also be required for a main in the public right of way if there is insufficient side clearance to the right-of-way line to permit maintenance of the pipeline (usually 6' for water and 7.5' for force mains and gravity sewer mains on each side measured from the center of the pipe). For pipelines larger than 16-inches in diameter the easement size shall be determined by the Department.

4) Easement lines shall be tied to the centerline of the main.

5) Show easement released with Miami Dade County Clerk of the Court Official Record Book (ORB) and page.

n. Tie-in Points

1) All tie-in points, water or sewer shall be tied to the baseline.

2) In instances where this is impractical such as for service installations, the tie-in location may be referenced to a known Department facility such as a valve or manhole. This facility must be fully identified with atlas page, Department As-Built/Record Drawing number and page and its designation and station as given therein. Approval for this method of location shall be secured with the As-Built Reviewer/Inspector.

3) All locations for future connections or tie-ins shall be left unburied and uncovered until the Contractor’s Florida

Registered Professional Surveyor and Mapper measures and records the As-Built information.

4) Clearly show and label what is new and what is existing at the tie-in points with the WASD As-Built/Record Drawing number identified on the existing main.

o. The ends of all services and laterals shall be fully located by reference to the main and the nearest property line(s).

p. Show all outlets, stub-outs, sewer lateral, water service and any other relevant information. Identify the size, material, length, direction and elevation (top of pipe for water and force main, invert for gravity sewer).

q. On all pipe fittings of 36-inches diameter or larger, including tees, bends, crosses, wyes and bevels, station and elevation shall be taken at the end and center points to reflect the true elevation and orientation of the fitting.

r. Elevations of natural ground or pavement over pipelines shall be shown at each position where the pipe elevation is shown at least every 100 feet on profile view.

s. Show profile view of the main pipeline installation on the same sheet as the plan view. Stationing on both views shall be aligned to facilitate As-Built review.

t. Manhole rim and valve box rim elevations shall be shown.

u. Show all invert and bottom elevations in manholes and valve vaults or boxes.

v. Show all invert and bottom elevations together with pipe size, and where it can be determined, pipe material, for existing structures having pipes which cross the pipe line being constructed within 250 feet of point of crossing.

w. Location, elevation, material and size of all casings shall be shown. Launching and receiving pits location and dimensions shall be shown in case of jack and boring or micro tunneling used for casing installation.

x. Types, sizes of sheeting and piling together with measured and complete locations with dimensions, top and bottom elevations of all sheeting and pile caps, tie backs, anchors, whalers or other appurtenant structures including sheeting left in-place, shall be shown.

y. Where service is not at a right angle (90 degrees) to main line, tie service with length of offset to nearest property line.

z. For Horizontal Directional Drilling installations, in addition to the applicable items already mentioned on this section, As-Built/Record Drawings shall include:

1) Equipment used.

2) Angles at entry and exit and radius.

3) Bore path report to include detection method used, location for both entry and exit referenced to a permanent structure,

information of the company collecting the data, such as company name, address, date, staff information who collected the data.

4) The Department shall be provided with As-Built/Record Drawing for any failed bore path.

aa. Provide State Plane Coordinate values and elevations for all visible features such as valves, fittings, service lines, manholes, fire hydrants, water sampling points, water meters, cleanouts and backflow preventers, utility poles, adjacent to the main, overhead wires crossing the main and other appurtenances along the main. Also provide State Plane Coordinate values for existing valves and manholes at points of connection or closest to the point of connection and the point of connection itself.

bb. Lines that are abandoned in place, placed out of service or removed shall be clearly identified (dashed and bold line type) on the As-Built/Record Drawings to include cut and plug locations, pipe material and existing As-Built location. Include the existing As-Built/Record Drawing numbers. State whether cut and plug was performed by Department forces.

cc. Include a statement showing work performed by the Contractor under Department's licensed operator supervision.

dd. Mechanical restraints shall be identified on the As-Built/Record Drawing. The restraint system used shall be identified (gland restrained, joint restrained or gasket restrained). If thrust blocks are constructed, the top elevation, outer dimension, thickness of the block, length and location of any sheet piling, if used, shall be recorded by the Contractor's PSM.

ee. Large diameter concrete transmission mains 42-inches and larger shall show each pipe joint with station and pipe length.

ff. Restrained pipe, end line valves, thrust blocks shall be left uncovered for the last complete length. In line valves and tees shall be left exposed for one length on both sides plus the face end. Measure and record the elevation, horizontal and vertical alignment, and inclination for these items.

gg. For pipeline projects, provide dimensions and elevations of ground and top of pipe every one-hundred feet maximum, or portion thereof along the pipeline, at every significant change on ground elevation, at every horizontal and vertical change in direction and at all fittings, with stations.

hh. If an asset is authorized to be reused, clearly show that asset, such as a fire hydrant, is being reused.

ii. Pipeline must be identified by type of pipe material, manufacturer, type of joint and type of joint restraint.

jj. The identity, dimension, location and elevation of any existing utilities crossing the proposed line and so immediately adjacent to the new line

as to be exposed by the excavation shall also be recorded. Locate, excavate, expose and record the same data for any utility shown in the plans whose proximity to the proposed pipeline could affect the certification requirements of the new installation. Note that in instances of a very wide ditch due to ground conditions the recording of data for adjacent, paralleling, utilities shall only be required for lines which come within three feet of the outside (but not less than the minimum required per FAC 62-555.314) of the pipe being installed unless otherwise ordered by the Department whose decision shall be final.

kk. Specific location and elevation of equipment, buildings and miscellaneous items installed inside the buildings shall be recorded as applicable and as required by the Department.

ll. Without exception, where the substitution of a piece of equipment for that shown on the Plans has been allowed, the footprint, clearance and elevation dimensions shall be recorded by the Contractor's PSM and these changes shall be accurately and thoroughly portrayed on the As-Built/Record Drawings.

2. As-Built/Record Drawings for **water and sewer force mains** shall additionally include the following:

a. Plan view showing size, material, offset of main, deflections (if any), stations and offsets of services, hydrants and fittings at the main; and at main, deflections (if any) and the end of the service line.

b. Profile showing ground and top of pipe elevation every 100 feet, maximum, and at any change in grade (with corresponding station) and at every fitting. Show size and material of pipe, all fittings and extend of restrained pipe with stations. Stationing system shall be the same as that used in the plan view.

c. Distances from main to all valves, fire hydrants and meter boxes shall be shown. Tie hydrants to right-of-way. In established areas, the PSM shall run-out right-of-way lines.

d. All "Assembly Detail" shall be provided for all turbo meter installations and for all meters greater than four (4) inches.

e. Label water service as either double, single, irrigation, and so on, based on type of service, including diameter and material.

f. When meter banks are used, show typical detail with size of service line, material and type of services.

g. Location of all air release valves and top of pipe elevation, identifying if the air release valves are automatic or manual.

h. Valves must be identified by size, type, and end condition. Manufacturer's name and number of turns required to open or close the valve shall be provided for valves 16 inch or larger.

3. Gravity sewer As-Built/Record Drawings shall additionally include the following:

a. Plan showing manhole numbers and stations, size and material of pipe,

manhole to manhole length and slope in percentage. The size, material, station and lengths of laterals shall also be shown. Stationing shall be in accordance with the approved permit Plans.

b. Profile showing manhole numbers (as per plan), rim elevations, invert elevations in and out of each manhole with directions, length and slope of line. Pipes with a slope less than the minimum recommended by RER (formerly Department of Environmental Resource Management) minimum for a particular size of pipe shall not be accepted.

c. Stations and offsets of all wyes and tees for laterals and location of cleanouts with distance to property line.

d. Connections to existing sewer collection systems with flow direction shown.

e. Show profile for sewer laterals crossing utilities, with invert elevations at main, at crossings, at change in direction and at clean out, including slope, clearance at crossing and station.

f. When connecting a new main or lateral to an existing main, the As-Built/Record Drawing shall show distance and invert elevations of downstream and upstream existing manholes.

4. The following shall also be included on As-Built/Record Drawings for sewer pump stations and other infrastructure:

a. A complete topographic and boundary survey for the pump station and/or other facilities signed and sealed by the Florida Registered Professional Surveyor and Mapper as part of the As-Built/Record Drawings. All information required of a boundary survey, such as property corners, setbacks, dimensions of the structure and appurtenances, etc. shall be contained on the As-Built/Record Drawings to include the legal description of pump station site and/or other facilities, easements and rights-of-way abutting the pump station site and location of all surface facilities recorded by a PSM. All utilities within pump station property shall be properly shown, along with their associated elevation and clearance.

b. Horizontal and vertical locations of all fittings, deflections, or at any significant change of direction, and at a maximum 25- foot intervals for on-site (e.g. on a facility such as a pump station or plant work).

c. Plan and vertical cross-section of the station showing and identifying the piping and mechanical layout. Show elevations for top of wet and dry wells, bottom of wet well, pipe inverts, finish floor elevation, etc.

d. FEMA flood zone and elevation shall be shown on the cover sheet.

e. Electrical As-Built/Record Drawing control and riser/one-line power schematic diagrams, RTU wiring diagram and all other elevation and any other electrical details.

f. Engineering Report as to the pump manufacturer, size, capacity (TDH), peak design capacity (in GPM) and Bill of Materials (for donation projects).

g. The mechanical, structural and electrical record drawings are to be prepared by the Engineer of Record or a designated Florida Registered Professional Engineer, each sheet of the record drawings must be signed and sealed by the Engineer of Record or a designated Florida Registered Professional Engineer. The cover sheet is to be signed and sealed by the Engineer of Record or a designated Florida Registered Professional Engineer and shall include the following statement:

1) "I certify that these record drawings have been reviewed by me or by individual(s) under my direct supervision and that these drawings incorporate the information contained in the certified As-Built/Record Drawings. To the best of my knowledge and belief these record drawings substantially reflect the sanitary sewer pump station and/or other infrastructure as constructed, and as depicted on the permit plans including any Department approved deviations, if any. The accuracy of these record drawings is reliant on the accuracy applied by the PSM that prepared the certified As-Built/Record Drawings, which was [include the PSM's name, business name, PSM number, address and telephone number]. The PSM has certified to me in writing, that the As-Built location information of the sanitary sewer pump station and/or other infrastructure conforms to the standards of practice for land surveying, Chapter 5J-17 of the Florida Administrative Code."

3.03 DEPARTMENT PROCESSING

A. The Department will require 10 County calendar days to perform the As-Built review.

B. As-Built/Record Drawings will be initially reviewed, commented and/or recommended to be approved, from construction perspective, by the responsible Field Inspector, who shall verify that they are an accurate representation of the work as installed and that the job as shown is complete and in accordance with the permitted plans.

C. Following the Field Inspector's review, As-Built/Record Drawings will be reviewed in depth by the As-Built Reviewer to ensure compliance with these specifications. The Reviewer will also check the complete package which for donation projects shall include the Bill of Materials.

D. The complete submittal package as defined above shall be delivered using the applicable Department's system.

E. Cause for Non-Review

1. If review by the As-Built Reviewers reveals excessive errors or omissions, the As-Built/Record Drawings shall be deemed "non reviewable". As-Built/Record Drawings containing excessive errors or omissions shall include those with omission of major sections of the installation, water and sewer As-Built/Record Drawings on same sheet, those lacking large amounts of information and other

rrors or omissions that are considered excessive in the opinion of the As-Built Reviewer.

2. In cases when an As-Built/Record Drawing is considered "non-reviewable", it shall be marked "Not Reviewable", the reviewer shall note comments regarding obvious problem(s) and shall be returned to submitter. Such As-Built/Record Drawings will not be considered as having been reviewed for the purposes of Sub-section F, Punch List, below.

F. Punch List (for donation projects only)

1. Punch List items may be generated from the Department initial review. Successive reviews are solely for the purpose of ensuring that original punch list items are completely and correctly done to obtain a final As-Built/Record Drawing acceptable to the Department.

2. Successive punch list items may only be added to correct a problem resulting from submitter's efforts to comply with the original punch list. The Department will prevent adding new punch list item(s). Submitter shall be required to make these successive changes.

3. In the case of a major oversight on the part of the As-Built Reviewer, punch list items may be added to the list or requested to the submitter after the valid time for such items. The Department requires that all corrections be made as a condition of accepting the final As-Built/Record Drawings.

G. Acquisition and Resubmittal

1. After notification from the Department, DWFX and/or PDF file with markups along with the As-Built punch list (donation projects only) can be obtained from the applicable Department’s System.

2. After making the corrections requested on the As-Built/Record Drawing set and punch list, upload the revised package to the applicable Department’s System. On contracts, contractor shall resubmit corrected As-Built/Record Drawings to the Department within 10 County calendar days for contracts

3. The Department will require 10 County calendar days to perform the As-Built/Record Drawing review.

H. Disputes or Interpretation

1. Resolution of disputes and interpretation of these requirements is the responsibility of the As-Built Reviewer. Submitting parties are urged to work with him to resolve any problems of this nature.

2. Where necessary, the submitting party may request a hearing with the Department’s PSM in matters of dispute or interpretation. The Department’s PSM's decisions shall be final.

END OF SECTION

SECTION 01730

OPERATING AND MAINTENANCE DATA

PART 1 - GENERAL

1.01 SCOPE OF WORK:

A. Prepare Operating and Maintenance (O & M) Manual covering all equipments and systems provided under this project.

B. Instruct Department's personnel in the operation of equipment and maintenance provided under this project.

C. This Section covers the services of the manufacturer's representatives and special coordinating services required of the Contractor that shall apply during construction, facilities startup, and training of the Department's personnel for facilities operation.

D. The Contractor shall inform all subcontractors and manufacturers of the requirements herein and include the following services in his costs for the work. Where a minimum amount of time is stated in the Technical Specifications for manufacturer's services, any additional time required to perform the specified services shall be at no additional cost to the Department.

1.02 FORM, FORMAT AND SUBMITTALS CONTENTS:

A. Operating and Maintenance manuals will be used for use by Miami-Dade Water and Sewer Department personnel in the operation and maintenance of the various systems.

B. The Department shall be furnished with one set of any special tools required for servicing for each type of equipment actually furnished.

C. Prepare data in the form of an instructional manual for use by Department's personnel.

D. Format:

1) Size: 8½ in. x 11 in.
2) Paper: 20-pound minimum, white, for typed pages.
3) Text: Manufacturer's printed data or neatly typewritten.
4) Drawings:
   (a) Provide reinforced punched binder tab, bind in with text.
   (b) Fold larger drawings to the size of the text paper.
5) Provide fly-leaf for each separate product, or each piece of operating equipment.
   (a) Provide typed description of product, and major component parts of equipment.
   (b) Provide indexed tabs.
6) Cover: Identify each volume with typed or printed title "OPERATING AND MAINTENANCE INSTRUCTIONS". List:
   (a) Title of Project.
   (b) Identify of separate structure as applicable.
   (c) Identity of general subject matter covered in the manual.

E. Binders:

1) Commercial quality three-ring binders with durable and cleanable plastic covers.
2) Maximum ring size: As required (Minimum 1½-inches).

F. Content of Manual:

1) Neatly typewritten table of contents, arranged in a systematic order.
   (a) Contractor, name of responsible principal, address and telephone number.
   (b) A list of each product required to be included, indexed to the content of the volume.
   (c) List, with each product, the name, address and telephone number of:
      (i) Subcontractor or installer.
      (ii) Maintenance contractor, as appropriate.
      (iii) Identify the area of responsibility of each.
      (iv) Local source of supply for parts and replacement.
   (d) Identify each product by product name and other identifying symbols as set forth in Contract Documents.

G. Product Data:

1) Include only those sheets which are pertinent to the specific product.
2) Annotate each sheet to:
   (a) Clearly identify the specific product or part Installed.
   (b) Clearly identify the data applicable in the installation.
   (c) Delete references to inapplicable information.

H. Drawings:

1) Supplement product data with drawings as necessary to clearly illustrate:
   (a) Relations of component part of equipment and system.
   (b) Control wiring, schematic wiring, and flow diagram.
2) Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation.
3) Do not use Project Record Documents as maintenance drawings.

I. Written text, as required to supplement product data for the particular installation:

1) Organize in a consistent format under separate headings for different procedures.
2) Provide a logical sequence of instructions for each procedure.

J. Copy of each warranty, bond and service contract issued.

1) Provide information sheet for Department's personnel, give:

   (a) Proper procedures in the event of failure.
   (b) Instances which might affect the validity of warranties or bonds.

1.03 MANUAL FOR EQUIPMENT AND SYSTEMS:

A. Content, for each unit of equipment and system, as appropriate:

1) Description of unit and component parts.

(a) Function, normal operating characteristics, and limiting conditions.
(b) Performance curves, engineering data and tests.
(c) Complete nomenclature and commercial number of all replaceable parts.

2) Operating Procedures:

(a) Start-up, break-in, routine and normal operating instructions.
(b) Regulation, control, stopping, shut-down, and emergency instructions.
(c) Special operating instructions.

3) Maintenance Procedures:

(a) Routine operations.
(b) Guide to "trouble shooting".
(c) Disassembly, repair, and reassembly.
(d) Alignment, adjusting, and checking.

4) Servicing and lubrication schedule.

(a) List of lubricants required.

5) Manufacturer's printed operating and maintenance instructions.

6) Description of sequence of operation by control manufacturer.

7) Original manufacturer's parts list, illustration, as drawings and diagrams required for maintenance.

(a) Predicted life of parts subject to wear.
(b) Items recommended to be stocked as spare parts.

8) List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.

9) Other data as required under pertinent sections of specifications.

B. Prepare and include additional data when the need for such data becomes apparent during instruction of Department's personnel.

C. Additional requirements for operating and maintenance data: The respective sections of Specifications.

1.04 POSTED OPERATING INSTRUCTIONS:

A. General: Operating instructions and diagrams shall be prepared for posting near the equipment. Posted operating instructions shall be photographic or equal non-fading reproductions framed under glass encased in non-discoloring plastic and shall be mounted in location directed. Copies of the posted operating instructions shall also used with the operating and maintenance manuals as a basis in training employees in the operation and maintenance of systems and related equipment installed.

B. Contents: Posted operating instructions shall consist of simplified, consolidated equipment, control and power diagrams graphically representing the entire system and actual equipment installed, including concise written instructions on how to start and stop systems, what settings and conditions are to be observed and what control adjustments are to be made or maintained by the operation.

1.05 MANUFACTURER'S NAMEPLATES:

A. Each major component of equipment to have manufacturer's name, address, model number and rating on a plate securely affixed in a conspicuous place. Nameplate of a distributing agent will not be acceptable in lieu of manufacturer's nameplate.

B. Nameplate shall be die-stamped, engraved, or etched to guarantee long term legibility.

1.06 GUARANTY/WARRANTY:

A. The Contractor shall guarantee that all new equipment has the capacity specified and that it will operate without excess noise or vibration.

B. Contractor shall furnish a written guarantee covering all workmanship and materials for a period of one (1) year, from the date of acceptance. This shall include an agreement to repair or replace, at his expense, all defects that may appear in that time, which in the opinion of the Department, are due to defective workmanship or materials.

C. Copies of factory warranties on all equipment furnished shall be submitted with the above described, written guarantee period, and included in maintenance manuals.

1.07 OPERATION AND MAINTENANCE RESPONSIBILITY:

A. Contractor shall provide all required service and maintenance on all equipment installed under this contract for one (1) year following final acceptance or the beginning of beneficial use by the Department. The starting date of one (1) year service period shall be determined by the Department. Included in the service and maintenance to be provided during this one (1) year period, shall be all required lubrication, adjusting belt tensions, eliminating excessive noise and vibration, correcting all electrical and mechanical faults, recording all permanent installed gauge meter and temperature readings, and other general service items, including the answering of service calls.

B. Services During Construction:

1) General: Competent and experienced technical representatives shall represent the manufacturers of all equipment and systems as many days as may be necessary to resolve assembly or installation problems at the worksite which are attributable to, or associated with, the equipment furnished. This requirement applies to manufacturers of all equipment furnished, whether or not specifically set forth in the Technical Specifications.

2) Manufacturer's Certificate of Proper Installation: Where called for in the Technical Specifications, the manufacturer's representative shall provide a certificate stating that the equipment or system has been installed in accordance with the manufacturer's recommendation and has been inspected by a manufacturer's authorized representative, that it has been serviced with the proper initial lubricants, that applicable safety equipment has been properly installed, and that the proper electrical and mechanical connections have been made.

C. Functional Testing Assistance:

1) Where functional (or run) testing is called for on the Technical Specifications, the manufacturer's representative shall assist with the initial test, which shall include checking for proper rotation, alignment, speed, excessive vibration, and noisy operation. Initial equipment and system adjustment and calibrations shall be performed in the presence of and with the assistance of the manufacturer's representative. The previously specified Manufacturer's Certificate of Proper Installation shall include the statement that proper adjustment have been made and that the equipment or system is ready for plant startup and operation.

2) The Contractor, as applicable to the equipment furnished, shall state in writing that all necessary hydraulic structures, piping systems, and valves have been successfully tested; that all necessary equipment systems and subsystems have been checked for proper installation, started, and successfully tested to indicate that they are all operational; that the systems and subsystems are capable of performing their intended functions; and that the facilities are ready for startup and intended operation.

D. Training of Owner's Personnel

Where called for in the Specifications, the manufacturer's representative shall provide detailed instructions to the Departments personnel for operation and maintenance of the specified equipment. These training services shall include pre-startup classroom and onsite equipment instruction and/or post-startup classroom and onsite equipment instruction, as stated in the Specifications.

(Not used)

PART 3 - EXECUTION

(Not used)

END OF SECTION

SECTION 01750

MAINTENANCE OF TRAFFIC AND PUBLIC STREETS

PART 1 GENERAL

1.01 SCOPE OF WORK

A. The Contractor shall be responsible for providing the Engineer with Maintenance of Traffic (M.O.T.) plans for lane closures and/or detours for approval. These M.O.T. plans shall be produced by an individual employed by the Contractor and certified as "Work Zone Traffic Safety Supervisor" by the American Traffic Safety Service Association, ATSSA.

B. The Contractor shall be responsible for the maintenance of public streets and traffic control for the duration of the project. The cost of Traffic Control including the cost of any required off duty police officers shall be included under the appropriate bid item in the Proposal. If no bid item for this is included, said costs shall be included in other appropriate items of the bid and no extra compensation will be allowed.

1.02 REGULATIONS

A. As used herein, any reference to Miami-Dade County, its departments, or its published regulations, permits and data, shall be synonymous and interchangeable with other recognized governing bodies over particular areas or streets, or their departments, published regulations, permits or data. The Contractor shall abide by all applicable laws, regulations, and codes thereof pertaining to maintenance of public streets, detour of traffic, traffic control and other provisions as may be required for this Project.

1.03 MAINTENANCE OF TRAFFIC (M.O.T.)

A. The Contractor shall be fully responsible for the maintenance of public streets, detour of traffic (including furnishing and maintaining regulatory and informative signs along the detour route), traffic control, and other provisions throughout the Project as required by the MDCDTPW, Traffic Engineering Division (Traffic Division), FDOT or other governing agency. Traffic shall be maintained according to corresponding typical traffic control details as outlined in the MDCDTPW Manual. No street shall be completely blocked, nor blocked more than one-half at any time, keeping the other one-half open for traffic, without specific approval.

B. If required by the Traffic Division, the Contractor shall make arrangements for the employment of uniformed off-duty policemen to maintain and regulate the flow of traffic through the construction area. The number of men required and the number of hours on duty necessary for the maintenance and regulation of the traffic flow shall be subject to their approval. The cost of such off-duty policemen shall be paid from the Quotation Item established for this purpose. If required by traffic control permits or agencies, the Contractor shall work, odd or night hours, as required for traffic control reasons, and the cost of such work shall be considered as incidental to construction and no extra compensation will be

allowed.

C. The Contractor shall provide all barricades with warning lights, necessary arrow boards and signs, to warn motorists of the work throughout the Project. Adequate approved devices shall be erected and maintained by the Contractor to detour traffic.

D. Excavated or other material stored adjacent to or partially upon a roadway pavement shall be adequately marked for traffic safety at all times. The Contractor shall provide necessary access to all adjacent property during construction.

E. The Contractor shall be responsible for the provision, installation and maintenance of all traffic control and safety devices, in accordance with specifications outlined in the MDCDTPW Manual. In addition, the Contractor shall be responsible for the resetting of all traffic control and information signing removed during the construction period.

F. Where excavations are to be made in the vicinity of signalized intersections, the Contractor is alerted that vehicle loop detectors may have been embedded in the pavement. Every effort has been made to show the approximate locations on the Plans; however, the Contractor shall verify these locations by inspecting the site of the work and by contacting the Traffic Division. Any loop detector which is damaged by the Contractor, whether shown on the Plans or not, shall be repaired or replaced by the Contractor, at his expense, and to the satisfaction of the Traffic Division.

G. Where applicable, the Contractor shall notify the Traffic Division 24 hours in advance of the construction date or 48 hours in advance of construction within any signalized intersection.

H. Temporary pavement will be required over all cuts in pavement areas, and also where traffic is to be routed over swale or median areas. When the temporary pavement for routing traffic is no longer necessary, it shall be removed and the swale or median areas restored to their previous condition.

I. Pavement markings damaged during construction shall be remarked, as required by the Traffic Division.

END OF SECTION

SECTION 02230

CLEARING AND GRUBBING

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Clear and grub the areas to be occupied by the facilities or utility systems to be constructed, including all areas to be excavated, filled, paved or planted as shown on the approved plans and as specified herein.

1.02 DEFINITIONS

A. Clearing shall consist of the cutting, removal and satisfactory disposal of all trees, stumps, brush, shrubs, rubbish and any other objectional material within the designated areas.

B. Grubbing shall consist of the removal and disposal of all stumps larger than 1-1/2 inches in diameter and other objectional material to a depth of at least 12 inches below the ground surface.

1.03 QUALITY ASSURANCE

In the course of the work, it may become to remove trees if they interfere with the work. Dade County and various municipalities have ordinances regulating the removal, relocation and pruning of trees in the public right-of-way, these ordinances shall be strictly adhered to. The Contractor shall obtain a permit from Dade County and/or other regulatory agencies having jurisdiction over the work area before removing, relocating and/or pruning any tree. The Contractor shall comply with all requirements and conditions of the permit.

PART 2 - PRODUCTS

PART 3 - EXECUTION

3.01 CLEARING AND GRUBBING

A. The Contractor shall remove and replace, where required all existing shrubbery, trees, grass, sprinklers, fences, signs, mailboxes, structures, roadways, sidewalks, curbs and similar items or structures in the way of all excavation necessary for the construction of the project.

B. Where pavements or sidewalks are cut, they shall be cut by means of a mechanical pavement saw to form true and straight edges. Where such cutting is for the purpose of pipeline installation, saw cutting shall be either parallel or at right angles with the centerline of the pipe,

C. To protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction, prior to proceeding with any work in the vicinity.

3.02 PROTECTION OF ADJACENT AREAS

The Contractor shall protect areas shown on the Drawings or designated by the Engineer of Record to remain protected from damage by construction operations by erecting suitable barriers of other acceptable means.

3.03 DISPOSAL

All roots, vegetation and other refuse removed from the site during clearing and/or grubbing operations shall be legally disposed of by the Contractor. Where required, the Contractor shall obtain a permit from Miami-Dade County and/or other regulatory agencies having jurisdiction over the work area before burning any material on the site.

- END OF SECTION -

SECTION 02260

STEEL SHEET PILING

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall furnish and install steel sheet piling as shown in the plans or as required for a complete and satisfactory installation.

PART 2 - PRODUCTS

2.01 STEEL SHEET PILING

A. Steel sheet piling shall conform to the requirements of "High-Strength Low-Alloy Columbium-Vanadium Steels of Structural Quality", ASTM A572/A572M-94b (AASHTO No. M223).

B. The Contractor will be responsible for design and selection. Structural plans for the sheet steel piling installation and the calculations for the required Section Modulus and the Sheet Piling Designation shall be prepared by a Professional Engineer registered in the State of Florida. Sealed plans shall be submitted to the Engineer of Record for approval prior to installation of the piling system.

B. Structural steel shall meet the requirements of ASTM Standard A36/A36M-94 "Structural Steel".

PART 3 - EXECUTION

3.01 The Contractor will be responsible for removing the temporary sheet piling and structural steel at the completion of the Project, such material will remain the property of the Contractor.

END OF SECTION

SECTION 02314

EXCAVATION, BACKFILL AND FILL FOR STRUCTURAL FACILITY AND UTILITY SYSTEMS

PART 1 - GENERAL

1.01 SCOPE OF WORK:

A. The work included under this Section consists of furnishing material and equipment, and performing all labor necessary for excavating, backfilling, filling and compaction of areas to be occupied by facilities or utility systems to be constructed.

B. Plan For Excavation: Prior to commencing the excavation, the Contractor shall submit a plan of his proposed operations to the Engineer of Record for approval. The Contractor shall consider, and his plan for excavation shall reflect, existing utilities that are to remain, the equipment and methods to be employed in the excavation.

1.02 QUALITY ASSURANCE

All excavations shall conform with South Florida Building Codes, the State of Florida Trench Safety Act, OSHA requirements and the provisions herein. Excavations shall be executed in accordance with all applicable requirements of Section 01016, including notification of Sunshine State One-Call Center (1-800-432-4770) 48 hours prior to any excavation.

PART 2 - PRODUCTS

2.01 MATERIALS:

A. Structural Fill: Structural fill shall consist of an inorganic, non-plastic, granular soil containing less than 10 percent material passing the No.200 mesh sieve (relatively clean sand or crushed limerock with a 2-inch max. particle size) with a Unified Soil Classification of GP, GW, SP, SP-GM, SW-SM or SP-SM.

B. Ballast Rock: Ballast rock shall be composed of hard, durable, sound pieces having a specific gravity of not less than 2.65. It shall be crushed rock conforming to the following gradation:

U.S. Standard sieve size	Percent by weight passing
1-1/2 inch	100
3/4 inch	30-75
½ inch	15-55
1/4 inch	0-5

C. Suitable Backfill Material: Backfill material shall be clean and free from all organic material, clay, marl or unstable materials, debris, lumps, or broken paving. No rocks or stones larger than 6 inches in diameter shall be allowed in any backfill. Material for backfill may be material resulting from excavation, if suitable in the opinion of the Department.

D. Select Backfill Material: Select backfill material specified herein shall meet all the general requirements for backfill material set forth above, and in addition, shall be free of any rocks or stones larger than 2 inches in diameter. Select backfill material may be material resulting from trench excavation, if suitable in the opinion of the Department, carefully selected to comply with these requirements.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Clearing: The construction site shall be cleared of all obstructions and vegetation, including large roots and undergrowth, within 5 feet of the lines of excavation, in accordance with Section 02230. All debris created by this clearing operation shall be hauled from the site and disposed of by the Contractor.

B. Removals: Complete all removals within the lines of excavation prior to beginning excavation. Where required, all existing shrubbery, trees, grass, sprinklers, fences signs, mailboxes, structures, sidewalks, curbs, utility poles, or structures subject to damage resulting from the excavation should be transplanted, relocated, braced, shored, or otherwise protected and preserved.

3.02 EXCAVATION

A. The Contractor shall perform all excavation of every description and of whatever substances encountered, to the dimensions and depths shown on the approved plans, but in all cases as required for construction, and as specified herein. All excavations shall be made by open cut.

B. When the walls of the excavations are to be kept vertical and in order to protect the safety of workmen, the general public, this or other work or structures, or excavation walls, or pipe installation including materials encountered in the excavation which have a tendency to slough or flow into the excavation, undermine the banks, weaken the overlying strata, or are otherwise rendered unstable by the excavation operation shall be retained by steel sheeting, stabilization, grouting or approved methods. Said methods shall comply with the Trench Safety Act (TSA). Sheeting and shoring or other approved method shall be designed by a Professional Engineer licensed to practice in the State of Florida.

C. For structures, the Contractor shall maintain the bottom of the excavation firm and dry, and maintain an elevation of the water one (1) foot below the concrete to be placed, by use of pumps, tremie or other acceptable method.

D. In areas where trench widths are not limited by right-of-way or easement widths, property line restrictions, existing adjacent improvements including pavements, structures, and other utilities, and maintenance of traffic, the trench sides may be sloped to a suitable angle of repose of the excavated material.

E. Ladders or steps shall be provided for and used by workmen to enter and leave trenches.

F. Excavated material shall be stored and disposed of in such a manner that they will not interfere unduly with traffic on public streets and sidewalks. In congested areas, such materials, cannot be stored adjacent to the trench nor used immediately as backfill, shall be removed to convenient places of storage. If any material is creating a public hazard or other unsafe condition, it shall be removed immediately to a storage area.

G. Materials suitable for use as backfill be hauled to and used in areas where not enough suitable material is available from the excavation. Material unsuitable for use in backfill shall be removed promptly and disposed of by the Contractor. Any pockets of organic matter, concrete or other unsuitable material encountered in excavating shall be removed and replaced with material satisfactory to the Department.

H. The excavation of walls for forms will not be permitted.

I. Excavation for structures:

1. Clear, as stated above, all existing items or structures in the way of the proposed pipeline or structures, and excavate as necessary to the depths and dimensions shown on the Plans, but in all cases as necessary for satisfactory installation.

2. Where pavements or sidewalks are cut, they shall be cut by means of a mechanical pavement saw to form true and straight edges which shall, in general, be either parallel or at right angles.

3. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. A copy of all such notices shall be forwarded to the Department.

4. Where interlocking steel sheeting is used, the Department may require that the sheeting be cut off at a level two (2) feet above the top of the installed pipe and that portion below the level be left in place.

5. Excavation for manholes and other piping appurtenances shall be sufficient to leave at least two (2) feet clear between their outer surfaces and the embankment or sheeting.

6. If, in the opinion of the Engineer of Record or the Department, the soil at that depth is unsatisfactory as foundation material because it contains marl, muck, organic matter, or other unsuitable material, the excavation shall be continued two (2) feet deeper, except if a suitable foundation material is exposed at a lesser depth, further excavation will not be required.

7. When the pipe to be installed in a trench requires the pipe installers to work under and around the pipe, the Contractor may request the Department that he be allowed to exceed the 12" maximum clearance, specifying the clear distance desired.

8. The ends of existing mains shall be temporarily capped or plugged to keep them clean and the ends of all mains shall be temporarily anchored to keep the joints from blowing apart from internal pressure until the new mains can be reconnected to them.

9. In addition to specific construction methods specified, the general requirements in subsequent subsections, below, shall apply to the work of this project.

3.03 DEWATERING

A. Any water which accumulates in the excavations for structures shall be removed promptly by means satisfactory to the Engineer of Record in such a manner as to not create a nuisance to adjacent property or public thoroughfare. Pumps and engines for dewatering systems shall be operated with mufflers and at a minimum noise level suitable to a residential area. The Contractor shall be responsible for any nuisance created due to the disposal of the water from his drainage system.

B. Where applicable, the Contractor shall be required to obtain all necessary permits approving the location and proposed method of disposal before discharging water from any excavation into any portion of the public right-of-way or into any existing drainage structure or facility.

3.04 STOCKPILED MATERIALS

Suitable materials removed from the excavation shall be stored and disposed of in a manner which will not interfere with traffic at the site. Material suitable for backfill and not needed for backfill at the structure, but needed elsewhere shall be stockpiled until moved and used elsewhere.

3.05 BACKFILL

A. The excavation shall then be brought to the structures bottom elevation by placing and compacting 6-inch layers of Oolitic limerock (or material previously defined) to 95 percent of maximum density as determined by AASTHO T-180. Structural fill shall be supplied by the Contractor except as may otherwise be carefully selected from excavated material if deemed suitable in the opinion of the Engineer. Backfill around new structures up to the pavement base or surface of the ground shall be material not exceeding 6-inches in diameter, and shall be compacted in layers not exceeding 9 inches. Each layer shall be compacted with a powered hand tamper, or other approved method to at least 98% of maximum density as determined by AASHTO T-180

B. Backfill for precast manholes shall be drainfield limerock or specified pipe bedding material to a level to receive the manhole at the proper elevation.

END OF SECTION

SECTION 02315

TRENCHING AND BACKFILLING FOR PIPING SYSTEMS

PART 1 - GENERAL

1.01 WORK INCLUDED

A. The work included under this Section consists of excavating, backfilling and compaction as required for the construction of the piping systems as specified herein. (See Section 02314 for excavation for structures.)

B. All excavations shall be executed in accordance with the South Florida Building Codes, the State of Florida Trench Safety Act (TSA), OSHA requirements and all applicable requirements of Section 01016, including notification of Sunshine State One-Call Center (1-800-432-4770), 48 hours prior to any excavation.

PARTS 2 - PRODUCTS

2.01 BACKFILL MATERIAL

A. Except where a 1:10 cement/sand or flowable fill concrete mix is required (See Section 02745), granular soil backfill materials shall be utilized. Suitable backfill material shall be clean, shall not be expansive nor have high organic content, shall be free of clay, marl, unstable materials, debris, lumps and clods, and shall meet the following requirements:

1. Maximum Liquid Limit shall not exceed 12 as determined by ASTM D 423.

2. Maximum Plasticity Index shall not exceed 35 as determined by ASTM D 424.

3. Not more than 10 percent of weight shall be finer than 74 micron (No. 200) U.S. Standard Sieve.

B. Backfill material containing limerock shall have sufficient sand to fill the voids in the limerock. No stones or rocks larger than 6-inches in diameter will be permitted in any backfill. Backfill material placed to a point at least one foot (1 ft.) above pipe and appurtenances shall be select backfill material not exceeding 2-inches in diameter. For PVC gravity sewers backfill material placed at least two feet (2 ft.) above pipe shall be select backfill material not exceeding 2-inches in diameter. In any case, above this point, but up to the upper 6-inches of the trench, backfill shall be of material not exceeding 6-inches in diameter.

C. Debris, broken paving or broken concrete shall not be used.

D. Material for backfill may be material resulting from excavation, only if it meets the above mentioned requirements, or if suitable in the opinion of the Department. If sufficient suitable backfill material, including select backfill material, is not available from the site, additional material shall be furnished.

2.02 SELECT BACKFILL MATERIAL

Select backfill material specified in these specifications or required by the Plans shall meet all the general requirements for backfill material set forth above, and in addition, shall be free of any rocks or stones larger than 2 inches in diameter. Select backfill for copper tubing shall be limerock screenings or sand. Select backfill material may be material resulting from excavation, if suitable in the opinion of the Department, carefully selected to comply with these requirements.

2.03 BEDDING MATERIAL

Pipe bedding material shall consist of one of the following types of material, and accordance with the Department's Standard Details: (See Section UC-300 for Gravity Sewer Piping Foundations)

A. Bedding may be select backfill material, as specified above, if approved by the Department.

B. Crushed stone (or drainfield limerock) shall be used for bedding of piping (except for copper pipe) and/or manholes as shown on the Standard Details. Crushed stone shall consist of hard, durable, sub-angular particles of proper size and gradation, and shall be free from organic material, wood, trash, sand, loam, clay, excess fines and other deleterious materials. The stone shall conform to the requirements of ASTM C 33, Size No. 57 (3/4-inch rock) and be graded within the following limits:

Sieve Size	Percent Finer by Weight
1 ½-inch	100
1-inch	95 to 100
½-inch	25 to 60
No. 4	0 to 10
No. 8	0 to 5

C. Sand for bedding copper pipe shall be a dry screened sand. Sand shall be graded sand with 100 percent passing a 3/8-inch sieve and not more than 5 percent passing a No. 200 sieve.

D. Limerock screenings, sand or other fine material shall not be used for bedding.

E. All pipe bedding material shall be new, unless otherwise approve by the Department. Existing pipe bedding material may not be used.

2.04 BACKFILL UNDER MANHOLES AND METER VAULTS

Any excavation below the levels required for the proper construction of manholes or meter vaults shall be filled with Class C concrete. The use of earth, rock, sand or other materials for this purpose will not be permitted. (See Section 02314 for excavation for structures.)

PART 3 - EXECUTION

3.01 CLEARING

A. The Contractor shall perform all clearing necessary for the proper installation of all piping and appurtenances in the locations shown in the Drawings, in accordance with Section 02230, "Clearing and Grubbing".

B. Where required, all existing shrubbery, trees, grass, sprinklers, fences, signs, mail boxes, structures, sidewalks, curbs, utility poles or structures subject to damage resulting from the excavation should be transplanted, relocated, braced, shored, or otherwise protected and preserved.

3.02 EXCAVATION

A. The Contractor shall perform all excavation of every description and of whatever substances encountered, to the dimensions and depth shown on the Drawings. All excavations shall be made by open cut.

B. When the walls of the excavations are to be kept vertical and in order to protect the safety of workmen, the general public, this or other work or structures, or excavation walls, or pipe installation including materials encountered in the excavation which have a tendency to slough or flow into the excavation, undermine the banks, weaken the overlying strata, or are otherwise rendered unstable by the excavation operation shall be retained by steel sheeting, stabilization, grouting or approved methods. Said methods shall comply with the Trench Safety Act (TSA). Sheeting and shoring or other approved method shall be designed by a Professional Engineer licensed to practice in the State of Florida.

C. In areas where trench widths are not limited by right-of-way or easement widths, property line restrictions, existing adjacent improvements including pavements, structures, and other utilities, and maintenance of traffic, the trench sides may be sloped to a suitable angle of repose of the excavated material, but only from a point one foot above the crown of the pipe.

D. A substantially and safely constructed moveable shield or box, as approved by the Engineer of Record, may be used in place of sheeting, except where specifically called for on the Plans to install sheeting. Where a moveable shield or trench box, is used in place of sheeting and shoring, the trench shall be opened immediately ahead of the shield as pipe laying proceeds inside the shield.

E. Ladders or steps shall be provided for and used by workmen to enter and leave trenches.

F. Materials removed from the trenches shall be stored and disposed of in such a manner that they will not interfere unduly with traffic on public streets and sidewalks. In congested areas, such materials, cannot be stored adjacent to the trench nor used immediately as backfill, shall be removed to convenient places of storage. If any material is creating a public hazard or other unsafe condition, it shall be removed immediately to a storage area.

G. Materials suitable for use as backfill be hauled to and used in areas where not enough suitable material is available from the excavation. Material unsuitable for use in backfill shall be removed promptly and disposed of by the Contractor

H. Excavation for Pipes and Piping Appurtenances (See Section UC-300 for additional requirements for gravity sewer piping):

1. Clear, as stated above, all existing items or structures in the way of the proposed pipeline or structures and excavate as necessary to the lines and grades shown on the Plans.

2. Where pavements or sidewalks are cut they shall be cut by means of a mechanical pavement saw to form true and straight edges which shall in general be either parallel or at right angles with the centerline of the pipe.

3. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. A copy of all such notices shall be forwarded to the Department.
4. Excavate pipe trenches to a minimum of 6-inches below the outside bottom of the proposed pipe barrel to provide for the installation of the bedding material.

5. If, in the opinion of the Department, the soil at that depth is unsatisfactory as foundation material because it contains unsuitable marl, muck, organic matter, or other unsuitable material, the excavation shall be continued 2 feet deeper, except if a suitable foundation material is exposed at a lesser depth, further excavation will not be required.

6. If the soil is still unsuitable after the additional excavation as prescribed above, the trench bottom shall be excavated further in one foot increments in accordance with "Trench Overcut", below.

7. Sheeting and shoring shall be installed where necessary to control trench width, protect the workmen and the general public, and prevent damage to this or adjacent work, or structures.

8. Where wood sheeting or certain designs of steel sheeting are used, the Department may require the sheeting to be cut off at a level 2-feet above the top of the installed pipe and that portion below that level shall be left in place.

9. If interlocking steel sheeting is used, the Department may permit its complete removal in lieu of cut-off, providing removal can be accomplished without disturbing the bedding, pipe or alignment of the pipe. Any damage to the pipe bedding, pipe or alignment of the constructed utility caused by removal of sheeting shall be cause for rejection of the affected portion of the work. Not more than 100-feet of trench shall be opened ahead of pipe laying operations at one time unless a greater length of open trench is approved by the Department.

10. Trench widths, when measured at a point 12 inches above the top of the pipe, shall provide a 12-inch maximum clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used. Minimum trench width shall provide at least 6-inches clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used.

11. Excavation for appurtenances, such as manholes and valves, shall be sufficient to provide a clearance between their outer surfaces and the face of the excavation or sheeting, if used, of not less than 12-inches. Manhole excavations shall be carried to sufficient depth to permit their construction on the undisturbed bottom of the excavation.

12. Excavation for thrust block shall be made in such a manner so that, when concrete is placed, it will bear against a firm, undisturbed, vertical trench wall with bearing are in accordance with the schedule shown in the Standard Details.

13. Selected backfill shall then be placed and compacted in 6-inch layers up to the level of the pipe bedding material.

14. When the pipe to be installed in a trench requires the pipe installers to work under and around the pipe, the Contractor may request the Department that he be allowed to exceed the 12" maximum clearance, specifying the clear distance desired. The decision of the Department in this regard shall be final.

15. The ends of existing mains shall be temporarily capped or plugged to keep them clean and the ends of all mains shall be temporarily anchored to keep the joints from blowing apart from internal pressure until the new mains can be reconnected to them.

16. In addition to specific construction methods specified, the general requirements in subsequent subsections, below, shall apply to the work of this project.

I. Excavation for PVC Gravity Sewers and Service Laterals:

1. The Contractor shall make all excavations necessary for the construction of the gravity sewers and service laterals to the lines and grades shown on the Plans, and in accordance with the Standard Details.

2. In stable soils, trench widths when measured to a point 12 inches above the top of the pipe shall provide a 12-inch maximum clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used. Minimum trench widths under the same conditions shall be 6-inches on each side for the pipe for 4-inch and 6-inch pipe, and 9-inches on each side of the pipe for 8-inch pipe and larger. Minimum trench widths are required to provide room for a man to place and compact the haunching and initial backfill material. Embedment material shall be Class I. (See Section UC-300)

3. In unstable soils (defined as peat, much or other organic soils, elastic silts and clays below the water table, and fine sands below the water level), trench widths when measured at a point 12-inches above the top of the pipe shall be a minimum of five (5) nominal pipe diameter in width. Slightly greater width are at the Contractor's option in order to accommodate his trenching equipment, but the pipe bedding material shall extend to the face of the excavation, or sheeting if used. Embedment material shall be Class II. (See Section UC-300)

3.03 TRENCH STABILIZATION

Trench bottoms which are rendered soft or unstable as a result of construction methods, such as improper or inadequate sheeting, dewatering or other causes, shall be stabilized. In no event shall pipe be installed when such conditions exist. The Contractor shall correct such conditions so as to provide proper bedding or foundations for the proposed installation.

3.04 TRENCH OVERCUT

A. If, after excavating the trench to a depth of 2 feet 6 inches below the outside bottom elevation of the proposed pipe barrel, and the soil at that depth is still unsatisfactory as foundation material because it contains marl, muck, organic matter, or other unsuitable material, the pipe trench shall be excavated further in one-foot depth increments until a suitable foundation material is found. As a point of reference, it has been the Department's experience that, typically, trench overcut does not extend to depths more than 6 feet. However, the Department reserves the right to require trench overcut to depths up to 6 feet, i.e., to a point 8.5 feet below the bottom of the pipe.

B. Select backfill, as defined above, shall then be compacted in 6-inch layers up to the bottom of the proposed 6 inches of pipe bedding.

3.05 REMOVAL OF WATER

A. It is a basic requirement of these Specifications that excavation shall be free from water before pipe or structures are installed. However, it is realized that in certain sections of the work this cannot be accomplished economically and the Contractor may request permission to use the "Alternate Method of Construction" defined below.

B. The Contractor shall provide all necessary pumps, underdrains, well point systems, and other means for removing water from trenches and other parts of the work including structures. The Contractor shall continue dewatering operations until the backfill has progressed to a sufficient height over the pipe to prevent flotation or movement of the pipe in the trench, so that the backfill is above the natural water level.

C. Where applicable, the Contractor shall be required to obtain all necessary permits approving the location and proposed method of disposal before discharging water from any excavation into any portion of the public right-of-away or into any existing drainage structure or facility.

D. Water from the trenches and excavation shall be disposed of in such a manner as will not cause injury to public health, to public or private property, to the work completed or in progress, to the surface of the streets, or to cause interference with the use of the same by public. Submit the proposed method of handling and disposal of trench waster for approval before starting the excavation.

E. The Contractor is cautioned that Dade County or other governing body having jurisdiction over the work location may have regulatory rules and ordinances prohibiting, or limiting, the discharge of water from any excavation into sanitary and storm sewer systems, or to canals and drainage ditches. Obtain all necessary permits approving the location and proposed method of disposal before discharging water from any excavation into any portion of the public right-of-way, or into any existing drainage structure or facility.

F. Pumps and engines for dewatering systems shall be operated with mufflers and a minimum noise level suitable to a residential area. The Contractor shall be responsible for any nuisance created due to the disposal of the water from his discharge system.

3.06 INSTALLATION OF BACKFILL

A. Backfilling of pipe trenches will not be allowed until the work has been approved by the Department, pressure tested if required, and the Department indicates that backfilling may proceed. Any work which is covered or concealed without the knowledge and consent of the Department shall be uncovered or exposed for inspection. Partial backfill may be made to help restrain the pipe during pressure testing, if previously authorized by the Department.

B. The Contractor shall backfill all trenches and other excavations made in the process of installing the pipe. He shall maintain the surface of the backfill free from major irregularities and potholes.

C. Select backfill material shall be placed under and around the pipe to one foot above the crown (or to two feet above crown for PVC gravity sewers) in 6-inch layers. Each layer shall be thoroughly compacted to at least 90 percent of maximum density as defined by AASHTO Standard No. T-180, "Moisture-Density Relations of Soils using a 10-lb. (4.54 kg.) Rammer and an 18-in. (457 mm) Drop". The material in the ditch may be compacted by either hand tamper or a mechanized power tamper, provided the results obtained meet the continued approval of the Department. Particular attention and care shall be exercised in obtaining thorough support for the branch of all service connection fittings. Care shall be taken to preserve the alignment and gradient of the installed pipe.

D. Backfilling and compacting of material lying above a point one foot (or two feet for PVC pipe), above the crown of the pipe and below the pavement base or the surface of the ground, if out of pavement, shall be accomplished in layers not exceeding 9 inches in thickness. Each layer shall be thoroughly compacted with a powered hand tamper or a mechanized power tamper to at least 98 percent of maximum density as determined by AASHTO Specification T-180 or such greater density as may be required by the governing authority over the area in which the work is performed. A testing laboratory will make periodic field tests to determine the density being obtained in each lift, or layer, or the backfill. When compacted backfill fails to meet the specified percentage of maximum density as shown by test results, it shall be reworked and recompacted, and then retested. The reworking, recompacting and retesting of the backfill shall be repeated as many times as may be necessary to obtain compacted backfill with density meeting or exceeding the specified percentage as indicated by test results.

E. The Contractor shall exercise proper care to insure that no pipe will be broken or displaced through the use of the type of mechanical compacting equipment he selects. Water shall be added as required to obtain optimum moisture to facilitate compaction, but ponding or inundation of backfill will not be permitted. These ponding limitations shall not prohibit backfill in a wet trench up to the level of the natural water table if the "Alternate Method of Construction" is utilized.

F. Backfill shall in general be kept up with the rate of pipe laying. The backfill up to the springline of the pipe shall be placed as soon as practical after the laying of the pipe. On parts of the line where ground water level may be high enough to float the pipe, the placing of the backfill and the rate of pumping the trench shall be so controlled as to prevent the pipe from floating or moving from the line and grade shown on the Plans.

G. In the event that sufficient suitable material is not available at any point to properly backfill the trench, the Contractor shall transport suitable material from points of the line where such material is available or shall otherwise furnish suitable material.

H. Suitable material in excess of all backfill requirements and all unsuitable material shall be removed from the work and disposed of by the Contractor.

I. Within paved areas of trench excavation, the base and surfacing shall be reconstructed as specified under Section 02745, "Pavement Removal and Replacement".

J. Where cuts have been made through unpaved, stabilized rock roadways, driveways and parkways, surface restoration shall consist of 3 inches of compacted limerock overlaid by 3 inches of gravel or graded and washed rock with a maximum diameter of ½-inch, except as otherwise directed by the Department. The rock shall be installed over the entire width of the disturbed area and shall closely match the existing rock at each location. Several grades of rock may be required to attain this end, but it is not anticipated that more than one grade will have to be used at any one location.

K. Backfill for Structures: See Section 02314.

3.07 INSTALLATION OF PIPE BEDDING - FORCE MAIN AND WATER MAIN

A. As described above, all pipe trenches shall be excavated to a level 6-inches below the outside bottom of the proposed pipe barrel. The resulting excavation shall be backfilled with approved pipe bedding material, up to the level of the outside bottom of the proposed pipe barrel. This material shall be tamped and compacted to provide a proper bedding for the pipe and shall then be shaped to receive the pipe, including recesses for the pipe bells and couplings. Placing and compacting bedding up to the level of the lower one-third of the pipe barrel shall immediately follow the installation of the pipe. Bedding shall be provided under the branch of all fittings to furnish adequate support and bearing under the fitting.

B. Select Backfill material may be utilized where the excavated trench bottom is above water.

C. Any excavation below the levels required for installation of the pipe bedding shall be backfilled with approved bedding material, tamped, compacted and shaped to provide proper support for the proposed pipe.

D. For installation of gravity sewers, see Section UC-300, "Gravity Sewer Pipe Foundation".

3.08 COMPACTION AND DENSITIES

A. Methods of control and testing of backfill construction to be employed in this work are:

1. Maximum density of the material in trenches shall be determined by AASHTO Designation T 180.

2. Field density of the backfill material in place shall be determined by AASHTO Designation T 238.

B. Laboratory and field density tests are necessary to establish compliance with the compaction requirements of these specifications. The Department will not accepts projects for which successful laboratory and field density test results are submitted. Tests will be made at depths and locations to the satisfaction of the Department.

C. Trench backfill which does not comply with the specified densities, as indicated by such tests, shall be reworked and recompacted until the required compaction is secured.

3.09 ALTERNATE METHOD OF CONSTRUCTION

A. General:

1. A combination of conditions in the substrata, water table, or method of disposal may be encountered during the course of the work which make dewatering impossible, or only possible through the use of unusual methods, the cost of which is excessive. When such conditions are encountered, but only after all reasonable means to dewater the excavation have been employed without success, the Contractor, with the concurrence of the Department may elect to employ the following alternate method of construction. The concurrence of the Department shall be obtained and the Contractor shall limit the use of the alternate method of construction to such specific portions of the work as determined applicable.

2. The requirements set forth in other sections of these Specifications shall establish the required standards of construction quality for this work. Use of the alternate method of construction described hereinafter shall in no way be construed as relieving the Contractor of his basic responsibility for satisfactory completion of the work.

3. Subject to all of the requirements stated hereinabove, including approval by the Department, construction will be permitted in accordance with the following specifications.

B. Removal of Water: The installation of pipe, manholes and appurtenances under water will be permitted and the dry-trench requirements of "Removal of Water" will be waived.

C. Excavation: Excavation shall be performed in accordance with normal applicable excavation specifications.

D. Pipe Bedding for Ductile Iron and Vitrified Clay Pipe:

1. Pipe bedding shall be placed from 6-inches below the outside bottom of the proposed pipe barrel up to the level of the springline of the pipe barrel of gravity sewers and to the level of the lower one-third of the pipe barrel for force mains or water mains. The bedding material shall be washrock, drainfield limerock or approved material. Limerock screenings, sand or other fine organic material shall not be used.

2. The bedding material used shall be tamped and graded to provide a proper bedding for the pipe and shall then be shaped to receive the pipe. Bedding shall be provided under the branch of all fittings to furnish adequate support and bearing under the fitting.

E. Bedding for PVC Pipe: The pipe bedding, haunching and initial backfill material shall conform to embedment material listed in Section UC-300 for either stable or unstable soil conditions as required, and shall be placed and compacted in as stated in "Installation of Pipe Bedding", above.

F. Backfill:

1. After the pipe is installed, backfilling shall proceed in accordance with the provisions of "Installation of Backfill", except that select backfill material or pipe bedding material shall be used to backfill around the pipe and to a level one foot above the outside top (crown) of the pipe. Under no circumstances shall material other than select backfill or specified pipe bedding material be considered satisfactory for this purpose.

2. If the Alternate Method of Construction is used, all backfill material, shall be carefully lifted into the trench and released to fall freely therein when the bucket or container is near or at a moderate height above water level. Height of release shall be to the satisfaction of the Department. Below the existing water level, and to a point not more than 18-inches above the water level, the backfill material shall be carefully placed into place in uniform layers, of equal depth on each side of the pipe. From a point not more than 18-inches above the water level, and below the pavement base or the surface of the ground if out of paving, backfill material shall be placed and compacted for normal backfilling as provided in "Installation of Backfill" and "Compaction and Densities".

G. Backfill for PVC Gravity Sewers:

1. After the pipe is installed, backfilling shall proceed in accordance with the provisions of "Installation of Backfill", except that select backfill material or pipe bedding material shall be used to backfill to a level two feet above the outside top (crown) of the pipe. Under no circumstances shall material other than select backfill or specified pipe bedding material be considered satisfactory for this purpose.

2. If the Alternate Method of Construction is used, all embedment and backfill material, shall be carefully lifted into the trench and released to fall freely therein until the bucket or container is at or just above water level. Below the existing water level, and to a point not more than 18-inches above the water level, the backfill material shall be carefully placed into place in uniform layers, of equal depth on each side of the pipe. From a point not more than 18-inches above the water level, and below the pavement base or the surface of the ground if out of paving, backfill material shall be placed and compacted for normal backfilling as provided in "Installation of Backfill" and "Compaction and Densities".

3.11 RESTORATION OF EXISTING SURFACES

Paved and grassed areas disturbed by the operations required under this Section shall be restored as indicated on the approved Plans and/or specified herein.

END OF SECTION

SECTION 02534

PUMP STATION TESTING

PART 1 GENERAL

1.01 SCOPE

A. The Contractor shall test sewage pump station, to the complete satisfaction of the Engineer, prior to final acceptance by the Department.

B. The Contractor shall provide start-up service to place the pumps and controls in proper operation. During this service, the operation of the equipment will be reviewed and the station will be inspected for proper installation and operation. This service shall be provided by a representative of the manufacturer. The Contractor shall inform the Department 48-hours prior to commencement of such services. These services shall be at no additional cost to the Department.

PART 2 PRODUCTS

(Not Used)

PART 3 EXECUTION

3.01 GENERAL

A. The Engineer and the Contractor shall jointly be present to witness test for determination of conformance with approved plans and specifications.

B. The Contractor shall notify the Department a minimum of forty-eight (48) hours in advance of the test.

3.02 PROCEDURE FOR TESTING SEWAGE PUMP STATION

A. The Contractor shall be responsible for testing the pump station in the manner described below:

1. Place the operating mode selector switch in the manual position.
2. Fill wet well with water.
3. Start and stop each pump sequentially and then both pumps together. While doing this, add water to the wet well as necessary.
4. With water level lower than pump's shut-off point, place selector switch to automatic position.
5. Fill wet well slowly. Observe lead pump run.
6. Increase water flow into wet well for lag pump to run.
7. Stop pouring water into wet well and observe as both pumps shut off at the pre-selected levels.
8. Disconnect power to pumps and fill wet well to alarm level and make sure it operates.

9. Disconnect level controller and check that the lead pump is turned "on" and "off' at the proper levels by the float switches.

B. If the above parts of the test show that any component is not operating as intended, make necessary adjustments and/or repairs and repeat steps 1 through 9, until the entire system operates trouble free.

C. Fill the wet-well with water to the invert of the influent pipe. Leave it full of water for at least two hours. If the water level goes down, locate and repair the leak to the satisfaction of the Department. Repeat test to insure absence of leaks.

3.03 GENERATOR START-UP

A. Upon completion of the initial start-up and system checkout, perform a field test, with the Engineer notified in advance, to prove full specified power, stability, voltage and frequency. The test shall run for four hours using a portable, dry resistive load bank capable of incremental loading. Use the load bank instrumentation to check the meters on the generator. The generator set shall be able to take its full rated KW load when applied in one step. The generator set shall also run continuously for four hours with all available load connected through the automatic load transfer switch. Records shall be maintained through the testing periods on coolant temperature, lubricating oil pressure, ambient air temperature, voltage, current, frequency and kilowatts. Record the data at fifteen minute intervals through the tests. There shall be a thirty minute unloaded run at the conclusion of each test to allow the engine to cool down before shutdown. Three copies of the field tests data shall be furnished to the Engineer. The generator set shall also be tested under a simulated power failure to check that the transfer sequence operates satisfactorily.

3.04 CERTIFICATIONS

A. At the time of final acceptance inspection, and in addition to all other submittals required by the specifications, the Contractor shall furnish the following to the Engineer:

1. Submit letter from electrical panel manufacturer certifying that:

    a. The electrical panel has been inspected at the jobsite, after complete installation.
    b. The electrical panel and its components match approved shop drawings and are in compliance with the project's plans and specifications.
    c. The electrical panel and its components have not been modified, changed or altered in any way, shape, or form as to void the Underwriter Laboratory "UL" listing.
    d. The electrical panel and its components are safe to energize and operate.

2. Submit letter from the Contractor certifying that:

    a. The electrical panel has been installed in accordance with the Department's standards and these specifications.
    b. External wiring has been terminated inside the panel at the

designated “Terminal Boxes,” in accordance with the approved electrical schematic and/or shop drawings.

c. The electrical panel and its components have not been modified, changed or altered in any way, shape, or form as to void the Underwriter’s Laboratory “UL” listing.

d. The electrical panel and its components match approved shop drawings and are in compliance with the Department’s specifications.

e. The electrical wiring schematic and control schematic are current and reflect all approved field modifications made, if any.

f. The electrical panel associated electrical equipment are safe to energize and operate.

END OF SECTION

SECTION 02536

PRECAST MANHOLES & COVERS

PART 1 - GENERAL

1.01 SCOPE OF WORK:

This section includes minimum construction requirements for standard sewer manholes and precast concrete wet wells. It also includes precast concrete manhole sections with bell and spigot joints with masonry transition to covering, anchorage, coating/lining and accessories.

1.02 REFERENCES:

Unless otherwise indicated, all materials, workmanship and practices shall be in accordance with the current editions of the following standards:

A. Florida Building Code

B. ACI 318, Building Code Requirements for Reinforced Concrete; ACI 350 Code Requirement for Environmental Engineer Construction Structures.

C. PCI MNL 116, Manual for Quality Control for Plants and Production of Precast Concrete Products.

D. ASTM C62 - Specification for Building Brick (Solid masonry units made from Clay or shale).

E. ASTM C478 - Precast Reinforced Concrete Manhole Sections.

F. ASTM A123 - Zinc (Hot-Dipped Galvanized) Coatings on Iron and Steel Products.

1.03 SUBMITTALS, INSPECTIONS:

Submit the following information for approval. Fabrication shall not begin until submission has been approved.

A. Satisfactory evidence that plant and production methods meet the requirements of PCI MNL 116 for the Quality Control of the Precast Plant, Concrete Batch Plant and Testing Lab.

B. Submit Design mix to the Engineer prior to fabrication.

C. Complete shop drawings of both concrete structure and castings and showing all dimensions, reinforcement data, concrete strengths, etc. If of a non-standard design or if required by the Engineer of Record submit design calculations and data. All computation shall bear the seal of a Professional Engineer registered in the State of Florida.

D. Manhole and Wet Wells: The WASD shall have the option of witnessing the manhole wet well pour, reinforcing or formwork prior to fabrication. Provide the Engineer a schedule of the manhole fabrication at the preconstruction meeting.

E. Provide a rebar cutting lists for Pump Station Wet Wells. The rebar cut list is not required for standard manholes.

F. Cylinder breaks shall be done for each lot in accordance with FDOT Standards (max of 50 structures per LOT). The manufacturer shall maintain records of the cylinder breaks for each design mix. The 28 day concrete cylinder break reports shall be submitted to the Department once the 28 day before the project closeout.

1.05 QUALIFICATIONS:

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience. United Concrete Products, Landmark Precast, Concrete Products of the Palm Beaches, TJ Precast, US Concrete Products or Approved equal.

B. Quality Control Plan approved by the FDOT. The testing laboratory and batch plant shall be included in the FDOT Quality Control Plan.

C. The Precast Manufacturer shall have a stamp from the Quality Control Manager on each completed precast structure. The Quality Control Manager Stamp shall indicate that the manhole was constructed in accordance with ASTM C478 and Municipality Standards and the date that the structure was fabricated.

1.06 TRANPORTATION

A. The precast concrete structure shall cure for a minimum of 72 hours. Transport of the precast structure to the jobsite is not allowed during the 72 hour curing period.

B. Comply with all applicable requirements of FDOT Section 450-16 Handling, Storage, Shipping and Erection.

PART 2 - PRODUCTS

2.01 MATERIALS:

Precast manholes shall conform to the requirements of ASTM C478, latest edition, the Miami-Dade Water and Sewer Department Standard Details and the following:

A. Properties:

1. Reinforcement of Grade 60 bars. (Pump Station Wet Wells require rebars not wire mesh reinforcing).
2. Concrete 4,000 psi.
3. Water Cement Ratio: 0.40 to 0.34 Standard Manholes, 0.34 Pump Station Wet Wells.
4. Waterstops: Ribbed PVC Waterstop with centerbulb.

B. Cement shall be Type II with a **maximum aggregate size of #57**. Aggregate shall be **well graded** to produce a less porous and stronger concrete.

1. **Gravity Sewer System Manholes**: In sanitary sewage applications, all manholes receiving the discharge of a force main, connecting to a major sewer line or interceptor sewer terminal manhole within a 350 foot radius of the pump station, drop manholes, or where called for in the plans and/or specifications shall have a concrete protective coating or a antimicrobial admixture in the concrete mix.

   The antimicrobial admixture in the concrete mix is specified below:

   a. An antimicrobial agent, Con^{MIC}Shield®, or approved equal, shall be used to render the concrete uninhabitable for bacteria growth.
   b. Contractor shall mix the liquid antimicrobial additive with the total water content of the concrete mix design in a proportion of 1 gallon per cubic yard. In the case of repairs to damaged concrete a proportion of 2 gallons per cubic yard shall be utilized.
   c. In some instances all of the concrete in the structure will receive the additive and in other instances only a portion of the concrete will receive the additive. Hence, the Contractor shall apply the additive only as directed in the specific instance.
   d. Precast Plant shall submit a letter of certification to the Department, stating that the correct amount and correct mixing procedure was followed for all antimicrobial concrete.
   e. Con^{MIC}Shield® antimicrobial additive shall be as manufactured by Con^{MIC}Shield® Technologies, Inc.; 541 Tenth Street NW #233, Atlanta, GA 30318; Phone: (877)543-2094.

2. **Pump Station Wet Wells**

   a. Pump Station Wet Wells shall have Xypex/BASF Crystalline Waterproofing Admixture or approved equal, applied at 2 to 3% of the weight of portland cement in the wet well by volume. The Crystalline Waterproofing Admixture shall be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy.

   b. Do not use Con-Shield with the Crystalline Waterproofing Admixture

   c. Concrete Protective Coating Preparation: The precast concrete structure with the Crystalline Waterproofing Admixture is required to cure for 28 days prior to application of the concrete protective coating. Prepare the interior wet well surface with an epoxy cement underlayment compatible with the concrete protective coatings approved for Pump Station Wet Wells, Epoxytec CPP, Tnemic 218 or approved equal.

C. Minimum shell thickness of manholes shall be eight (8) inches.

D. Lifting holes through the structure will not be permitted.

E. Three to five courses of brick shall be constructed atop the manhole corbel for height adjustment. Manhole adjustment grade rings may be utilized in lieu of clay bricks.

F. Precast Joints above Elevation +4.0. and Waterproofing

1. Standard Manhole: Ram-Nek preformed plastic joint filler, Swellseal Hydrophillic Waterstop by Deneef, or approved equal. Apply Non-Shrink Grout both inside and outside of the joint. Wrap the outside Corbel and Exterior joint with a heat activated high shrink membrane.

2. Pump Station Wet Wells: Ram-Nek preformed plastic joint filler, Swellseal Hydrophillic Waterstop by Deneef, or approved equal. Apply Xypex Concentrate Cementitous Slurry or approved equal to the exterior and interior of the joint between precast members for waterproofing.

G. Holes for pipe connections, with a diameter equal to the outside dimension of the connecting pipe plus an additional 4-inches, shall be formed in the manhole walls. No cutting or chipping of the pre-formed holes, or cutting additional holes in the precast concrete walls will be permitted.

H. The bottom slab shall be cast monolithically with the lower section and the longitudinal reinforcement extending into the slab. The free air drop of the mix shall not exceed five feet.

I. No construction joints will be allowed below an elevation of four feet above mean sea level. Construction joints will be allowed above elevation+4.0, if adequate keyways and waterstops, approved by the Department (Ribbed PVC waterstop with centerbulb), are provided. The Department may approve an alternate joint method in cases of excessively deeper and heavy structures.

J. Built-in ladders or climbing rungs will not be permitted in any sanitary sewer manhole and only in other structures where shown on the Plans and called for in the specifications.

K. Openings shall be sealed with hydraulic cement non-shrink grout on both the exterior and interior of the structure.

L. Furnish manholes with accessories listed under "Manhole Accessories", below.

M. Lid and Frame: See Section 05550, "Castings".

N. Waterproofing:
Xypex Crystalline Waterproofing Admixture C-1000R with red dye or approved equal, applied at 3% of the volume of Portland cement in the manhole by volume.
Rheomac 300D Admixture as manufactured by BASF with red dye applied at 2% of the volume of Portland cement in the manhole by volume.
The Crystalline Waterproofing Admixture may be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy.
Note: The Engineer may accept certification from the precast fabricator in lieu of the red dye.

2.02 CLAY BRICK UNITS AND GRADE RINGS

A. Clay brick shall be used in manhole construction. Clay brick shall conform to ASTM Standard C32, "Building Brick (Solid Masonry Units Made from Clay or Shale)". Bricks shall have true edges and sharp corners and shall have been cured for at least 14 days before being placed in any wall. Under no circumstances shall brick with holes be utilized anywhere in construction of a manhole or other structure unless specifically called out on the Plans or in the Specifications.

B. Manhole adjustment grade rings may be utilized. Rings shall be made of 100% recycled HDPE and available in cone opening diameters of 24, 27, 30 and 36-inches. Slope adjustment shall be attained by rotation of “wedge” rings from 4.1% to 0% grade. Rings shall have been tested to withstand HS25 loading through at least 1,100,000 cycles without cracking or other damage. Rings shall not be damaged by hydrogen sulfide manhole conditions and shall be waterproof when assembled with approved butyl sealant. Ring shall weigh six pounds or less and be equipped with UV inhibitor. Rings shall have been in successful service in multiple locations within the US for at least ten years and shall be warranted for five years. Rings shall be LadTech, Inc. HDPE Recycled Adjusting Rings or approved equal.

C. Exterior Shrink Membrane not required on the HDPE Grade Rings.

2.03 MORTAR AND GROUT: As specified in Section 04060 and 03600, respectively. Only Type II cement shall be used.

2.04 REINFORCEMENT: As specified in Section 03300.

2.05 SUMP: Where required, formed integrally with the base slab.

2.06 CONCRETE PROTECTIVE COATINGS **(Gravity Sewer Manholes)**

A. For manholes standard manholes that do not have a concrete protective coating or an antimicrobial additive (ConShield)in the mix, coat the interior of the manhole with Bitumastic 300M or approved equal, 16 mils minimum thickness. The manholes with a concrete protective coating or ConShield anti-bacterial admixture shall not have Bitumastic on the interior of the manhole.

Locations that require a Concrete Protective Coating or the Con Shield Admixture:

1 Manholes receiving the discharge of a force main.
2 Manholes within a 350 foot radius of a pump station wet well.
3 Drop manholes (if a drop connection is added to an existing manhole the existing manhole shall be rehabilitated with a concrete protective coating).
4 Any manhole location determined by the Engineer to have the probability of generating large quantities of sewer gas.

B. All concrete protective coating systems shall be pre-approved by the Water and Sewer Department based on testing done within the WASD system. Only products that have had a successful test application within the Miami-Dade Water and Sewer Department system and approved by WASD forces shall be allowed.

PREAPROVED PRODUCTS LIST- concrete protective coatings (standard manholes)

1. **Available Manufacturers: The manhole coating products below have passed the WASD testing protocol and have been approved for use for rehabilitation of standard manholes. The manhole rehabilitation products shall be used as a complete system with no third party products used unless approved in writing by the coating manufacturer. A one year warranty on the complete coating system from the project completion is required.**

   a. Uroflex as manufactured by Epoxytec International
   b. PPC as Manufactured by Polymorphic Polymers Corporation
   c. SP15 Spray Mortar, Sewer Guard HBS 100 Epoxy Liner by BASF
   d. Permaform MS-10,000 Fortified with ConShield or Cor-Guard Epoxy
   e. SprayRoq, Spray Wall and SprayShield GT Coating
   f. GEOKRETE System as manufactured by Quadex
   g. Mainstay DS-5 High Build Epoxy, Mainstay ML-72 Restoration Mortar
   h. GML Coating System: Green Monster Epoxy, GML-30 and GML-60 Epoxy Cement
   i. Raven Lining System: Raven 405 Epoxy, Raven 755 Epoxy Mortar

2. The manhole chimney shall utilize a flexible concrete protective coating. The acceptable flexible interior coatings for the manhole Chimeny are Epoxytec Uroseal, Uroflex or Geokrete.

C. Due to the probability of sewer gas generation, all manholes receiving the discharge of a force main, connecting to a major sewer line or interceptor sewer, drop manholes, or within a 350-foot radius of the terminal manhole immediately upstream of the pump station shall be either constructed of concrete containing Con^{MIC}Shield® antimicrobial additive or lined on all interior concrete surfaces with a pre-approved concrete protective coating or approved equal. Concrete protective coating system shall fully protect openings, such as for pipes, to insure that corrosive attack cannot take place at these locations. Protective system design for these areas will be checked as shop drawings. Note that boot systems are not accepted by the Department.

   Since the proprietary grouts used to close the annular area between the manhole wall and pipe entering or leaving the manhole are not compatible to the addition of Con^{MIC}Shield® these areas require liner or coating (as acceptable to the Engineer) protection even in manholes constructed of concrete containing this material.

D. All manhole exterior surfaces, from finished grade to base, shall be coated with Carboline Bitumastic 300M, 2 coats 16 mils minimum thickness or have Xypex/BASF Crystalline Waterproofing Admixture, applied at 2 to 3% of the volume of portland cement in the manhole by volume. The Crystalline Waterproofing Admixture may be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy.

E. If Con^{MIC}Shield® anti-microbial agent is used, interior coating and liners can be eliminated except as specified above.

2.07 CONCRETE ADDITIVE AND PROTECTIVE COATINGS **(Pump Station Wet Wells)**

A. Waterproofing Additive: Xypex Crystalline Waterproofing Admixture or approved equal, applied at 3% of the weight of Portland cement in the manhole by volume. The concrete protective coating shall be applied a minimum of 28 days after the casting of the reinforced concrete structure in order for new concrete to cure.

B. Epoxy Cement Underlayment to smooth and prepare concrete surface Epoxytec Ceramico, Tnemic 218 or approved equal.

C. Preapproved Concrete Protective Coating for Pump Station Wet Wells

1. Uroflex Coating System as manufactured by Epoxytec International
2. PPC as Manufactured by Polymorphic Polymers Corporation
3. or approved equal

2.08 MANHOLE ACCESSORIES:

All new sanitary sewer manholes shall be furnished with the following items. Where existing manholes will be modified or are scheduled to be refurbished, rehabilitation shall also include the following items unless otherwise approved by the Department.

A. Provide concrete protective coating system for manholes installed in locations identified to have high levels of sewer gas.

B. Provide high density polyethylene manhole infiltration inserts in accordance with Section 02625, unless the Department requires the installation of stainless steel insert.

C. Exterior Shrink Membrane on Corbel and Exterior Joint; <u>On all manholes</u> (excluding the HDPE grade rings)install a heat activated, high shrink membrane, on the manhole's exterior, at each section joint and from the cast iron frame to the corbel section. Membrane shall be Wrapid Seal, by Canusa Corrosion Protection and Sealing, or approved equal with the following properties:

PRODUCT COMPONENT	PROPERTY	TEST STANDARD	UNIT	RESULTS
ADHESIVE	Softening Point	ASTM E28	Deg. C (Deg. F)	100 (212)
	Lap Shear Strength	DIN 30 672	N/cm^2 (psi)	8 (12)
BACKING	Tensile Strength	ASTM D638	MPa (psi)	20 (2900)
	Elongation	ASTM D638	%	600
	Hardness	ASTM D2240	Shore D	46
	Abrasion Resistance	ASTM D1044	mg	45
SLEEVE	Peel Strength	ASTM D1000	N/cm^2 (psi)	15 (9)
	Water Absorption	ASTM D570	%	0.05

	Low Temp. Flexibility	ASTM D2671D	Deg. C (Deg. F)	-40 (-40)

PART 3 - EXECUTION

3.01 EXCAVATION:

A. Refer to Section 02314, "Excavation, Backfill and Fill for Structures" for specific procedures, requirements and testing methods appurtenant to the work under this Section.

B. Excavation shall extend to a level 12-inches below the level of the outside bottom of the base slab. If necessary, provide sheeting and shoring for the excavation.

C. Backfill resulting excavation with drainfield limerock or specified bedding material to a level to receive the structure at the proper elevation.

3.02 GENERAL INSTALLATION

A. The precast base shall be set level, with the walls plumb on the graded crushed rock bedding.

B. If any surfaces of structures are exposed to view and to a depth of 6 inches below grade, the Contractor shall fill all depressions and all air holes with mortar, dampen surfaces, and apply an approved bonding agent then spread slurry, consisting of one part cement and one and one-half parts sand, by damp loose volume, on the surface with clean burlap pads and sponge rubber floats. The Contractor shall remove any surplus by scraping and then rubbing with clean burlap. Finish surface shall be suitable to receive paint.

3.03 INSTALLATION OF MANHOLES

A. Place base slab and manhole sections plumb and level. Coat exterior of precast structure with Bitumastic 300M or approved equal. Install heat activated, high shrink membrane, on the manhole's exterior, at each section joint and from the cast iron frame to the corbel section.

B. During all backfilling operations, the backfill level shall be kept even on all sides of the structure. Exercise every precaution to prevent damage to, or unplanned loading of, the structures and its appurtenances.

C. Lay clay brick in running bond. A minimum of three and a maximum of five courses shall be constructed atop each manhole corbel. Lay masonry units in full bed of mortar, with full head joints, uniformly jointed with other work. Stucco inside and out with 3/4-inch of mortar.

D. Set cover frames and covers level without tipping, to correct elevations.

E. Exterior surfaces of all structures shall be painted prior to the installation as specified elsewhere herein.

F. Openings shall be sealed with non-shrink grout. No expanding grout shall be allowed.

G. After satisfactory installation and testing, all interior concrete surfaces of the new manhole shall be seal coated in accordance with Section 2.06-A.

H. The invert channels of the manhole shall be formed of brick or brick rubble thoroughly bedded and covered with sand-cement grout, accurately shaped to a semi-circular bottom conforming to the lower half of the connecting sewer pipe. Steep slopes outside the invert channels shall be avoided. Changes in size and grade shall be made gradually and evenly. Changes in the direction of the sewer or entering branch shall be a smooth curve with radius as long as practicable.

I. It shall be the Contractor's responsibility to assure that the frames and covers are set to match proposed finish paving grades at the manhole locations.

J. Gravity sewers shall connect to the manholes in accordance with Standard Details SS 7.0 and Section UC-250 "Gravity Sewer Systems".

3.04 ALTERNATE INSTALLATION

Installation methods given below in this Section shall only apply if permission is granted by the Engineer of Record to use the "Alternate Method of Construction" as specified elsewhere herein. All provisions of that Section shall be applied to the installation of the structures with the specific modifications as follows:

A. Excavation

Excavation shall be carried to a depth of two feet below the bottom of the base slab.

B. Special Bedding

1. Bedding shall be crushed stone or gravel meeting the requirements of ASTM Standard C33 "Concrete Aggregates", latest edition, gradation 67.
2. The bedding shall be placed in the excavation from cut bottom to the level of the bottom of the slab. Thereafter it shall be thoroughly rammed and tamped by use of a crane and weight or other means suitable to the Engineer of Record to provide a stable base for the structure. Tamping and, if necessary, additional filling shall be carried on until the Engineer of Record is satisfied that a suitably stable base has been created for the structure.

C. Backfill

1. After the structure is installed, special bedding material as specified immediately above shall be carefully hand or machine tamped around the structure up to a level of no more than eighteen inches above the water level. Thereafter the procedures and materials specified for backfill and compaction, shall be used to complete the installation.

2. During all backfilling operations the backfill level shall be kept even on all sides of the structure and the Contractor shall exercise every precaution to prevent damage to, or unplanned loading of, the structure or its appurtenances.

END OF SECTION

SECTION 02540

PUMP STATION

PART 1 – GENERAL

1.01 SCOPE OF WORK

The purpose of this Specification is to establish uniform MD-WASD requirements for the design and construction requirements for wastewater pumping stations. This Specification does not purport to cover all materials or installation procedures which may be required. However, it is intent of the MD-WASD to obtain a complete and working installation under this project, and any items of labor, equipment or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the Plans or stated herein.

1.02 QUALITY ASSURANCE

All material and installation shall be in accordance with the MD-WASD's Design and Construction Standard Specifications and Details.

1.03 DEFINITIONS

See Section 01005, "Defined Terms"

1.04 PROJECT APPROVAL

The approval of the MD-WASD and the local governing agencies shall be secured, prior to any construction related activity.

1.05 SPECIAL CONDITIONS

The work shall proceed in accordance with the following specification sections, found herein:

A. Section 01011 - Site Conditions
B. Section 01016 - Safety Requirements and Protection of Property
C. Section 01031 - Grades, Lines and Levels
D. Section 01100 - Special Project Procedures
E. Section 01720 - Project Record Documents
F. Section 01725 - Project As-Builts
G. Section 01730 - Operating and Maintenance Instructions
H. Section 01740 - Permits
I. Section 01750 - Maintenance of Traffic and Public Streets
J. Section 16051 – Pump Station Electrical Materials
K. Section 16268 – Low Voltage Variable Frequency Drive
L. Section 16420 - Stationary Engine-Generator Sets
M. Section 16510 – Interior Lighting
N. Section 16780 – S.C.A.D.A. System RTU Installation
O. Section 16940 – Pump Station Control Panel

1.06 PERMITS, INSPECTIONS AND FEES

A. The Contractor shall obtain and pay for all permits and fees in accordance with Section 01740, "Permits".

B. Inspection by MD-WASD personnel is required in addition to, not in lieu of, municipal and County department inspections. No facility will be accepted until it has passed all inspections, including pavement installation or replacement.

1.07 PRECONSTRUCTION CONFERENCE

A. Prior to commencement of the work, the Contractor shall attend a Preconstruction Conference.

1.08 SUBMITTALS

A. The Contractor shall furnish "As-Builts" in accordance with Section 01725. The Contractor shall submit operating and maintenance instructions and all other submittals in accordance with Section 01730.

B. Where the Specifications require test certification or certification that certain products or material furnished are as specified, the Contractor shall deliver such certification to the MD-WASD. No material or equipment shall be approved for use in the work until individual certification has been received.

1.09 DESIGN REQUIREMENTS

A. GENERAL

1. Pumping stations shall be designed in accordance with the State of Florida Department of Environmental Protection (DEP) Rules, Chapter 62-604 for Wastewater Facilities, with OSHA requirements and with the "Florida State Board Health Sewage Guide" and the recommendations of Chapter 12 of the ASCE Manual No. 37, "Sewer Design and Construction", except as otherwise provided herein. Wet wells shall be classified as hazardous areas, Class 1, Division 2, Group C.

2. In addition, pump stations shall be designed in accordance with the MD-WASD's "Supplemental Design Guidelines for Lift Stations and Force Mains" found in Appendix B. The MD-WASD's "Standard Pump Station Drawings", bound herein, are provided solely as an aid and shall not be considered as completed construction drawings.

3. Pump station shall be designed to serve no more than one quarter section. Also design shall incorporate corrosion inhibiting measures, practices and or products as found in the "Basic Guide to Corrosion Protection for Miami-Dade Water and Sewer Department Projects", found in Appendix D.

4. All applicable drawings of the MD-WASD's "Standard Details", found in PART IV herein, shall apply. Water service at pump stations shall be installed as shown in M-DWASD's Standard Pump Station Drawings.

B. STRUCTURE AND TYPE

1. Stations may be either precast or cast-in-place, installed by Caisson Method.

2. Stations shall be of reinforced concrete, and may be of the wet well-dry well type or submersible pumping station type, with depths no greater than 24 feet. The dry well shall maintain the cross-sectional area of the floor, up to ground level and shall be provided with an intermediate removable deck. Dry wells with entrance tubes shall not be approved.

3. Dry wells shall be close to square, in shape, with a minimum area of:
   64 sq. ft. - for stations of 50 horsepower per pump and below,
   100 sq. ft. - for stations of 60 to 75 horsepower per unit.
   In all cases, dimensions of dry well shall also be based on the size of the pumping equipment and appurtenances approved for installation therein.

4. Structural design shall conform with the requirements of the Florida Building Code and the American Concrete Institute "Building Code Requirements for Reinforced Concrete", ACI 318, latest edition. In order to provide strength, stability, and serviceability for sanitary structure under special loading conditions, the recommendations of ACI Committee 350 Report entitled "Concrete Sanitary Engineering Structures" (ACI 350) shall be used as a guide.

5. Wet-Well/Dry-well configuration shall be used when the station requires installation of pumps weighing more than 1,500 pounds.

6. Wet-wells may be constructed as an integral part of the dry-well or as a separate structure. Piping between separate wet-well and dry-well structures shall be provided with a flexible joint at the structure wall. There shall be at least four feet of separation between such structures. Wet-well operating capacity determination shall be based on pump cycling, not on a fixed determined wet-well effective volume. The method of determination shall be as specified in Section 3.4.3 of “Supplemental Design Guidelines for Pump Stations and Force Mains”.

C. ACCESS

1. Wet-well/dry-well pumping station: shall have separate outward opening access hatches for the-wet well and dry-well sized for the pump. Hatches shall be provided in accordance with Section 05540. Wet-well hatches shall have a minimum clear opening of 30 inches by 30 inches and shall be located directly above the influent pipe and the operating control tubing. Dry-well hatches shall have a minimum clear opening of 48-inches by 72-inches centered above the pumps. In no case shall dry-well opening be less than as recommended by pump manufacturer.

2. Submersible pumping station: shall have hatches designed for an H-20 live load and sized according to pump manufacturer's recommendations. [See Section 05540 and Plans entitled; “Typical Submersible Sewage Pumping Station].

D. PUMPING EQUIPMENT

1. For wet well-dry well stations furnish and install vertical, centrifugal sewage pumps, in accordance with Section 11210.

2. For submersible stations furnish and install submersible sewage pumps in accordance with Section 11205.

3. Each pumping unit shall be designed to pump the peak flow at the required head.

E. PIPING

1. Each pump suction line shall be sized for a maximum velocity of 5 feet per second at the rated peak flow. Provide a 90 degree flared elbow in the wet well and an isolation plug valve in the dry well, of a wet well-dry well type station. The plug valve shall be the same size as the suction piping. Provide a plug valve per pump in the valve vault of a submersible type station together with a further isolation plug valve just outside of the valve vault on the force main.

2. Discharge lines shall be provided with horizontally mounted check valves of the outside-lever and weight type and full size isolation plug valve. Discharge piping shall be sized for a maximum velocity of 6 feet per second at rated peak flow or a minimum of 6-inches in diameter, whichever is greater. Each pump discharge line shall be equipped with a petcock and pressure gage. The combined discharge line shall be equipped with a bronze tapping saddle with 1-inch plugged tap for installation of SCADA by MD-WASD.

3. All pipes and fittings furnished and installed shall be in accordance with Section 15060, "Pipe and Fittings".

4. Piping within the pumping station shall be flanged ductile iron pipe. Piping passing through concrete walls shall be provided with wall pipe or sleeves.

5. Fresh water and seal water pressure piping shall be copper. Seal water suction, drain and overflow piping shall be PVC. Small piping (including conduits), passing through concrete walls shall be provided with wall sleeves.

6. Valves 6-inches and larger shall be plug valves of the non-lubricated eccentric type with resilient faced plugs. Valves 2-inches and smaller shall be gate valves.

F. EMERGENCY PUMP CONNECTION

1. A connection to the discharge piping shall be provided for emergency pump-out of the wet well. It shall consist of necessary fittings, isolation plug valve, a ductile

iron or brass quick-connect male fitting and a dust cap with an air release petcock. A petcock for gage at discharge of force main shall be provided.

G. ELECTRICAL SERVICE

1. Coordinate with the power company early during the design stage. No booster or set-up transformer shall be permitted. Service shall be 3 phase, 208 or 480 volt, and adequate for the load served, but never smaller than the sizes indicated below:

SERVICE SIZE

Voltage	Pump Motor H.P.	AMP	THW Cu	Conduit
208	5 thru 10	110	# 3	1-1/2”
208	15 thru 25	200	# 3/0	2-1/2”
480	5 thru 15	70	# 3	1-1/2”
480	20 thru 50	200	# 3/0	2-1/2”
480	60 thru 75	250	250 MC	3”

2. Neutral and grounding conductors to be sized according to NEC and FBC.

H. STANDBY POWER

1. As shown on the Plans titled, “Typical Submersible Pumping Station (WASD Design Standard Update 2005)”, the MD-WASD will require, as a minimum, construction of a generator building, fuel tank pad and all interconnecting piping and conduits. MD-WASD may require actual provision and installation of the diesel generator, fuel tank and associated items dependent upon the criteria provided below in this subsection.

2. Stations Above 350 GPM Capacity: Stations that will a peak flow above 350 GPM shall require approval and installation of an emergency generator and fuel tank (Section 16420).

3. Stations at/or Below 350 GPM Capacity: May require stationary generator based on the area's need for uninterrupted service (i.e. hospitals, government centers, correctional institutions and similar facilities).

4. Unusually High Horsepower Motors: Which cannot be operated by portable generators shall require a stationary generator.

5. Special Cases:

a) The MD-WASD may, at its discretion, require portable generators at stations having unusual characteristics, or when an existing pump stations being upgraded above 350 GPM, or when an institution as described in Article 1.09-H.2, above, is added and no space exist for a permanent generator.

b) If the project will contribute less than 350 GPM, but the pump station is being designed to handle more than 350 GPM (PEAK) for the entire service area, no installation of emergency generator and fuel tank is required.

c) A pump station serving only one development and designed for peak flows of 150 GPM or more shall require installation of an emergency generator and fuel tank.

I. FIRE EXTINGUISHER

1. General: One fire extinguisher shall be wall mounted in the dry well on suitable brackets furnished by the manufacturer, bearing the mark of approval of Underwriter's Laboratory, Inc., and ratings conforming to NFPA No. 10, but not less than 3-A; 20-B:C. Fire extinguishers shall be of steel construction with red enamel finish, except the valves which shall be stainless steel or chromium-plated.

2. Dry Chemical Extinguishers: shall be rated for Class A, B and C fires, shall be ten (10) pound capacity, nitrogen operated and shall be steel with red enamel finish except valves which shall be stainless steel or chromium plated. Dry type extinguishers shall be Allenco, Badger-Powhatan, Larsen or approved equal.

3. Carbon Dioxide Extinguishers: shall be steel with red enamel finish, except valve and operator which shall be stainless steel or chromium-plated, Allenco Model 7400-10, Badgern-Powhatan or approved equal. Hose diffuser horns shall be non-metallic.

J. PANELBOARD & TRANSFORMER

A 100 amp single phase 120/240V breaker panelboard shall be provided to power all miscellaneous loads such as lights, seal water pump, air compressors, fans, sump pumps, dehumidifier, etc. If required, a dry type 480V-120/240V transformer wall mounted at the intermediate deck level shall be provided to feed all these loads. The transformer shall be sized to supply all of the connected load plus 30% of spare capacity.

K. STUCCO

Only the outside wall surfaces of the above-grade structure (to six inches below grade) shall be stuccoed. Materials shall conform to the Florida Building Code (latest edition).

L. LIGHTING

1. Provide LED indoor lighting with a minimum of 10 foot-candle power at the intermediate deck and at the lower level.

2. Where outdoor lighting is required provide LED wall-mounted fixture with photoelectric control.

3. Lighting fixtures shall be in accordance Section 16510.

M. ALARM SYSTEM

Provide an alarm system to give audible and visual alarms of pump station malfunction, in accordance with Section 16051.

N. AIR MOVING EQUIPMENT

All air moving equipment shall be in accordance with Section 15860.

O. INTERMEDIATE DECK

Provide an intermediate deck at an elevation with at least one-half foot clearance above the top of the motor, but never less than 7-foot clearance from floor slab. The deck shall be constructed of removable galvanized steel grating supported on galvanized steel channels. Grating shall be anchored to support frame channels. The channels shall be located such, that clear access is provided to the motors from the hatch opening when the grating is removed. Design in accordance with FBC and OSHA requirements.

P. LADDER

Provide a galvanized steel ladder from the hatch to the intermediate deck. It shall have extension rails which can be pulled up when the hatch is open. A second galvanized steel ladder shall be provided from the intermediate deck to the bottom floor. Ladders shall be in accordance with the requirements of the FBC and OSHA. A safety railing and stainless-steel chain shall also be provided around the opening in the intermediate deck for the bottom ladder.

Q. SURFACE PROTECTION - PAINTING

1. The inside walls of the dry well and all piping and equipment shall be properly primed and painted.

2. Paint material and specification requirements are shown in Section 09900.

R. SITE & LOCATION REQUIREMENTS

1. Stations shall be located on property of adequate size and said property shall be conveyed to the MD-WASD by fee simple title.

2. Location of pump stations shall be in accordance with local codes or governing authority having jurisdiction at the proposed site. In any case, a 25-feet long by 12-feet wide paved driveway, which shall provide access to all structures, wet well, dry well, valve pit, emergency generator and fuel tank, if required. Typical pump station site plans shall have a 45-feet by 65-feet format. A minimum separation of 5-feet shall be maintained between any proposed structure and a water or sewer main, and between two sewer

mains (edge to edge). Proposed rim elevations and final grade elevations shall be in compliance with DERM requirements.

3. Direct access shall be provided, without entering or crossing private property, by a paved driveway alongside the drywell and the wet-well for parking of maintenance trucks. The driveway shall be direct and clear from the roadway to the dry well / wet well. Control panels and emergency pump-out shall be located to permit clear access through driveway

4. Provide a chain link fence, in accordance with Section 02822, that will enclose the pump station property. The fence shall be 6-feet high minimum, with a 12-foot wide, minimum, double-leaf gate for the paved driveway. Barbed wire and extension arms may also be required in some locations.

5. Other types of property enclosures, such as block walls, may be substituted but shall require the prior approval of the MD-WASD.

6. Unpaved areas shall be completely sodded after construction is complete. Additional landscaping as required shall be incorporated in the Plans as set forth in Section 02900.

1.10 COMPLETED AS-BUILTS

A. The as-builts shall be completed and submitted to the Department at the time of system testing. Testing will not be considered complete until as-built record documents are submitted and approved by the Department. Completed finalized as-built package are required by the Department within 10-days upon the successful testing of all mains, equipment and appurtenances.

B. Complete topographic and boundary survey for the pump station shall be signed and signed and sealed by the Florida Licensed Professional Surveyor and Mapper as part of the as-built plans. All information required of a boundary survey shall be contained on the as-built plans to include the legal description of pump station site, easements and right-of-ways abutting the pump station site and location of all surface facilities recorded by a PSM. All utilities within pump station property shall be properly shown, along with their associated elevation and clearance.

C. The mechanical, structural and electrical information on as-builts for Pump Stations and Plant work shall be reviewed and signed and sealed by a Florida Registered Professional Engineer when designated as the responsible party for the corresponding portion of the as-builts. The Engineer shall verify that all mechanical, structural and electrical information on the as-built the work was constructed as designed on the Design Plans. Any deviation shall be noted and approved by the Department.

PART 2 - PRODUCTS

MDWASD
2.01 GENERAL

A. All material for use in the Project shall be new and of recent domestic manufacture and shall be the products of reliable manufacturers or suppliers who, unless otherwise specified, have been regularly engaged in the manufacture of such materials and equipment for at least five (5) years.

B. All fittings and components shall, wherever possible, be standard stock articles of well known manufacturers.

C. Where the Specifications designate the products of a particular manufacturer, the product specified has been found suitable for the intended use, but, unless otherwise provided, articles or products of similar characteristics may be offered for the approval of the MD-WASD, after prior approval by the Engineer.

D. Copies of complete descriptive data shall be furnished regarding all material, consisting of dimension drawings, catalog references and other information necessary to clearly identify and evaluate each article.

E. Unless otherwise specified, all fabricated items, steel bolts, nuts washers and all other miscellaneous ferrous metal items (except cast iron and stainless steel) shall be hot-dip galvanized in accordance with ASTM A123, "Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products" and ASTM A153, "Zinc Coating (Hot-Dip) on Iron and Steel Hardware". Where the word "galvanized" or its abbreviation is used on the Plans or in these Specifications, it shall mean hot-dip galvanized. Fabricated items shall be hot-dip galvanized after fabrication. Internal threads shall be tapped or re-tapped after galvanizing. All threaded fasteners together with their associated components, such as washers, located in the wet well shall be type 316 stainless steel.

F. Pumps, motors, electrical items and other station equipment shall be shipped, handled, stored and protected in accordance with Section 01600, "Materials and Equipment Shipping, Handling, Storage and Protection"

G. Any salvageable pipe, fitting, or other miscellaneous material or equipment, removed from the MD-WASD-owned mains during construction and not reused in the work shall be cleaned, hauled to and stored where directed by, and shall remain the property of the MD-WASD. All other material and equipment shall be disposed of by the Contractor at his expense.

H. To insure satisfactory and successful final painting of materials and equipment to be furnished, it is essential that the paints applied in the shop and in the field be mutually compatible. To this end, require that the shop paints applied to materials and equipment be compatible with the paints proposed for use in the field, or determine what shop paints have been used and select field paints compatible therewith, all as approved by the MD-WASD.

2.02 PUMPS

A. Submersible Pumps – See Section 11205 Submersible Pumps

B. Dry Well Centrifugal Sewage Pumps – See Section 11210 Vertical (Dry Pit) Centrifugal Pumps

C. Pump Warranty

1. Submersible Pumps: The pump manufacturer shall warrant the units supplied to the owner against defects in workmanship and materials for a period of 5 years or 10,000 hours of operation, in normal use, operation and service. The warranty shall be in printed form and shall apply to all similar units. A copy of the warranty shall be supplied with each pump. The warranty shall consist of the following: From 0 18 months or 0 - 3,000 hours, 100% warranty, From 19 39 months or 3,001 6,500 hours, 50% warranty, From 40 60 months or 6,501 10,000 hours, 25% warranty.
2. Centrifugal over 60 HP and under: Same as for submersible pumps.
3. Centrifugal over 60 HP: One year Warranty minimum. Project specific as required by the Engineer.

2.03 WET WELL

A. See Section 02536 Precast Manholes.

B. Concrete Protective Coatings: See WASD Pre-Approved Product List Sheet 10.7 Wet Well Coating.

C. Crystalline Waterproofing: Pump Station Wet Wells shall have Xypex/BASF Crystalline Waterproofing Admixture or approved equal, applied at 2 to 3% of the weight of portland cement in the wet well by volume. The Crystalline Waterproofing Admixture shall be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy. The precast concrete structure with the Crystalline Waterproofing Admixture is required to cure for 28 days prior to application of the concrete protective coating.

D. Water Cement Ratio: 0.34 for Pump Station Wet Wells

E. Reinforcement of Grade 60 bars. (Pump Station Wet Wells require rebars not wire mesh reinforcing).

F. Waterstops: Ribbed PVC Waterstop with centerbulb.

G. No construction joints will be allowed below an elevation of four feet above mean sea level. Construction joints will be allowed above elevation+4.0, if adequate keyways and waterstops, approved by the Department (Ribbed PVC waterstop with centerbulb), are provided. The Department may approve an alternate joint method in cases of excessively deeper and heavy structures.

2.04 CASTINGS

A. GENERAL

MDWASD

1. Material used in the manufacture of the castings shall conform to ASTM A48, "Gray Iron Castings", for Class 35B. Proof Loading: AASHTO M306 Loading

2. Castings shall be in compliance with Standard Details and Section 05550, "Castings".

B. MANHOLE FRAMES AND COVERS

Manhole covers and frames shall be MD-WASD Type "A" with roadway cover, U.S.F. Fabrication No. 310, or approved equal. The covers shall be cast labeled "SANITARY SEWER".

C. VALVE BOXES AND COVERS

Valve Boxes and Covers shall be MD-WASD No. 52 or No. 53 in accordance with the Standard Details appended hereto. Valve box covers shall be cast labeled with the letter "S".

2.05 BRICK

A. Concrete brick shall conform to ASTM Standard C55-01 "Concrete Building Brick". Clay brick shall be used in manhole construction. Clay brick shall conform to ASTM Standard C62-00, "Building Brick (Solid Masonry Units Made from Clay or Shale)".

B. Bricks shall have true edges and sharp corners and shall have been cured for at least 14 days before being placed.

2.05 CONCRETE, MORTAR AND GROUT

See Sections 03300, 04060 and 03600, respectively.

2.06 CONCRETE BLOCK

Unit masonry shall conform with Section 04220.

A. Standard units of concrete block shall conform to ASTM C90, "Hollow Load-Bearing Concrete Masonry Units", Normal Weight, Grade N-1, except that the maximum moisture content shall not exceed 50 percent of the total absorption.

B. Louvered concrete ventilator block shall conform to the FBC for materials and quality control. Louvered blocks shall be considered non-load bearing units requiring a reinforced concrete lintel above, when placed in standard concrete block construction. Size and reinforcement of the lintel shall be as required by the FBC, however, the lintel shall bear not less than 8 inches on the masonry at each end.

C. Louvered ventilator blocks shall be furnished in modular units 16 inches square nominal (15-1/2 inches by 15-1/2 inches actual), and each unit shall have four louvers.

D. A mortar groove shall be provided on the exterior of the frame, centered on the frame depth.

E. Each modular unit shall be provided with an insect screen. Fabrication shall be extruded aluminum frames, corners mitered aluminum spline, and 16-18 mesh aluminum screen. Screens shall be fixed type, with aluminum clips and screens suitable anchored to the unit.

2.07 ELECTRICAL MATERIALS

A. See Section 16051 "Pump Station Electrical Materials".
B. See Section 16940 "Pump Station Control Panel".

2.08 TELEMETRY

A. A telemetry panel provided by the MD-WASD shall be installed in the future. All appurtenances required by the telemetry system shall be provided, including antenna, concrete filled galvanized steel pipe, concrete base, mounting clamps and accessories.

B. All lift stations shall be designed for fully automatic unattended pump control with local override capability. Lift stations shall also be designed for remote monitoring capability. Provisions for these installations shall be made by Engineer of Record. Remote monitoring will be installed by the MD-WASD.

2.09 FENCING MATERIAL

Fencing material shall be furnished and installed in accordance with Section 02822, "Chainlink Fences and Gate". Gates shall be positioned to allow for maintenance and direct truck access to the wet well.

2.10 PIPING AND FITTING MATERIAL

Piping, fittings and appurtenances shall be as specified in Section 15060, "Piping and Fittings". Sewage lined ductile iron pipe and fittings are required within the pump station.

2.11 LADDERS & GUARD CHAINS

A. Galvanized steel ladders shall be fabricated with structural shapes in accordance with Section 05120, "Miscellaneous and Structural Steel", and shall be sized in accordance with the Plans. All welds shall be ground smooth and cleaned to remove welding marks. All screws and bolts appurtenant to the ladders shall be AISI Type 316 stainless steel.

B. Guards chains shall be used where shown on the Plans. The chains shall be welded stainless steel close link hoist chain 3/8-inch by 1.2 inch X .540 inch links. One end of each chain shall be attached by a stainless steel shackle to a 3/8-inch round stainless steel eye bolt through the pipe stanchion and the other end of each chain shall be connected to a heavy stainless steel snap hook. A 3/8-inch stainless steel

welded eye and concrete insert shall be provided in the wall for both chains. The eyes shall be installed just below the bottom of the top and intermediate rails. Stainless steel items shall be AISI Type 316.

2.12 All other material required for the satisfactory installation of the pump station, including valves, sewage pumps, sump pump, steel reinforcing, structural steel, waterstops, miscellaneous material and other products, shall be as specified elsewhere herein.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. The precast base shall be set level, with the walls plumb on the graded crushed rock bedding.

B. Excavation shall extend to a level 12-inches below the level of the outside bottom of the base slab. If necessary, provide sheeting and shoring for the excavation. Sheeting and shoring may be required in order to control the excavation dimensions, protect the workmen, and prevent damage to the structure or other adjacent facilities. The resulting excavation shall be backfilled with drainfield limerock or specified pipe bedding material to a level to receive the structures at the proper elevation.

C. Necessary sheeting and shoring shall be designed by a Registered Professional Engineer licensed to practice in the State of Florida. Signed, sealed, and dated drawings and design calculations shall be submitted to the Engineer for approval prior to construction.

D. The excavation shall then be brought to the structure's bottom elevation by placing and compacting 6-inch layers of Oolitic limerock to 95% of maximum density as determined by AASHTO Specification No. T-180. Excess excavated material, suitable for the purpose, may be used later as backfill around the structure. The wet well, dry well and/or valve pit shall be painted prior to installation. Backfill around new structures up to the pavement base or surface of the ground shall be material not exceeding 6-inches in diameter and shall be compacted in layers not exceeding 9-inches. Each layer shall be compacted with a powered hand tamper or other approved method.

E. For surfaces of structures exposed to view the Contractor shall fill all depressions and all air holes with mortar, dampen surfaces, and then spread slurry, consisting of one part cement and one and one-half parts sand, by damp loose volume, on the surface with clean burlap pads and sponge rubber floats. The Contractor shall remove any surplus by scraping and hen rubbing with clean burlap. Finish surface shall be suitable to receive paint.

3.02 INSTALLATION OF PRECAST PUMP STATION

A. Excavations for the cast-in-place or the precast structures shall be extended to a level 6-inches below the level of the outside bottom of the slab. Sheeting and shoring may be required in order to control the excavation dimensions, protect workmen, and prevent damage to the structure or adjacent facilities. The resulting excavation shall be backfilled with drainfield limerock or specified pipe bedding material to a level to receive the structures at the proper elevation. Pump station exteriors shall be painted prior to installation.

B. Sheeting and shoring for the pump station shall be designed by a Registered Professional Engineer licensed to practice in the State of Florida. Signed, sealed and dated drawings and design calculations shall be submitted to the MD-WASD for approval prior to construction.

C. The pump station shall come with an anchor slab, precast to the dimensions shown on the Plans to be lowered in to the excavation separately, or as a complete unit. The structure, with anchor slab shall be securely seated.

3.03 INSTALLATION OF VALVE PIT STRUCTURES

A. During all backfilling operations the backfill level shall be kept even on all sides of the structure and the Contractor shall exercise every precaution to prevent damage to, or unplanned loading of, the structure or its appurtenances.

B. The valve pit structure shall be precast to the dimensions shown on the plans and carefully lowered into the excavation. The structure shall be seated securely to grade and to the approval of the MD-WASD, after which the Contractor shall complete the remainder of the installations.

C. After satisfactory installation and testing, the valve pit interior shall be painted as specified.

3.04 MECHANICAL WORK

A. The mechanical work shall be performed by personnel who have had previous experience installing similar pumping station equipment. All equipment shall be installed in complete accordance with the installation instructions pertaining to the various items of equipment as published by the equipment manufacturers and no piece of equipment shall be installed unless its installation instructions are on hand. Duplicate copies of these instructions shall be furnished to the Engineer of Record prior to installation. Before any installation work is started, the Contractor shall submit five copies of installation drawings to the MD-WASD for approval of all the proposed mechanical work. No work shall commence until approval of the installation drawings has been received.

B. All pipe, tubing, and fittings shall be adequately supported with adjustable pipe saddle supports, by wall brackets, or by ceiling hangers, as indicated on the drawings. Except as otherwise indicated or specified, all piping passing through walls or floors shall be provided with pipe sleeves or wall pipe as indicated on the Plans. Sleeves shall be caulked to piping on both sides of wall with Dow-Corning

790 joint sealant or approved equal. Sleeves and wall pipe shall be accurately set in the forms and blocked to prevent movement during pouring of concrete. Sleeves and wall pipe for piping 6 inches and larger shall be made of cast iron. Sleeves for piping smaller than 6 inches shall be cut from Schedule 40 galvanized steel pipe, reamed and set flush with both faces of wall or floor, or as shown on the Plans.

C. All pipe shall be thoroughly cleaned internally to the satisfaction of the MD-WASD before installation.

D. All pipe work under this Contract including handling of materials, excavation, laying, blocking, alignment and grade, jointing, setting valves and fittings, and anchoring, shall meet the applicable provisions of AWWA Specification C600, "Installation of Ductile-Iron Water Mains and Their Appurtenances", latest edition, as modified herein.

E. The Contractor shall furnish all nuts, bolts, washers, gaskets, foundation bolts, and all other items necessary to install the equipment specified herein. Foundation bolts shall be of a size recommended by the manufacturer of the equipment. All nuts, bolts, foundation bolts, and washers shall be hot-dip galvanized steel or stainless steel, as specified herein, or shown on the Plans.

F. Equipment shall be installed in a neat workmanlike manner in accordance with accepted practices. Alignment of pumping equipment shall be by a qualified millwright. Foundations and supports for equipment shall be poured to within one inch from finished elevation. The floor shall be thoroughly roughened by chipping where supports, foundations or bases are to be poured. Foundation bolts shall be located by templates which shall be left in place during the pouring of the concrete. The equipment shall be set and shimmed with steel wedges to the required finished elevation. The foundations shall be encircled by forms and the equipment grouted in, using epoxy grout, as specified herein. Rodding or other suitable means shall be used to assure that all voids have been filled. After the grout has set, the shims shall be removed and the resulting spaces filled with grout. After setting, this grout shall be trimmed to match the adjoining grouted surfaces. The matching surfaces of the grout and foundation on all pumps shall be rubbed with a carborundum brick to produce a smooth, even finish, satisfactory to the MD-WASD. Exposed corners shall be chamfered 1 inch.

G. The pumps and motors shall be placed in position and shall be perfectly aligned in accordance with the recommendations of the pump manufacturer, and to the satisfaction of the MD-WASD. Bolts shall then be tightened, and the alignment shall be rechecked. Alignment and checking shall be done in the presence of a MD-WASD representative.

3.05 STRUCTURAL WORK

A. All concrete work shall be constructed in accordance with all applicable provisions of Section 03300.

B. If, in performing the concrete work hereunder, the forms holding the concrete should fail, sag or get out of line in any way whatsoever, repair such damage to the

complete satisfaction of the Engineer. All completed members shall be straight and true, and present a uniform appearance. The use of excavation walls as forms will not be approved.

C. Concrete surfaces shall be inspected immediately after the forms are removed. Defective areas shall be chipped away to the depth of the imperfections but not less than one inch deep. These areas shall be kept wet for at least two hours before patching. Immediately thereafter, all the holes shall be brushed neat with cement grout. While the grout is still wet, the holes shall be filled with a barely moist grout consisting of one part Portland cement and three parts sand, which shall be driven tight with wooden caulking tools and finished off flush and smooth. The mortar patches shall be cured as specified.

D. The dry well floor and valve pit floor shall slope one inch from the farthest point to the sump.

E. Construct the foundations for the pumps and motors with non-shrink epoxy grout. The foundation shall include anchor bolts, nuts, washers, and sleeves as required for the equipment. Anchor bolts shall be in accordance with the equipment manufacturer's recommendations and as approved by the MD-WASD. The foundations shall be poured to heights of not less than one inch below the elevation required to bring the equipment to the correct elevation, leaving room for placing grout to maintain the equipment at the proper elevation. After the forms have been removed, the foundations above the floor line shall be rubbed smooth with a carborundum brick. Exposed corners shall be chamfered 1-inch. Anchor bolts, nuts, washers, and sleeves shall be hot dip galvanized.

F. The Contractor shall construct concrete foundations for the check valves, including felt paper lining. Foundation and supports shall be allowed to cure for at least 7 days before setting any equipment. The floor shall be thoroughly roughened by chipping where supports are to be poured. After the forms have been removed, the foundations above the floor line shall be rubbed smooth with a carborundum brick. Exposed corners shall be chamfered 1 inch.

3.06 ACCEPTANCE TESTING

A. The Contractor shall inform the City in writing that the station is ready for operation, and shall, in the presence of the City's representative, demonstrate the operability and correct adjustment of every device included in the Project. The Contractor shall furnish all gauges, testing devices, water to fill (and refill as required) the wet well, electric power, labor, and other necessities to demonstrate that the station is ready to be put into operation. All tests and/or demonstrations shall be conducted to the complete satisfaction of the City.

B. Testing of the different items of equipment shall be conducted as many times, and for as long as is necessary, to determine whether the various items meet Specifications. Discharge piping shall be tested for leaks under pump shut-off head condition. No leakage is allowed. All interior ductile iron piping except the pump-

suction piping shall be tested and made "drop-tight" under a hydrostatic test pressure of at least 100 psi. Sections of discharge piping which cannot be isolated by valving for full pressure tests shall be tested at system pressure with no leakage allowed. Pump suction piping and valves shall be made "drop-tight" when the wet well is flooded to the invert level of the gravity line entering the wet well.

C. The Pump Station shall be tested per pump manufacturer's recommendations, WASD Standards for Submersible/Centrifugal Pumps and in the manner described below:

1. Fill wet well with water.
2. For pump number one:
   - Check winding resistance and record readings.
   - Place the operating mode selector switch in the manual position.
   - Record voltage and amperages.
   - Take pump down time and document it.
3. For all subsequent pumps follow steps 1 and 2.
4. With water level below lead pump starting point place all pumps selector switch to automatic position and continue adding water to wet well as necessary.
5. Observe lead pump run.
6. Increase water flow into wet well for lag pumps to run.
7. Continue this process for all pumps.
8. Stop pouring water into wet well and observe as all pumps shut off at the pre-selected levels.
9. Return selector switch to the off position.
10. Allow well to fill up to verify that High level alarm is functioning.
11. Again, pump down well in manual operation until low alarm level is triggered but
12. before pump looses prime.
13. Disconnect Digital Level Controller and check that lead pump is turned "on" and "off" at the proper levels by Back-up controller operating with float switches.
14. If the above parts of the test show that any component is not operating as intended, make necessary adjustments and/or repairs and repeat steps one through thirteen, until the entire system operates trouble free.
15. Fill the wet well with water to the invert of the influent pipe. Leave it full of water for at least two hours. If the water level goes down, locate and repair the leak to the satisfaction of the Engineer. Repeat test to ensure absence of leaks.

END OF SECTION

SECTION 02615

CONCRETE PROTECTIVE LINER SYSTEM FOR PRECAST STRUCTURES

PART 1 - GENERAL

1.01 SCOPE OF WORK

A. Furnish and install all labor, materials, equipment, and incidentals required to supply polypropylene, random copolymer (PP-R) concrete protective liner in the precast wet wells and manholes as required and as shown on the plans. The liner system shall be AGRU "Sure-Grip" PP-R Concrete Protective Liner, or approved equal polypropylene lining, as installed by U.S. Precast Corporation, Miami, Florida and Joelson-Taylor Concrete Products at Venice, FL, Deland, FL and other locations in this state.

B. PP-R concrete protective liner shall be designed and installed by the manufacturer of the precast structure to protect the structure's interior surfaces from chemical attack and microbial corrosion, and to facilitate the prevention of ground water infiltration. A watertight seal between the ring and cover, or access hatch, and the liner, must be incorporated into the design. Additionally, the liner must be sealed at the bottom of the concrete structure's wall with a waterstop assembly thermo-welded to the wall liner, or with continuous liner coverage over the top of the base slab. All construction joints must be sealed by extrusion welding the liner seams together to form a continuous and flexible seal between structure sections.

1.02 SUBMITALS

A. The contractor shall submit for review a detailed CAD shopdrawings for each type of structure to be used on the project. These drawings shall detail the precast structure, per the design specified for the project, and shall show the concrete protective liner's placement on the structure's interior wall surfaces, at the construction joints, at pipe and other conduit connections, and at the adjustment area between the precast structure and the ring and cover. A manhole frame sealing system, in accordance with Section 02620, may be used in lieu of liner at the adjustment area.

B. The contractor shall provide, upon request, detailed thermo-welding and weld testing procedures, and supply to the engineer, upon request, a copy of the liner manufacturer's certification of training for those personnel performing the welding.

PART 2 - PRODUCTS

2.01 PHYSICAL PROPERTIES

A. The PP-R liner shall be free of pores, pinholes, voids and foreign bodies. All anchoring studs shall be manufactured during the extrusion process in one piece with the sheet. No welding to attach the studs to the sheet or mechanical finishing work is permitted. All welding rod, profile strips, cap strips and polyester backed transition wrapping shall be manufactured from

the same resins by the same manufacturer. The liner manufacturer shall be ISO 9001 certified.

B. The characteristic values of the raw materials shall be as follows:

PROPERTY	TEST METHOD	UNIT	STD. VALUE
Density	ASTM D 792-86	G/cm^3	.898
Melt Flow Index	ASTM D 1238-88	G/10min	(190/5)
Heat Reversion	ASTM D 1637-83	%	< 2
Yield Stress	ASTM D 638-89	PSI	$\geq$ 2,900
Elongation of Yield	ASTM D 638-89	%	$\geq$ 10
Elongation at Break	ASTM D 638-89	%	$\geq$ 50
Fire Classification	UL 94		V2
Electric Conductivity			10^{13}
Resistance to Pull-Out	SKZ Test Directives	T/m^2 T/ft^2	30 3
Maximum Working Temperature		C. F.	90 degrees C. 194 degrees F.

2.02 CONFIGURATION

A. Studded PP-R liner sheets shall have a minimum design thickness of 2 mm (.079 inches) and have a minimum of 39 wedge shaped anchoring studs per square foot of liner. Minimum stud height shall be no less than 9 mm (.39 inches) with a minimum length of 14 mm (.55 inches). Anchoring studs must be capable of resisting continuous hydraulic backpressure, to a minimum of 40 feet of hydraulic backpressure, exerted between the interior wall of the concrete structure and the anchoring stud side of the protective liner.

B. Non-studded PP-R cap strips, used to bridge construction joints, shall have a minimum design thickness of 2 mm (.079 inches). Polyester backed non-studded PP-R transition sheets, used for the purpose of bonding PP-R to dissimilar materials, shall be attached to the PP-R sheet during the extrusion process.

C. The lining system shall be designed to be repaired, or modified, at any time during the design life of the system.

PART 3 - EXECUTION

3.01 INSTALLATION

A. The installation of the PP-R concrete protective liner into precast wet wells and manholes shall be accomplished only by a precast concrete manufacturer certified by the liner manufacture, with a minimum of five years of manufacturing experience, and a minimum of five years experience in the installation of corrosion resistant thermoplastic sheet liners in concrete structures. Upon request, the liner installer shall provide written certification that the installation is in accordance with the liner manufacturer's installation specifications.

B. Placement of the liner on forms shall conform to the liner manufacturer's written instructions. All shop and field welding shall be performed only by thermoplastic extrusion welders certified by the liner manufacturer. All field thermo-welding shall additionally be performed only by confined space trained, and certified personnel.

- END OF SECTION -

SECTION 02625

SANITARY SEWER MANHOLE INFILTRATION INSERT

PART 1 - GENERAL

1.01 SCOPE

. This section specifies sanitary sewer manhole infiltration inserts. Manhole inserts shall be furnished and installed in all new sanitary sewer manholes and all manholes to be rehabilitated as part of the Project.

PART 2 - PRODUCTS

2.01 GENERAL

The manhole infiltration inserts furnished shall be the product of firms which have been regularly engaged in the manufacture of such items for a period of at least five (5) years.

2.02 MATERIAL

A. All materials used in the manufacture of the infiltration inserts shall be highly resistant to corrosion from sanitary sewer atmospheres containing hydrogen sulfide and dilute sulfuric acid.

B. Infiltration insert body shall be manufactured of High Density Polyethylene meeting the requirements of American Society for Testing and Materials Standard D1248-84 (Reapproved 1989), APolyethylene Plastics Molding and Extrusion Materials@, Type III, Class A, Category 5 or stainless steel, when required by the Department.

C. Insert body thickness shall be a minimum of .125 inches. Inflow dish shall be one piece molded with structural ribbing members in the bowl area for extra structural integrity. Inflow dish is to have smooth radius molded edges for additional strength and prevention of cracking. The insert shall have a straight-side design to allow penetration of the manhole lid dropping through the clear opening of the manhole frame. The depth of the infiltration insert shall be a minimum of 5 inches from the smooth radius molded edge to the center of the bowl area. The insert shall be designed to provide a sufficiently loose fit into the manhole frame to allow easy removal. Manufacturers name and the date manufactured shall be molded into the inflow dish.

D. The infiltration inserts shall be dimensioned to fit sanitary sewer manholes as shown on the Miami Dade Water and Sewer Departments Standard Detail #SS4.0, “Type “A” Manhole cover and Frame” pages 1 and 2 of 2.

E. The gasket shall be a minimum of .5 inches wide and shall be a minimum thickness of .125 inches installed by the manufacturer and shall be envelope type, providing a seal on the lower side of that portion of the insert, which sits in the manhole frame. The gasket shall be closed cell Neoprene rubber and shall provide a watertight seal when installed. The gasket

shall be permanently attached to the insert by means of chemical bonding, (or waterproof adhesive). The maximum amount of leakage through the infiltration insert shall be five (5) gallons in twenty-four (24) hours.

F. Ventilation is provided by a vent hole on the side of the bowl.

G. A handle made of nylon webbing no less than one (1) inch wide, shall be located so that it does not interfere with the installation of the manhole lid, yet still provide for easy removal of the infiltration insert. Corrosion resistant fasteners shall be used to fasten the nylon webbing to the inflow dish. The handle shall be able to withstand a pull of at least 500 pounds before failure or separation from the insert body.

H. Bidders may be required to submit a sample inflow dish along with a complete detailed specification and certifications referenced in this document for evaluation.

I. The County reserves the right to perform its own testing procedures or to send any and all samples to any laboratory for analysis. On the basis of this testing and analysis, the County shall be the sole judge of the acceptability of the sample in conformance with the specifications and its decision will be final. Any sample submitted shall create an express warranty that the whole of the goods to be provided by the contractor shall conform to the sample submitted.

J. Five (5) year warranty against defects.

K. Insert shall be an “Inflow Defender” by USSI, LLC; Venice, FL; (941) 926-2646 or approved equal.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Inserts shall be installed in accordance with the manufacturer recommendations.

B. The Department reserves the right to require installation of stainless steel inserts, as required.

C. Manhole frame shall be set so that the tops of the covers are flush with the adjoining pavement or ground surface.

- END OF SECTION -

SECTION 02822

CHAIN LINK FENCES AND GATES

PART 1 - GENERAL

1.01 WORK INCLUDED

A. The work included in this Section consists of furnishing and installing a galvanized steel chain link fence, complete with gates and "V" arms with barbed wire, where permitted, to be constructed as shown on the Plans.

B. Minimum fence height shall be six (6) feet, with a double leaf entry gate having a minimum ten foot clear opening; except that if building and zoning codes permit, the fence and gate height shall be eight (8) feet.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Fabric:

The chain-link fence fabric shall meet the requirements of ASTM Standard A392, "Zinc-Coated Steel Chain-Link Fence Fabric", latest edition. Zinc coating of the fabric shall be not less than 2 ounces per square foot of wire surface (Class 2 coating). Fabric shall be one-piece fabric height as shown on the Plans, with 2-inch by 2-inch mesh of No. 9 gauge wire, unless otherwise specified. Top and bottom selvages shall be twisted. The fence shall have a single strand of 7 gage galvanized coil spring wire at the bottom, fastened at each post, and at 2 foot centers, with hog rings, extending to within 1-inch of the ground.

B. Posts and Other Appurtenances:

All tubular members including gate members shall comply with ASTM Standard A 53-90b, "Pipe, Steel, Black and Hot-Dipped Zinc-Coated (Galvanized) Welded and Seamless, for Ordinary Uses", Type S Grade A or B, and shall be plain-end steel pipe, with zinc coating applied inside and out by the hot-dip process. Zinc coating shall be not less than 1.8 ounces per square foot of pipe area. Gate frames shall be hot-dip galvanized after fabrication. All fence posts shall have weather proof caps which shall conform with the specifications detailed elsewhere in this section. Fence components shall be as follows:

Components	Nominal Pipe Size	Outside Diameter	Weight Per Foot
Top rail and braces	1 1/4 inches	1.660 inches	2.27 pounds
Gate frames	1 ½ inches	1.900 inches	2.72 pounds
Line posts	2 inches	2.375 inches	3.65 pounds
Corner posts	2 ½ inches	2.875 inches	5.79 pounds
Gate posts (less Than 10 ft. leaf)	3 inches	3.500 inches	7.56 pounds
Gate posts (greater than 12 ft. leaf)	6 inches	6.625 inches	18.97 pounds

C. Top Rail: The top rail shall be provided with couplings approximately every 20 feet. Couplings are to be the outside sleeve type, at least 6 inches long.

D. Concrete: Concrete shall have a minimum compressive strength of 3,000 psi at 28 days.

E. Barbed Wire: Where permitted by building and zoning codes, the fence shall have six strands of barbed wire mounted on "V" arm post top extensions, as shown on the Plans. Barbed wire shall meet the requirements of ASTM Standard A121, "Zinc-Coated (Galvanized) Steel Barbed Wire", latest edition, for wire gage No. 12-1/2 (2 strands) with a minimum zinc coating of 0.5 ounce per square foot of wire surface (Class 2 coating), applied before fabrication. The individual barb shall be four points, twisted around both wires, with the barbs spaced no more than 5 inches apart.

F. Gates:

1. The gate frames shall be assembled by welding and shall be hot-dip galvanized after fabrication. The gate shall be installed complete with all hardware, including hinges, locking devices, drop bars, center stops, holdbacks and other items, as required. Padlock will be furnished by the Department.

2. The gate frame shall be made of 1-1/2 inch diameter Schedule 40 pipe and shall be welded at all corners so as to form a rigid one piece unit for each leaf. Fabric shall be securely stretched and held in the center of the tubing by use of hooks, bolts and tension rods on all four sides of the gate opening frame.

3. If permitted, the gate shall have three strands of barbed wire mounted on frame top extensions and barbed wire shall be as specified above.

4. Gates shall have a center stop and drop rod with padlock hardware and padlock. Gate stops and latches shall all be hot-dip galvanized.

5. Gate post shall be equipped with caps designed to exclude moisture from the post.

6. Gate posts shall be equipped with caps designed to exclude moisture from the post.

G. Accessories: Miscellaneous hardware shall be of steel, malleable iron or ductile iron of standard design and conform to the requirements of the Chain Line Fence Manufacturer's Institute. All parts shall be galvanized except ties and clips may be of aluminum. The Contractor shall install all of the hardware necessary for a complete and working installation, and shall include the following:

1. "V" Arms or Single Arm Post Extensions for Barbed Wire:

Barbed wire supporting arms shall form an angle of approximately 45 degrees with the vertical fence and be fitted for attaching three strands of barbed wire. The top wire shall project approximately 12-inches horizontally from the fence line. The other wires shall be spaced uniformly between the top of the fence

fabric and the outside strand. The barbed wire supporting arm shall be manufactured from pressed steel or malleable iron capable of withstanding 200 pounds applied at outer strand of barbed wire. It shall be designed as a combination weather-tight closure cap and a barbed wire supporting arm, where barbed wire is required.

2. Padlocking Device shall be a fulcrum type latch assembly for double gates.

3. Post Caps shall be of cast steel or cast iron and shall be designed to provide a drive fit over the top of the post to exclude moisture.

4. Tension Bars shall be one piece for the fence height of the fabric with a minimum cross-section of 3/16" x 3/4". Provide one tension bar for each end post, and 2 for each corner and pull post. The gate shall have tension bars as shown on the Plans.

H. Tension bars, the tension bar bands, post caps, V-arms, brace rods, top rail clamps, turnbuckles, nuts and bolts, all gate hardware and remaining accessories shall be zinc coated in accordance with the ASTM Standard A153 "Zinc Coating (Hot Dip) On Iron and Steel Hardware", latest edition.

I. Hardware: Miscellaneous hardware shall be of steel, malleable iron or ductile iron of standard design and conform to the requirements of the Chain Link Fence Manufacturer's Institute. All parts shall be galvanized except ties and clips, which may be aluminum.

PART 3 - EXECUTION

3.01 ARRANGEMENT

A. Posts: Post shall be uniformly spaced, not to exceed 10-feet on centers. Intermediate post shall have waterproof tops which have integrally cast openings through which the top rails shall pass.. Terminal posts shall consist of one end, corner and pull posts.

B. Braces: Braces shall be provided at each gate, corner, pull and end post.

C. Ties and Clips: Fabric shall be fastened to all intermediate posts with 9 gauge tie wires, spacing not to exceed 14-inches apart. Fabric shall be tied to top rail with 9 gauge tie wires, spacing not to exceed 24-inches on centers.

3.02 INSTALLATION

A. All posts shall be installed in accordance with ASTM F567, "Practice for Installation of Chain Link Fence", latest edition. Where conflict between said standard and these specifications exists, the more stringent shall apply.

B. Post Setting: Line posts shall be set in holes 12 inches in diameter, 38 inches deep with 36-inch post embedment. Terminal posts shall be set in holes 15 inches in diameter, 38 inches deep with 36-inch post embedment. Gate posts for double swing gates shall be set in holes 18 inches in diameter, 38 inches deep with 36-inch post

embedment. Gate posts for single swing gates shall be set in holes 15 inches in diameter, 38 inches deep with 36-inch post embedment. After the post has been set and plumbed, the hole shall be filled with concrete. The exposed surface of the concrete shall be crowned to shed water.

C. Terminal and Gate Posts: Terminal and gate posts shall be set as specified above and shall be braced to the nearest post with a galvanized horizontal brace used as a compression member and a galvanized 3/8-inch steel truss rod and truss tightener used as a tension member.

D. Fabric: Fabric shall not be stretched until concrete footings have cured a minimum of three days. Chain link fabric shall be placed on the side designated by the Engineer of Record and shall be stretched taut approximately 1-inches above finish grade and securely fastened to all posts. Rolls of wire fabric shall be joined by weaving a single strand into the ends of the rolls to form a continuous mesh.

END OF SECTION

SECTION 05540

ACCESS HATCHES

PART 1 - GENERAL

1.01 SCOPE OF WORK

The Contractor shall furnish and install access hatches, frames and accessories, where shown on the Drawings, and as specified herein.

1.02 QUALITY ASSURANCE

A. Codes: Access hatches shall conform with South Florida Building Code and OSHA requirements.

B. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience.

PART 2 - PRODUCTS

2.01 HATCHES

A. General:

1. Hatches for valve vault shall be aluminum when outside of the right-of-way and shall be steel when in public right-of-way. In all cases hatches shall be double door type designed for AASHTO H-20 wheel loads.

2. The access hatches shall have spring loaded covers for easy opening, recessed padlock and automatic 90-degree hold-open arms. Hatches shall be equipped with a flush drop handle which does not protrude above the cover. Hinges shall be all stainless steel with tamper proof stainless steel bolts and nuts, and shall be removable for maintenance after the access hatch is cast in place. Access hatches shall be furnished with a safety chain (double door leaf design). Access hatch shall have a stainless steel slamlock with removable outside handle and fixed inside release handle and shall be equipped with stainless steel compression springs.

3. When mounted, door leaf shall be flush with the top surface of the frame, with the exception of the projecting lugs. Hatches shall be of skid proof design.

4. Hardware shall be AISI Type 316 stainless steel. Aluminum used in the construction of the access hatches shall conform to Section 05140.

B. Valve Vault:

Valve vault hatch shall be Type AHD as manufactured by U.S.F. Fabrication, Inc., Hialeah, Florida, modified as specified herein, or approved equal.

C. For Submersible Pump Type Pump Stations:

1. Access hatches shall be U.S.F.F. Inc. Type AHD aluminum double door designed for AASHTO H-20 wheel loads, modified as specified herein, or approved equal.

2. Frame shall be furnished with upper guide holder, level sensors cable holder and stainless steel compression springs. Frame shall be securely placed and mounted above the pumps.

3. The access hatches shall have spring loaded covers for easy opening, keyed lock and automatic 90-degree hold-open arms. It shall be equipped with recessed lock and a flush drop handle which does not protrude above the cover. Hinges shall be all stainless steel with tamper proof stainless steel bolts and nuts, and shall be removable for maintenance after the access hatch is cast in place.

D. For Wet Well/Dry Well Type Pump Stations:

1. Access hatches shall be U.S.F.F. Inc. Type THD double door for the dry well and Type AHD single door for the wet well designed for AASHTO H-20 wheel loads, modified as specified herein, or approved equal.

2. Frame shall be furnished with stainless steel compression springs.

3. The access hatches shall have spring loaded covers for easy opening, keyed lock and automatic 90-degree hold-open arms. It shall be equipped with recessed lock and a flush drop handle which does not protrude above the cover. Hinges shall be all stainless steel with tamper proof stainless steel bolts and nuts, and shall be removable for maintenance after the access hatch is cast in place.

4. Frames shall be 1/4-inch thick minimum extruded aluminum with mitered and welded corners, and with strap anchors bolted or welded to the frame for embedment into the concrete slab. Frame depth shall be at least 2-1/2 inches below the horizontal top surface of the hatch doors. The exterior portion of the frames which will be in contact with the concrete, and the strap anchors, shall be painted with a factory applied bituminous coating. Run PVC pipe drain from frame to sump in dry-well.

PART 3 - EXECUTION

(Not Used)

END OF SECTION

SECTION 11205

SUBMERSIBLE (WASTEWATER) PUMPS

PART 1 GENERAL

1.01 SCOPE OF WORK

A. The Contractor shall furnish and install submersible non-clog wastewater pumps and appurtenances and place in satisfactory operation, in a workmanlike manner, all machinery, equipment, apparatus and accessories required for a complete installation in accordance with these specifications.

B. It is the intent of these Specifications to obtain complete and operable equipment. All items and accessories appearing in the Drawings, in the manufacturer's literature as standard, and all items specified herein, shall be included. Items not included herein or on the Drawings or manufacturer's literature, but which can be reasonably inferred as necessary for the equipment to be properly and legally operable, shall be included.

1.02 REFERENCES

A. This section contains references to the following documents. They are a part of this section as specified and modified. In case of conflict between the requirements of this section and those of the listed documents, the requirements of this section shall prevail.

1.	ABMA 9-90	Load Ratings and Fatigue Life for Ball Bearings
2.	ABMA 11-90	Load Ratings and Fatigue Life for Roller Bearings
3.	ASTM A48-00	Gray Iron Castings
4.	ASTM A108-99	Steel Bars, Carbon, Cold Finished, Standard Quality
5.	ASTM A276-00a	Stainless and Heat-Resistant Steel Bars and Shapes
6.	ASTM A278-93	Gray Iron Castings for Pressure Containing Parts for Temperature up to 650 Degrees F
7.	ASTM A322-91	Steel Bars, Alloy, Standard Grades (1996)
8.	ASTM A576-90b	Steel Bars, Carbon, Hot Wrought, Special Quality (2000)
9.	ASTM A743/A743M-98a	Castings, Iron-Chromium, Iron-Chromium-

		Nickel, Corrosion-Resistances for General Application
	10. Hydraulic Institute	Standards of the Hydraulic Institute, (Current Edition)

1.03 SUBMITTALS

A. The Contractor shall submit the following after approval of drawings, but prior to construction of pump station:

1. Pump Drawings.
2. Pump performance curves, including other impeller sizes.
3. Predicted pump performance curves for each condition point specified in Part 2 showing head, power, efficiency and NPSH required on the ordinate plotted against capacity on the abscissa (x-axis).
4. Materials of construction.
5. Motor drawings
6. Complete electric motor data.

B. Submit in accordance with Section 01340, "Shop Drawings."

1.04 QUALITY ASSURANCE

A. Pumping units and accessories shall be the standard product of manufacturers which have produced and sold such pumps and appurtenances for a period of at least 5 years for similar service.

B. Spare parts shall be available from the manufacturer, not the vendor. All mounting, guides, and spare parts shall be supplied by the manufacturer.

C. The Department has identified area with ragging and clogging problems which require the use of submersible pumps that have been field tested in the Department’s system. The Department Approved Pumps in areas with rags and wipes issues shall have cutters or other features to successfully operate at the location with the severe clogging problems. Coordinate with the Department Engineer if the proposed pump is located at a severe clogging location.

D. Pump Materials of Construction: Any pumps submitted as an alternate shall meet the design curve and material construction of the specified pump to the satisfaction of the Engineer. Any submitted alternate shall be reviewed to verify that the Department will receive the same quality of grade of steel, epoxy coating, mating to the discharge elbow and resistance to corrosion.

1.05 PUMP WARRANTY

A. The pump manufacturer shall warrant the units supplied to the owner against defects in workmanship and materials for a period of 5 years or 10,000 hours of operation, in normal use, operation and service. The warranty shall be in printed form and shall apply to all similar units. A copy of the warranty shall be supplied

with each pump. The warranty shall consist of the following:

1. From 0 18 months or 0 - 3,000 hours, 100% warranty.
2. From 19 39 months or 3,001 6,500 hours, 50% warranty.
3. From 40 60 months or 6,501 10,000 hours, 25% warranty.

PART 2 PRODUCTS

2.01 PUMPS

A. Pump shall be totally submersible, non-clogging, electrically operated, designed specifically for use in municipal wastewater applications and capable of handling raw unscreened sewage. Pumping units shall be suitable for the allotted space shown on the Drawings and shall be satisfactorily suitable for the design conditions as determined by the City. Pump stations will be located in an area where clogging of pumps by debris in the sewer is expected. The proposed pumps shall be capable of passing debris without clogging (to the satisfaction of the Engineer).

B. Source: Provide pumping units by one of the following submersible pumps approved for use in the Water and Sewer Department system:

1. Xylem/Flygt;
2. ABS, with contra-block impeller;
3. Grundfos.

C. Design: The design shall be such that the pump unit shall be automatically and firmly connected to the discharge piping when lowered into place on its mating discharge connection. The pump shall be so designed that it may be lowered to or raised from its place in the wet-well by Type 316 stainless steel chain or cable and accurately guided by pipe guide bars extending from the top of the station to the discharge connection. The pump shall be guided by no less than two (2) separate Type 316 stainless steel guide rails of 2-inch minimum diameter for pumps of 29 or less horsepower; 3-inch minimum diameter for pumps between 30 and 100 horsepower and of 4-inch minimum diameter for pumps over 100 horsepower or other guide system as approved by the MD-WASD. There shall be no need for personnel to enter the wet-well.

D. Discharge Connection: Mating discharge connection of pump unit (aka Base Elbow) shall be permanently affixed to the concrete in the wet well with Type 316 stainless steel epoxy set anchor bolts furnished by and of the size recommended by the pump manufacturer. However, anchor bolts shall be 3/4-inch stainless steel, minimum. Sealing of the pumping unit to the discharge connection shall be accomplished by a machined metal to metal watertight contact. Sealing of the discharge interface with a diaphragm, O-ring or profile gasket shall not be acceptable. Provide a six-inch discharge for 20 HP and above.

E. Each pump with its appurtenances and cable shall be capable of continuous submersion under water without loss of water-tight integrity. Major parts such a

stator casing, oil casing, sliding bracket, volute and impeller shall be of cast iron ASTM A-48, Class 35B. All surfaces coming into contact with sewage other than stainless steel shall be protected by a coating resistant to sewage. All exposed bolts and nuts shall be Type 316 stainless steel.

F. The discharge connection (aka Base Elbow) shall be design and manufactured such that it will accept a Flygt CP or NP pump model. The base elbow shall be a product of the pump manufacturer and not a third party fabricator.

G. The pumps shall have a maximum weight of 1,500 pounds, as required to meet conditions described in these Specifications and design operating characteristics. The previously stated weight requirement supersedes any other weight listed elsewhere in these specifications. Pumps shall have a minimum efficiency of 50% at Best Efficiency Point (BEP).

2.02 COOLING SYSTEM

A. Motors shall be sufficiently cooled by the surrounding environment or pumped media. Cooling system shall provide for continuous operation in ambient temperatures up to 104^{o}F.

2.03 PUMP CONSTRUCTION

A. Material and Coating: The major pump components shall be ASTM A48, "Gray Iron Castings", Class 35B cast iron, with smooth surfaces devoid of blow holes and other irregularities; of sufficient strength, weight and metal thickness to insure long life, accurate alignment and reliable operation. All exposed nuts and bolts shall be Type 316 stainless steel. All surfaces coming into contact with sewage other than stainless steel shall be protected by an approved sewage resistant coating. The pump exterior shall be sprayed first with PVC epoxy primer. All remaining surfaces where watertight seal is required shall be machined and fitted with nitrile rubber "O" rings. Fittings shall be such that the sealing is accomplished by metal-to-metal contact between the machined surfaces.

B. Cable Entry Seal:

1. The cable entry water seal shall be designed to preclude specific torque requirements to insure a watertight and submersible seal. The cable entry shall be comprised of a cylindrical elastomer grommet flanked by stainless steel washers, all having a close tolerance fit against the cable outside diameter and the entry inside diameter and compressed by the entry body containing a strain relief function separate from the function of sealing the cable.

2. The cable entry junction chamber and motor shall be separated by a stator lead sealing gland or terminal board, which shall isolate the motor interior from foreign material gaining access through the pump top.

3. Cable entry assemblies utilizing an epoxy for sealing may be considered, on a case-by-case basis. Epoxy shall be locally and commercially available, and shall have maximum published cure time of six (6) hours at room temperature and shall be suitable for use in a municipal sewerage environment.

C. Impeller: The impeller(s) shall be of gray cast iron, Class 35B, dynamically balanced, single or double shrouded, non-clogging design having a long throughlet without acute turns. The impellers shall be capable of handling solids, fibrous materials, heavy sludge and other matter found in normal sewage applications. The impeller shall be of a single vane, 2 or 3 vane non-clogging design. Recessed impellers are not acceptable by the City. Impeller(s) shall be keyed to the shaft, retained with an Allen head bolt and shall be capable of passing a minimum 3-inch diameter solid sphere. One impeller tool shall be provided with each pump.

D. Wear Rings: A wear ring or wear plate system shall be used to provide efficient sealing between the volute and suction inlet of the impeller. Each pump shall be equipped with a brass, or nitrile rubber coated steel ring insert that is drive fitted to the volute inlet.

E. Volute: Pump volute(s) shall be single-piece gray cast iron, Class 35B, non-concentric design with smooth fluid passages large enough at all points to pass any solids that may enter the impeller.

F. Shaft and Mechanical Seal:

1. The pump and rotor shaft shall be the same unit. The shaft shall be ANSI Type 420 series stainless steel, or approved equal.

2. Each pump shall be provided with a tandem mechanical rotating shaft seal system. Seals shall run in an oil reservoir. Lapped seal faces must be hydro-dynamically lubricated at a constant rate. The lower seal unit, between the pump and the oil chamber shall contain one stationary and one positively driven rotating tungsten or silicon carbide ring. The upper seal unit, between the oil sump and motor housing, shall contain one stationary tungsten carbide or ceramic ring and one positively driven rotating carbon ring. The use of a positively driven rotating tungsten or silicon carbide ring is acceptable in lieu of the positively driven rotating carbon ring. Each seal interface shall be held in contact by its own spring system. The seals shall require neither maintenance nor adjustment, but shall be easily inspected and replaceable. Each pump shall be provided with an oil chamber for the shaft sealing system. The oil chamber shall be designed to prevent over-filling and to provide oil expansion capacity. The drain and inspection plug with positive anti-leak seal shall be easily accessible from the outside. The pump shaft shall rotate on 2 permanently lubricated bearings with a minimum L10 rating of 50,000 hours.

2.04 PUMP MOTOR

A. The pump motor shall be squirrel cage induction, shell type design, housed in an air filled, watertight chamber, no more than 60 HP and 1,800 RPM, 240/480 volts, 3 phase, 60 Hertz, 1.15 S.F., NEMA Type B. The stator winding and stator leads shall be insulated with moisture resistant Class F insulation which will resist a temperature of 155 degree centigrade. The stator shall be dipped and baked 3 times in Class F varnish. The motor shall be designed for continuous duty capable of sustaining a minimum of 12 starts per hour. Motors shall be approved for Class 1, Division II, Group D atmospheres in accordance with NEC classification for hazardous areas. Motors shall be able to start within the 1300% factor allowed by NEC 430-52 or documentation shall be provided as to why it cannot.

B. Each unit shall be provided with an adequately designed cooling system to permit continuous operation in totally, partially, or non-submerged condition. Cooling media channels and ports shall be sized to be non-clogging.

C. Motor bearings shall be permanently grease lubricated. Oil filled motors are not acceptable.

D. Thermal switches shall be embedded in the stator lead coils. All stators shall incorporate thermal switches in series to monitor the temperature of each phase winding. At 125 degrees C (260 degrees F) the thermal switches shall open, stop the motor and activate an alarm. These thermal switches shall be used in conjunction with and supplemental to external motor overload protection and shall be connected to the control panel. Wire nuts or crimping devices are not acceptable. The motor and pump shall be designed and assembled by the same manufacturer

E. The pump motor cable shall be suited for submersible pump applications with Underwriters Laboratory approval permanently embossed on the cable. Cable sizing shall conform to the National Electric Code Specifications for pump motors. Each pump shall be furnished with ample cable such that one continuous length of cable, supplied by pump manufacturer, will be all that is required to run from pump, when lowered in the wet-well, to the controls, without need of splices.

F. The motor horsepower shall be adequate such that the pump is non-overloading throughout the entire pump performance curve from shut-off through run-out.

PART 3 EXECUTION

3.01 INSTALLATION

A. All equipment shall be installed as shown on the Plans and in accordance with these specifications.

B. All motors shall be factory mounted by the driven equipment manufacturer in accordance with the motor manufacturers drawings and instructions. Field installation of the unit, including final alignment shall be the responsibility of the

Contractor.

C. Installation shall include furnishing all necessary appurtenances for initial operation and making final adjustments to place the equipment in operable condition.

D. All control and alarm wires, as required, shall be provided even if not shown on plan drawings.

3.02 PREPARATION FOR STORAGE

A. All flanges shall be covered to prevent damage. Pump motors, and shafts will be stored inside warehouses. Pumps may be stored outside, on wood members away from the ground, at sufficient elevation to prevent flooding, and protected from the weather by secured canvas or plastic coverings.

3.03 PUMP TESTS

A. The manufacturer shall perform the following inspections and tests on each pump before shipment from the factory:

1. Impeller, motor rating and electrical connections shall be checked for compliance with customer's purchase order.

2. Motor and cable insulation tests for moisture content or insulation defects shall be made.

3. Prior to submergence, the pump shall be run dry, to establish correct rotation and mechanical integrity.

4. Pump shall be run for 30 minutes submerged a minimum of 6 feet underwater.

5. After the operation tests, the insulation test is to be performed again. A written report, signed by a professional engineer, registered in the state where the tests were performed, stating that "A" through "D" (above) were performed and that the tests were satisfactorily accomplished, shall be supplied with each pump at the time of shipment.

3.04 FIELD QUALITY CONTROL

A. The supplier shall provide start-up service to place the pumps and controls in proper operation.

B. During this service, the Manufacturer’s Representative shall review the operation of the equipment and the pump and station will be inspected for proper installation and shall coordinate with Contractor and make recommendations.

C. The pumps shall be tested at start-up and the voltage, current and other significant parameters recorded. The manufacturer shall provide a formal test

procedure and forms for recording the data.

D. The supplier shall submit a written report to the Contractor, stating results of the start-up inspection. A copy of the report shall be furnished to the City. The Contractor shall inform the City 24-hours prior to commencement of such start-up services and tests. These services shall be at no cost to the City.

END OF SECTION

Revision #7, 5-2-2023
1.04 Quality Assurance added Paragraphs C and D
2.01 Pumps Paragraph B removed KSB Pumps from Products List

SECTION 11215

SUMP PUMP

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall furnish and install sump pump and all appurtenances, as specified below, where shown on the plans or as required for a complete installation.

1.02 SUBMITTALS

The Contractor shall furnish full detailed manufacturer specifications, characteristic curves and shop drawings showing the make, model and descriptive data to the Department for the pump unit he proposes to supply. Submittals shall be approved prior to installation of pumping unit.

PART 2 - PRODUCTS

2.01 SUMP PUMPING UNIT

A. Sump pump in the dry-well shall be a submersible type with a cast iron or bronze housing, by Barnes, Covert Pump Division, or approved equal. Pump shall be rated for duty in conditions it shall be subjected to, including being totally submerged. Unit shall contain mechanical seal with rotating carbon face and stationary ceramic face. The motor shall be single phased, oil-filled unit, with overload protection and maximum ½-horsepower. However, sump pumps installed in dry wells ranging from 20 feet to 24 feet depths are excluded from this requirement and shall meet Department approval.

B. Sump in shall be sized per sump pump manufacturer's recommendation, but unless approved, not less than dimensions shown on the Department's Standard Pump Station Drawings. Dry-well sump shall include space for external float switch. Float switch shall be furnished with 10 feet cord and piggyback plug.

C. Where installed in valve-pit, sump pump shall be 1/3-horsepower, single phase, oil filled unit, with overload protection. Unit shall be Series BP27, by Barnes, or approved equal.

PART 3 - EXECUTION

3.01 INSTALLATION

A. All equipment shall be installed as shown on the approved plans.

B. Installation shall include furnishing all necessary wiring, piping and other necessary appurtenances for satisfactory operation and making final adjustments to place the equipment in operable condition.

C. All power, control and alarm wires as required shall be provided even if not shown on plans.

D. Installation, testing and start-up shall be as recommended by the manufacturer provided specifications.

E. Dry-well Installation: Provide a sump and sump pump in the floor of the dry-well in a corner opposite the wet-well. Slop the floor from all directions toward the sump. The PVC pump discharge line shall contain two swing-disk type check valves and a gate valve, and shall be piped to the top of the dry-well before passing through the wall into the wet-well.

F. Valve Vault Installation: Sump pump and local motor starting switch shall be installed in the valve pit and hard-wired to the control cabinet. Manual motor starting switch shall be NEMA 3, 4X and 12, corrosion-resistant, dust-tight and watertight. It shall be Crouse-Hinds NSSC-D22, or approved equal. Discharge from pump shall be conveyed to the wet-well using 1-1/2 inch diameter PVC pipe. (The Department may consider approval of 1-1/4 inch diameter discharge piping as shown in the Standard Pump Station Drawings.)

END OF SECTION

SECTION 11500

FUEL STORAGE TANKS

PART 1 - GENERAL

1.01 SCOPE OF WORK

A. The work under this Section includes furnishing and installing above ground fuel storage tanks, with concrete bases, gauges, valves and piping, as required and as shown on Drawings; and other related items necessary for a complete installation, as indicated on the Contract Drawings.

1.02 RELATED SECTIONS

A. Section 02314 - Excavation, Backfill and Fill For Structures

B. Section 03300 - Cast-in-place Concrete, Reinforcing and Formwork.

C. Section 09900 – Painting

D. Section 16420 - Stationary Engine-Generator Set

E. Section 16425 - Portable Engine-Generator Set

1.03 REFERENCE, CODES AND STANDARDS

A. FDEP - Florida Department of Environmental Protection, Ch. 62-761 & 62-762, FAC

B. NFPA 30 - Flammable and Combustible Liquids Code.

C. NFPA 31 - Installation of Oil-Burning Equipment.

D. NFPA 70 – National Electrical Code (NEC)

E. NFPA 78 - Protection of Life and Property against Lightning.

F. FBC - Florida Building Code.

G. RER – Regulatory & Economic Resources Department, Miami-Dade County, Ch. 24-Miami-Dade County Environmental Code

H. U.L. Subject #2085 and #142.

I. UFC - ICBO Uniform Fire Code, Section 79 Appendix A-II-F

J. OSHA – Occupational Safety and Health Administration Standard 1910.23-1910.24

1.04 QUALITY ASSURANCE

A. Comply with the appropriate codes, regulations and standards referenced in paragraph 1.03.

1.05 SUBMITTALS

A. The fuel storage tank and accessories shall be FDEP approved and installation plans must have been reviewed and approved by RER/DERM.

B. Prepare and submit a site plan, drawn to scale, containing the following:

1. Show property lines and indicate occupancy or use of adjacent property.
2. Show streets, intersections and railroads.
3. Show buildings on the site and indicate type of construction. Show building openings on walls adjacent to tanks.
4. Show important utility lines, sewer, water, gas and electric including fire hydrants and catch basins.
5. Show any nearby waterways, streams, rivers, lakes or bodies of water.
6. Show any existing underground or aboveground tanks.
7. Show location of proposed tank and indicate shortest distance to buildings and property lines.

C. Prepare and submit detail drawings of tank, to include the following:

1. Tank type double-walled aboveground or underground storage tank (AST or UST), size, dimensions and spacing between adjacent tanks. Note: Miami Dade Water and Sewer Department requires aboveground tanks whenever possible.
2. Base slab dimensions and bollard location and size.
3. Vent size, height, location and type of cap.
4. Fill details including spill containment and overfill protection.
5. Piping details including shut-off/isolation valves and anti-siphon valve.
6. Pumps and other equipment, where applicable, including location, size and type.
7. Electrical details including shut-off switch location and grounding wire.
8. Level gauges and leak detection equipment. (i.e. Morrison Clock gauge for fuel level, Krueger Pop-up gauge for interstitial monitoring)
9. Signs and decals.

1.06 WARRANTY

The tank must carry a thirty year (30) warranty.

1.07 DELIVERY AND STORAGE

A. Deliver, store, protect and handle products under provisions of Section 01600.

B. Protect while transporting, storing, installing until work is completed.

C. Do not handle or move tank unless it is empty.

D. Do not drop or drag the tank.

E. Do not handle or install tank without having knowledge and experience in procedures involved with proper and safe installation of tank used for storage of stable, flammable and combustible liquids.

F. Equipment required for the shipping and off-loading of aboveground and underground storage tanks include lifting straps, forklift and crane up to 150 ton capacity and nylon tie down straps.

1.08 GENERAL FIRE PROTECTION

A. A sign which prohibits smoking shall be conspicuously posted.

B. Portable fire extinguisher shall be provided for the suppression of fires in accordance with NFPA 10 and UFC for high hazard area.

C. Exterior warning signs and labels shall be at proper location and configuration to meet applicable code requirements.

PART 2 - PRODUCTS

2.01 ABOVEGROUND TANKS

A. General:

The Contractor shall furnish an FDEP approved secondarily contained shop fabricated aboveground storage tank (AST) for flammable and combustible liquids. Storage tank system shall be UL listed for both vehicle impact protection and projectile resistant and shall be tested to and listed for the following:

1. UL - 142, aboveground steel tanks for flammable and combustible liquids.
2. UL – 2085, protected aboveground tanks for flammable and combustible liquids.

B. The tank shall be cylindrical in shape and have continuous welds on all sides conforming to the American Welding Standard for continuous weld. The primary and secondary tank shall be minimum 0.125 inch thick carbon steel and manufactured in accordance with U.L. 142. However, thickness shall be based on a thirty year (30) warranty.

C. The tank shall be designed and tested to provide 2-hour fire protection. The fire resistance of the tank shall be tested in accordance with the procedure established in U.L. 2085.

D. The primary steel tanks shall have "emergency vent" system as per NFPA 30 Code requirements.

E. The AST shall have a tank leak detector tube to allow for physical monitoring capability of the interstitial space between the primary and the secondary tank. A mechanical interstitial monitoring gauge (i.e., Kreuger Pop-Up) shall be installed.

F. The AST shall have a mechanical level gauge (i.e., Morrison Bros. Clock Gauge Model 818/818F).

G. The primary steel tank shall be pressure tested at 5 psig for 24 hours.

H. All openings shall be from the top only.

I. The AST shall have a coated exterior to resist weather and reflect sunlight.

J. The AST shall have a warranty of 30 years regardless of capacity.

K. The AST shall be constructed to allow for grounding in accordance with NFPA 78.

L. Tank shall be Fireguard Aboveground Tank or approved equal.

2.02 TANK CAPACITY

The tank capacity shall be as shown on Drawings. Minimum tank size shall be based on the fuel capacity required to run one pump continuously for five days, at maximum horsepower.

2.03 VENTING

A. Atmospheric Vent: The tank system shall be furnished with a 2-inch vent and an appropriate emergency vent. An open atmospheric utility vent cap shall be installed on the 2-inch vent line to protect against intrusion and blockage from water, debris or insects. Venting systems shall meet all 2-inch standard vent and emergency vent requirements of U.L. 142. Height of the vent line shall be per code. Vent line shall be capable of sufficient venting into the atmosphere in case of pressure build-up inside the tank. Vent cap shall be installed with no overhead obstructions to allow free flow of vapors from the vent.

B. Primary Tank Emergency Vent: The tank system shall be furnished with pressure relief nipples and emergency pressure relief devices to automatically relieve the pressure of the primary tank before it reaches 2.5 psig. It shall include a fire screen to prevent ignition from an external source.

C. Secondary Containment Venting Device: The tank system's secondary containment shall be furnished with an emergency venting device. The venting device shall consist of a pressure relief nipple and a relief device. The emergency device will open before the secondary containment internal pressure reaches 2.5 psig.

2.04 OVER SPILL CONTAINMENT

A. The AST systems shall include an FDEP approved over spill containment device.

B. Over spill containment device shall be mounted on top of the tank and shall surround the tank fill pipe to catch occasional spills.

C. A hand-activated spring-loaded normally closed valve shall be provided inside the containment to drain the spill back into the tank.

D. Lid to over spill containment device shall meet proper color–coding requirements for diesel fuel.

2.05 FILL PIPE

The tank system shall be furnished with a MNPT fitting for filling. The fill pipe shall be equipped with an adapter and lockable cap. Fill pipe diameter shall be 4-inches.

2.06 COLLISION PROTECTION

Collision protection approved by the tank manufacturer shall be located around tank perimeter for vehicular protection. Pipe bollards shall be installed for collision protection, as follows: concrete filled steel posts, 4-inches diameter (minimum) by 6 feet long, shall be set 3 feet into the ground within a 15-inch diameter concrete filled hole. Post shall be spaced 4 feet center to center and shall be spaced from tank in accordance local codes.

2.07 CONCRETE PAD

The tank system shall be installed on a reinforced concrete pad to protect against stresses from uneven settlement and to assure that the tank supports allow for inspection and maintenance beneath the tank. Concrete foundation (i.e, pad) shall have a minimum compressive strength in 28 days equal to 3000 psi. Pad length, width, thickness and placement specifications shall be as recommended by the manufacturer or engineer of record.

2.08 PIPING AND ACCESSORIES

A. All accessories (vents, product fill, etc.) shall be installed to meet the site specific requirements and governing codes.

B. Adherence to all operational safety precautions shall be taken under consideration and piping shall include safety valves as follows:

1. Angle check valve with pressure relief or foot valve and strainer. Foot valve and strainer shall be located 1-inch from the inside bottom of the tank.

2. Shut-off/isolation valve with fusible link on supply and return piping.

3. Anti-siphon valve (i.e., OPW Model # 199ASV) on the highest point of the supply line closest to the tank, if suction/supply line falls below the high fuel level.

4. Check valve in the return line.

C. Exterior warning signs and labels shall be properly located and meet applicable code requirements. Tanks shall be marked as required with warning signs: "FLAMMABLE" or "COMBUSTIBLE", "NO SMOKING", product identification, etc.

D. Exposed piping exterior surface shall be primed and coated with protective finish (i.e., Keeler and Long Tri-Polar Ferrite Primer and Rust-Oleum Industrial Acrylic Enamal 5225 (Royal “Safety” Blue) in a WASD approved safety blue color for diesel product.

2.09 ELECTRICAL

A. Electrical service and fuel piping to the pumps unit shall be installed in accordance with the requirements of NEC and NFPA and local code requirements.

B. All electrical devices used with or located twenty (20) feet of the tank shall conform to NFPA 70 Hazardous Locations. All electrical conduits and wiring connected to the tank shall be explosion proof and in strict accordance with NEC Class 1, Division 1.

C. Electrical grounding shall be installed on tank.

2.10 STAIRS AND CATWALKS

A. Install stairs/catwalks to facilitate access, inspections and maintenance services to the tanks as required.

B. Stairs shall comply with OSHA Standard 1910.24.

C. Railings shall be provided as required by OSHA Standard 1910.23

D. Stairs shall be 36” wide, straight-tread with top platform.

a. Top platform shall be 30” in direction of travel by 36” wide.

b. Top platform shall be 24”-30” below top of tank (excluding appurtenances).

E. Stair assembly shall be galvanized carbon-steel, free-standing with a 1”-3” clear gap between stairs and tank. (It shall not be in contact with tank or be supported by tank.)

PART 3 - EXECUTION

3.01 TANK SITE

A. The tank location and foundation shall comply with the all applicable local codes and ordinances.

B. Tanks shall not be located over underground utilities or directly beneath overhead power and telephone lines.

C. The tank shall be protected from vandalism and accidental damage in accordance with all applicable codes.

D. Fire department vehicle access should be provided within 150 feet of the tank.

E. The venting of the tank to a remote location must include the use of a steel pipe equal to or greater in size than the vent outlet. The methods of supporting such piping against displacement must comply with local codes.

3.02 FOUNDATION REQUIREMENT

A. The foundation for the tank shall be designed to support the tank plus 100% of the weight of the maximum amount of the product the tank will be storing. The foundation design shall also include provision for draining surface water away from the tank to minimize the risk of fuel accumulation from the over fill or spills at the tank footings.

B. The tank foundation (concrete pad) shall sit on compacted fill, free of organic material. The tank shall be installed on a continuous solid slab which will uniformly distribute the weight of the tank and its contents to the soil.

3.03 INSTALLATION OF ABOVEGROUND FUEL TANKS

A. General: The aboveground tanks shall be set on a concrete foundation (pad) in accordance with current installation instructions, foundation engineering drawings and shall comply with all governing code requirements.

1. Concrete Foundation (Pad): Reference and follow the appropriate manufacturer's or engineer of record’s drawings for the respective foundation size and load bearing requirements for pad lengths, widths, thickness, and placement specifications.

2. Unloading and Handling: A thorough inspection of the entire assembly shall be conducted prior off loading. Check for any damage, chipping or other impairments incurred during transportation. Do not remove the shrink wrapped plastic cover until after final installation of vents and piping. However, shrink wrap should be left on if installation is not to concur with delivery, as vault finish will be affected if shrinkwrapped and left exposed to sunlight for several days.

3. Equipment used to off-load: The equipment shall be adequate size and capability to lift the vault without dragging and dropping to ensure that no damage is done to the vault or its coating. The vault shall be lifted lowered, and secured only by use of nylon straps (chain and cables are not allowed) placed at designated lifting areas to avoid damage to the assembly.

4. The vault shall be anchored in accordance with applicable code requirements.

5. Air Pressure Test of Internal Steel Tank: Contractor shall verify the internal steel tank tightness during the process of placing the unit into service. Use the basic procedure and desired result as an unvaulted steel tank, and in accordance the industry standard procedures as published by the Steel Tank Institute or other professional organizations and manufacturer recommended procedures. Pressure test the tank at 5 psig. No leakage shall be permitted. Vaults under pressure shall not be left unattended.

END OF SECTION

SECTION 33 05 31.13 (15068)

PVC C900 SEWER FORCE MAINS

PART 1 GENERAL

1.01 SCOPE

A. This Section includes materials, installation and testing requirements of the Department for PVC C900 sewer force mains installed in its service area. Size range is 4 through 48 inches.

B. PVC C900 force mains are acceptable for use in areas with limited heavy vehicle traffic only. Not for use near gas stations or other sites which may have hydrocarbon contamination.

C. All PVC pipe used shall be of new or recent manufacturer. Pipe with surface discoloration will not be allowed.

D. Pipe Fittings shall be ductile iron.

E. Force mains 16 inch or larger shall be fully restrained the entire run of the pipe.

F. This Section does not purport to cover all material or installation procedures which may be required, whether by the nature of the proposed work, by the Department or by other regulatory agencies.

1.02 RELATED WORK SPECIFIED ELSEWHERE

A. The work shall proceed in accordance with the following specifications sections, bound herein:

1. Section 01 33 00 (UC-005) – “Project Approval”
2. Section 01 33 23 (01340) – “Shop Drawings”
3. Section 01 35 13 (01100) – “Special Project Procedures”
4. Section 01 35 26 (01016) – “Safety Requirements and Protection of Property”
5. Section 01 42 16 (01005) – “Defined Terms"
6. Section 01 55 26 (01750) – “Maintenance of Traffic and Use of Public Streets”
7. Section 01 71 23 (01031) – “Grades, Lines and Levels”
8. Section 02 00 00 (01011) – “Site Conditions”
9. Section 31 23 33 (02315) – “Trenching and Backfilling for Piping Systems”
10. Section 33 01 10.54 (02505) (UC-170) – "Cleaning and Testing of Mains"
11. Section 33 14 00 (15060) – “Piping and Fittings”
12. Section 33 31 23 (UC-750) – ”Sewer Force Mains”

1.03 QUALITY ASSURANCE

A. All material and installation shall be in accordance with the Department's Design and Construction Standard Specifications and Details and in shall be in full compliance with all applicable standards listed in Section 01 42 19 (01090) "Reference Standards" and this Section.

B. No deflection of joints is allowed for PVC pressure mains.

C. PVC pipe shall not be over-homed. Pipe installed below the water table where the homing mark is not visible shall utilize an over-insertion prevention device; EBAA Iron Mega-Stop Series 500; S&B Technical Product, RIG, Resistance Insertion Grip; or approved equal.

D. Pipe Embedment Material shall be class 1 backfill material with a maximum rock size of 3/4-inches.

1.04 SUBMITTALS

A. See Sections 33 31 23 (UC-750) ”Sewer Force Mains”, 33 14 00 (15060) “Piping and Fittings.”, 01 33 23 (01340) “Shop Drawings.”

B. Submit shop drawings in accordance with the Departments specifications or submit the Pre-Approved Product List Manufacturer.

C. PVC Pipe not on the Pre-Approved Products list shall supply the following:

1. Provide affidavit of compliance with AWWA C900.
2. Submit fully dimensioned cross-section of the bell and barrel of the pipe. Show the bell maximum outside diameter in the pressurized area and its minimum wall thickness at the same location.
3. Submit copies of the following manufacturer-required tests conducted on project pipe:
    a. Quick-burst strength of pipe and couplings.
    b. Flattening resistance of pipe.
    c. Record of additional tests after test sample failure.
4. Submit manufacturer's literature of gray iron and ductile-iron fittings including dimensions, thickness, weight, coating, lining, and a statement of inspection and compliance with the acceptance tests of AWWA C110 or C153. Submit copy of report of pressure tests for qualifying the designs of all sizes and types of AWWA C153 fittings that are being used in the project. The pressure test shall demonstrate that the minimum safety factor described in AWWA C153 is met.
5. Submit outline drawings and materials description of service connection saddles, corporation stops, and pipe plugs.
6. Submit test results for the restrained joint system to be used certified by an independent test laboratory demonstrating compliance with these

specifications for each size and pressure rating.

7. Submit restrained joint system installation instructions. Include bolt torque limitations and assembly tolerances.

1.05 MANUFACTURER'S SERVICE

A. Provide pipe manufacturer's services at the jobsite for the following minimum labor days, travel time excluded: One labor-day to instruct the Contractor's personnel in the preparation and execution of rubber-gasket and solvent-welded joints for the sizes of pipes to be installed in the project.

1.06 SAFETY REQUIREMENTS

A. See Section 01 35 26 (01016) “Safety Requirements and Protection of Property.”

1.07 DESIGN REQUIREMENTS

A. See Section 33 31 23 (UC-750) “Sewer Force Mains.” and Section 01 33 00 (UC-005) “Project Approval”

PART 2 PRODUCTS

2.01 GENERAL

A. See Section 33 14 00 (15060) “Piping and Fittings.”

2.02 CASTINGS

A. Castings shall be in accordance with Section 33 05 81 (05550) “Castings.”

2.03 EMBEDMENT MATERIAL

A. Embedment material, for bedding, haunching and initial backfill, shall conform with the requirements of Section 31 23 33 (02315) “Trenching and Backfilling for Piping Systems.”

2.04 PIPE

A. See Section 33 14 00 (15060) “Piping and Fittings.”

B. Pipe shall conform to AWWA C900, rubber-ring gasket bell end or plain end with elastomeric gasket coupling, cast iron equivalent outside diameter, material cell classification 12454 per ASTM D1784.

1. Pipe 4-inches through 30 inches DR 18
2. Pipe 36-inches through 42-inches DR 21
3. Pipe 48-inches DR 25

2.05 FITTINGS

A. See Section 33 14 00 (15060) “Piping and Fittings.”

B. Fittings shall be Zinc coated Ductile Iron and shall conform to AWWA C153 or AWWA C110.

C. Fittings shall be Lined and coated with fusion-bonded epoxy.

2.06 FLANGES

A. See Section 33 14 00 (15060) “Piping and Fittings.”

B. Flanges on outlets of fittings shall be Class 250 per ASME B16.1.

C. PVC flanges shall be of the one-piece solid socket design and shall be made of the same material as the pipe. Manufacturer’s pressure rating shall be at least 250 psi at a temperature of 73°F. Minimum burst pressure shall be 500 psi. Flanges shall match the dimensions of ASME B16.5, Class 250, steel flanges for outside diameter, bolt circle, and bolt holes. Do not use Van Stone flanges.

2.07 FLANGED COUPLING ADAPTERS

A. See Section 33 05 98 (15065) “Miscellaneous Materials.”

2.08 OUTLETS AND NOZZLES

A. See Section 33 14 00 (15060) “Piping and Fittings.”

B. All connections to PVC require a saddle.

C. For outlets larger than 2 inches, use a Ductile Iron tee with a flanged or MJ outlet.

2.09 RESTRAINED JOINTS

A. See Section 33 14 00 (15060) “Piping and Fittings.”

B. PVC Pipe 16 inch or larger shall be restrained at all joints for the entire run of the pipe.

C. Provide restrained joints where indicated in the drawings. Restrained joints shall be provided by restraining systems that incorporate a wedge restraint on the restraint ring to provide positive restraint.

D. Restraint devices for bell-and-spigot joints shall consist of a split restraint ring installed on the spigot, connected to a solid backup ring seated behind the bell.

E. Restraining Glands shall be EBAA Iron Series 2000 and 1600 or approved equal.

F. The ASTM A536 ductile iron casting of the restrained gland shall be bonded powder coated. The wedge and wedge assembly shall have a bonded liquid polymer coating

applied for corrosion protection. The gland shall utilize torque limiting twist off wedge actuation screws.

G. T-bolts, studs, and connecting hardware shall be high-strength, low alloy material in accordance with AWWA C111.

H. Design restraining devices to have a 2:1 safety factor based on the design strength of the pipe.

2.10 WYE STRAINERS

A. PVC wye strainers shall be manufactured of the same material as the pipe, with 30-mesh screens and Viton seals. Connecting ends shall be the socket type, solvent welded. Provide one spare screen for each strainer.

2.11 DETECTABLE TAPE/TRACER

A. Detectable tape/tracer approved for use by the Department are shown on Sheet number 10.2 of the Pre-Approved Product List.

2.12 MISCELLANEOUS MATERIALS

A. The Contractor shall furnish and install all miscellaneous material and appurtenances required for a complete installation. Section 33 05 98 (15065) “Miscellaneous Materials” specifies material necessary for a complete installation, not specified herein. These materials, including but not limited to the following, shall be installed when required, whether shown on the Plans or not.

1. Anchor Bolts, Bolts, Nuts and Washers
2. Blind Flanges
3. Corporation Stops
4. Gasket Lubricant
5. Joint Material for Flanged Pipe, Valves and Fittings
6. Stainless steel repair clamps, with stainless steel bolts
7. 90^{o} Street Elbows
8. Tie-Rods

2.13 SADDLES FOR CONNECTIONS TO SEWER FORCE MAINS

A. See Section 33 31 23 (UC-750) “Sewer Force Main.”

PART 3 EXECUTION

3.01 GENERAL

A. See Section 33 14 00 (15060) “Piping and Fittings.”

3.02 PRODUCT MARKING AND UNDERGROUND LOCATION

A. Legibly mark pipe at 5-foot intervals and each coupling to identify the nominal diameter, the outside diameter base, that is, cast-iron or steel pipe (IPS), the material code for pipe and couplings, the dimension ratio number, AWWA C900, and the seal of the testing agency that verified the suitability of the material for potable water service (NSF/ANSI 61).

B. Install 10 gauge tracer wire taped every four feet to the buried PVC pipe, a magnetic detection tape one foot above the buried PVC pipe and 3M compatible magnetic location ball markers two feet below grade every 100 feet or at any vertical and horizontal deflection point. See Pre-Approved product list Sheet 10.2.

3.03 DELIVERY AND TEMPORARY STORAGE OF PIPE

A. PVC shall be protected from UV degradation caused by extended exposure to direct sun. Pipe with surface discoloration shall not be installed and immediately removed from the project site. Tarps used to protect the pipe from sunlight shall be placed to allow for adequate ventilation to prevent heat build-up.

B. Ship, store, and place pipe at the installation site, supporting the pipe uniformly. Avoid scratching the pipe surface. Do not stack higher than 4 feet or with weight on bells. Cover to protect from sunlight.

C. Do not drag PVC pipe over the ground, drop it onto the ground, or drop objects on it.

D. Store loose pipes on racks with a maximum support spacing of 3 feet. Provide shades for pipe stored outdoors or installed outdoors until the pipe is filled with water. Store fittings indoors in their original cartons.

E. Store solvent cement indoors or, if outdoors, shade from direct sunlight exposure. Do not use solvent cements that have exceeded the shelf life marked on the storage container.

3.04 HANDLING PIPE

A. Hoist pipe with mechanical equipment using a cloth belt sling or a continuous fiber rope that avoids scratching the pipe. Do not use a chain. Pipes up to 16 inches in diameter may be lowered by rolling on two ropes controlled by snubbing. Pipes up to 6 inches in diameter may be lifted by hand.

3.05 INSTALLING BURIED PIPING

A. See Sections 31 23 33 (02315) “Trenching and Backfilling for Piping Systems” and Section 33 14 00 (15060) “Piping and Fittings.”

B. Bedding material and backfill to 1 foot above the pipe for PVC shall be well graded Class 1 backfill with a max rock size of ¾-inch compacted in 6-inch lifts. The minimum trench width shall be the pipe width plus 24-inches (12-inches on each side).

C. Before installation, check pipe and fittings for cuts, scratches, gouges, buckling, kinking, or splitting on pipe ends. Remove any pipe section containing defects by cutting out the damaged section of pipe.

D. Do not install PVC pipe when the temperature is below 40°F or above 90°F.

E. Do not install pipe that is gouged or scratched forming a clear depression.

F. Pipe shall be installed utilizing an over-insertion prevention device.

G. Install in accordance with AWWA C605, and as follows.

1. When installing pipe in trenches, do not deviate more than 1 inch from line or 1/4 inch from grade. Measure for grade at the pipe invert.

2. Backfill materials in the pipe zone shall be imported sand per Section 31 23 33 (02315) “Trenching and Backfilling of Piping Systems”. Do not add successive layers unless the previous layer is compacted to 90% relative compaction per ASTM D1557.

3. Compact material placed within 12 inches of the outer surface of the pipe by hand tamping only.

4. Compact trench backfill to the specified relative compaction. Do not float pipe. Do not use high-impact hammer-type equipment except where the pipe manufacturer warrants in writing that such use will not damage the pipe.

5. Install detector balls 2 feet below grade every 100 feet on straight lines, at any point changing direction, vertical or horizontal; in addition, install 10 gauge tracer wire taped every 4 feet to the buried PVC C900 pipe and a magnetic detection tape 1 foot above the PVC C900 pipe.

3.06 PIPE LAYOUT FOR CURVED ALIGNMENT

A. Pipe lengths shall not be bent for curved alignment.

3.07 ASSEMBLY OF RUBBER-GASKET PIPE JOINT

A. See Section 33 14 00 (15060) “Piping and Fittings.”

B. The spigot and bell or bell coupling shall be dirt free and slide together without displacing the rubber ring. Lay the pipe section with the bell coupling facing the direction of laying.

C. Insert the rubber ring into the groove in the bell in the trench just before joining the pipes. First clean the groove. Observe the correct direction of the shaped ring. Feel that the ring is completely seated.

D. Lubricate the spigot over the taper and up to the full insertion mark with the lubricant supplied by the pipe manufacturer. If the lubricated pipe end touches dirt, clean the pipe end and reapply lubricant.

E. Insert the spigot into the bell and force it slowly into position.

F. Check that the rubber ring has not left the groove during assembly by passing a feeler gauge around the completed joint.

3.08 CLEANING AND TESTING OF SEWER FORCE MAINS

A. See Section 33 01 10.54 (02505) (UC-170) "Cleaning and Testing of Mains."

END OF SECTION

SECTION 15115

CHECK VALVES

PART 1 - GENERAL

1.01 SCOPE OF WORK

The Contractor shall furnish and install check valves complete and operable, including all appurtenances and accessories.

1.02 RELATED WORK SPECIFIED ELSEWHERE

Section 15100 - Valves, General

PART 2 - PRODUCTS

2.01 CHECK VALVE

A. General

1. The swing-check valves shall be standard (plain), outside lever-and-weight or outside lever-and-spring types, for normal horizontal installations, conforming to all of the applicable requirements of the most current ANSI/AWWA Standard C508, "Swing-Check Valves for Waterworks Service, 2-in. Through 24 In. NPS", except as otherwise specified herein. The valves shall be iron body, bronze mounted and suitable for buried service.

2. Valve bonnet opening shall be large enough to allow ample clearance for direct removal of disc by hand.

B. External Ferrous Items

All external ferrous items, except cast iron, shall be hot-dipped galvanized in accordance with the most current ANSI/ASTM Standard A123, "Zinc (Hot-Galvanized) Coatings on Iron and Steel Products", or ANSI/ASTM Standard A153, "Zinc Coating (Hot-Dip) on Iron and Steel Hardware", or stainless steel.

C. Flanged Valves

Flanged valves shall have ends plain-faced and drilled conforming to ANSI Standard B16.1, "Cast Iron Pipe Flanges and Flanged Fittings", Class 125. Bolt holes in the flanges shall be equally spaced and shall straddle the vertical and horizontal centerline. All joint materials for flanged valves will be furnished with the valves; neoprene for sewer and SBR for water applications.

D. Clapper

1. The clapper shall swing clear of the waterway when the valve opens, permitting a full flow through the valve equal to the nominal diameter of the pipe.

2. The body and clapper seating surface shall be metal to metal, and shall be bronze.

3. The clapper disc and the clapper hinge arm, including the clapper disc cap screw, shall be bronze or cast iron. Clapper to hinge arm connection shall be such that the unit cannot be unscrewed by fluid flow.

D. Clapper Hinge Pin

1. The clapper hinge pin (shaft) shall be stainless steel conforming to AISI Type 316. For check valves with outside levers, the clapper hinge pin shall rest in bronze bushings and shall extend through the casing on the right hand side when facing the valve inlet.

2. The clapper hinge pins shall rest in bronze bushings provided with a compression packing or double nitrile o-ring seal and shall extend through the casing on the right hand side when facing the valve inlet. An opening shall be provided in each of two bosses on the body for easy access to either end of the hinge pin. The openings shall be tapped and provided with plugs.

E. See Part 2 of Section 15100, "Valves, General", for other components.

2.02 TESTING

All check valves shall be tested at the factory in accordance with Section 5.2 of the most current ANSI/AWWA Standard C508 and a Certified Test Report shall be furnished with each valve.

PART 3 - EXECUTION

3.01 GENERAL

All valves shall be installed in accordance with provisions of Section 15100, "Valves, General." Care shall be taken that all valves are well supported.

END OF SECTION

SECTION 15120

GATE VALVES

PART 1 - GENERAL

1.01 SCOPE OF WORK

A. The Contractor shall furnish and install gate valves complete and operable, including all appurtenances and accessories.

B. The City will permit the use of resilient seated type gate valves in potable water systems, as described herein. Such use shall be restricted to potable water systems of nominal sizes 4-inch through 48-inch. All other size or system applications shall be allowed only if reviewed and approved by the City. Resilient seat gate valves shall only be used in sewer applications where cover depth is sufficient to mount the valve in the vertical position and only with review and approval of the City. Sewer lines may not dipped or lowered in close proximity to a gate valve for the purpose of providing said cover. Resilient seat gate valves used as tapping valves in sanitary sewer systems and laid upon their side shall be left open when the line is placed in operation and backed up with a plug valve to provide flow control.

1.02 RELATED WORK SPECIFIED ELSEWHERE

Section 15100 - Valves, General

PART 2 - PRODUCTS

2.01 GATE VALVES, GENERAL

A. As used herein, "ANSI" denotes the American National Standards Institute; "AWWA" denotes the American Water Works Association; and "ASTM" denotes the American Society for Testing and Materials.

B. All valves specified herein, whether manufactured under the provisions of AWWA C515, latest revision "Reduced-Wall, Resilient-Seated Gate Valves for Water Supply Service" shall be furnished with an Affidavit of Compliance from the manufacturer as required by Section 6.3 of AWWA C515 latest revision.

C. The MD-WASD requires that suppliers shall submit with their proposals, if bidding on valve sales to the City; or shop drawings, if supplying valves to the City for contract or donations work; all data as listed in the "Data to Be Supplied by the Manufacturer" Sections of the referenced standards. This material is Section 4.1 in C515, latest revision and is identical. Data to be furnished is as follows:
"*Catalogue Data.* The manufacturer shall supply catalogue data, including illustrations and a parts list that identifies the materials used for various parts. The information shall be in sufficient detail to serve as a guide in the assembly and disassembly of the valve and for ordering repair parts.
Weight information. The manufacturer shall provide a statement of the net assembled weight for each size of valve exclusive of joint accessories.

Assembly Drawings. The manufacturer or supplier shall submit to the purchaser one set of drawings showing the principal dimensions, construction details, and materials used for all parts of the valve. All work shall be done and all valves shall be provided in accordance with these drawings after the drawings have been reviewed and accepted by the purchaser."

In the quotation above, the word "purchaser" shall be construed to mean the Miami-Dade Water and Sewer Department in either direct purchase or contract/donations situations.

D. All work performed according to the standards cited above, except prototype testing, shall be subject to inspection and acceptance by the City or its representatives who shall have access to all places of manufacture where these valves are being produced and tested. Suppliers shall, with their shop drawing submittals, submit the company name and location of the actual manufacturer of the valve which shall include Country, City, and street address of the manufacturer. Where valves are not domestically produced and tested, the City reserves the right to require that the Affidavit of Compliance be signed and sealed by a Professional Engineer, licensed to practice in the state of where the importing firm is located or the State of Florida. When this is required, the City's decision as to its necessity shall be final and no extra compensation will be allowed.

E. All valves shall conform with ANSI/NSF Standard 61, "Drinking Water System Components-Health Effects".

F. Grades B and C bronze as listed in Table 1 of AWWA C500, latest revision shall not be used in the fabrication of any of the various valve types listed in this specification. Aluminum bronzes, if used, shall not dealuminize and the method of preventing this shall be fully described in the submittal.

G. AWWA Standard C515, latest revision lists a number of copper alloys for valve stems and gates. Of these the City will accept alloys with the following Unified Numbering Series (UNS) numbers; C66100, C87600, C99400 and C99500. This same standard lists other copper alloys for Stem Nuts and Gates. Of these the MD-WASD will accept alloys with the following UNS numbers; C83600, C83450, C95200, C95500, C95800 C99400 and C99500.

H. Other copper alloys not listed in the standard may be used but must meet the performance requirements of the Standard, including but not limited to, minimum yield strength, chemical requirements and corrosion. The City requires that alloys containing more than sixteen (16) percent zinc shall not be used.

2.01 RESILIENT SEATED GATE VALVES

A. Resilient-seated gate valves shall be manufactured in accordance with the applicable provisions of the most recent ANSI/AWWA Standard C515, latest revision “Reduced-Wall Resilient-Seated Gate Valves for Water Supply Service” as modified herein.

B. Valves shall have non-rising stems (NRS) and are to be installed under buried and/or submerged conditions. The design working water pressure shall be 250 psig for 3 48-inch sizes. For valves manufactured in conformance with the provisions of AWWA C515, latest revision as modified herein, the design working water pressure shall be a minimum of 200 psi for all sizes. In addition to the pressure requirements, the valve assembly and mechanism shall be capable of withstanding an input torque of 200 ft.lbs. for valves 4-inch and smaller, and 300 ft. lbs. for valves

6-inch and larger. With the valve open the unobstructed waterway shall have a diameter not less than the full nominal diameter of the valve.

C. Valve body: Valves manufactured in conformance with AWWA C515, latest revision shall be iron-bodied and shall conform to ASTM Standard A395-99, "Ferritic Ductile Iron Pressure-Retaining Castings for Use at Elevated Temperatures" or ASTM Standard A536-84 "Ductile Iron Castings". Body and bonnet thickness shall conform with the requirements of AWWA Standard C515 latest revision.

All ferrous metal items in contact with the line fluids, except gray or ductile cast iron, shall be AISI Type 316 stainless steel. Valve body and bonnet gaskets shall be rubber or rubber composition, inorganic mineral fiber and paper are not acceptable. Rubber and rubber composition materials shall be suitable for use in water containing chlorine or chloramines and in sanitary sewage.

D.. Stems, stem nuts, glands and bushings shall be made of bronze as specified in ANSI/AWWA Standard C515 latest revision with no Grades B or C bronze being utilized. The same items for valves made in conformance with C515 latest revision shall be made of the alloys specified above in the last paragraph of the "Gate Valves, General" section of this specification. The stem diameter shall conform to Table 4 of C515 latest revision. All valves shall be equipped with an ANSI/AWWA standard 2-inch square operating nut with skirt, or handwheel when required for above-ground service. Valve stems shall rotate counterclockwise to open. All valves 20-inch and larger shall be equipped with gearing conforming to AWWA standard. Bevel or spur gearing shall be supplied as ordered with no cost differential.

E. "O"-ring stem seals shall be neoprene, Buna-N, or approved equal. No natural rubber compounds will be acceptable. The stem seals shall be of design that permits the replacement of the "O"-ring seals while the valve is in service, without undue leakage.

F. All external ferrous items, except gray or ductile cast iron, shall be hot dipped galvanized in accordance with ASTM Standard A123, "Zinc (Hot-galvanized) Coatings on Iron and Steel Products", or ASTM Standard A153, "Specification for Zinc Coating (Hot Dip) on Iron and Steel Hardware", or Type 304 stainless steel.

G. Resilient seats shall be applied to the disc only and shall seat against a corrosion-resistant surface. The surface may be either metallic or nonmetallic, applied in a manner to withstand the action of line fluids and the operation of the sealing gate under long-term service. A metallic surface shall have a corrosion resistance equal to or better than bronze. A nonmetallic surface shall be in compliance with ANSI/AWWA Standard C550, "Protective Epoxy Interior Coatings for Valves and Hydrants". Resilient seats shall be bonded to the gate. No natural rubber products will be acceptable. If the resilient seat is a rubber material, the method used for bonding or vulcanizing shall be proven by ASTM Standard D429, "Test Methods for Rubber Property-Adhesion to Rigid Substrates", Method A or B. For method A, the minimum strength shall not be less than 250 psi. When Method B is applicable, the peel strength shall not be less than 75 lb/in. All exposed mechanical attaching devices and hardware used to retain the resilient seat shall be of AISI Type 316 stainless steel.

H. Flanged valves shall have ends faced and drilled conforming to ANSI Standard B16.1, Class 125. Bolt holes in the flanges shall be equally spaced and shall straddle the vertical and horizontal centerlines. Joint materials for flanged valves will be furnished with the valves.

I. Mechanical joint valves shall have ends complying with ANSI/AWWA Standard C111/A21.11, "Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings". Mechanical joint gaskets, glands, tee-head bolts and hex nuts shall be included with the valve. Segmented glands or follower glands held in place with set screws will not be acceptable. Bolt holes in the flanges of the mechanical joint shall be equally spaced and shall straddle the vertical centerline. Gaskets shall be shipped separately in suitable protective containers. Valves for use in sewage shall have neoprene gaskets.

J. Painting and coatings shall conform to the requirements of Fed. Spec. TT-C-494a on exterior ferrous surfaces, and ANSI/AWWA Standard C550 for the interior of the valve. A coating shall be applied to all ferrous parts of the valves except for finished or seating surfaces. Surfaces shall be clean and dry before painting.

K. Testing: All production tests shall be performed on all valves supplied without exception. Operation, shell and seat tests shall be performed as specified in Section 6.2 of AWWA C509 latest revision and Section 5.1.2 of AWWA C515, latest revision as appropriate to the standard which covers the valve in question. An Affidavit of Compliance as specified in paragraph two of the "GATE VALVES, GENERAL", section above, shall be furnished to the MD-WASD with the invoice for the valves. Final payment (prior to installation in donations situations) by the MD-WASD will not be made until after receipt of these Affidavits of Compliance.

The gate valves shall conform to AWWA C515, latest revision standard as modified herein and as manufactured by American Flow Control, Mueller or approved equal.

L. Resilient Seated Gate Valves installed in the horizontal position with bevel gearing shall require a flushing port on the side of the valve to clean the tracks. See the Standard Detail WS 4.70 for piping and ball valve installation requirements.

2.03 TAPPING VALVES

A. Tapping valves shall conform to the applicable requirements for the gate valves specified above herein, and also with the requirements listed below.

B. With the valve open, an unobstructed waterway shall be provided, the diameter of which shall be at least the full nominal diameter of the valve, to permit taps to be made through the valve.

C. Tapping valves shall have a mechanical joint outlet end conforming to ANSI/AWWA Standard C111/A21.11-90, "Rubber-Gasket Joints for Ductile-Iron Pressure Pipe and Fittings" or a flanged outlet conforming to ANSI Standard B16.1 Class 125 (as called for in the particular valve order), for connection to new piping and a flanged inlet with centering ring (for all valves of 12-inch diameter and smaller and for all larger valves where the manufacturer produces a centering ring flange in that size), for connecting to the tapping sleeve. For tapping valves 12-inch and smaller, the sleeve shall be in compliance with all applicable provisions of MSS Standard Practice SP 60, latest revision, as developed and approved by the Manufacturers Standardization Society of the Valve and Fittings Industry, 127 Park Street N.E., Vienna, Virginia 22180. For tapping valves larger than 12-inch, the connecting flanged joint between the tapping sleeve and the tapping valve shall be industry standard; however, the tapping valve must provide a matching fit with tapping sleeves by other manufacturers.

D. The tapping valves shall be furnished complete with all joint materials. Joint materials for the flanged inlets shall be ANSI-sized and approved and shall include 1/8-inch thick full faced gaskets and hot-dip galvanized carbon steel bolts and nuts with internal threads tapped or retapped after galvanizing or stainless steel bolts and nuts. The flanged inlet gaskets shall conform to the gasket material and property requirements set forth in ANSI/AWWA Standard C111/A21.11-90. All pipe connection gaskets for use in sewer applications shall be neoprene and natural rubber shall not be used in any application. Seal shall be neoprene, Buna-N, Nitrile, EPDM or approved equal, but not natural rubber. The mechanical joint outlets shall include the necessary joint materials conforming to the requirements of joint materials for mechanical joint ended gate valves of the appropriate type specified above herein (neoprene for use with sewer). Bolt holes in the flanges of the mechanical joint shall be equally spaced and shall straddle the vertical centerline. Gaskets shall be shipped separately in suitable protective containers.

E. Valve operators for tapping valves 20-inch and larger shall be located to the right or left (when looking into the mechanical joint outlet end) as ordered by the City.

F. The valves shall be suitable for use with ductile-iron pipe conforming to ANSI/AWWA Standard C151/A21.51-96, "Ductile-Iron Pipe, Centrifugally Cast, for Water", with wall thickness and outside diameter as specified in Tables 3 and 4, (Special Thickness Classes) for the following sizes:

Size	Thickness Class
4-inch	54
6-inch	53
8-inch	52
10-inch and larger	50

and with wall thicknesses and outside diameter as specified in Tables 1 and 2 (Standard dimensions and weights) of the same standard.

Pressure Class Pipe (Potable, Reuse and Raw Water Only)

Size	Pressure Class
4-inch through 12-inch	350
14-inch through 20-inch	250
24-inch	200
30-inch through 48-inch	150

G. All production tests shall be performed on all valves supplied without exception. Operation and hydrostatic tests shall be performed as specified in AWWA C515, latest revision. An Affidavit of Compliance as specified in paragraph two of the "GATE VALVES, GENERAL", section above, shall be furnished if requested to the City prior to installation of the valves. Final payment (installation in donations situations) by the City will not be made until after receipt of these Affidavits of Compliance.

The tapping valves shall conform with the appropriate AWWA valve standard as modified herein and as manufactured by American Flow Control, Mueller or approved equal.

PART 3 - EXECUTION

3.01 GENERAL

All valves shall be installed in accordance with provisions of Section 15100, "Valves, General." Care shall be taken that all valves are well supported.

END OF SECTION

SECTION 16051

PUMP STATION ELECTRICAL MATERIALS

1 GENERAL

1.01 SCOPE OF WORK

A. The Contractor shall furnish and install all electrical material specified herein and required for a complete installation.

1.02 RELATED SECTIONS

A. Section 16940 - Pump Station Control Panel

1.03 QUALITY ASSURANCE

A. All electrical materials and equipment shall be new, of recent domestic manufacture, and approved by the Underwriters' Laboratories, Inc. Material or equipment damaged in the course of installation or test shall be replaced or repaired in a manner meeting with the approval of the Engineer.

B. All electrical material and installation shall comply with the following codes and standards:

1. National Electrical Code (NEC)
2. South Florida Building Code (SFBC)
3. National Fire Protection Association (NFPA)
4. Insulated Power Cable Engineers Association (IPCEA)
5. National Electrical Manufacturers Association (NEMA)
6. Institute of Electrical and Electronic Engineers (IEEE)
7. American Society for Testing and Materials (ASTM)
8. American National Standards Institute (ANSI)
9. Underwriters Laboratories (UL)

1.04 SUBMITTALS

A. Before any material or equipment is purchased, the Contractor shall submit complete shop drawings to the Engineer for approval, including a complete list in quintuplicate of electrical materials, fixtures and equipment to be incorporated in the work. The list shall include catalog number, diagrams, drawings, and such other descriptive data as may be required by the Engineer. Approval of material will be based on the manufacturer's compliance with the Specifications, published ratings, or on test results, where specified.

B. In addition, the Contractor shall furnish four copies, in booklet form, of complete installation drawings, instruction books, operating and maintenance manuals, parts lists for each major item of electrical equipment, and similar data on minor items of equipment, if requested by the Engineer, dimensional drawings, wiring diagrams and schematics for each major piece of electrical equipment.

2 PRODUCTS

2.01 GENERAL

A. All equipment shall be new, complete and in operating condition unless otherwise specified.

B. All components shall, whenever possible, be standard stock articles of well known domestic manufacturers, who have been regularly engaged in the manufacture of such material and equipment for at least five years.

C. Fusible equipment shall be equipped with fuses, and 100 percent of spare fuses of each type shall be supplied.

2.02 SURGE PROTECTION

A. Line-to-line and line-to-ground protection shall exceed the requirements of ANSI/IEEE Standard C62.1-1984 Sections 8.6.1 and 8.7.3 by a factor of at least 300%. Voltage clamping time shall be less than five nanoseconds with a maximum surge current of 30,000 RMS at a clamping voltage under 600 VAC. One arrestor, complete with circuit breaker disconnect is to be supplied on the incoming line to the control system. Arrestors shall be Ingram Products, Joslyn or approved equal.

2.03 PHASE MONITOR

A. Phase Monitor shall be a three-phase monitor and supplied on the incoming line. The phase monitor shall prevent motors starting on the following conditions: overvoltage, undervoltage, phase reversal, phase imbalance and loss of phase. The phase monitor shall have integral fault light and dry contact for alarm indication. The unit shall be ATC Diversified Electronics or approved equal.

2.04 GROUNDING, BONDING AND GROUND RODS

A. Ground Rod shall be a copper-clad steel rod, 3/4-inch diameter by 15 feet long, approved for that use.

B. Make inaccessible or underground connections with the exothermic welding process using equipment manufactured by Burndy or Erico Products.

C. Make accessible connections with multiple bolt silicon bronze connectors specifically designed and approved for the purpose. Connectors to be as manufactured by Burndy or O.Z. Gedney Electric.

D. Install grounding system as shown on Drawings and never use a neutral conductor as grounding or bonding means.

E. Drive ground rods full length into the earth. Main ground electrode system resistance to ground to be no greater than 3 ohms. Use as many rods as needed to attain this level.

F. Ground and bond panelboard frame, fittings, fixtures and devices, cable sheaths and screens, neutral of transformers, boxes and raceways, motor frames, non-current carrying parts of appliances and devices, control equipment and panels, and all other parts and equipment as required by the NEC.

G. Provide every branch circuit for power and lighting and each 120-volt receptacle circuits, with a green grounding conductor of the same size and type as the power conductors installed in the same raceway.

2.05 CABLE AND WIRE

A. Cable and Wire shall be plainly marked with the manufacturer's name, year of manufacture, and type of cable. All conductors shall be copper unless otherwise specified.

B. All cable shall be manufactured in strict accordance with the specifications and the applicable IPCEA, NEMA, IEEE, UL, and ANSI standards, by a manufacturer with at least 5 years of experience in cables of this type.

C. All cable and wire shall be suitable for wet locations.

D. All 600 volt class cable shall be Class B, heat and moisture resistant thermoplastic type THW rated 75° C, maximum conductor temperature in wet or dry locations, with copper conductors. No. 10 and smaller shall be single strand, No. 8 through No. 2 shall be 7 strand and No. 1 through 4/0 shall be 19 strand and 250 MCM through 500 MCM shall be 37 Strand. Insulation shall meet UL Standard 83.

E. All conductors shall be plainly marked on outer braid at least every two feet with name of manufacturer, size and grade of insulation.

F. Conductors shall be as manufactured by General Cable, Phelps Dodge, Okonite or approved equal.

2.06 CONTROL WIRING

A. Wiring for monitoring system and control shall be single conductor #14 AWG minimum, solid or stranded with THW or THWN insulation.

B. Wiring for analog or pulse systems shall be 3-conductor shielded cable with #14 AWG stranded copper conductors with individual thermoplastic color-coded insulation. Overall shield shall be either copper or aluminum tape providing 100% shielding coverage and provided with a stranded copper ground drain wire and an overall vinyl jacket. Cable shall be Belden, Dekoron or approved equal.

C. Fireproofing tape shall be Irvington No. 7700, or approved equal, applied in accordance to the manufacturer’s instructions.

D. Multiconductor cable shall be copper conductors, flame retarded ethylene-propylene insulated for 600 V with a 90ºC rating. The single conductors of the multiple conductor cable shall be color coded with integral color for proper

identification. Color coding shall be equal to ICEA S-68-514, Table K-2. Cable shall meet the requirements of IEEE-383. A heat, moisture flame and chemical resistant, mechanically rugged ethylene-propylene insulating compound, 30 mils thick, shall be provided for #14 AWG. Conductors shall be tin or alloy coated stranded copper as per ASTM B-8 and B-33 or B-189. Overall cable jacket shall be chlorosulfonated polyethylene compound over cable tape and fillers and shall exceed the requirements of ICEA S-68-516.

E. Connectors, Terminals and Splices:

1. Provide connectors, terminals and splices for all power and lighting circuits using 600-volt wire and cable as follows:

a. Provide connectors, terminals, and splices, for all wire, cable, and equipment and bus connections that are designed and approved for the specific type and size of conductors being connected.
b. Connectors and terminals shall be designed and UL approved for use with the associated conductor material, and shall provide a uniform compression over the entire contact surface. Solderless terminal lugs shall be used on all stranded conductors.
c. Pressure-crimp type connectors, terminals and splices shall be applied with a mechanical or hydraulic tool with proper size crimpling dies for making each connection. The tool shall be of the type that will not release until the correct pressure has been applied.
d. Splices and taps in wire No. 10 AWG, and smaller, shall be made with approved, wire-nut-type, patent spring connectors. Use 3M Scotch-locks or equal.
e. Provide Burndy, type YAV box, or equal, pressure-crimp ring-tongue terminals for termination of No. 8 stranded cable.
f. Provide Burndy type YSV box butt splices, or equal, for splicing No. 8 AWG stranded cable.
g. For termination and splicing of cable of AWG No. 6 or larger, provide long-barrel, type YA pressure-crimp lugs and type YS tubular pressure-crimp splices by Burndy or equal. Use long-barrel pressure-crimp lugs wherever space conditions permit. Use long-barrel pressure crimp splices exclusively for splicing. Where space is inadequate for use of long-barrel lugs, provide Burndy Type YA-L, pressure-crimp, short barrel lugs, or equal. Use two-hole lugs on cable of 250 MCM and larger.
h. For tap off AWG No. 8 cable and larger, provide Burndy type KS split-bolt copper connectors (bugs), with Burndy type SC one-piece plastic split bolt covers, or equal. Other types of connectors for tapping may be used subject to prior approval by the Engineer.
i. Use proper size bronze bolts, nuts, washers, and lock washers of Burndy Durium alloy, or equal, for bolting cable terminations to equipment terminals and bus bars.
j. Termination of solid wires of AWG No. 10 and smaller at

terminal blocks shall be made by forming the wires in a ring to fit under a screw head, thus requiring no terminal lug.

2. Provide terminals and splices and make connections in control, alarm and instrumentation system as follows:

   a. For solid wiring provide type TP, vinyl-insulated, ring-tongue terminals by Burndy, or equal, for all terminations.
   b. In locations where splicing of solid wire is indicated or permitted by specifications, use type SP vinyl-insulated, butt splices by Burndy, or equal.
   c. Wire terminals shall be installed with pressure tools equal to those manufactured by American Pamcor, one of which is No. 59072, which obliges the Electrician to apply the correct pressure required to produce a tight connection before the tool is released. Use a pressure tool designed for the specific size of connector and wire being terminated.
   d. Taps in solid wire may be made with 3M, Scotchlock wire nut, or equal, except that the conductor being tapped shall not be cut, and shall be twisted together with the tap conductor before wire nut application.

2.07 LUGS

A. All power cables of any voltage class shall be terminated with tinned copper indentation-type lugs. The lugs shall be Bundy type YA, T & B, or equal, long barreled, with double indentations in the larger sizes. Two-hole lugs shall be used where possible. The Contractor shall be responsible for compatibility between hole size and spacing on the lugs and on the equipment furnished.

B. Terminate stranded conductors on mechanical connectors furnished on equipment. Where no connectors are included, provide suitable mechanical connectors.

C. Termination of stranded conductors on screw terminals will not be permitted. Provide suitable size compression or mechanical type connector with spade tongue.

2.08 PULLING COMPOUND

A. Pulling Compound, if used, shall conform to the recommendations of the wire and cable manufacturer.

2.09 CONDUIT, FITTINGS AND WIREWAY

A. Conduit shall be heavy wall, threaded, rigid, metallic conduit. PVC schedule 40 conduit shall be used where it is embedded in concrete and/underground runs, and aluminum conduit shall be used for exposed runs. Use PVC coated rigid steel conduit for risers and transitions from underground PVC conduit to above-ground conduit seals. Use galvanized rigid steel conduit above conduit seals. Conduit, fittings and wireway shall be sized in accordance with the National Electrical Code, where sizes are not shown on the Plans. Conduit smaller than 3/4-inch shall not be used.

1. Galvanized Steel Conduit shall be hot-dip galvanized, inside and outside, after threading, and shall conform to Federal Specification WW-C581, ANSI C80.1 and UL 6.
2. PVC Coated Steel Conduit shall be externally coated with a 40 mil of grey PVC per UL 6.
3. Aluminum Conduit shall contain less than 0.1 percent copper, and shall conform to Federal Specification WW-C-540C. It shall be as manufactured by Kaiser Aluminum and Chemical Corporation, Triangle, or approved equal. Alcoa thread lubricant shall be used on all aluminum threads.
4. Flexible Conduit shall be "Sealtite" flexible, liquid tight conduit, as manufactured by the American Brass Company, Bridgeport, Connecticut, the equivalent by 0-Z/Gedney, or equal.
5. PVC Conduit shall be Schedule 40, heavy-walled rigid, rated for 90 degree C cables conforming to UL 651, Fed Spec W-C-1094 and NEMA TC-2 as manufactured by Carlon or approved equal.
6. Conduit Fittings and Device Boxes embedded in concrete shall be PVC conforming to UL 514 and NEMA TC-3.
7. Wall Sleeves for Conduit shall be O.Z., positive, watertight through wall entrance fittings, FSK Series, Crouse-Hinds, or equal.
8. Entrance Seals shall be O.Z. type CSBG, Crouse-Hinds, or equal.
9. Rigid Conduit Straps and Clamp Backs of cast aluminum such as EFCOR 233 AL, Appleton, or equal, shall be used in attaching conduit to concrete surfaces where channels and clamps are not used.
10. Conduit Bushings shall be insulated metallic bushings by T & B, O.Z., or approved equal, except where grounding bushings are required.
11. Conduit Sealing Fittings shall be Crouse-Hinds, type GUAB, with sealing covers, or approved equal.
12. Wireways shall be of the size required plus no less than 50% of spare capacity, made of 12 gauge aluminum with hinged spring-latched covers conforming to UL 870, and painted to protect against corrosion. The Contractor shall furnish all necessary bends, couplings and connectors. Interior parts shall be smooth, free of sharp edges and burrs. Use grounding type locknut and copper bond wire to make wireway and attached conduits electrically continuous. Slip-fasteners are not acceptable for this purpose. Wireways shall be type HW as manufactured by General Metals, Inc., Square D, or approved equal.

2.10 SWITCHES AND COVERS

A. Light Switches shall conform with Fed Spec WS-896E and shall be rated 20 amp, 120/277 volt AC, for tungsten or inductive load, Hubbell 1221 and 1223, Leviton, or approved equal.

B. Weather proof Switch Covers shall be Crouse-Hinds DS185-SA, Appleton, or approved equal, copper-free aluminum.

C. Explosion-Proof Switches shall be rated 20 amp, 125 volts AC with front operating handle, Appleton Cat. No. EFS175-FL, Crouse-Hinds, or approved equal.

D. Safe-Run Switches shall be 2 position, double pole, single throw, maintained contact, selector switch in NEMA-4 enclosure, General Electric AJ201C or approved equal.

E. Safety Disconnect Switches shall be heavy duty Type A, quick-make, quick-break, horsepower rated, with external operating handle interlocked to prevent opening of the cover unless it is in the "off" and "open door" position. Switch shall be manufactured by Square D, Westinghouse, or approved equal.

F. Mercury Float Switch shall have molybdenum contacts sealed in a doublewalled float of plastic material resistant to inorganic salt solutions, alkalis, and mineral acids. The electrical cable shall be two conductors with neoprene jacket and shall run unspliced to the Control Cabinet. Switch shall be Enpo-Cornell Pump Co. or equal.

G. Limit Switch shall be heavy duty Square D Class 9007 or approved equal with 2 N.O. and 2 N.C. contacts.

2.11 RECEPTACLES AND COVERS

A. Outlets shall be 125 volt, 20 amp, grounding type, duplex receptacle specification grade, Hubbell 5362, Leviton, or approved equal.

B. Weatherproof Switch Covers shall be Crouse-Hinds DS185-SA, equivalent by Appleton, or approved equal, copper-free aluminum, gasketed cover.

C. Receptacle for Emergency Power shall be 4 wire, 4 pole with angle adapter and screw cover, Russell Stoll, Catalog numbers as indicated below for the different services, or approved equal:

1. JRSA 2034 DR45 for 240 volts
2. JRSA 2034 HR45 for 480 volts

D. Ground Fault Protected Receptacles shall be Class A, 120 Volt, duplex 20/20A NEMA 5-20R, Square D Catalog GDFR-120BC or approved equal.

2.12 PANELBOARD

A. Panelboards shall be dead front, safety type construction and shall conform to Federal Specification WP-115, NEMA PB1, ANSI C33.38 and UL67.

B. All circuit breakers shall be thermal magnetic, temperature compensated, bolt-on type with quick-make quick-break mechanism, of the frame and size indicated.

C. Circuit breakers minimum interrupting ratings shall be 22,000 A for 277 volts systems and 14,000 A for 120 volt systems. Circuit breaker minimum rating shall be 20A single pole unless otherwise noted.

D. The panel board shall be provided with the voltage, phases and amperage required per project drawings, with main and branch breakers ambient-

compensated. It shall provide for a minimum of 20% spare space. Panels shall have neutral and equipment grounding bus and shall be Square D, General Electric, Westinghouse or approved equal.

E. Install panelboards in accordance with manufacturer's instructions.

2.13 PUMP MOTOR CONNECTION BOX

A. Pump motor connection box shall only be used in submersible pump wet well applications. The Contractor shall furnish and install 24" x 18" x 8" NEMA 4X stainless steel enclosure with hinged bolt-on cover and all necessary appurtenances for a complete installation. Connection box assembly shall include 3' x 3' x 6" concrete slab and 1-5/8 x 1-5/8 unistrut support. The following shall also be included:

1. 6-Pole power insulated terminal block panel mount shall be Allen Bradley Bulletin 1492, sized as required.
2. 6-Circuit control insulated terminal block panel mount shall be Allen Bradley Bulletin 1492
3. Gland nut and neoprene bushing shall be Crouse-Hinds CGK, or approved equal, sized as required for cable outer diameter.
4. Conduit Seal.

2.14 TRANSFORMER

A. Transformer shall be 480 volt to 120/240 volt, single phase, 60 hertz, 3KVA for submersible stations. It shall be high efficiency Sqaure "D" Model 9070E01D1, or approved equal, with two 5% taps below normal, weatherproof for indoor or outdoor service.

2.15 PULL BOX

A. Pull box shall be welded aluminum, 12 gauge, with hinged cover, minimum dimensions of 12 inch x 12 inch x 6 inch, without knockouts, anodized and painted, as manufactured by General Metals, Inc., Hoffman, or approved equal.

2.16 LIGHTNING ARRESTOR

A. Lightning arrestor shall be 3-pole, 650 volt, thyrite secondary arrester, General Electric type 9L15BCC008, Westinghouse 634A217AO1, or approved equal.

2.17 SURGE CAPACITOR

A. Surge capacitor shall be a 3-pole, 650 volt, 1.0 mfd. capacitor. It shall be a General Electric Type 9L18ABB301, equivalent by Westinghouse, or equal.

2.18 EMERGENCY LIGHT

A. Furnish and install wall mounted emergency light package unit with battery backup wired to an existing lighting fixture, Hubbel Lighting IMF 12-50-2-

P8 or approved equal.

2.19 LEVEL CONTROLLER

A. Level controller shall be microprocessor based SCADA ready, station controller with float switches backup. It shall measure the depth of water in the wet well and operate the pumps based on selected setup values. The controller shall be a microprocessor-based device and not require a battery to maintain the operating program. All set-up values shall be stored in non-volatile memory.

B. The controller shall be standard “off the shelf” equipment with published literature and fully tested hardware and operating program. The controller shall be field configurable from the front of the unit, and require no special tools or software to set-up or operate.

C. MPE Station Controller, microprocessor based controller with pressure transducer, Model SC2000, as manufactured by Motor Protection Electronics, Inc. or approved equal.

D. Provide intrinsically safe duplexer backup controller with float switches, as manufactured by Motor Protection Electronics Inc. or approved equal.

2.20 PUMP STATION LEVEL TRANSDUCER

A. A submersible level transmitter shall be capable of sensing and measuring the level of wastewater in the wet well based on the hydrostatic pressure above the submerged sensor’s diaphragm.

B. The level transmitter shall be factory calibrated to a nominal 4-20 mADC output.

C. The transducer housing shall be fabricated of PVC with a 2.5-inch diameter Teflon diaphragm and shall be filled with silicone oil.

D. The sensor shall be mounted using its signal cable and have ¾” NPT pipe threading for pipe mounting.

E. The internal air pressure of the sensor assembly shall be relieved to atmospheric pressure through a sealed breather system.

F. The unit shall measure 9 inches high by 3.8 inches diameter. The cable diameter shall be 0.26 inches.

G. The level transducer shall be Model SLX 130-M, as manufactured by Contegra, Inc., or approved equal.

H. The mounting option used shall be a 316 SS pipe for cable suspension (SLX-SP1 Contegra Option 3).

PART 3 EXECUTION

3.01 GENERAL

A. All electrical work shall comply with the applicable rules of the National Electrical Code, the National Fire Protection Association, and the South Florida Building Code, and shall be in accordance with the requirements of OSHA, and the best commercial and industrial practice. Conduit and cable shall be sized as specified in the National Electrical Code, where sizes are not shown on the Plans.

B. All electrical wiring, regardless of voltage classes, shall be installed in rigid conduit, except where shown otherwise on the Plans. No conduit installed shall be smaller than 3/4 inch IPS and no wire smaller than 12 gauge, except as otherwise shown on the Plans, specified herein, or authorized by the Engineer.

C. In some cases, the exact requirements must be determined from the shop drawings of the equipment furnished by the Contractor. Changes required by the Contractor - furnished equipment shall be the Contractor's responsibility. Materials or equipment damaged in the course of installation or test shall be replaced or repaired to the satisfaction of the Engineer.

3.02 EXAMINATION

A. Verify items provided by other sections of Work are properly sized and located.

B. Verify that built-in items are in proper location, and ready for roughing into Work.

C. Electrical service shall be built per Florida Power & Light Standards.

3.03 INSTALLATION OF 600-VOLT WIRE AND CABLE

A. Install wire and cable in conduits, ducts, wireways, cable trays and other enclosures as indicated.

B. Except as otherwise indicated or specified, all wire and cable shall be installed in continuous runs between terminal points without splicing.

C. Make splices and taps only in junction boxes, from terminals in terminal boxes, in manholes, in handholes and other accessible enclosures.

D. Do not splice wire and cable in ducts or conduits.

E. Except as otherwise indicated, or specified, do not splice or tap control, alarm or instrumentation wiring in underground manholes and handholes.

F. When pulling wire or cable, do not subject the wire or cable to a tension greater than 50% of the yield strength of the conductor. Pulling lugs shall be attached to the conductor with a sleeve or grip over the cable sheath to prevent slipping the insulation.

G. Use a UL approved lubricant to decrease friction when pulling cable in

ducts and conduits

H. Do not subject cable to a bending radius less than 8 times the cable O.D. during or after installation.

I. In wet locations, make splices first as for dry locations, then encapsulate them in an epoxy resin sealing and potting compound. Encapsulation of compression sleeve splices shall be with preformed molds.

J. Pulling of wires and cable into conduits shall be done in a manner which will in no way injure the insulation.

K. All wires in conduit shall be continuous between pull points without splices. No joints or splices in the conductors shall be permitted except at outlet or accessible junction boxes.

L. Sufficient lengths of wire shall be left at pull boxes for connecting to equipment and apparatus without straining.

M. All wires passing through pull boxes shall have enough slack in each box so they may be pulled out of the box a distance of no less than 6" across the entire length of the box.

N. Pull together all cables or conductors to be installed in a single conduit.

O. Wire Sizes: Drawings indicate wire and conduit sizes for typical equipment. If sizes shown on the drawings are not appropriate for the equipment chosen by the Contractor, wires and conduit shall be sized for the proper current-carrying capacity (including voltage drop and motor inrush allowances) in accordance with the NEC, at no extra cost to the Department. On 120/240 volts systems, "Homeruns" of over 50 feet in total length from panel to first outlet shall be #10 AWG minimum size and on 277/480 volts, the distance shall be 100 feet total length for #12 AWG minimum size.

3.04 CONDUIT INSTALLATION

A. The Plans are generally indicative of the work to be installed, but do not show all bends, fittings, boxes, and specialties which may be required or the exact location of all conduits. The Contractor shall carefully investigate the site and conditions affecting all of his work and arrange his work accordingly. Any changes from locations shown on the Plans must be approved by the Engineer.

B. Conduits shall be installed in such a manner that wires may be removed and replaced at a later date and to ensure against collection of condensation or rainwater. Where bends are made, they shall be made with an approved conduit bending machine. Crushed or deformed conduit shall not be used.

C. All conduit ends shall be square cut and reamed to remove burrs. Running threads will NOT be permitted. Approved couplings shall be used. All conduit joints shall be made up wrench tight, using strap wrenches, and shall be made waterproof in such a manner as not to interrupt the electrical bonds.

D. As soon as installed, all open conduit ends, including those terminating in boxes, shall be plugged or capped and so maintained during construction to prevent the entrance of moisture and dirt. All conduit shall be carefully cleaned and dried inside before the installation of wire.

3.05 GROUNDING

A. All grounding shall comply with the requirements of the National Electric Code and all local Codes having jurisdiction.

B. Unless otherwise shown on the Plans, the ground system shall be composed of at least two 5/8" in diameter by 10 feet long copper clad ground rod, spaced a minimum of 6 feet apart. Ground rods shall also be connected to rebar in slab. Make all connections with #6 bare copper wire.

C. Maximum ground resistance shall not exceed 25 ohms under normal dry conditions. Additional ground rods shall be driven if required to maintain this level.

D. All electrical equipment, structural steel, guard rails, and other metallic objects shall be connected to the above-mentioned ground system.

E. Provide a warning ribbon installed at 12" depth in the ground above the ground loop conductor.

3.06 NEUTRALS

A. Each circuit which requires a neutral conductor shall have its own individual neutral conductor, contained in the same enclosure.

3.07 TESTING

A. All circuits and motors shall be megger tested, and the voltage and current load on each circuit shall be checked. Five copies of the results shall be furnished to the Engineer and the Department before acceptance of the work.

END OF SECTION

SECTION 16780

S.C.A.D.A. SYSTEM R.T.U. INSTALLATION

PART 1 - GENERAL

1.01 SCOPE OF WORK

A. All conditions of the existing contract shall apply.

B. The Contractor shall coordinate all work with the local Electrical Supervisor for the area. The Contractor shall review the installation with the area Electrical Supervisor before starting the work. The installation shall be completed and inspected by the local supervisor or his representative.

C. The Contractor shall be responsible for location of all utilities.

1.02 REFERENCE STANDARDS

A. All work shall be in accordance with the Florida Building Code and the National Electrical Code.

PART 2 - PRODUCTS

2.01 MIAMI-DADE WATER AND SEWER DEPARTMENT SUPPLIED MATERIALS

A. R.T.U. in a NEMA 4X enclosure. Note that batteries are to be furnished and installed inside the 4X enclosure by the contractor.

B. Radio

C. Antenna with mounting cap and cable

D. Force main pressure transmitter assembly consisting of a 1-inch diameter threaded nipple, manifold with test port and pressure gage with isolation diaphragm and the pressure transmitter unit.

E. Low level pressure switch

F. Wet well level transformer (for the RTU)

G. Current transformer

H. Amp transmitter

I. “Station Flooding”(drywell) and “High Level”(wetwell) float switches; Mini Float,

model SM N.O.

J. “Low Level”(wetwell) float switch; Mini Float, model SM N.C.

K. “Intrusion Alarm” , Square D 9007 Series A, Type C54D, Type C54RC, Type C54A2, Microswitch #MC7711-BZ-2R-A2 or equal as required for that type of installation.

2.02 CONTRACTOR SUPPLIED MATERIALS

A. Unless otherwise specifically called out elsewhere herein, all other labor, materials and equipment required for SCADA System R. T. U. Installation will be provided by the Contractor whether or not said items are specifically called out in the Contract Documents.

B. Individual wires shall be 600 volt, 75° C insulation, 14 guage stranded copper. Ends shall be terminated with compressiron lugs. Wires shall be color coded according to Miami-Dade Water and Sewer Department supplied drawings and identified by wire marking labels. Any circuits designated as “spare” shall each have individual ends securely taped and marked “spare”.

C. Shielded multi-conductor transducer wire shall be Belden twisted #16 stranded copper with shield, 600 volt rated. The shield shall be terminated at the R. T. U. end only. Shield shall be cut back to insulation and taped at other end. Shielded wire shall be run in a raceway with no other power circuits.

D. The antenna ground rod shall be copper weld 3/4", 10 feet long and driven by the Contractor.

E. Tapping saddle assembly for pressure transmitter consisting of: solid brass, single strap (silicon bronze), tapping saddle with Buna-N-gasket, Ford Style 101B with 1-inch tap; brass corporation stop with 1-inch inlet, outlet and valve AWWA/CC taper thread inlet by flare copper outlet, Ford FB600-4; brass adapter for flare copper connection (replaces flare nut) 1-inch female copper thread x 1-inch female iron pipe thread, Ford part no. C01-44. All items specified as brass shall be ASTM B-62, UNS C83600 allow and shall conform with NSF 61.

PART 3 - EXECUTION

3.01 ANALOG INPUTS

A. Three transducers are involved at each site with standard or microprocessor control (current, wetwell pressure level, and force main pressure). The pressure transmitters will be installed by MD-WASD forces in coordination with, and as a part of, the Contractor’s permitted work. The Contractor shall mount the current transformer on the leg of the power cable from which the control power is derived and connect shielded wiring to all three transducers. The current

transformer shall be installed to indicate power used whether on normal or generator power where applicable. The current transducer shall be installed in existing cabinets as close as possible to the current transformer.

B. At sites identified by the City only two types of transducers, (force main pressure and current), will be used. Shielded wire from the level logic control device to the R. T. U. shall be installed for level indication. Termination of the shielded cable to the control unit shall be performed by the City forces.

C. Other analog inputs may include flow recorders, suction pressure, discharge pressure, vibration or R. P. M. input. The MD-WASD shall supply devices and the Contractor will supply and install circuits. These circuits will be installed by the Contractor, but terminated by MD-WASD forces.

3.02 ANALOG OUTPUTS

A. At sites determined by MD-WASD shielded wire and conduit shall be installed for analog outputs such as VFD speed control, valve control, or other positioning devices. Circuits shall be installed by the Contractor, but terminated by MD-WASD.

3.03 DISCRETE INPUTS

A. Feedback signal circuits are “Pump On”, “Station Flooding” (drywell), “High Level” (wetwell), “Low Level” (wetwell), “Generator Run”, “Intrusion Alarm” and “Common Alarm”. Except where noted, the Contractor shall provide all materials and devices to complete these two wire circuits. The power will be from the R. T. U. and all devices shall be normally open in the safe or off condition.

1. “Pump On” shall be provided by a Contractor furnished and installed auxiliary contact on each pump motor starter. (Note: two speed pumps require two per pump.) No other devices shall be used to indicate “Pump On”.
2. “Station Flooding” (drywell), “High Level” (wetwell), and “Low Level”(wetwell), shall be supplied by MD-WASD and installed by the Contractor. In pump stations with pneumatic controls (bubbler system) MD-WASD will provide a pneumatic pressure switch for “Low Level”(wetwell) to be installed by the Contractor.

3. “Intrusion Alarm” will be supplied by MD-WASD and installed by the Contractor.

3.04 DISCRETE OUTPUTS

A. Active control circuits to start each pump, (or each speed), stop pump, and reset alarms shall be installed and connected.

1. The normally closed stop relay in the R. T. U. shall be connected in series to the existing stop control circuit.
2. The normally open start relay shall be connected in parallel to the existing auto start control circuit. **No existing safety or process orderly shutdown circuits shall be bypassed or defeated for either the start or stop control circuit.**
3. The “Common Alarm” circuit shall be from a normally open R.T.U. relay in parallel with the existing reset switch.

3.05 R. T. U.

B. There shall be no holes or entrance of any type into the top of the R.T.U. enclosure.

C. The R. T. U. shall not be mounted below grade or inside the drywell. If existing structure does not provide mounting for the R.T.U. a separate MD-WASD approved stanchion shall be constructed and installed by the Contractor. The R.T.U. stanchions shall be installed in accordance with current MD-WASD approved S. C. A. D. A., R. T. U. installation drawings. Equivalent parts shall require approval by the S.C.A.D.A. Section representative.

D. All abraded galvanized hardware shall be cleaned and then recoated with two coats of cold galvanized compound.

3.06 CONDUITS

A. Rigid galvanized conduit shall be used in all exterior below grade installations. It shall be coated with two coats of Bitumastic No. 50 or equal. Rigid galvanized conduit shall extend completely through all concrete penetrations at which point it may be converted to PVC conduit in the interior of the drywell. Rigid aluminum conduit may be used in installations above grade where exposed.

B. All concrete penetrations shall be sealed with epoxy grout compound. All conduits shall have minimum 1/4" spacing where installed on concrete surfaces.

C. All conduits below grade and/or extending from the wetwell shall have seal off fittings installed before entry into the R. T. U. enclosure. All conduits shall be sealed with duct seal compound during the construction phase to limit the exposure of electronic circuitry to corrosive atmosphere.

3.07 MISCELLANEOUS

A. A separate circuit shall be provided for and installed by the Contractor from the existing lighting/control panel, to provide 120 VAC power to the R. T. U. This circuit shall be routed through an available phase monitor relay normally open contact. This circuit will be switched on by the SCADA Section at start-up.

B. For wetwell/drywell pump stations with the pump controller in the drywell a MD-WASD supplied enclosure and terminal strips shall be installed for circuits entering and exiting the drywell.

C. Additional work such as sidewalk or street cutting may be required. This work must be authorized by the Project Manager and validated by a detailed, itemized invoice showing exact labor and material used.

D. An as-built drawing, (schematic and point-to-point) of the final installation and approved by the SCADA representative shall be provided by the Contractor for the installation before final payment is made.

E. A Certificate of Completion and original approved permits shall be supplied to the Department before final payment is made.

F. Install SCADA tapping saddle at location shown on Plans, pressure test, perform 1-inch tap, in coordination with MD-WASD forces, connect remainder of pressure transmitting system, and test.

END OF SECTION

SECTION 16940

PUMP STATION CONTROL PANEL

PART 1. GENERAL

1.01 SCOPE OF WORK

A. The Contractor shall furnish and install a pump station control panel, which shall include the level controller, relays, switches, lamps, and all electrical material specified herein or required for a complete installation.

B. The contractor is responsible for the erection, installation and start-up of the equipment covered under these specifications.

1.02 RELATED SECTION

A. Section 16051 - Pump Station Electrical Materials.

1.03 QUALITY ASSURANCE

A. All electrical materials and equipment shall be new, of recent domestic manufacture, and approved by the Underwriters' Laboratories, Inc. Material or equipment damaged in the course of installation or test shall be replaced or repaired in a manner meeting with the approval of the Department. Further, said repairs or replacement shall be performed by personnel qualified such that the UL approval will not be lost. The Contractor shall provide satisfactory evidence of these qualifications to the MD-WASD prior to the work being performed.

B. All electrical material and installation shall comply with the following codes and standards listed in Section 16051, Subsection 1.03.

C. Furnish equipment designed, built and tested by a firm with at least ten years of experience manufacturing this type of equipment.

D. Comply with NFPA 70, “National Electrical Code,” for components and installation.

E. Furnish equipment that bear the UL label.

1.04 SUBMITTALS

A. The Contractor shall provide all submittals in accordance with Section 16051, Subsection 1.04

B. Submit for review, properly identified manufacturers’ literature and shop drawings including but not limited to the following:

1. Dimensioned outlined drawings (Plan and Elevations).
2. Itemized bill of materials.
3. Manufacturers’ literature and shop drawings for every piece of equipment mounted on the panel.

4. Enclosure construction details.
5. Operating and maintenance manuals.
6. Detailed external wiring diagram and sequence of operation.

PART 2. PRODUCTS

2.01 GENERAL

A. The Control Panel shall be designed and built as integrated, pre-wired equipment. It shall control the operation of number of pumps in the station, based on the level in the wet well.

1. Level controller (specified in Section 16051, Subsection 2.19) shall monitor the wet well level and actuate the sewage pumps in sequence with rising water level. Once a pumping cycle has started, it shall continue until the stop level is reached. All start/stop levels shall be adjustable, based on design levels shown on the Plans. Controller shall maintain level to within ± 1% of full scale (i.e. maximum depth).
2. The level controller shall have a 3-position selector switch for manual selection of pumps sequence. An alarm shall be annunciated whenever the lag pump is called on, indicating failure of lead pump.
3. The Panel shall include the level indicator and pumps alternators, motor controllers, relays, switches, lamps, pressure switches and any other device shown on the Plans, or required to function as specified. Shop drawings of every device shall be submitted and approved before the panel is assembled.
4. Phase monitor relay shall be Timemark Model 258, Potter-Brunfield CPS-38, or approved equal, fused on line side and disconnect only for 3-phase equipment.
5. Selector switch to manually select or automatically alternate position of "lead" and "lag", sewage pumps after each pumping cycle shall be furnished and installed.
6. The manufacturer of the control system shall be certified by the Underwriters Laboratories (UL) as a UL 698A listed system panel manufacturer certified to install serialized label for quality control and insurance liability considerations.

B. Each major component shall be identified by an engraved phenolic nameplate.

C. All wiring shall be a flexible, stranded type and each conductor shall be tagged and numbered according to wiring diagrams and neatly tied.

D. The Control Panel shall be dimensioned to facilitate maintenance.

2.02 ALARMS

A. Control panels shall be capable of reporting, a minimum, of the following alarm points:

1. Dry Well High Level (Float switch).
2. Wet Well High Level.
3. Wet Well Low Level (With auxiliary contact to stop sewage pumps.)

4. Level Controller Failure.
5. Sewage Pump High Temperature or Failure (with pump shut down, lock out relay and reset push button.)
6. Loss of Phase Voltage.
7. Sump Flood (Dry well only).

B. Provide three spare alarm points and one set of N.O./N.C. contacts from common alarm relay for remote signaling. Every alarm shall be indicated by a labeled red pilot light mounted in the control panel. A red light with guard protector, as Series VDA manufactured by Crouse-Hinds, or approved equal and a bell with silencing buttons shall be mounted in the service enclosure. The alarm lights shall remain "on" until alarm signal is reset at control panel.

2.03 MOTOR STARTERS

A. Motor starters shall be sized as indicated on the drawings, with overloads to match the supplied motors. One set of N.O/N.C. spare contacts shall be provided in the sewage pump starter. Motor starters to be Siemens, Square D, Cutler Hammer, or approved equal.

B. Starters for sewage pumps shall be three-phase, sized in accordance with the following table:

NEMA SIZE STARTER			
Motor Size (Horsepower)	Single Phase 240 Volt	Three Phase 208 Volt	Three Phase 480 Volt
Up to 5	2	1	1
7½	2	2	1
10	-	2	2
15	-	3	2
20	-	-	2
25	-	-	3
30	-	-	3
40	-	-	3
50 to 75	-	-	4
100 to 150	-	-	5

2.04 CONTROL PANEL ACCESSORIES

A. All wiring shall be a flexible, stranded type and each conductor shall be tagged and numbered according to wiring diagrams and neatly tied.

B. All external wiring shall terminate in a terminal block, Square D Type G class 9080, or equal.

C. Relays shall be socket-mounted for ease of replacement, Square D Type K Class 8501, or equal.

D. Lamps, push bottoms, and switches shall be heavy duty oil-tight/watertight, Square D, Type K Class 9001, or equal.

E. Elapsed time meters shall be provided to indicate total running time of each sewage pump in "hours" and "tenths of hours". Meters shall be Eagle Signal Series HK or approved equal. An extra elapse time meter shall be furnished and installed to indicate the total time for all pumps simultaneous run.

2.05 LEVEL CONTROLLER

A. As specified in Specification Section 16051.

2.06 TELEMETRY

A. Telemetry (RTU) provided by the City shall be installed by the Contractor in its own weather-proof and corrosion-resistant enclosure separate from the control panel enclosure. The manufacturer of the control system shall provide the hardware required to interface the controller with the City SCADA System to remotely start-stop the pumps and monitor the operation of pumps and alarms.

2.07 CONSTRUCTION

A. Outside panels shall be gasketed, NEMA 3R, free standing, stainless steel, 12 gauge minimum construction, with same material continuous hinges and dead front anodized aluminum inner door. Finishing of the enclosure to be No. 2B. Padlocking of motor circuit breakers shall not obstruct the closing of the inner doors.

B. Inside panels shall be NEMA 12, constructed of .080 inches thick anodized aluminum or 14 gauge 316 stainless steel. Control wiring shall be color coded (minimum of 16 different colors), 16 gauge, 600 volts, 90 degree C. standard tinned copper, PVC insulated with crimped terminal connections.

C. Enclosure shall be approximately 48" W x 48" H x 12" D. The top of the panel shall stand no higher than 72-inches from the top of the support concrete pad. In any case, it shall be sized to facilitate maintenance of enclosed equipment with a double door. Total length of the enclosure will depend on the size of the pumps but shall be sized to provide enough space so that every piece of equipment can be easily reached for service and maintenance. The outer doors shall be furnished with a locking latch and staple for padlock, to be furnished by the City. All hardware shall be stainless steel. Provide every outer door with a limit switch to trip a remote alarm in case of unauthorized opening. Panel seams shall be continuously welded and ground smooth. All exterior joints shall be ground level and polished smooth. Stiffeners shall be added to panel sides and doors as necessary to ensure rigidity. Lifting eyes and a rolled lip around

three sides of the outside doors shall be provided. Provide also a rain shield over the generator outlet or access opening. Enclosure shall be 12-inches deep minimum.

D. The double doors shall be made of the same material as the enclosure. All edges of the doors shall be folded inward, similar to the cabinet to form a rigid non-flexing door. The door shall be hung on a continuous stainless steel hinge with stainless steel bolts and nuts. The door shall be equipped with a three-point locking latch, a handle and a heavy-duty stainless steel staple for a padlock. Provide a friction type latch on hinge side to keep the door in position desired and to keep it from being closed by the wind.

E. Cabinet anchorage shall consist of chemical adhesive anchor cartridge system 5/8" φ, minimum, stainless steel anchor threaded rod with 5-1/2", minimum, depth of embedment. The cabinet shall be secured to the concrete base at a minimum of four locations.

F. An external red LED strobe light, vapor tight with aluminum lens protector shall be mounted on a side of the enclosure. The voltage of the strobe light shall be 120 Volts AC and will flash on an alarm condition. The strobe light will continue to flash after the alarm silence button is pressed until the alarm condition has cleared.

G. The alarm bell shall be 120 volt A.C., 6 inches diameter, 90 db, weatherproof with protecting guard. Bell shall be Simplex Series 4090 or approved equal.

H. A cast or stamped plate, with the legend "Miami-Dade Water and Sewer Department, Tel. (305) 274-9272" in characters a minimum of 2-inches high, shall be firmly attached to the upper portion of the door by welding or tamper-proof bolting.

I. Provide stainless steel weather and sun shield welded to top of panel enclosure as shown on drawings if Variable Frequency Drives (VFD) or Soft-Start equipment are included and located within the enclosure. Shield shall be factory installed.

J. All hardware including hinges, 3- point latches and handles shall be corrosion-resistant metal.

K. Make all punching, reaming, cutting and other fabricating work before any finish is applied. Prior to painting, clean, degrease and phosphate-clean all panels. Final finishing, not less than three coats of semi-gloss polyurethane paint applied over a rust inhibitor primer. Panel interior to be white, with exterior surfaces of light gray ANSI-61.

L. Provide print pocket inside the panels to hold detailed wiring and interconnecting diagrams. One copy of the relevant drawings shall be provided and placed in these pockets.

M. Wiring to be stranded copper with 600 volt rated thermoplastic insulation. Power wiring shall be No. 14 AWG and control wiring No. 16 AWG minimum. Electronic signal wiring shall be No. 18 AWG twisted and shielded pairs.

Wiring shall not be spliced. Wiring shall be tagged for identification with printed wire sleeves or self-stick labels.

1. Color Coding to be as follows:
   a. Black: AC hot (line feed and load circuits).
   b. White: AC neutral.
   c. Green: Bonding ground.
   d. Red: AC control circuits.
   e. Yellow: Wiring with foreign voltage.

N. All wiring to and from field mounted devices shall be terminated at terminal strips, not directly connected to devices. Use plastic wireway Panduit or equal to route wire within the panel. Wireway shall be run in continuous length with snap-on covers, with AC and DC power wiring in separate wireways.

O. Protect all devices against damage from electrical transients induced in interconnecting lines by lightning discharges and nearby electrical equipment. Surge suppressors shall be provided at least at any interconnection of AC power and electronic equipment and at every analog signal input with circuits extending outside the building.

2.08 PANEL MOUNTED AIR CONDITIONING UNIT (VFD APPICATIONS ONLY)

A. The enclosure shall be Stainless Steel NEMA 4X rating fully gasketed for tight, leakproof installation. It shall be UL/CUL listed with closed loop cooling to allow the interior airflow system to be isolated from the ambient airflow system. The system shall be designed so no ambient air can invade the cool, dehumidified sensitive compartment.

B. Condenser Coils shall be Epoxy-Coated. This coating shall withstand 1000 hours of salt spray per the ASTM B 117 test method.

C. An air cured coating shall be sprayed on interior copper lines and brazed joints on the condenser side to provide protection from corrosive environments. The coating shall withstand 1000 hours of salt spray per the ASTM B 117 test method.

D. The unit shall include thermostatic Low Temperature Control to prevent over-cooling and to provide energy-efficient operation. Refrigerant shall be R410A.

E. Filters shall consist of a multi-layer grid of sturdy corrugated aluminum, securely held in a one-piece aluminum frame. Filters are required wherever air is drawn into an electronics enclosure or related cooling equipment to keep internal parts as clean as possible.

F. A short cycle relay shall be installed to protect the compressor from possible damage due to harmful short cycling, (frequent starting) where temperature controls enable the compressor to restart frequently or after a power interruption.

G. The unit shall be as manufactured by Kooltronic or approved equal. The unit shall be sized appropriately.

PART 3. EXECUTION

3.01 EXAMINATION & INSTALLATION

A. Verify items provided by other sections of Work are properly sized and located.

B. Verify that built-in items are in proper location, and ready for roughing into Work.

C. The Contractor shall provide limit switch to turn light "ON" when dry well hatch is opened.

D. Minimum interrupting capacity of the electrical panel shall be 10,000 AMPS.

E. Sump pump shall be provided with high level alarm wired to the telemetry.

F. A sump pump, discharge piping and local switch shall be installed in the valve pit in.

END OF SECTION

SECTION UC-250

GRAVITY SEWER SYSTEMS

PART 1 - GENERAL

1.01 SCOPE

A. These Specifications shall govern the design, materials and installation requirements of the Department for gravity sanitary sewer systems constructed in its service area when using Poly (Vinyl Chloride)(PVC) pipe and fittings, Vitrified Clay (V.C.) pipe and fittings or Ductile Iron pipe and fittings. "PVC" shall mean Poly (Vinyl Chloride) as it relates to pipe and fittings.

B. This Specification does not purport to cover all material or installation procedures which may be required, whether by the nature of the proposed work, or by the Department, or by other regulatory agencies.

C. It is intent of the Department to obtain a complete and working installation under this project, and any items of labor, equipment or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the Plans or stated herein.

1.02 QUALITY ASSURANCE

A. All material and installation shall be in accordance with the Department's Design and Construction Standard Specifications and Details.

B. The material and installation for this project shall be in full compliance with all applicable standards listed in Section 01090, " Reference Standards"

1.03 DEFINITIONS

See Section 01005, "Defined Terms"

1.04 PROJECT APPROVAL

The approval of the Department shall be secured, in accordance with Section 17005, prior to any construction related activity.

1.05 SPECIAL CONDITIONS

The work shall proceed in accordance with the following specification sections, bound herein:

A. Section 01011 - Site Conditions
B. Section 01016 - Safety Requirements and Protection of Property
C. Section 01031 - Grades, Lines and Levels
D. Section 01100 - Special Project Procedures
E. Section 01750 - Maintenance of Traffic and Public Streets

1.06 DESIGN REQUIREMENTS

A. GENERAL

1. Gravity sanitary sewer systems shall be designed in accordance with the State of Florida Department of Environmental Protection (DEP) Rules, Chapter 62-604 for Wastewater Facilities, with OSHA requirements and with the "Florida State Board Health Sewage Guide" and the recommendations of Chapter 12 of the ASCE Manual No. 37, "Sewer Design and Construction", except as otherwise provided herein. Wet wells and manholes shall be classified as hazardous areas, Class 1, Division 2, Group C.

2. In addition, systems shall be designed in accordance with the requirements of the Miami-Dade County Department of Environmental Resource Management (DERM), the requirements of the latest edition of the South Florida Building Code and the Miami-Dade Water and Sewer Department Standards and Specifications.

3. The use of PVC pipe or AWWA C900 PVC pipe within a public water supply wellfield cone of influence or in areas zoned industrial or commercial shall be as stated under "Tightness Standards" in Section UC-370.

4. Manhole to manhole runs shall be kept in the range of no more than 400 feet without permission.

5. Slope shall be such as to maintain two feet per second minimum velocity when running full or half full when calculated using the Manning Equation with a roughness coefficient of .013.

6. Minimum slope for terminal runs shall be 0.40 percent for eight inch pipe. This slope shall be maintained for a minimum of 300 feet and longer if loading is abnormally light.

7. Design shall be performed by experienced personnel who have previously designed sewerage collection systems in Miami-Dade County. Proof of experience shall be provided if required by the Department. All design work submitted for approval shall be signed, sealed and dated by a registered professional engineer licenced to practice in the State of Florida.

8. The Department reserves the right request complete design calculations, which shall be submitted and shall be in a format easily read.

9. Design shall be conservative with sufficient peaking and infiltration factors included. Absolute minimum slopes shall not be used since minor field construction variations will reduce slopes and give actual velocity of less than two feet per second.

10. The Department reserves the absolute right to require greater slopes, higher peaking or infiltration factors if this is considered necessary upon review of design. The design/build firm shall conform with any such requirements and supply said design and construct same at no extra cost to the County.

11. The use of PVC pipe and fittings will only be permitted for gravity sanitary sewers (and service laterals) 15-inches in diameter and smaller.

1.07 PERMITS, INSPECTIONS AND FEES

A. The Contractor shall obtain and pay for all permits, official inspections and all other fees in accordance with Section 01740, "Permits".

B. Inspection by Department personnel is required in addition to, not in lieu of, municipal and County department inspections (if any).

C. No installation will be accepted until it has passed all inspections, including pavement installation or replacement.

1.08 PRECONSTRUCTION CONFERENCE

Prior to commencement of the work, the Contractor shall attend a "Preconstruction Conference" in accordance with Section 01150, "Preconstruction Conference".

1.09 SUBMITTALS

A. The Contractor shall furnish "As-Builts" in accordance with Section 01725. Project Record Documents shall be submitted in accordance with Section 01720. The Contractor shall submit operating and maintenance instructions and all other submittals in accordance with Section 01730.

B. Where the Specifications require test certification or certification that certain products or material furnished are as specified, the Contractor shall deliver such certification to the Department. No material or equipment shall be approved for use in the work until individual certification has been received.

1.10 SAFETY REQUIREMENTS

A. The Contractor shall be in compliance with all applicable provisions of the Occupational Safety and Health Act of 1970, in general, and any subsequent amendments and revisions thereto and specifically to the provisions concerning confined space entry.

B. The Contractor's personnel will be in the vicinity of raw sewage. For his own protection, as well as for his employees, he shall check with Metropolitan Dade County Health Department, and based upon their recommendation, shall have his personnel properly immunized against disease.

C. Under this project, personnel may be required to enter the existing manholes/sewers to perform certain items of work. Before entering, the Contractor shall be in compliance with Dade County Manhole Ordinance No. 83-3 (which mandates, in part, that above-ground safety personnel shall be on duty at all times when someone enters or works in a manhole/sewer and the air within a manhole / sewer shall be tested with a combination oxygen deficiency meter-explosion meter to determine oxygen content and explosion potential). A test for the presence of hydrogen sulfide shall also be performed. The work area must be ventilated mechanically by the use of an air blower, before entry and during occupancy, to insure that an adequate quantity of oxygen is supplied to the work area.

D. The Contractor shall conduct his operations in such a manner, utilizing warning devices such as traffic cones, barricades and warning lights, and personnel such as flagmen and uniformed police officers, that the public is given adequate warning of hazards of the work site as may be deemed necessary by the authority having jurisdiction and/or the Department. See Section 01750, "Maintenance of Traffic and Public Streets."

E. In the instance of men working within the manholes, the Contractor shall provide safety provisions to cover any possible consequences of structural failure and/or flooding. Such provisions might take the form of, but not be limited to, ladders in position to permit rapid egress; safety harnesses ; stand-by pumping equipment; extra air supplies; and such other measures as the situation and good construction practices might indicate.

F. Certain products specified in these Specifications contain warnings by the manufacturers that under certain conditions, if instructions for use of the product are not followed, a hazardous condition may exist. It is the Contractor's responsibility to instruct his workmen in the safe use of the product, or any product substitution.

PART 2 - PRODUCTS

2.01 GENERAL

A. All material for use in the Project shall be new and of recent domestic manufacture and shall be the products of reliable manufacturers or suppliers who, unless otherwise specified, have been regularly engaged in the manufacture of such materials and equipment for at least five (5) years.

B. All fittings and components shall, wherever possible, be standard stock articles of well known manufacturers.

C. Where the Specifications designate the products of a particular manufacturer, the product specified has been found suitable for the intended use, but, unless otherwise provided, articles or products of similar characteristics may be offered for the approval of the Department, upon approval by the Engineer of Record.

D. Copies of complete descriptive data shall be furnished regarding all material, consisting of dimension drawings, catalog references and other information necessary to clearly identify each article.

E. When substitutions are permitted, the Contractor shall make all necessary changes in adjacent or connected structures and equipment, at his expense

F. Unless otherwise specified, all steel bolts, nuts, washers and all other miscellaneous ferrous metal items (except cast iron) furnished by the Contractor shall be hot-dip galvanized in accordance with ASTM A386, "Zinc Coating (Hot-Dip) on Assembled Steel Products" and ASTM A385, Providing High-Quality Zinc Coatings (Hot-Dip)". Where the word "galvanized" or its abbreviation is used on the Plans or in the Specifications, it shall mean hot-dip galvanized. Fabricated items shall be hot-dip galvanized after fabrication. Internal threads shall be tapped or re-tapped after galvanizing.

G. Where miscellaneous materials are required for a complete installation the Contractor shall provide such materials in conformance with Section 15065, "Miscellaneous Material".

H. See Section 01100 for water used in construction.

2.02 CASTINGS

A. GENERAL

1. Material used in the manufacture of the castings shall conform to ASTM A48, "Gray Iron Castings", for Class 30 iron. Manhole and valve box covers shall have a roadway or pedestrian type surface as required by location, and shall be non-rocking.

2. Castings shall be in compliance with Section 05550. Castings shall be as manufactured by U.S.F. Fabrication, Inc., Neenah Foundry, or approved equal.

3. Castings shall be delivered unpainted with a shotblasted finish.

B. MANHOLE FRAMES AND COVERS

Manhole covers and frames shall be Department Type "A" U.S.F.&F No. 310 as manufactured by U.S.F. Fabricating, Inc., Hialeah, Florida, or approved equal. The covers shall be cast labeled "SANITARY SEWER".

2.03 BRICK

A. Clay Brick: Bricks for manhole construction shall be dense, hard burned, common clay brick conforming to ASTM Standard C62, "Building Brick (Solid Masonry Units made from Clay or Shale)".

B. Concrete Brick: Concrete bricks shall conform to ASTM Standard C55, "Concrete Building Brick".

C. All bricks shall have true edges and sharp corners and shall have been cured for at least 14 days before being placed.

2.04 CONCRETE, MORTAR AND GROUT

See Section 17033, " Concrete, Mortar and Grout (Short)"

2.05 EMBEDMENT MATERIAL

Embedment material, for bedding, haunching and initial backfill, shall conform with the requirements of Section UC-300 “Gravity Sewer Pipe Foundation”.

2.06 MANHOLE

A. Shallow manholes shall be constructed of brick or precast concrete. All other manholes shall be constructed of precast concrete. See Section 02536, "Precast Manholes & Covers"

B. Castings for manhole frames, covers and other items shall conform to Subsection 2.02, above. Casting patterns shall conform to those designated in the Miami-Dade Water and Sewer Standard Details.

C. Concrete shall conform to Section 17033.

D. Brick for manhole construction shall be clay brick, in accordance with Subsection 2.03, above.

E. Cement mortar for manhole construction shall conform to Section 17033. It shall be mixed dry and then wetted to proper consistency for use. No mortars that have stood for more than one hour shall be used. Brick manholes shall be coated with 3/4-inch thickness of mortar both inside and outside.

F. The invert channels shall be formed of brick or brick rubble thoroughly bedded and covered with sand-cement grout, accurately shaped to a semicircular bottom conforming to the inside of the adjacent sewer section. Steep slopes outside the invert channels shall be avoided. Changes in size and grade shall be made gradually and evenly. Changes in the direction of the sewer or entering branch shall be a smooth curve with radius as long as practical.

G. Frames and covers shall be set accurately to grade with a minimum of 3 and a maximum of 5 courses of brick provided as a leveling course. It shall be the Contractor's responsibility to assure that the frames and covers are set to match existing and/or proposed finish paving grades at the manhole locations.

H. For PVC Sewers:

1. The first joint at both influent and effluent sewers at each manhole, including service laterals, shall consist of an approved manhole coupling grouted into the manhole wall, and providing a continuous watertight elastomeric gasket seal between the coupling and the pipe inserted therein. The coupling shall have an increasing tapered interior from the gasket groove to allow flexibility for the pipe in the event of future settlement of the manhole or pipeline.

2. The first length of PVC pipe into or out of the manhole shall be 2-feet long, maximum, and shall be either plain-end by plain-end, or plain-end by bell. In the first option, the next joint shall be a double bell PVC repair coupling (no stop) with a maximum 1-inch gap between the pipes inserted therein. In the latter option, the next joint shall be another 2-foot long section, maximum, of plain-end by bell PVC pipe.

I. For Ductile Iron and Vitrified Clay Sewers

The first length of pipe into or out of the manhole shall be a 2-foot length of plain end by plain end ductile iron pipe (i.e. 2' as measured from the outside wall) grouted directly into the opening in the manhole wall. This P.E. X P.E. short shall be joined to the spigot end of an adjacent ductile iron sewer main by use of a ductile iron solid sleeve. In the instance of a vitrified clay main, the ductile iron P.E. X P.E. short manhole stub out shall be joined to the V.C. spigot by use of a double hub connector for vitrified clay pipe. Note that C-900 PVC repair couplings shall not be used in ductile iron or vitrified clay mains.

J. Where shown on the drawings, the Contractor shall provide stub-outs for future extensions. Both ends of all such stubouts shall be closed with specified PVC plugs.

K. Precast manholes shall conform to Section 02536, "Precast Manholes & Covers". In precast concrete manholes, holes for sewer line connections, with a diameter equal to the outside diameter of the connecting sewer plus an additional four inches (4"), shall be formed in the manhole walls. No cutting or chipping at pre-formed holes, or cutting additional holes in precast concrete walls will be allowed.

L. A minimum of three to a maximum of five courses of brick shall be constructed atop each manhole corbel.

M. Prior to acceptance of manhole, the Contractor shall verify that he has installed required manhole accessories and coating/lining (See Section 02536)

2.07 POLY (VINYL CHLORIDE) PIPE

Pipe for use in gravity sewer systems shall be Vitrified Clay, Ductile Iron with polyethylene or ceramic epoxy (Protecto 401) lined , PVC SDR 35, or AWWA C900, C905 PVC as shown on the plans or called out elsewhere herein. For further information on these types of pipe, see Section 15060, “Piping and Fittings”.

2.08 REINFORCING STEEL

A. Bar reinforcement for concrete structures shall conform to the requirements of ASTM Standard A615 "Deformed and Plain Billet-Steel Bars for Concrete Reinforcement", Grade 60, Deformed, except that steel manufactured by the Bessemer Process will not be accepted. Wire mesh reinforcing for concrete paving or driveway repairs, if required, shall be welded wire fabric meeting the requirements of ASTM Standard A185, "Steel Welded Wire, Fabric, Plain, for Concrete Reinforcement".

B. The Contractor shall furnish the Department with manufacturer's test certificates showing the steel to meet the above requirements, in addition to which the Department may take representative samples from the material on the job and have them tested by an independent testing laboratory. Completely detailed shop drawings and bending schedules shall be submitted by the Contractor for the approval of the Engineer of Record. Such approval shall be obtained before the bars are cut and bent.

2.09 DUCTILE IRON CASING PIPE

Ductile iron casing pipe shall be ANSI/AWWA Standard C151/A21.51, Class 50, no lining required. Casing pipe shall be one size larger than PVC pipe to be encased, unless otherwise approved.

2.10 DUCTILE IRON SEWER PIPE

A. Ductile iron sewer pipe shall be ANSI/AWWA Standard C151/A21.51, Class 53 for 6-inch, Class

52 for 8-inch, Class 50 for 10-inch through 15-inch. Ductile iron pipe shall conform to Section 15060.

B. All ductile iron pipe and fittings 8-inches and larger in diameter for use in force mains and gravity sewers, except riser pipes, shall be delivered with either heat fused virgin polyethylene lining or ceramic epoxy lining (See Section 15060). The only ceramic epoxy material approved by the Department at this time is a high-build multi-component Amine cured Novalac epoxy, Protecto 401, by Vulcan Painters, Inc. of Bessemer, AL 35021.

2.11 MISCELLANEOUS MATERIAL

A. The Contractor shall furnish and install all miscellaneous material and appurtenances required for a complete installation. Section 15065 specifies material necessary for a complete installation, not specified herein. These material, including the following, shall be installed when required, whether shown on the Plans or not.

1. Paint, Bituminous
2. Caulking Compound
3. Manhole Couplings
4. PVC double bell repair couplings, No-stop (sleeves)
5. PVC double bell transition couplings or adapters PSM SDR-35 PVC Sewer Pipe to ductile-iron or AWWA C900 CI-PVC Pressure pipe.
6. Stainless steel repair clamps, with stainless steel bolts

PART 3 - EXECUTION

3.01 PIPE INSTALLATION, GENERAL

A. Proper and suitable tools and appliances for the safe convenient handling and laying of pipe shall be used and, in general, conform with manufacturer's recommendations. At the time of laying, the pipe shall be examined carefully for defects, and should any pipe be discovered to be defective after being laid, it shall be removed and replaced with sound pipe by the Contractor at his expense.

B. Pipe and fittings shall, at all times, be handled with great care to avoid damage. In loading and unloading, they shall be lifted with cranes or hoists or slid or rolled on skidways in such manner as to avoid shock. Under no circumstances shall this material be dropped or allowed to roll or slide against obstructions. Pipe an other material shall be distributed along the right-of-way in advance of installation only to the extent approved by the Department. Such materials shall be so placed as to keep obstruction to traffic minimum.

C. Upon satisfactory completion of the pipe bedding, a continuous trough for the pipe barrel and recesses for the pipe bells, or couplings, shall be excavated by hand digging. When the pipe is laid in the prepared trench, true to line and grade, the pipe barrel shall receive continuous, uniform support with no pressure being exerted on the pipe joints from the trench bottom.

D. Pipe shall be installed in accordance with the manufacturer's recommendation. Before being lowered into the trench, the pipes and accessories shall be carefully examined and the interior of

the pipes shall be thoroughly cleaned of all foreign matter and other deleterious materials by methods acceptable to the Department. During suspension of work, for any reason, at any time, a suitable stopper shall be placed in the end of the pipe last laid to prevent mud, dirt, groundwater or other foreign material from entering the pipe. Any pipe which is disturbed or found defective shall be immediately removed and replaced with sound pipe.

E. Gaskets shall be thoroughly checked for breaks, cuts or other damage, and shall be free of oil, grease, dirt or other foreign matter. Pipe joints shall be assembled with care. Lubricant, if required shall be as recommended by the manufacturer of the pipe, and shall have no deteriorating effects on the gasket and pipe materials. If assembly is under water, lubricant recommended by the manufacturer for underwater use is required.

F. Good alignment of the pipe is required for assembly. Align the spigot to the bell of the previously laid pipe and insert the spigot into the bell until it uniformly contacts the gasket. Apply steady pressure until the spigot easily slips through the gasket. Do not push or swing the spigot into the bell. Smaller diameter pipe and fitting may be assembled manually. Mechanical means such as bars and blocks, ratchets or jacks shall be used for joining larger pipe and fittings. Power equipment such as a backhoe bucket, shall not be used to assemble pipe and fittings, since excessive force may damage the gasket or bell.

G. Cutting the pipe in the field shall be done by the Contractor in a neat and workmanlike manner using manual or power saws. The pipe shall be marked around its entire circumference before cutting to assure a square cut. After cutting, the end shall be beveled with a beveling tool, rasp, or other approved equipment, to the proper taper. Mark the proper insertion depth on the cut and beveled end before installing the cut pipe into the pipeline. Pipe laying shall proceed up-grade from the lowest point of the proposed system, with spigot ends pointing in the direction of flow.

H. All pipe shall be laid straight, true to the lines and grades shown on the Plans, or matching existing grade, in each section between manholes. The pipe shall be laid so that the identification markings are located on the top of the installed pipelines.

I. Each individual length of pipe shall be solidly and evenly bedded and haunched throughout its length on a prepared bed on the floor of the trench and not supported in position on blocks or wedges. Pipe shall only be laid when the two preceding lengths have been thoroughly embedded in place to prevent any movement or disturbance of the finished joint. Any pipe which is disturbed or found to be defective after laying shall be taken up and relaid or replaced.

J. Any work within the pipe and fittings shall be performed with care to prevent damage to the interior wall of the pipe. Damaged interior walls shall be repaired or the pipe section or fitting replaced as required by the Department. No cables, lifting arms, hooks or other devices shall be inserted into the pipe or fitting. All lifting, pulling or pushing mechanisms shall be applied to the exterior of the pipe or fitting.

K. After pipe has been laid, reviewed and found satisfactory, sufficient backfill shall be placed along the pipe barrel to hold the pipe securely in place during the conduction of the required tests.

3.02 INSTALLATION OF DUCTILE IRON AND VITRIFIED CLAY PIPE

A. Installation of gravity sewers shall conform to the applicable requirements of ANSI/AWWA Standard C600-93, "Installation of Ductile Iron Water Mains and Appurtenances".

B. Cutting of ductile iron pipe for fittings and other connections shall be done by the Contractor in a neat and workmanlike manner without damage to the pipe, the lining, or the coating. Pipe shall be cut with a mechanical pipe saw. After cutting the pipe, the plain ends shall be filed to remove all sharp edges and burrs.

C. Polyethylene encasement of valves, cast iron pipe and fittings, if required by the Department, shall be installed in accordance with ANSI/AWWA C105/A21.5, "Polyethylene Encasement for Ductile-Iron Piping for Water and Other Liquids" Method A, B or C.

D. If any difficulty is experienced in assembling lengths of pipe together in the trench, the pipe sections shall be tried on the surface of the ground and each length of pipe plainly marked for position and sequence in which they are to be installed.

E. Ductile iron solid sleeves shall be used to connect D.I. pipe spigots to existing D.I. manhole stub spigots. Vitrified clay double hub connectors shall be used to connect D.I. manhole stub outs to V.C. pipe spigots.

F. All bolts, nuts, gaskets or other joint materials for use in the pipeline shall be properly protected.

G. Gaskets shall be properly stored, and care shall be exercised to keep them away from heat, light, oil, gasoline or other petroleum products. Gaskets shall be kept clean at all times and not handled with greasy or dirty hands.

3.03 INSTALLATION OF POLY VINYL CHLORIDE (PVC) PIPE

A. Each length of pipe, immediately prior to being placed in position in the trench, shall be inspected, cleaned and prepared for installation. Gaskets shall be thoroughly checked for breaks, cuts or other damage, and shall be free of oil, grease, dirt or other foreign matter. Pipe joints shall be assembled with care. Lubricant, if required, shall be as recommended by the manufacturer of the pipe, and shall have no deteriorating effects on the gasket and pipe materials. If assembly is underwater, lubricant recommended by the manufacturer for underwater use is required. Good alignment of the pipe is required for assembly. Align the spigot to the bell of the previously laid pipe and insert the spigot into the bell until it uniformly contacts the gasket. Apply steady pressure until the spigot easily slips through the gasket. Do not push or swing the spigot into the bell. Small diameter pipe and fittings may be assembled manually. mechanical means such as bars and blocks, ratchets or jacks shall be used for joining larger pipe and fittings. Power equipment, such as backhoe bucket, shall be not be used to assemble pipe and fittings, since excessive force may damage the gasket or bell.

B. Cutting the pipe in the field shall be done by the Contractor in a neat and workmanlike manner using manual or power saws. The pipe shall be marked around its entire circumference before cutting to assure a square cut. After cutting, the end shall be beveling tool, rasp, or other approved equipment, to the proper taper. Mark the proper insertion depth on the cut and beveled end before installing the cut pipe into the pipeline. Pipe laying shall proceed up-grade from the lowest point of the proposed system, with spigot ends pointing in the direction of flow. All pipe shall be laid straight, true to the lines and matching existing grade, in each section between manholes. The pipe shall be laid so that the identification markings are located on the top of the installed pipelines. At all times when work is not in progress, the exposed ends of all pipes shall be fully protected by an approved stopper to prevent groundwater, dirt, rocks or other substances from entering the pipe.

3.04 PIPE-TO-PIPE CONNECTIONS

Pipe-to-pipe connections shall be made by using solid sleeves for Ductile Iron, double hub

connectors for vitrified clay and double bell couplings for PVC.

3.05 PIPE-TO-PIPE MANHOLE CONNECTIONS

When a sound pipe stub-out exists at a manhole to which connection is to be made, a pipe-to-pipe connection shall be made as described above. If a stub-out is not present or is faulty, an opening shall be cut in the manhole wall and the connection made. The connection shall be constructed as specified above in paragraphs 2.06 H and I with the pipe material/method chosen to match that of the new line. The invert/shelf area inside the manhole shall be cut and reshaped as necessary to construct the new channels in compliance with WASD Standard Details

3.06 GRAVITY SEWER SERVICE LATERALS

See Section UC-310, "Gravity Sewer Service Laterals".

3.07 MODIFICATIONS OF EXISTING MANHOLES

See Section UC-330, "Repairs to Department Sewers"

3.08 EXCAVATION

See Section 02315, "Trenching and Backfilling for Piping Systems"

3.09 SEWER PIPE FOUNDATION

See Section UC-300, "Gravity Sewer Pipe Foundation"

3.10 CLEANING AND TESTING

See Section UC-370, "Cleaning and Testing Gravity Sewers"

3.11 SEWERAGE REMOVAL

See Section UC-290, "Removal of Sanitary Sewerage and Debris"

3.12 SEWAGE FLOW CONTROL

See Section UC-320, "Sewerage Bypass Pumping and Flow Control"

3.13 REPAIR OF DAMAGE TO DEPARTMENT MAINS & SEALING LEAKS

See Section UC-330, "Repairs to Department Sewers"

3.14 DEFLECTION TEST

See Section UC-350, "Sewer Deflection Test"

END OF SECTION

SECTION UC-290

REMOVAL OF SANITARY SEWERAGE AND DEBRIS

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall furnish all labor, material and equipment required for the removal of sanitary sewer mains and appurtenances.

1.02 RELATED SECTIONS

Section 01016 - Safety Requirements and Protection of Property
Section 01100 - Special Project Procedures
Section 02315 - Trenching and Backfilling for Piping Systems

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 REMOVAL OF SANITARY SEWER

A. During cleaning operations and removal sewer mains, all sludge, dirt, sand, rock, grease, laitance (lime scum), roots, mortar, unsound concrete and other materials shall be completely removed. If the steel reinforcing is exposed, the Contractor shall request guidance from the Engineer of Record.

B. Under no circumstances shall sludge or other debris removed during cleaning or sewer main removal operations be dumped or spilled into the streets, ditches, storm drains or other sanitary sewers. However, water decanted from removed solids shall be returned to the sewer.

C. The Contractor is advised that he shall not dispose of this material by dumping on private or public property, by sale to others, or any means other than those given below. Any load of material, or any portion thereof, disposed of in a non-permitted fashion will result in a charge to the Contractor in the amount of $500.00 per load, or any portion thereof, which sum will be deducted by the Department from any monies due the Contractor. Additionally, the Contractor shall be backcharged for any fines, penalties, or other costs or damages imposed upon the City any agency or private party as a result of improper disposal by the Contractor.

D. The Contractor shall keep his haul route and work area(s) neat and clean and reasonably free of odor, and shall bear all responsibility for the cleanup of any spill which occurs during the transport of cleaning or surface preparation by-products and the cleanup of any such material which is authorized by or pursuant to this Contract and in accord with applicable law or regulations. The Contractor shall immediately cleanup any such spill or waste. If the Contractor fails to cleanup

such spill or waste immediately, the Department shall have the right to cleanup or arrange for its cleanup and shall charge to the Contractor all costs, including administrative cost and overhead, incurred by the Department in connection with such cleanup. The Department shall also charge to the Contractor any costs incurred or penalties imposed on the Department as a result of any spill, dump or discard. Under no circumstances is this spilled material to be discharged into the waterways or any place other than where authorized to do so by the appropriate authority. The term "Contractor" as used in this section shall include the Contractor's subcontractors and other Contractors.

D. The general requirements for vehicles hauling such waste materials are as follows: Transport vehicles must be of type(s) approved for this application by the political jurisdiction involved. General requirements are that the vehicles have watertight bodies, that they may be properly equipped and fitted with seals and covers to prohibit material spillage or drainage, and that they be cleaned as often as is necessary to prevent the deposit of material on the roadways. Vehicles must be loaded within legal weight limits and operated safely within all traffic and speed regulations.

E. The routes used by the Contractor for the conveyance of this material on a regular basis shall be subject to approval by the governing authority having jurisdiction over such routes.

F. All waste materials and debris removed during these operations shall be, if sufficiently dewatered (at least 20 percent solids and no visible moisture), conveyed directly to the County's Class I sanitary landfill, the South Dade Solid Waste Disposal Facility, 24000 S.W. 97th Avenue, Dade County, Florida. Solids which are too wet for direct deposit at the landfill shall be conveyed to and deposited on the Plant's "cleanout" pad established to receive and drain/dry this material. All cost for such removal and disposal, including tipping fees, shall be paid by the Contractor.

G. Material cleaned from the sewer shall be removed from the site for disposal as each truck is filled and at the end of each work shift.

H. Copies of records of all disposal shall be furnished to the Engineer of Record, indicating disposal site, date, amount, and a brief description of material disposed. Under no circumstances will the Contractor be allowed to accumulate debris, etc., on the site of work beyond the stated time, except in totally enclosed containers and as acceptable to the Department.

END OF SECTION

SECTION UC-300

GRAVITY SEWER PIPE FOUNDATION

PART 1 - GENERAL

1.01 WORK INCLUDED

The work under this Section includes the installation of gravity sewer pipe foundations.

1.02 RELATED SECTIONS

Section 01016 - Safety Requirements and Protection of Property
Section 01100 - Special Project Procedures
Section 02315 - Trenching and Backfilling for Piping Systems

PART 2 - PRODUCTS

2.01 Material: See Part 2 of Section 02315

PART 3 - EXECUTION

3.01 GENERAL

A. Excavation shall proceed in accordance with Section 02315, "Trenching and Backfilling for Piping Systems".

B. Gravity sewers shall be constructed using Vitrified Clay, Poly Vinyl Chloride (PVC) (SDR 35 or AWWA C900) pipe and fittings or ductile iron pipe and fittings, as shown on the approved Plans (See Section 15060, "Piping and Fittings" for D.I.P. or Section UC-250, “Gravity Sewer Systems” for PVC).

3.02 FOUNDATIONS FOR V.C. AND D.I.P. AT DEPTH OVER 10 FT. OR BELOW WATER

A. Sewer pipe constructed at a depth greater than 10 feet, or with a trench bottom below groundwater, shall have a rockbed foundation, in accordance with Section 02315. The trench shall be excavated to a depth of at least 6 inches below the bottom of the pipe, the trench backfilled with a layer of rockbed firmly compacted, the pipe solidly bedded and additional rockbed firmly packed and thoroughly compacted under and around the pipe up to the springline.

B. See Subsection 3.03, below, for sewer pipe constructed at a depth less than 10 feet and trench bottom above groundwater.

3.03 FOUNDATIONS FOR V.C. AND D.I.P. AT DEPTH ABOVE 10 FT. AND ABOVE WATER

Pipe constructed at cut ranges less than 10 feet, and the trench bottom is above ground water, shall be installed according to the following conditions:

A. Installation in Rock Bottom

Where rock is encountered at the bottom of a trench in which pipe is to be installed, the excavation shall be extended to a depth at least 6 inches below the bottom of the pipe and shall be backfilled with selected backfill material in 6-inch layers, with each layer being firmly compacted, and with the final layer carefully graded and compacted at the proper elevation to provide continuous support for the pipe barrels. Where pipe bells will be located, depressions shall be excavated in the trench bottom to provide clearance under the bell or socket.

B. Installation in Soil Bottom

Where rock is not encountered at the bottom of a trench excavation, and the soil is satisfactory for pipe foundation, in the opinion of the Engineer, excavation shall be halted at an elevation slightly above that for bedding the pipe, and the pipe bed carefully excavated by hand in the undisturbed trench bottom to provide continuous bearing for the pipe barrels and clearance under the bells or sockets, or machine excavation may extend slightly below the elevation for bedding the pipe with the trench bottom carefully backfilled and compacted as specified.

3.04 FOUNDATIONS FOR PVC GRAVITY SEWERS

Embedment material (for bedding, haunching and initial backfill) shall be Class I in stable soil conditions, and Class II in unstable soil conditions, as modified herein.

A. Class I materials shall be angular, 1/4 to 3/4 inch graded stone including washed and graded limerock.

B. Class II materials shall be well graded coarse sands and gravels with the following gradation requirements:

Sieve Size	Percent Passing By Weight
3/4	100
3/8	85-100
#8	40-60
#30	5-30
#100	0-2

END OF SECTION

SECTION UC-310

GRAVITY SEWER SERVICE LATERALS

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall furnish all labor, material, equipment and appurtenances necessary for the installation of gravity sewer service laterals, complete, in accordance with these specifications.

1.02 RELATED SECTIONS

Section 01016 - Safety Requirements and Protection of Property
Section 02315 - Trenching and Backfilling for Piping Systems
Section UC-250 - Gravity Sewer Systems

1.03 QUALITY ASSURANCE

A. Lateral sewers shall be installed in accordance with all the applicable requirements for pipe installation. Branch fittings shall be installed in the main line sewer as it is constructed, in the locations and configuration of the original laterals or as designated by the Engineer.

B. All excavations shall be executed in accordance with the South Florida Building Codes, OSHA requirements, the State of Florida Trench Safety Act (TSA), the State of Florida Trench Safety Act (TSA) and all applicable requirements of Section 01016, including notification of the Sunshine State One-Call Center (1-800-432-4770), 48 hours prior to any excavation.

PART 2 - PRODUCTS

See Part 2 of Section UC-250, "Gravity Sewer Systems" & "Tightness Standards" under Section UC-370.

PART 3 - EXECUTION

3.01 INSTALLATION OF LATERALS

A. Service laterals shall be installed in accordance with the requirements for gravity main installation. Branch fittings shall be installed in the main line sewer as it is constructed. The branch fittings shall be either a tee set for a modified riser when the top of the sewer is 7 feet or deeper, or a wye set and connected as shown in the Miami-Dade Water and Sewer Department's Standard Details SS 1.0 and 2.0, respectively. In no case shall the branch be covered until its location has been measured and recorded.

B. Where a service lateral enters a manhole at an elevation of 2 feet or more above the

sewer main invert, a drop connection shall be required.

C. Each service lateral shall be plugged at the point shown on the Standard Details. Plug shall provide a watertight seal, without the use of adhesives or epoxies, and shall be subject to approval by the Department. In no case shall a service lateral be covered until its exact location is measured and recorded, nor until a two-inch square by two feet long, pressure-treated pine stake, with the top stained or painted green, has been set by the Contractor at the end of the service lateral.

D. The Contractor shall not excavate trenches for service laterals to both sides of the street at the same time unless written permission has been secured in advance to close the street.

3.02 REMOVAL AND REPLACEMENT OF LATERALS

A. Excavate in accordance with Section 02315, "Trenching and Backfilling for Piping Systems"

B. The existing laterals shall be hand excavated to a joint, disassembled, or if necessary saw cut, clean and square and the appropriate adapter installed to connect the replacement lateral. Care shall be taken to maintain the slopes of the existing lateral. The lateral shall be removed and replaced from the main line to a point along the existing lateral determined by the Engineer of Record to be in acceptable condition.

C. Placement of bedding/cover materials in the trench shall be the same for laterals as provided in Section UC-300, "Gravity Sewers Pipe Foundation".

END OF SECTION

SECTION UC-320

SEWERAGE BYPASS PUMPING AND FLOW CONTROL

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall furnish and install all labor, material and equipment necessary to control the flow of sewage in accordance with this Section. This Section also contains provisions regarding surcharging sewers and sewage spills.

1.02 SUBMITTAL

The Contractor shall submit complete, detailed plans for this aspect of the work to the City for approval.

1.03 SPECIAL PROVISIONS

A. All applicable requirements in the following specification sections shall apply during execution of the work:

Section 01100 - Special Project Procedures
Section 01750 - Maintenance of Traffic and Public Streets

B. For projects where twenty-four (24) hour by-pass pumping of sewage is required, the Contractor shall provide personnel for manning and maintenance.

C. The Contractor shall be completely responsible for conditions at the job site, until acceptance of the project; he shall provide for traffic safety, traffic control and protection of property; and he shall be directly responsible to property owner(s) for any damage, injury, expense, loss, suits, or claims in accordance with Section 01016, "Safety Requirements and Protection of Property".

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 BYPASS PUMPING/FLOW CONTROL, GENERAL

A. The Contractor shall be prepared to bypass pump the sewage effluent as a part of his operations, if necessary. The Contractor shall provide all necessary pumps, piping, and other equipment to accomplish this task with each mobilized crew and shall be prepared to perform all construction; obtain all permits; pay all costs; and perform complete restoration of all existing facilities to equal or better condition and to the satisfaction of the City. Bypass

pumping will occur where high flow rates and insufficient upstream storage capacity make this necessary. All costs of accomplishing the bypass pumping tasks, at whatever volume, and all associated work, such as, for example, construction of intake and discharge points, and restoration, shall be considered as incidental to the work.

B. When sewer line flows at the upstream manhole of the gravity main being replaced or the pump station wet well are above the maximum allowable requirements for the replacement, the flows shall be reduced to the levels indicated by one of the following methods: manual operation of pumping stations by the City forces, by the Contractor plugging/blocking of the flows, or by the Contractor pumping/bypassing of the flows all as acceptable to the City.

C. In some applications, the sewer may be plugged and wastewater contained within the capacity of the collection system. This shall only be done when it has been determined that the system can accommodate the surcharging without any adverse impact.

D. When sewer line flows at the upstream manhole of the line being removed and replaced, in the opinion of the Engineer of Record, are too excessive to plug while the work is being performed; the Contractor shall submit for approval by the City, a written plan and pump/ bypass the flow.

E. For all service lateral reestablishment, testing and sealing, the depth of flow within the sewer shall not exceed that shown below for the respective pipe sizes as measured in the manhole.

	Maximum Depth of Flow
4-inch - 12-inch Pipe	25 percent of pipe diameter
15-inch - 18-inch Pipe	30 percent of pipe diameter

3.02 PLUGGING AND BLOCKING

A sewer line plug shall be inserted into the line at a manhole upstream from the section being removed and replaced or pump station wet well being re-worked. The plug shall be so designed that all or any portion of the operation flows can be released. During removals and replacement, the flows shall be shut off and monitored or pumped / bypassed, as acceptable to the City. After the work tasks have been completed, flows shall be restored to normal.

3.03 PUMPING AND BYPASSING

A. When pumping / bypassing is required, as approved by the City the Contractor shall supply the necessary pumps, conduits and other equipment to divert the flow of sewage around the sewer section or pump station in which work is to be performed. The bypass system shall be of sufficient capacity to handle existing flows plus additional flow that may occur during periods of rain storms. The Contractor shall be responsible for furnishing the necessary labor and supervision to set up and operate the pumping and bypassing system. A "setup" consists of the necessary pumps (including backup pumps if required), conduits and other equipment to divert the flow of sewage around the pump station or sewer section, from the start to finish of work performed in the pump station or sewer section.

B. Pumps and equipment shall be continuously monitored by a maintenance person capable of starting, stopping, refueling and maintaining these pumps during the construction. If pumping

is required on a 24-hour basis, engines shall be equipped in a manner to keep noise to a minimum. In the instance of work on a pump station, the Contractor may be required to provide, at his sole expense, a temporary electric service, electrically driven pump(s) and engine driven backup pump(s).

3.04 SURCHARGING SEWERS

A. Where the raw sewage flow is blocked or plugged, sufficient precautions must be taken to protect the public health. Upstream flow shall be monitored. The sewer lines shall also be protected from damage. The following occurrences will not be allowed:

1. No sewage shall be allowed to back up into any homes or buildings.

2. No sewage shall overflow any manholes, cleanouts or any other access to the sewers.

3. Users upstream of the repair area shall be able to use all their water and sewer utilities without interruption.

B. If any of the above occur or are expected to occur, the Contractor shall bypass pump to alleviate one or all of the conditions. Additionally, the Contractor is required to observe the conditions upstream of the plug and be prepared to immediately start bypass pumping, if needed.

3.05 PUMP DISCHARGE

Any sump pumps, bypass pumps, trash pumps or any other type pump which pulls sewage/water or any type of material out of the manhole or sewer shall discharge this material into another manhole, or appropriate vehicle or container acceptable to the Engineer of Record. Under no circumstances shall this material be discharged, stored or deposited on the ground, swale, road or open environment.

3.06 MAINTENANCE OF TRAFFIC FOR BYPASS PUMPING

The Contractor shall take appropriate steps to ensure that all pumps, piping and hoses that carry raw sewage are protected from vehicular traffic and pedestrian traffic. Maintenance of traffic shall be performed in accordance with Section 01750, "Maintenance of Traffic and Public Streets"

3.07 SEWAGE SPILLS

A. In the event, during any form of "Sewage Flow Control," that raw sewage is spilled, discharged, leaked or otherwise deposited in the open environment, due to the Contractor's work, the Contractor is responsible for any cleanup of solids and disinfection of the area affected and liability for any claims. This work shall be performed at the Contractor's expense with no cost to the City.

B. The Contractor is also responsible for notifying the sewer system maintenance personnel and complying with any and all regulatory requirements in regard to the size of spill with no cost to the City.

C. The Contractor shall be backcharged for any fines, penalties or other costs or damages imposed upon the City by any agency or private party as a result of a spill or improper discharge by the Contractor.

END OF SECTION

SECTION UC-330

REPAIRS TO DEPARTMENT SEWERS

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall furnish all labor, material and equipment required to repair the Department's sewers due to damage caused by his operations or as required to perform necessary modifications to existing installations.

1.02 RELATED SECTIONS

Section 01016 - Safety Requirements and Protection of Property
Section 01100 - Special Project Procedures
Section 02315 - Trenching and Backfilling for Piping Systems
Section UC-250 - Gravity Sewer Systems

PART 2 - PRODUCTS

2.01 CHEMICAL JOINT AND CRACK SEALING MATERIALS FOR ACTIVE LEAKS

A. Chemical joint and crack sealing materials used on this Project shall have the following properties: react quickly to form a permanent watertight seal; resultant seal shall be flexible and immune to the effects of wet/dry cycles; non-biodegradable and immune to the effects of acids, alkalis, and organics in sewage; component packaging and mixing compatible with field conditions and worker safety; extraneous sealant left inside pipe shall be readily removable.

B. Chemical joint sealing material shall be acrylic resin type and shall be furnished with activators, initiators, inhibitors and any other materials recommended by the manufacturer for a complete grout system. Sealing grout shall be furnished in liquid form in standard manufacturer's containers. Sealing grout shall be AV-118 Duriflex manufactured by Avanti International, Houston, Texas (1-800-877-2570) or approved equal.

PART 3 - EXECUTION

3.01 REPAIRS DUE TO CONTRACTOR'S OPERATIONS

A. The Contractor shall exercise caution to insure that his operations do not damage the existing sewer. The Contractor shall be responsible for repairs to the sewers which are necessary due to damage caused by the Contractor's operations. Such repair shall be considered as part of the work.

B. Damaged pipe or manholes shall be replaced in kind or repaired by the Contractor to the satisfaction of the Department, with emphasis on providing a good, solid foundation for the new pipe. Temporary paving and permanent paving repairs shall also be made by the Contractor.

C. Contractor shall immediately repair any damage using methods satisfactory to the Engineer. Repairs shall proceed on a 24-hour/day, seven day/week basis if so directed by the Department. If the Contractor fails to immediately repair any such damage, the Department shall have the right to make the repair or have the repair made, and may charge to the Contractor all costs, including administrative costs and overhead, incurred by the Department in connection with the repair. The Department shall also charge to the Contractor any costs incurred or penalties imposed on the Department as a result of such damage.

D. The Contractor is strongly advised not to position equipment having greater than an AASHTO H-20 loading above the sewer line. Repair of any damage caused by such equipment loads shall be at the Contractor's expense.

E. Any repairs requiring excavation, except emergency work, shall have prior approval of the Engineer.

3.02 MODIFICATION OF EXISTING MANHOLES

Where modification of existing manholes are required to replace existing mains the following requirement shall be adhere to:

A. After satisfactory replacement and testing of mains all interior concrete surfaces of the modified manhole shall be high pressure washed and seal coated with 2 coats of a coal tar epoxy, Kop-Coat Company Bitumastic 300-M, or approved equal. Each coat shall have a dry film thickness of 8 mils, minimum. The requirements of this paragraph are not applicable to existing manholes to lined with a Department approved liner. (See Section 02536 for additional requirements.)

B. The modifications to the invert channels of the manhole shall be formed of brick or brick rubble thoroughly bedded and covered with sand-cement grout, accurately shaped to a semi-circular bottom conforming to the inside of the adjacent sewer section. Steep slopes outside the invert channel shall be in the direction of the sewer or entering branch shall be a smooth curve with radius as long as practical

C. Gravity sewer shall connect to the manholes in accordance with Miami Dade Water and Sewer Department's Standard Details and Section UC-250.

3.03 SEALING OF POST-REPLACEMENT LEAKS

In the event it becomes necessary to seal sewer pipe to stop leakage after sectional replacement, the following procedure shall be used:

A. Chemical joint or crack sealing material specified above or as approved by the Department shall be furnished and satisfactorily installed. The Contractor shall modify his equipment as necessary to seal the leaks, however both his equipment and sealing method shall meet the approval of the Department prior to use.

B. Extreme caution shall be utilized during leak sealing (pressure) operations in order to avoid damage of the sewer pipe. If any damage occurs, it shall be repaired as specified in Subsection 3.01, above, and to the satisfaction of the Department. Excessive pumping of grout which might plug a service lateral shall be avoided. Any service laterals blocked by the

grouting operation shall be cleared immediately by the Contractor.

END OF SECTION

SECTION UC-350

SEWER DEFLECTION TEST

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall test new sewer system installations, completely and satisfactorily, prior to final acceptance by the Department.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 GENERAL

All testing performed by the Contractor shall be witnessed by the Department Inspector, who shall be notified a minimum of twenty-four (24) hours in advance of the test.

3.02 DEFLECTION TESTS

A. Deflection testing of the new sewer shall be performed by the Contractor. No section of sewer shall be tested before at least 30 days have elapsed from the date of completed backfill over the section. The pipe will be observed for evidence of obvious ovality, deflected or offset joints, and other pipe defects.

B. The deflection, or deformation of the pipe due to external loading, shall not exceed approximately 7.5 percent. All labor, materials and equipment necessary for cleaning the sewers and performing the deflection testing shall be furnished by the Contractor. However, prior to the test, the Contractor's mandrel must pass a ring gauge test, performed by the Inspector at the site using the Department's ring gauge, to show that the mandrel is properly sized in accordance with the mandrel sizes listed hereinbelow 7.5 percent deflection.

C. Deflection testing the system may also be performed by the Department, at its cost, at any time during the Warranty or Contract Bond period, and the deflection in any pipe shall not exceed 7.5 percent.

D. Deflection shall be determined by passing an approved go/no go mandrel through the gravity sewer main. Deflection will be based on the average inside diameter as presented in ANSI/AWWA C900, "AWWA Standard for Polyvinyl Chloride (PVC) Pressure Pipe, 4 inches through 12 inches, for Water Distribution:", Table 1, for Poly (Vinyl Chloride) (PVC) C 900 pipe. However, no mandrel testing is required for AWWA C900 PVC pipe installed with up to 14 feet of cover, in accordance with subsection 1.05-C of Section UC-005.

E. The deflection may also be based on the average inside diameter as presented in ASTM D3034, Table XI.I, for PSM SDR35 PVC sewer pipe. The mandrel sizes are listed as follows:

Pipe Size Nominal (inches)	Average Inside Diameter	Mandrel 7.5% Deflection
6	5.893	5.31
8	7.891	7.09
10	9.864	8.84
12	11.737	10.51
15	14.374	12.86

F. If any pipe fails the deflection test, performed by the Contractor or by the Department, unstable conditions and/or improper bedding will be assumed. The overly deflected pipe shall be removed and replaced by the Contractor, at his expense. Re-rounding of overly deflected pipe will not be allowed. A trench to unstable conditions, as shown on Department Standard Detail SS 18.0, shall be excavated and new pipe installed to unstable soil condition specifications. New replacement pipe shall be connected to existing pipe to remain with new double bell PVC repair couplings (no stop) with a maximum 1-inch gap between the pipes inserted therein. The couplings shall conform to the Specifications herein for PVC pipe and fittings. The Contractor shall furnish the Department with a new one year Warranty or Contract Bond guaranteeing the replacement work and materials under the same terms and conditions as the original new Warranty or Contract Bond. The new warranty period shall commence from the Department's acceptance of the replacement work performed by the Contractor.

END OF SECTION

SECTION UC-370

CLEANING AND TESTING GRAVITY SEWERS

PART 1 - GENERAL

1.01 SCOPE OF WORK

The Contractor shall furnish all material, labor and equipment necessary to clean and test gravity sewers and sanitary force mains and shall conduct all testing required, under the direction of the Engineer.

1.03 QUALITY ASSURANCE

Cleaning and testing shall be performed in strict accordance with these specifications.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 GENERAL

A. All drain and gravity sewer line segments or sections shall be separately and individually lamped and tested for infiltration and exfiltration, unless otherwise allowed by the Engineer. A line “segment” or “section” shall be defined as a run of pipe between a manhole and the next manhole either up or down stream of that manhole.

B. Each section of gravity pipe sewer, upon its completion or at such other time as the Engineer may direct, is to be cleaned, tested and inspected.

C. The allowable limits of infiltration or exfiltration or leakage for the drain or sewer lines, or any portion thereof shall not exceed the appropriate rate as specified in 3.04 “Tightness Standards”, below. Duration of tests shall be a minimum of two hours.

D. Since allowable leakage is defined in gallons per hour, testing shall be conducted in, at a minimum, two independent one-hour test periods. Testing shall continue for additional one-hour periods if during any subsequent test period leakage increases above that of any previous test period even if the leakage is within the allowable amount. Testing shall continue until the leakage stabilizes or decreases.

E. When allowed by the Engineer in writing, longer portions of the line may be tested. However, no more than three manhole sections or 1000 feet of sewer (whichever is the lesser) shall be tested at any one time.

F. When multiple sections of line are tested together as specified above, the leakage

shall be calculated based on the footage of the smallest segment being tested as if all of the leakage originated in the shortest segment of the group.

G. Prior to testing for infiltration, the system shall be pumped out so that normal infiltration conditions exist at the time of testing. The amounts of infiltration or exfiltration shall be determined by pumping into or out of calibrated drums, or by other approved methods.

H. The exfiltration test will be conducted by filling the portion of the system being tested with water to a level which will provide a minimum head of 2-feet in a lateral connected to the test portion, or, in the event there are no laterals in the test portion, a minimum difference in elevation of 5-feet between the crown of the highest portion of the drain or sewer and the test level.

I. If the ground water level is above the crown of the highest portion of the drain or sewer, the 5-foot differential shall be measured between the ground water level and the test level. Where insufficient depth of cover is available to produce a 5-foot differential, the maximum differential producible between ground water elevation and a test elevation set to avoid flow out of low manholes or into adjacent structures connected to the test section shall be used.

J. Where infiltration or exfiltration exceeds the allowable limits specified herein, the defective pipe, joints, or other faulty construction shall be located and repaired by the Contractor.

K. The Contractor shall locate and repair all leaks until the leakage is reduced to the limits specified. Any observed leaks or obviously defective joints or pipes shall be repaired or replaced as directed by the Engineer, even though the total leakage is below that specified above.

L. Lamping Test- Each section of sewer shall show, from each end, a full circle of light.

3.02 DEFECTS

In addition to the above requirements, the following shall also apply:

A. All repairs shown necessary by the tests are to be made, broken, cracked or obviously defected pipe replaced, all deposits removed, the sewer left true to line and grade, as herein specified, and entirely clean, free from lumps of cement, protruding gaskets, bulkheads, etc. and ready for use.

B. Each manhole or other appurtenance to the system shall have the specified size and form, be watertight, neatly and substantially made with the top set permanently to exact position and grade, and shall serve well and fully its intended use.

C. Any defects found in the system shall be corrected by the Contractor in accordance with the requirements of the Specifications or the MDWASD Design and Construction Standards, as approved by the Engineer.

D. In the event that a sewer line or structure, such as a manhole, leaks during the period that the Warranty or Contract Bond is in effect, the Contractor shall be required to return and replace it with a new section of pipe or manhole or, if approved by the Engineer, to eliminate infiltration leaks by external grouting or encasement. After the leaks have been stopped, all visible cracks shall be repaired inside the manhole.

3.03 ACCEPTANCE

A. No pipe installation will be accepted if the leakage is greater than that determined by the above requirements.

B. The Contractor shall locate and repair all leaks until the leakage is reduced to the limits specified. Any observed leaks or any obviously defective joints or pipes shall be repaired or replaced as directed by the Department, even though the total leakage is below that specified above.

C. The tests and repairs shall be continued or repeated until the Department is assured that the leakage into or from the section of line under test is less than the amount specified.

3.04 TIGHTNESS STANDARDS

Effective since 1987 (Per Public Notice No. 9), the Department adopted new tightness standards for gravity sanitary sewers and sanitary force mains to be installed within the it's service area. The new standards for maximum allowable exfiltration rates are to minimize the risk of contaminating the County's groundwater supplies in the Biscayne Aquifer. These standards are issued to comply with those adopted into Chapter 24 of the County Code by Ordinance 86-42, and to have leakage requirements for clay and PVC pipe materials. The term "cone of influence" as used below refers to limits of wellfield protection areas as defined the County. Tightness standards are specified below:

A. GRAVITY SANITARY SEWERS

The maximum allowable exfiltration, infiltration, or leakage in gravity sanitary sewers shall be as listed below, with no allowances for manholes or laterals. The duration of all tests shall be a minimum of two (2) hours. Any observed leaks or any obviously defective joints or pipes shall be replaced even when the total leakage is below that allowed. Only the piping materials listed for each specific area will be permitted in that area, including both gravity sanitary sewers and laterals. (Where reference is made to a "10 Day Travel Time" contact the Department or DERM for further information.)

1. Residential Zoned Areas

1.1a Within cone of influence and **outside** 10 Days Travel Time:

Mains: D.I.P. - 50 gpd/in. diameter/mile
C900 PVC - 50 gpd/in. diameter/mile

Laterals: may be D.I.P., C900 PVC, or

X.H.C.I.(Extra Heavy Cast Iron Soil Pipe)

1.1b Within cone of influence and **within** 10 Days Travel Time:

Mains and laterals shall only be D.I.P.

1.2 Outside of cone influence:

Mains: D.I.P. - 100 gpd/in. diameter/mile
C900 PVC - 100 gpd/in. diameter/mile
PVC - 100 gpd/in. diameter/mile
V.C.P. - 100 gpd/in. diameter/mile

Laterals: may be D.I.P., C900 PVC, PVC, or X.H.C.I. or V.C.P.

2. Commercial Zoned Areas

2.1a Within cone of influence and **outside** 10 Days Travel Time:

Mains: D.I.P. - 20 gpd/in. diameter/mile
C900 PVC - 20 gpd/in. diameter/mile

Laterals: may be D.I.P., C900 PVC or X.H.C.I.

2.1b Within cone of influence and **within** 10 Days Travel Time:

Mains and laterals shall only be D.I.P.

Note: In any event and any zoned areas, the Department may require D.I.P. based on minimum cover requirements, installation in grass areas or at depths of 14 feet or greater.

2.2 Outside of cone influence:

Mains: D.I.P. - 100 gpd/in. diameter/mile
C900 PVC - 100 gpd/in. diameter/mile
PVC - 100 gpd/in. diameter/mile
V.C.P. - 100 gpd/in. diameter/mile

Laterals: may be D.I.P., C900 PVC, PVC, or X.H.C.I. or V.C.P.

3. Industrial Zoned Areas

3.1 Within cone of influence:

Mains: D.I.P. - 20 gpd/in. diameter/mile

Laterals: may be D.I.P. or X.H.C.I.

3.2 Outside of cone influence:

Mains: D.I.P. - 100 gpd/in. diameter/mile
V.C.P. - 100 gpd/in. diameter/mile

Laterals: may be D.I.P., X.H.C.I. or V.C.P.

B. SANITARY FORCE MAINS - ALL AREAS

1. Sanitary force mains shall be constructed of either Protecto 401 lined ductile-iron pipe and fittings or prestressed concrete plastic lined (120° T.D.C. minimum) cylinder pipe and fittings meeting current Department Specifications.

2. No such ductile-iron pipe sanitary force main shall exfiltrate or leak at a rate greater than the allowable leakage rate specified in AWWA C600 (latest edition) at a test pressure of one hundred (100) psig. The duration of all test shall be a minimum of two (2) hours. Any observed leaks or any obviously defective joints or pipes shall be repaired or replaced even when the total leakage is below that allowed.

3. No such prestressed concrete cylinder pipe sanitary force main shall exfiltrate or leak at a rate greater than one-half (2) the allowable leakage rate specified for ductile iron pipe in AWWA C600 (latest edition) at a test pressure of one hundred (100) psig. The duration of all test shall be a minimum of two (2) hours. Any observed leaks or any obviously defective joints or pipes shall be repaired or replaced even when the total leakage is below that allowed.

4. See Section UC-170, "Cleaning and Testing of Main".

END OF SECTION

APPROVED BY

Miami-Dade County
Department of Regulatory and Economic Resources
Environmental Resources Management
Sewerage Facilities Only

2022 -SEW-EXT- 00426 Date: 10/19/2023

For the Director: _____

Note: This Approval is not intended to cover structural design

TEST REQUIRED

Permittee MUST notify RER-DERM before field test is performed for:

[X] **Exfiltration** [X] **Pressure** [X] **Pump Station Start-Up**

Note: Refer to Permit Conditions

SHEET NO.
C-100

STANDARD REQUIREMENTS FOR WATER AND SEWER CONSTRUCTION (GS 0.5-SHEET 1 OF 2)

1. ALL MATERIALS AND CONOSTRUCTION UNDER THIS PROJECT SHALL BE IN STRICT ACCORDANCE WITH THE REQUIREMENTS OF THE MIAMI–DADE WATER AND SEWER DEPARTMENT AND SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS AVAILABLE AND ON FILE WITH THE DEPARTMENT. SUBMIT SHOP DRAWINGS FOR ALL MATERIALS.

2. COVER OVER WATER OR SEWER FORCE MAINS SHALL BE 3'–0" MIN. UNDER RIGID PAVEMENT.

3. ALL MAIN LINE VALVES SHALL BE INSTALLED COMPLETE WITH 10" RISER PIPES AND NO. 3 OR 53 VALVE BOXES FIRE HYDRANTS AND SERVICE VALVES SHALL BE INSTALLED COMPLETE WITH 6" RISER PIPES AND NO. 2 VALVE BOXES.

4. ALL FORCE MAIN SERVICE CONNECTIONS INTO PRESSURE TRANSMISSION MAINS SHALL HAVE A SHUT OFF VALVE AT THE POINT OF ENTRY.

5. ALL GRAVITY SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH DEPARTMENT STANDARDS.

6. FIRE HYDRANT REQUIREMENTS (NUMBER AND LOCATION) SHALL BE AS REQUIRED BY THE MIAMI–DADE COUNTY FIRE DEPARTMENT OR THE APPROPRIATE FIRE AGENCY WITH INSTALLATION IN ACCORDANCE WITH DEPARTMENT STANDARDS.

7. CONTRACTOR MUST CALL M–DWASD INSPECTION DIVISION TO ARRANGE FOR A PRE–CONSTRUCTION MEETING 2 FULL BUSINESS DAYS PRIOR TO PROPOSED START OF CONSTRUCTION. CONTACT ONE CALL CENTER 48 HRS PRIOR TO EXCAVATION.

8. WORK PERFORMED UNDER THIS PROJECT WILL NOT BE CONSIDERED AS COMPLETE UNTIL FINAL ACCEPTANCE OF THE SYSTEM BY THE DEPARTMENT AND UNTIL THE FOLLOWING DOCUMENTS ARE RECEIVED AND APPROVED BY THE DEPARTMENT.
   a. EASEMENTS, IF REQUIRED.
   b. CONTRACTOR'S WAIVER AND RELEASE OF LIEN.
   c. ABSOLUTE BILL OF SALE.
   d. i. CONTRACTOR'S LETTER OF WARRANTY (I.E., LETTER AGREEMENT). ii. DEVELOPER'S CONTRACT BOND (I.E., CONTRACT AGREEMENT).
   e. "AS–BUILT" PRINTS 24"x36" SHOWING SPECIFIC LOCATIONS, DEPTH, ETC. OF All WATER AND SEWER FACILITIES AS LOCATED BY A LICENSED FLORIDA SURVEYOR, ALONG WITH PRINTS OF "AS–BUILT WHICH HAVE BEEN SIGNED AND SEALED BY A REGISTERED SURVEYOR. (No. OF PRINTS: 3–FOR WATER, 4–FOR GRAVITY SEWER AND 5–FOR FORCE MAIN OR PUMP STATION PROJECTS). THE DEPARTMENT RESERVES THE RIGHT TO REQUIRE SUBMITTAL ON ELECTRONIC MEDIA IN ACCORDANCE WITH SEC. 01775 "MAGNETIC MEDIA SUBMITTAL".
   f. H.R.S. LETTER OF RELEASE REQUIRED FOR All WATER PROJECTS.
   g. Bill OF SALE SKETCH (8 1/2"x11") FOR WATER AND SEWER, SEPARATELY.

11. All NEW CONNECTIONS FROM EXISTING DEPARTMENT MAINS TO BE MADE BY DEPARTMENT FORCES ONLY. THE CONTRACTOR TO EXCAVATE AT REQUIRED LOCATIONS, PROVIDE AND INSTALL MATERIAL WITH FITTINGS, PRIOR TO TAP.

12. AN APPROVED PAVING AND DRAINAGE PLAN MUST BE SUBMITTED TO MDWASD FOR All NEW SUBDIVISIONS PRIOR TO APPROVAL OF WATER AND SEWER PERMIT PLANS, UPON REQUEST.

13. UNLESS OTHERWISE SPECIFIED, All TAPS 20 INCHES AND SMALLER FOR CONNECTIONS TO EXISTING MAINS Will BE DONE BY DEPARTMENT FORCES. UNDER NO CIRCUMSTANCES Will THE CONTRACTOR BE PERMITTED TO TAP EXISTING MAINS IN THE SIZE RANGE SPECIFIED ABOVE. THE TAPPING SLEEVE AND TAPPING VALVE ARE FURNISHED AND INSTALLED BY THE CONTRACTOR UNDER THE SUPERVISION OF THE INSPECTOR.

"AS-BUILT" REQUIREMENTS FOR WATER AND SEWER CONSTRUCTION (GS 0.5- SHEET 2 OF 2)

1. AT THE COMPLETION OF ANY WATER AND SEWER JOB, EITHER DONATION OR CONTRACT, THE CONTRACTOR SHALL SUBMIT:

a. AS–BUILT PRINTS WHICH HAVE BEEN SIGNED AND SEALED BY A FLORIDA LICENSED PROFESSIONAL SURVEYOR AND MAPPER. (QTY. OF PRINTS, AS REQUIRED BY THE DEPARTMENT.)

2. "AS–BUILT" FORMAT:

a. 24"x36" PRINTS
b. LOCATION MAP SCALE SHOULD BE 1"=300' AND SECTION –TOWNSHIP–RANGE SHOULD BE SHOWN.
c. THE WORD "AS–BUILT" IN LARGE LETTERS.
d. TITLE BLOCK WITH DEPARTMENT DS, DW OR ER NUMBER AND PERTINENT INFORMATION.
e. PREFERRED SCALE TO BE I"= 40' HORIZONTALLY AND I"= 4' VERTICALLY*.
f. STREET NOMENCLATURE.
g. SEPARATE AS–BUILTS FOR WATER AND SEWER.
h. SEPARATE WATER AND SEWER PROFILE.
i. STATIONING STARTING WITH 0+00 AT PERMANENT REFERENCE POINT (I.E., CL,SL , ETC.) OR AS SHOWN ON DESIGN PERMIT PLANS, AND TO RUN CONTINUOUSLY TO END OF MAIN.
j. EASEMENTS, IF ANY, TIED TO PERMANENT REFERENCE POINT.
k. IDENTIFY ALL CONTROL LINES (I.E. BLDG. LINE, PROPERTY LINE, R/W, ETC).
l. ALL "PROPOSED" INFORMATION TO BE REMOVED FROM PRINTS, LEAVING ONLY "AS–BUILT" INFORMATION REFLECTED IN DRAWINGS.

Digitally signed by Airia Austin
Date: 2023.05.30 15:44:39 -04'00'

3. WATER "AS–BUILTS" MUST INCLUDE:

a. PLANS SHOWING PIPE SIZE, MATERIAL AND OFFSET OF MAIN, DEFLECTIONS (IF ANY), STATION OF SERVICES, HYDRANTS AND FITTINGS AT THE MAINLINE (IF PERPENDICULAR TO IT), AND AT MAIN AND END OF SERVICES IF ANY, OTHER ANGLE, AND DEFLECTION OF PIPE, IF ANY.
b. PROFILE SHOWING TOP OF GROUND AND TOP OF PIPE ELEVATIONS AT EVERY 100' STATION AND AT ANY CHANGE IN GRADE (WITH CORRESPONDING STATION), PIPE SIZE AND PIPE MATERIALS REFERENCED TO PLAN.

4. SEWER "AS–BUILTS" MUST INCLUDE:

a. PLAN SHOWING MANHOLE NUMBER, PIPE SIZE AND PIPE MATERIAL OF PIPE, DEFLECTION, IF ANY (FORCE MAIN ONLY), AND LOCATION OF LATERALS WITH REFERENCE TO MANHOLE.
b. PROFILE SHOWING MANHOLE NUMBER (AS PER PLAN), RIM AND INVERT ELEVATIONS (IF MORE THAN ONE INVERT, LABEL NORTH, SOUTH , ETC), AND STATION STARTING AT EACH 0+00 AT DOWNSTREAM MANHOLE.

5. FORCE MAIN "AS–BUILT" SAME AS WATER MAIN ABOVE.
6. EACH AS–BUILT SHALL SHOW THE FLORIDA STATE PLANE COORDINATES (CURRENT READJUSTMENT) OF ALL THE MANHOLES AND VALVES AND OF AT LEAST TWO HORIZONTAL CONTROL POINTS PROPERLY IDENTIFIED AND LOCATED WITHIN THE PROJECT. OTHER SCALE MAY BE PERMITTED, BUT MUST BE APPROVED BY THE DEPA OF DRAWINGS.

RUBEL SIDDIQUE, STATE OF FLORIDA, PROFESSIONAL ENGINEER, LICENSE NO. 67239
THIS ITEM HAS BEEN DIGITALLY SIGNED AND SEALED BY RUBEL SIDDIQUE, PE. ON THE DATE INDICATED HERE USING A SHA AUTHENTICATION CODE.

RER-DERM WATER-SEWER GENERAL NOTES

1. A horizontal distance of at least 6 feet, and preferably 10 feet (outside to outside), shall be maintained between gravity or pressure sewer pipes and water pipes. The minimum horizontal separation can be reduced to 3 feet for vacuum-type sewers or for gravity sewers where the top of the sewer pipe is at least 6 inches below the bottom of the water pipe. When the above specified horizontal distance criteria cannot be met due to an existing underground facility conflict, smaller separations are allowed if one of the following is met:
   a) The sewer pipes are designed and constructed equal to the water pipe and pressure tested at 150 psi.
   b) The sewer is encased in a watertight carrier pipe or concrete.
   c) The top of the sewer is at least 18 inches below the bottom of the water pipe.

2. A vertical distance of at least 12 inches (outside to outside) shall be maintained between any water and sewer mains with sewer pipes preferably crossing under water mains. The minimum vertical separation can be reduced to 6 inches for vacuum-type sewers or for gravity sewers where the sewer pipe is below the water main. The crossing shall be arranged so that all water main joints are at least 6 feet from all joints in gravity and pressure sewer pipes. This distance can be reduced to 3 feet for vacuum-type sewers. When the above specified vertical distance criteria cannot be met due to an existing underground facility conflict, smaller separations are allowed if one of the following is met:
   a) The sewer pipes are designed and constructed equal to the water pipe and pressure tested at 150 psi.
   b) The sewer is encased in a watertight carrier pipe or concrete.

3. Air release valves shall be provided at high points of new force main sanitary sewers.

4. Gravity sanitary sewers constructed within a public wellfield protection area shall be C-900 PVC or Ductile Iron Pipe. The maximum allowable exfiltration rate of gravity sanitary sewers constructed in a public wellfield protection area shall be:
   a) Residential Land Uses. Fifty (50) gallons per inch pipe diameter per mile per day, based on a minimum two (2) hour test having a minimum of two (2) feet of positive head above the crown of the pipe.
   b) Non-Residential Land Uses. Twenty (20) gallons per inch pipe diameter per mile per day, based on a minimum two (2) hour test having a minimum of two (2) feet of positive head above the crown of the pipe.
   c) Any observed leaks or any obviously defective joints or pipes shall be replaced even when the total leakage is below that allowed.

5. The maximum allowable exfiltration rate of gravity sanitary sewers constructed outside a public wellfield protection area shall be one hundred (100) gallons per inch pipe diameter per mile per day, based on a minimum two (2) hour test having a minimum of two (2) feet of positive head above the crown of the pipe. Any observed leaks or any obviously defective joints or pipes shall be replaced even when the total leakage is below that allowed.

6. Forcemain sanitary sewers constructed within a public wellfield protection area shall be ductile iron, C-900 PVC, HDPE or reinforced concrete pressure sewer pipes.

7. The maximum allowable exfiltration/leakage rate of forcemain sanitary sewers shall be:
   a) Ductile Iron, C-900 PVC, HDPE and PVC Pipe. The allowable leakage rate specified in American Water Works Association Standard (AWWAS) C600-82 at a test pressure of 100 psi for a duration of not less than two (2) hours.
   b) Reinforced Concrete Pressure Pipe. Half (1/2) the allowable leakage rate specified in AWWA C600-82 at a test pressure of 100 psi for a duration of not less than two (2) hours.
   c) Any observed leaks or any obviously defective joints or pipes shall be replaced even when the total leakage is below that allowed.

8. The contractor shall verify nature, depth, and character of existing underground utilities prior to start of construction.

9. In no case shall a contractor install utility pipes, conduits, cables, etc. in the same trench above an existing water or sewer pipe except where they cross.

10. If any area of the work site is found to contain buried solid waste and/or ground or ground water contamination, the following shall apply:
    a) All work in the area shall follow all applicable safety requirements (e.g., OSHA, etc.) and notification must be provided to the appropriate agencies.
    b) Immediately notify the Environmental Monitoring and Restoration Division (EMRD). The EMRD can be contacted at (305) 372-6700.
    c) If contaminated soils and/or buried solid waste material is excavated during construction, then they require proper handling and disposal in accordance with the local, state and federal regulations. Be advised that the landfill owner/operator is the final authority on disposal and may have requirements beyond those provided by herein. If disposal within a Miami-Dade County owned landfill (Class I landfill) is appropriate and selected, please contact the Miami-Dade County Department of Solid Waste Management at (305) 594-6666 for information.
    d) The reuse of contaminated soils that are not returned to the original excavation requires prior approval of a Soil Management Plan from the Environmental Monitoring and Restoration Division. The EMRD can be contacted at (305) 372-6700.

11. Pumps must comply with the National Electrical Code (NEC) requirements for Class I, Group D, Division 1 locations (Explosion Proof).

12. The contractor is advised that a Tree Removal/Relocation Permit may be required prior to the removal and/or relocation of tree resources. Prior to removing or relocating any trees, the Contractor shall notify the Tree and Forest Resources Section of DERM at (305) 372-6574 or via e-mail at: tfrs@miamidade.gov , or contact the municipality with tree ordinance jurisdiction to obtain any required permits. Those trees not interfering with the construction shall be protected in place in accordance with the provisions of Section 24-49.5 of the Miami-Dade Code.

13. Please note that the demolition, removal, and/or disturbance of existing underground utilities that contain asbestos- cement pipes (ACP) are subject to the provisions of 40 CFR-61 Subpart M. Therefore, pursuant to the provisions of 40 CFR-61-145, a NOTICE OF DEMOLITION OR ASBESTOS RENOVATION form must be filed with the Air Quality Management Division (AQMD) of DERM, at least ten (10) working days prior to starting of any work. Note that the backfilling and burial of crushed ACP would cause these locations to be considered active disposal sites and subject to 40 CFR-61.154, and 40 CFR-61.151 a year after project completion.
    Existing standard operating procedures, as well as applicable federal, state and local regulatory criteria, must be followed and implemented to minimize any potential release of fugitive emissions, especially during project construction activities. The AQMD can be contacted via email at asbestos@miamidade.gov or 305-372-6925.

FOR ALL PROJECT WHERE REMOVAL OF UTILITY LINES IS PROPOSED

1– ALL EXISTING UTILITIES BEING REMOVED AND/OR RELOCATED MUST REMAIN IN EFFECT AND IN SERVICE, UNTIL SUCH TIME WHEN PROPOSED REPLACING UTILITIES HAVE BEEN INSTALLED AND IN SERVICE AND ALL RELATED SERVICES TO THE FIRST LINES HAVE BEEN TRANSFERRED TO THE LATTER ONES, BY M–DWASD FORCES AT OWNERS EXPENSES.

2– ALL ABANDONED OR REPLACED UTILITY LINES LOCATED IN PRIVATE PROPERTY SHALL BE REMOVED AND CAPPED AT MAIN, WHEN APPLICABLE, AFTER ALL INSTALLED SERVICES TO OR FROM THEM HAVE BEEN TRANSFERRED TO THE ALREADY INSTALLED AND IN SERVICE PROPOSED UTILITY LINES, ANY RELATED EASEMENT SHALL BE RELEASED AND VACATED AFTER REMOVAL OF LINES AND RESTORATIONS OF SITE, IF APPLICABLE, HAVE BEEN COMPLETED.

DRAWN BY: RS
CHECKED BY: RS
DATE: 09-05-2022
SHEET NO.
C-200

1. ALL MATERIALS AND CONSTRUCTION UNDER THIS PROJECT SHALL BE IN STRICT ACCORDANCE WITH THE REQUIREMENTS OF THE CITY OF OPA-LOCKA AND/OR MIAMI-DADE COUNTY WATER & SEWER DEPARTMENT (MD-WASD) AND/OR MIAMI DADE COUNTY PUBLIC WORKS DEPARTMENT (MD-PWD) AND/ OR THE FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) AND SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS AVAILABLE AND ON FILE WITH THE DEPARTMENT.

2. MINIMUM COVER OVER MAINS SHALL BE 3'-0". 2'-0" FOR SERVICE LINES, UNLESS SPECIFIC WRITTEN EXCEPTION IS ISSUED OR REQUIRED BY AN AUTHORIZED REPRESENTATIVE OF CITY OF OPA-LOCKA.

3. DETECTOR TAPE SHALL BE INSTALLED 18" ABOVE THE CENTERLINE OF MAINS AND SERVICES. TAPES SHALL BE GREEN CONTINUOUSLY MARKED "CAUTION WASTEWATER FORCE MAIN BURIED BELOW".

4. ALL VALVES SHALL BE INSTALLED COMPLETE WITH 10" RISER PIPES AND No. 53 C.I. VALVE BOXES AND LIDS.

5. LOW PRESSURE SEWER MAIN SHALL BE HDPE SDR-11. SERVICE LINES SHALL BE HDPE SDR-9.

6. ALL JOINTS FOR LOW PRESSURE HDPE MAIN SHALL BE BUTT-FUSION WELDED. ALL WELDING OF JOINTS SHALL BE IN STRICT CONFORMITY WITH THE RECOMMENDATIONS OF THE PIPE MANUFACTURER UNLESS OTHERWISE SPECIFIED IN WRITING.

7. CONTRACTOR MUST CALL THE CITY OF OPA-LOCKA INSPECTION DIVISION AND ALL OTHER APPLICABLE PERMITTING AGENCIES TO ARRANGE FOR A PRE-CONSTRUCTION MEETING AT LEAST 72 HOURS PRIOR TO PROPOSED START OF CONSTRUCTION.

8. CITY OF OPA-LOCKA PERSONNEL WILL INSPECT ALL FACILITIES APPROVED BY THE ENGINEERING DEPARTMENT. ALL OTHER REQUIREMENTS OF THE PERMITTING AGENCY SHALL BE IN ACCORDANCE WITH THEIR STANDARDS AND REQUIREMENTS.

9. WORK PERFORMED UNDER THIS PROJECT WILL NOT BE CONSIDERED AS COMPLETE UNTIL FINAL ACCEPTANCE OF THE SYSTEM BY THE DEPARTMENT AND UNTIL THE FOLLOWING DOCUMENTS ARE RECEIVED AND APPROVED BY CITY OF OPA-LOCKA:

*EASEMENTS, IF REQUIRED (WHETHER BY DEED OR PLAT SUITABLY RECORDED)
* CONTRACTOR'S WAIVER AND RELEASE OF LIEN
* CONTRACTOR'S LETTER OF WARRANTY (I.E. LETTER AGREEMENT)
* AS-BUILT 24" x 36" SHOWING SPECIFIC LOCATIONS, DEPTHS, ETC. OF ALL WATER FACILITIES AS LOCATED BY A LICENSED SURVEYOR, ALONG WITH TWO (2) PRINTS OF THE "AS-BUILT" WHICH HAVE BEEN SIGNED AND SEALED BY A REGISTERED SURVEYOR OR ENGINEER OF RECORD AND ENDORSED BY THE CONTRACTOR IN ACCORDANCE WITH MD-WSD STANDARDS.

10. ALL NEW CONNECTIONS FROM EXISTING CITY OF OPA-LOCKA MAINS TO BE INSPECTED BY CITY OF OPA-LOCKA FORCES PRIOR TO BACKFILL.

11. THE CONTRACTOR SHALL BE RESPONSIBLE FOR VERIFYING ALL LOCATIONS, DIMENSIONS, ELEVATIONS AND THE LOCATIONS OF ALL UNDERGROUND STRUCTURES AND UTILITIES PRIOR TO THE START OF CONSTRUCTION. THE LOCATIONS SHOWN ON THE PLANS ARE NOT GUARANTEED ACCURATE OR CORRECT BY THE KNOWN UTILITY COMPANIES.

12. THRUST BLOCKS SHALL BE PROVIDED TO ALL BENDS, TEES AND PLUGS IN ACCORDANCE WITH MD-WASD STANDARD DETAILS.

13. PIPE INSTALLATION, CLEANING, FLUSHING, AND TESTING, AS PER CITY OF OPA-LOCKA AND STATE OF FLORIDA STANDARDS FOR THE INSTALLATION OF PRESSURE SEWER BY CUSTOMER DONATION PROJECTS.

14. THE CONTRACTOR IS RESPONSIBLE FOR THE COST OF INSPECTIONS FOR ANY CONSTRUCTION ACTIVITIES OCCURRING OUTSIDE NORMAL WORKING HOURS (8:00 a.m. TO 5:00 p.m.) SATURDAYS AND SUNDAYS AND HOLIDAYS EXCLUDED AND ARRANGEMENTS FOR INSPECTIONS OUTSIDE NORMAL WORKING HOURS MUST BE MADE A MINIMUM OF 48 HOURS IN ADVANCE OF THE CONSTRUCTION ACTIVITY.

15. ALL TRENCHES TO BE EXCAVATED AND BACKFILLED AS PER THE MD-WASD DETAIL GS-1.9.

16. SURFACE RESTORATION, PAVEMENT REPLACEMENT, SIDEWALK REPLACEMENT, TRENCH BACKFILLING AND COMPACTION SHALL COMPLY WITH THE APPLICABLE CURRENT MD-WASD, MD-PWD AND FDOT STANDARDS.

17. THE ENGINEER OF RECORD SHALL PROVIDE CITY OF OPA-LOCKA WITH A SIGNED AND SEALED PRESSURE TEST REPORT CERTIFYING PRESSURE TEST RESULTS.

18. FIELD LEAK TESTING OF POLYETHYLENE (PE) PRESSURE PIPING SYSTEMS USING HYDROSTATIC PRESSURE SHALL BE CONDUCTED BY THE CONTRACTOR FOLLOWING METHODS AND PROCEDURES NOTED ASTM DESIGNATION: F2164-13

19. A HORIZONTAL DISTANCE OF 10 FEET SHALL BE MAINTAINED BETWEEN WATER AND SEWER MAINS. WHEN A 10 FEET HORIZONTAL DISTANCE CRITERIA CANNOT BE MET DUE TO AN EXISTING UNDERGROUND FACILITY CONFLICT, THIS HORIZONTAL DISTANCE MAY BE REDUCED TO 6 FEET. IF THE WATER MAIN IS LAID AT LEAST 6 INCHES ABOVE THE TOP OF A GRAVITY SANITARY SEWER, THIS HORIZONTAL DISTANCE MAY BE REDUCED TO 3 FEET.

20. IN HIGHLY CONGESTED AREAS, WHERE EITHER WATER OR SEWER FACILITIES ARE EXISTING AND THE SEPARATION REQUIREMENTS CANNOT BE MET, SPECIAL CONSIDERATION MAY BE GIVEN SUBJECT TO A COMPLETE EVALUATION OF EXISTING AND PROPOSED CONDITIONS.

21. THE CONTRACTOR SHALL VERIFY NATURE, DEPTH, CHARACTER OF EXISTING UNDERGROUND UTILITIES PRIOR TO START OF CONSTRUCTION.

22.TRENCH EXCAVATION PROTECTION SHALL BE ACCOMPLISHED AS REQUIRED BY THE PROVISIONS OF PART 1926, SUBPART P, EXCAVATIONS, TRENCHING AND SHORING OF THE OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATIONS STANDARDS AND INTERPRETATIONS.

23. ALL ABOVE GROUND PIPE & FITTING, VALVE BOXES, AIR RELEASE VALVE COVERS AND ANY OTHER MARKING DEVICE, SHALL BE COLOR CODED IN ACCORDANCE WITH THE UTILITY LOCATION & COORDINATION COUNCIL UNIFORM COLOR CODE AS SHOWN IN MIAMI-DADE COUNTY WATER & SEWER DEPARTMENT (MD-WASD).

NOTES FOR CONTAMINATED SITES

IF ANY AREA OF THE WORK SITE IS FOUND TO CONTAIN BURIED SOLID WASTE AND/OR GROUND OR GROUND WATER CONTAMINATION, THE FOLLOWING SHALL APPLY:

1. ALL WORK IN THE AREA SHALL FOLLOW ALL APPLICABLE SAFETY REQUIREMENTS (E.G., OSHA, ETC.) AND NOTIFICATION MUST BE PROVIDED TO THE APPROPRIATE AGENCIES.

2. IMMEDIATELY NOTIFY THE ENVIRONMENTAL MONITORING AND RESTORATION DIVISION (EMRD). THE EMRD CAN BE CONTACTE AT (305) 372-6700.

3. IF CONTAMINATED SOILS AND/OR BURIED SOLID WASTE MATERIAL IS EXCAVATED DURING CONSTRUCTION, THEN THEY REQUIRE PROPER HANDLING AND DISPOSAL IN ACCORDANCE WITH THE LOCAL, STATE AND FEDERAL REGULATIONS. BE ADVISED THAT THE LANDFILL OWNER/OPERATOR IS THE FINAL AUTHORITY ON DISPOSAL AND MAY HAVE REQUIREMENTS BEYOND THOSE PROVIDED BY HEREIN. IF DISPOSAL WITHIN A MIAMI-DADE COUNTY OWNED LANDFILL (CLASS I LANDFILL) IS APPROPRIATE AND SELECTED, PLEASE CONTACT THE MIAMI-DADE COUNTY DEPARTMENT OF PUBLIC WORKS AND WASTE MANAGEMENT AT (305) 594-1670 FOR INFORMATION.

4. THE REUSE OF CONTAMINATED SOILS IS PROHIBITED WITHOUT PRIOR APPROVAL FROM THE ENVIRONMENTAL MONITORING AND RESTORATION DIVISION. THE EMRD CAN BE CONTACTED AT (305) 372-6700.

5. A SUBSURFACE INVESTIGATION WAS CONDUCTED BY ENVIRONMENTAL REGULATORY COMPLIANCE, INC. (ERC) DATE MARCH 2022. THE REPORT STATED THAT THE PRESENCE OF SOLID WASTE MIXED WITH OTHER MATERIAL (CARBONATE AND SILICA SAND, LIMEROCK, AND ORGANIC MATERIAL) WILL NOT SUBSIDE BY THE INSTALLATION OF THE 2 INCH SEWER LINE.

DESIGN APPROACH

1. A SUBSURFACE INVESTIGATION WAS CONDUCTED BY ENVIRONMENTAL REGULATORY COMPLIANCE, INC. (ERC) DATE MARCH 2022. THE REPORT STATED THAT THE PRESENCE OF SOLID WASTE MIXED WITH OTHER MATERIAL (CARBONATE AND SILICA SAND, LIMEROCK, AND ORGANIC MATERIAL) WILL NOT SUBSIDE BY THE INSTALLATION OF THE 2 INCH SEWER LINE.

2. DUE THE UNDERLYING SOIL CONDITION OF THE SITE, HDPE PIPE WAS USED TO ADDRESS ANY CONTAMINATION ISSUES. ACCORDING TO THE PIPE MANUFACTURER, POLYETHYLENE IS NON-CONDUCTIVE AND IMMUNE TO GALVANIC AND ELECTROCHEMICAL EFFECTS. THUS POLYETHYLENE WILL NOT CORRODE IN THE MANNER OF METAL AND CONCRETE PIPING. PERFORMANCE POLYETHYLENE PIPES HAVE OUTSTANDING RESISTANCE TO A WIDE RANGE OF CHEMICALS AND ENVIRONMENTAL CONDITIONS, MAKING THEM IDEAL CANDIDATES FOR USE WITH CORROSIVE FLUIDS AND CHEMICALS, AND UNDER HARSH ENVIRONMENTAL CONDITIONS.

3. ALL THE JOINT IN THE HDPE PIPES WILL BE FUSED JOINT, THERFORE NO POSSIBILITY OF JOINT LEAKING.

GENERAL NOTES:

1. CONTRACTOR SHALL MAINTAIN FUNCTION OF SEWAGE PUMPING DURING CONSTRUCTION BY UTILIZING BY-PASS PUMPING SYSTEM, FITTINGS AND VALVES AS REQUIRED. CONTRACTOR SHALL SUBMIT A PLAN OUTLINING SEWAGE "BY-PASS" PROCEDURE TO THE ENGINEER FOR APPROVAL PRIOR TO COMMENCING WORK.
2. THE EXISTING UTILITIES SHOWN ON THIS PLAN ARE BASED ON THE CITY OF OPA-LOCKA WATER AND SEWER ATLAS, SURVEY AND SITE VISIT. CONTRACTOR MUST VERIFY SIZE, LOCATION, AND INVERTS OF ALL UTILITIES PRIOR TO COMMENCING WORK.
3. CONTRACTOR SHALL PERFORM ALL WORK WITHIN LEGAL PROPERTY AND EASEMENT, AND SHALL NOT DISTURB ADJACENT PROPERTY.
4. CONTRACTOR SHALL VERIFY EXISTING PIPING TO REMAIN BEFORE ORDERING PROPOSED PIPING/FITTINGS CONNECTING TO IT.
5. CARE SHOULD BE TAKEN TO AVOID DISTURBING ELECTRICAL SERVICE IN THE AREA UNDER CONSTRUCTION.
6. CONTRACTOR SHALL INCLUDE NECESSARY CUTTING, PATCHING, AND RESTORATION OF ALL EXISTING SURFACES TO MATCH SURROUNDING AREAS.
7. CONTRACTOR TO COAT ALL UNDERGROUND FITTINGS THOSE ARE IN DIRECT CONTACT WITH SOIL WITH TWO COATS OF BITUMASTIC OR APPROVED EQUAL.
8. ELEVATIONS INDICATED HEREON ARE IN FEET AND DECIMALS REFERENCED TO THE NATIONAL GEODETIC VERTICAL DATUM OF 1929 (NGVD 1929).
9. THE MINIMUM WET-WELL BOTTOM SLOPE SHALL BE 2:1 TO ALLOW SELF-CLEANING AND MINIMUM DEPOSIT OF DEBRIS.
10. THE ELECTRICAL SYSTEMS AND COMPONENTS IN RAW WASTEWATER WET WELLS SHALL COMPLY WITH THE NATIONAL ELECTRICAL CODE REQUIREMENTS FOR CLASS I, GROUP D, DIVISION 1.
11. THE STATION SHOULD BE EQUIPPED WITH MISSION M850 RTUs FOR REAL-TIME ALARMS AND STREAMING DATA OR APPROVED EQUAL.
12. FLOW METER SHALL BE ABB ELECTROMAGNETIC FLOWMETER DN150 (6") OR APPROVED EQUAL.

1. ALL MATERIALS AND LABOR UNDER THIS PROJECT SHALL BE IN STRICT ACCORDANCE WITH THE REQUIREMENTS OF THE MIAMI-DADE WATER AND SEWER DEPARTMENT AND SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS AVAILABLE AND ON FILE WITH THE DEPARTMENT. SUBMIT SHOP DRAWINGS FOR ALL MATERIALS.
2. COVER OVER WATER OR SEWER FORCE MAINS SHALL BE 4'-0" MIN.
3. ALL MAIN LINE VALVES SHALL BE INSTALLED COMPLETE WITH 10" RISER PIPES AND NO. 3 OR 53 VALVE BOXES FIRE HYDRANTS AND SERVICE VALVES SHALL BE INSTALLED COMPLETE WITH 6" RISER PIPES AND NO. 2 VALVE BOXES.
4. ALL FORCE MAIN SERVICE CONNECTIONS INTO PRESSURE TRANSMISSION MAINS SHALL HAVE A SHUT OFF VALVE AND CHECK VALVE AT THE POINT OF ENTRY.
5. ALL GRAVITY SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH DEPARTMENT STANDARDS.
6. ALL WATER METERS WILL BE INSTALLED BY THE MIAMI-DADE WATER AND SEWER DEPARTMENT PROVIDING THE APPROPRIATE CHARGES HAVE BEEN PREPAID.
7. FIRE HYDRANT REQUIREMENTS (NUMBER AND LOCATION) SHALL BE AS REQUIRED BY THE MIAMI-DADE COUNTY FIRE DEPARTMENT OR THE APPROPRIATE FIRE AGENCY WITH INSTALLATION IN ACCORDANCE WITH DEPARTMENT STANDARDS.
8. CONTRACTOR MUST CALL M-DWASD INSPECTION DIVISION TO ARRANGE FOR A PRECONSTRUCTION MEETING 2 FULL BUSINESS DAYS PRIOR TO PROPOSED START OF CONSTRUCTION. CONTACT ONE CALL CENTER 48 HRS PRIOR TO EXCAVATION.
9. CONTRACT INSPECTOR WILL INSPECT ANY FACILITIES APPROVED BY THE DEPARTMENT. ALL OTHER REQUIREMENTS OF THE PERMITTING AGENCY SHALL BE IN ACCORDANCE WITH THEIR STANDARDS AND REQUIREMENTS.
10. WORK PERFORMED UNDER THIS PROJECT WILL NOT BE CONSIDERED AS COMPLETE UNTIL FINAL ACCEPTANCE OF THE SYSTEM BY THE DEPARTMENT AND UNTIL THE FOLLOWING DOCUMENTS ARE RECEIVED AND APPROVED BY THE DEPARTMENT.
    a. EASEMENTS, IF REQUIRED.
    b. CONTRACTOR'S WAIVER AND RELEASE OF LIEN.
    c. ABSOLUTE BILL OF SALE.
    d. i. CONTRACTOR'S LETTER OF WARRANTY (I.E., LETTER AGREEMENT).
       ii. DEVELOPER'S CONTRACT BOND (I.E., CONTRACT AGREEMENT).
    e. "AS-BUILT" PRINTS 24"x36" SHOWING SPECIFIC LOCATIONS, DEPTH, ETC. OF ALL WATER AND SEWER FACILITIES AS LOCATED BY A LICENSED FLORIDA SURVEYOR, ALONG WITH PRINTS OF "AS-BUILT" WHICH HAVE BEEN SIGNED AND SEALED BY A REGISTERED SURVEYOR. (No. OF PRINTS: 3-FOR WATER, 4-FOR GRAVITY SEWER AND 5-FOR FORCE MAIN OR PUMP STATION PROJECTS). THE DEPARTMENT RESERVES THE RIGHT TO REQUIRE SUBMITTAL ON ELECTRONIC MEDIA IN ACCORDANCE WITH SEC. 01775 "MAGNETIC MEDIA SUBMITTAL".
    f. H.R.S. LETTER OF RELEASE REQUIRED FOR ALL WATER PROJECTS.
    g. BILL OF SALE SKETCH (8½"x11") FOR WATER AND SEWER, SEPARATELY.
11. ALL NEW CONNECTIONS FROM EXISTING DEPARTMENT MAINS TO BE MADE BY DEPARTMENT FORCES ONLY. THE CONTRACTOR TO EXCAVATE AT REQUIRED LOCATIONS, PROVIDE AND INSTALL MATERIAL WITH FITTINGS, PRIOR TO TAP.
12. AN APPROVED PAVING AND DRAINAGE PLAN MUST BE SUBMITTED TO MDWASD FOR ALL NEW SUBDIVISIONS PRIOR TO APPROVAL OF WATER AND SEWER PERMIT PLANS, UPON REQUEST.
13. UNLESS OTHERWISE SPECIFIED, ALL TAPS 20 INCHES AND SMALLER FOR CONNECTIONS TO EXISTING MAINS WILL BE DONE BY DEPARTMENT FORCES. UNDER NO CIRCUMSTANCES WILL THE CONTRACTOR BE PERMITTED TO TAP EXISTING MAINS IN THE SIZE RANGE SPECIFIED ABOVE. THE TAPPING SLEEVE AND TAPPING VALVE ARE FURNISHED AND INSTALLED BY THE CONTRACTOR UNDER THE SUPERVISION OF THE INSPECTOR.

STANDARD DETAIL
STANDARD REQUIREMENTS WATER AND SEWER CONSTRUCTION

GS 0.5 SHEET 1 OF 2

1. AT THE COMPLETION OF ANY WATER AND SEWER JOB, EITHER DONATION OR CONTRACT, THE CONTRACTOR SHALL SUBMIT:
    a. AS-BUILT PRINTS WHICH HAVE BEEN SIGNED AND SEALED BY A FLORIDA LICENSED PROFESSIONAL SURVEYOR AND MAPPER. (QTY. OF PRINTS, AS REQUIRED BY THE DEPARTMENT.)
2. "AS-BUILT" FORMAT:
    a. 24"x36" PRINTS
    b. LOCATION MAP SCALE SHOULD BE 1"=300' AND SECTION-TOWNSHIP-RANGE SHOULD BE SHOWN.
    c. THE WORD "AS-BUILT" IN LARGE LETTERS.
    d. TITLE BLOCK WITH DEPARTMENT DS, DW OR ER NUMBER AND PERTINENT INFORMATION.
    e. PREFERRED SCALE TO BE 1"= 40' HORIZONTALLY AND 1"= 4' VERTICALLY*.
    f. STREET NOMENCLATURE.
    g. SEPARATE AS-BUILTS FOR WATER AND SEWER.
    h. SEPARATE WATER AND SEWER PROFILE.
    i. STATIONING STARTING WITH 0+00 AT PERMANENT REFERENCE POINT (I.E., ℄, ℄, ETC.) OR AS SHOWN ON DESIGN PERMIT PLANS, AND TO RUN CONTINUOUSLY TO END OF MAIN.
    j. EASEMENTS, IF ANY, TIED TO PERMANENT REFERENCE POINT.
    k. IDENTIFY ALL CONTROL LINES (I.E. BLDG. LINE, PROPERTY LINE, R/W, ETC).
    l. ALL "PROPOSED" INFORMATION TO BE REMOVED FROM PRINTS, LEAVING ONLY "AS-BUILT" INFORMATION REFLECTED IN DRAWINGS.
3. WATER "AS-BUILTS" MUST INCLUDE:
    a. PLANS SHOWING PIPE SIZE, MATERIAL AND OFFSET OF MAIN, DEFLECTIONS (IF ANY), STATION OF SERVICES, HYDRANTS AND FITTINGS AT THE MAINLINE (IF PERPENDICULAR TO IT), AND AT MAIN AND END OF SERVICES IF ANY, OTHER ANGLE, AND DEFLECTION OF PIPE, IF ANY.
    b. PROFILE SHOWING TOP OF GROUND AND TOP OF PIPE ELEVATIONS AT EVERY 100' STATION AND AT ANY CHANGE IN GRADE (WITH CORRESPONDING STATION), PIPE SIZE AND PIPE MATERIALS REFERENCED TO PLAN.
4. SEWER "AS-BUILTS" MUST INCLUDE:
    a. PLAN SHOWING MANHOLE NUMBER, PIPE SIZE AND PIPE MATERIAL OF PIPE, DEFLECTION, IF ANY (FORCE MAIN ONLY), AND LOCATION OF LATERALS WITH REFERENCE TO MANHOLE.
    b. PROFILE SHOWING MANHOLE (AS PER PLAN), RIM AND INVERT ELEVATIONS (IF MORE THAN ONE INVERT, LABEL NORTH, SOUTH , ETC), AND STATION STARTING AT EACH 0+00 AT DOWNSTREAM MANHOLE.
5. FORCE MAIN "AS-BUILT" SAME AS WATER MAIN ABOVE.
6. EACH AS-BUILT SHALL SHOW THE FLORIDA STATE PLANE COORDINATES (CURRENT READJUSTMENT) OF ALL THE MANHOLES AND VALVES AND OF AT LEAST TWO HORIZONTAL CONTROL POINTS PROPERLY IDENTIFIED AND LOCATED WITHIN THE PROJECT.

* OTHER SCALE MAY BE PERMITTED, BUT MUST BE APPROVED BY THE DEPT OF DRAWINGS.

A SECTION

SCALE: 1/2"=1'-0"

CONSTRUCTION NOTES:

1. THE STANDARD DRAWINGS PRESENTED ARE BASED ON MINIMUM OF 4" DISCHARGE FORCE MAIN.
2. CONTRACTOR SHALL VERIFY EXISTING UNDERGROUND UTILITIES IN APPLICATIONS, ELEVATIONS, AND QUALITIES PRIOR TO CONSTRUCTION. THE CONTRACTOR SHALL VERIFY EXISTING PIPING TO REMAIN BEFORE ORDERING NEW PIPE AND FITTINGS FOR CONNECTIONS. tHE CONTRACTOR SHALL INSPECT AND VERIFY ALL SITE CONDITIONS AND DIMENSIONS, AND COORDINATE WITH OTHER TRADES PRIOR TO CONSTRUCTION. WORK SHALL BE SCHEDULED ACCORDING TO SPECIFIED CONSTRUCTION SEQUENCE.
3. ATTENTION TO AVOID DISTURBING EXISTING ELECTRICAL SERVICE IN THE AREA UNDER CONSTRUCTION (FOR EXISTING FACILITIES ONLY).
4. ALL ELEVATIONS FOR UNDERGROUND UTILITIES SHOWN ARE T.O.P. ELEVATIONS UNLESS OTHERWISE SPECIFIED.
5. ALL PIPING, UNLESS SPECIFIED, TO USE DUCTILE IRON WITH LINING OF SEWER APPLICATION. FITTINGS AND CONNECTIONS UNDERGROUND TO USE MECHANICAL JOINT WITH RESTRAINTS; FITTINGS ABOVE GROUND OR IN VAULT TO USE FLANGE JOINT, OR MECHANICAL JOINT WITH RESTRAINTS
6. APPLY ALL UNDERGROUND FITTING WITH BOLT CONNECTIONS IN DIRECT CONTACT WITH SOIL WITH TWO COATS OF BITUMASTIC OR APPROVED EQUAL.
7. PROVIDE DIELECTRIC FITTINGS BETWEEN TWO DIFFERENT PIPING MATERIALS.
8. PIPE SUPPORTS SHALL BE HOT-DIP GALVANIZED AFTER FABRICATION.
9. PROPOSED WET WELL SHALL BE CYLINDRICAL TYPE MADE OF REINFORCED CONCRETE WITH DEPTH NO GREATER THAN 24 FEET.
10. ALL PUMP CONTROLS SHALL BE SET AS PER DESIGN REQUIREMENTS.
11. ALL PIPING FOR OUTSIDE DROP TO BE DUCTILE IRON WITH LINING OF SEWER APPLICATION. FITTINGS AND CONNECTIONS UNDERGROUND TO USE MECHANICAL JOINT WITH RESTRAINTS.
12. PUMP STARTUP SHALL BE PERFORMED WITH NO EFFLUENT DISCHARGING INTO THE WET-WELL. PUMPS OPERATING POINTS CALCULATED BY PUMP REPRESENTATIVE DURING THE DRAWDOWN TEST SHALL BE NO GREATER THAN 10% OFF THE PUMP CURVE. PROPOSED PUMPS SHALL HANDLE BOTH MAX, MIN AND AVERAGE OPERATING POINTS GIVEN BY THE ENGINEER OF RECORD.
13. THREE PRESSURE GAUGES ARE TO BE INSTALLED INSIDE THE VALVE BOX, ONE GAUGE BEFORE EACH CHECK VALVE AND ONE PRESSURE GAUGE ON THE FORCEMAIN SIDE. PRESSURE DIAL READER SHALL NOT EXCEED 20 PSI.

ELECTRICAL GENERAL NOTES

I. GENERAL REQUIREMENTS

A. DRAWINGS. THE DRAWINGS ARE TO BE CONSIDERED DIAGRAMMATIC, NOT NECESSARILY SHOWING IN DETAIL OR TO SCALE ALL OF THE MINOR ITEMS. UNLESS SPECIFIC DIMENSIONS ARE SHOWN, THE STRUCTURAL, ARCHITECTURAL, AND SITE CONDITIONS SHALL GOVERN THE EXACT LOCATIONS. CONTRACTOR SHALL FOLLOW DRAWINGS IN LAYING OUT WORK, CHECK DRAWINGS OF ALL TRADES TO VERIFY SPACES IN WHICH WORK WILL BE INSTALLED. WHERE HEADROOM OR SPACE CONDITIONS APPEAR INADEQUATE, CONTRACTOR SHALL, WITHOUT EXTRA CHARGE, MAKE FIELD MODIFICATION IN LAYOUT AS NEEDED TO PREVENT CONFLICT WITH WORK OF VARIOUS TRADES OR FOR PROPER EXECUTION OF THE WORK. SITE CONDITIONS SHALL GOVERN THE EXACT LOCATION OF ALL ELECTRICAL EQUIPMENT, DEVICES, WIRING, CONDUIT, ETC.

ONE COMPLETE SET OF DRAWINGS AND SPECIFICATIONS SHALL BE KEPT ON FILE AT THE SITE FOR THE SOLE USE OF MARKING AS-BUILT DATA. ALL CHANGES SHALL BE MARKED IN RED ON THESE PRINTS AS WORK PROGRESSES.

PRIOR TO EACH REQUISITION FOR PAYMENT, AS-BUILT PRINTS SHALL BE BROUGHT UP TO DATE FOR ACCEPTANCE BY OWNER'S REPRESENTATIVE.

THE COMPLETED SET OF AS-BUILT PRINTS SHALL BE DELIVERED TO THE ARCHITECT/ENGINEER PRIOR TO FINAL PAYMENT FOR INCORPORATION ONTO ORIGINALS.

RISERS ARE DIAGRAMMATIC AND DON'T INTEND TO SHOW EVERY BEND REQUIRED FOR THE INSTALLATION.

B. COORDINATION. CONTRACTOR WILL BE REQUIRED TO FURNISH, INSTALL AND/OR CONNECT WITH APPROPRIATE SERVICES ALL ELECTRICAL ITEMS SHOWN ON ANY OF THE ARCHITECTURAL, PLUMBING, AIR CONDITIONING SPRINKLER, INTERIOR DESIGN AND ELECTRICAL DRAWINGS WITHOUT ADDITIONAL EXPENSE TO THE OWNER. IF DISCREPANCIES, CONFLICTS, INTERFERENCES OR OMISSIONS OCCUR BETWEEN DRAWINGS, NOTIFY IN WRITING THE ARCHITECT/ENGINEER IN AMPLE TIME TO PERMIT REVISIONS BEFORE THE BIDS ARE SUBMITTED.

ELECTRICAL CONTRACTOR SHALL COORDINATE THE REQUIREMENTS OF PLUG AND CHORD TYPE EQUIPMENT WITH MANUFACTURER AND IS REQUIRED TO PROVIDE ELECTRICAL OUTLETS THAT WILL ACCEPT MANUFACTURER'S SUPPLIED PLUGS.

SEE MECHANICAL DRAWINGS FOR ELECTRICAL REQUIREMENTS AND LOCATION OF A/C UNITS AND ALL OTHER MECHANICAL EQUIPMENT (SOLENOIDS, VAV'S, THERMOSTATS, PUMPS, FANS, SMOKE DETECTORS, DUCT HEATERS, ETC.) THE CONTRACTOR SHALL PROVIDE ALL BRANCH CIRCUIT AND CONTROL WIRING AS INDICATED OR REQUIRED AND IN CONFORMANCE WITH N.E.C. ARTICLE 440 AND MANUFACTURER'S RECOMMENDATIONS. ALL PENETRATIONS SHALL BE MADE WEATHERPROOF DURING CONSTRUCTION AND AFTER FINAL INSTALLATION. A/C EQUIPMENT WIRING, BREAKERS, AND FUSES ARE BASED ON A/C EQUIPMENT SPECIFIED ON CONTRACT DRAWINGS. CONTRACTOR IS RESPONSIBLE FOR PROVIDING ALL WIRING, AND OVERCURRENT PROTECTION REQUIREMENTS IF EQUIPMENT USED IS DIFFERENT FROM THAT SPECIFIED. CONTRACTOR SHALL MAKE THESE CHANGES AT NO ADDITIONAL COST TO THE OWNER.

C. TEMPORARY SERVICE TEMPORARY ELECTRICAL POWER AND LIGHTING SHALL BE FURNISHED, INSTALLED AND MAINTAINED FOR ALL TRADES REQUIRING SAME. SYSTEM SHALL CONSIST OF DISTRIBUTION SYSTEM, PANELBOARDS, GROUNDING, BRANCH CIRCUITS, SWITCHES, RECEPTACLES, OUTLETS. SERVICE SHALL BE ARRANGED FOR WITH POWER COMPANY, IF REQUIRED.

D. PERMITS. THE CONTRACTOR SHALL SECURE AND PAY FOR ALL PERMITS, STATE SALES TAX, FEDERAL EXCISE TAX, ROYALTIES AND OTHER TAXES OR FEES AS REQUIRED FOR INSTALLATION OF A COMPLETE SYSTEM AS OUTLINED HEREIN AND AS SHOWN ON THE PLANS. THE CONTRACTOR SHALL SECURE ALL NECESSARY LICENSES AND INSURANCE.

E. BASIS FOR BIDS EQUIPMENT SPECIFIED SHALL BE ADHERED TO. HOWEVER, OWNER HAS FINAL DECISION ON THE TYPE AND QUALITY OF EQUIPMENT TO BE SUPPLIED.

WITHIN 30-DAYS AFTER THE CONTRACT HAS BEEN EXECUTED, A FORMAL REQUEST FOR THE SUBSTITUTION OF PRODUCTS IN PLACE OF THOSE SPECIFIED WILL BE CONSIDERED, UNDER THE FOLLOWING CONDITIONS:

THE REQUEST IS ACCOMPANIED BY COMPLETE DATA ON THE PROPOSED SUBSTITUTION SUBSTANTIATING COMPLIANCE WITH THE CONTRACT DOCUMENTS INCLUDING PRODUCT IDENTIFICATION AND DESCRIPTION, PERFORMANCE AND TEST DATA, REFERENCES AND SAMPLES WHERE APPLICABLE, AND AN ITEMIZED COMPARISON OF THE PROPOSED SUBSTITUTION WITH THE PRODUCTS SPECIFIED, WITH DATA RELATING TO CONTRACT TIME SCHEDULE, DESIGN AND AESTHETIC EFFECT WHERE APPLICABLE.

THE REQUEST IS ACCOMPANIED BY ACCURATE COST DATA ON THE PROPOSED SUBSTITUTION IN COMPARISON WITH THE PRODUCT SPECIFIED, WHETHER OR NOT MODIFICATION OF THE CONTRACT SUM IS TO BE A CONSIDERATION. IF REDESIGN BY THE ARCHITECT OR HIS CONSULTANTS IS REQUIRED TO ACCOMMODATE AN ALTERNATE PRODUCT OR SYSTEM, ALL COSTS OF THIS REDESIGN SHALL BE BORNE BY THE CONTRACTOR REQUESTING THE CHANGE. IF ADDITIONAL WORK IS REQUIRED BY OTHER CONTRACTORS TO ACCOMMODATE AN ALTERNATE PRODUCT OR SYSTEM, ALL ADDITIONAL COSTS OF THIS WORK SHALL BE BORNE BY THE CONTRACTOR REQUESTING THE CHANGE.

THE REQUEST SHALL BE ACCEPTED OR REJECTED SOLELY AT THE DISCRETION OF THE OWNER WITH ARCHITECT'S OR ENGINEER'S WRITTEN APPROVAL.

F. CODES & STANDARDS THE WORK PERFORMED UNDER DIVISION 16 SHALL COMPLY WITH THE LATEST EDITION AND REQUIREMENTS OF THE FOLLOWING:

APPLICABLE LOCAL CODES AND ORDINANCES, NATIONAL ELECTRICAL CODE, AS AMENDED BY LOCAL CODE, ALL APPLICABLE FEDERAL AND STATE CODES, REGULATIONS AND STATUTES, APPLICABLE ENERGY CODE, OCCUPATIONAL SAFETY AND HEALTH ACT (OSHA), NATIONAL FIRE PROTECTION ASSOCIATION (NFPA), NATIONAL ELECTRICAL MANUFACTURERS ASSOCIATION (NEMA), UNDERWRITERS LABORATORIES, INC. (UL), AMERICAN NATIONAL STANDARDS INSTITUTE (ANSI), AMERICANS WITH DISABILITIES ACT (ADA).

G. MATERIALS & EQUIPMENT MATERIAL AND EQUIPMENT SHALL BE NEW, STANDARD, CURRENT PRODUCTS OF MANUFACTURERS REGULARLY ENGAGED IN THE PRODUCTION OF SUCH EQUIPMENT, AND SHALL BE THE MANUFACTURER'S LATEST DESIGN.

ALL MATERIALS SHALL BEAR THE LABEL OF THE UNDERWRITERS LABORATORY FOR THE INTENDED USE OR SHALL BE MATERIALS APPROVED BY THE CODE ENFORCING AUTHORITIES AND THE ARCHITECT.

FOLLOW THE INSTALLATION DIRECTIONS AND RECOMMENDATIONS OF MATERIAL AND EQUIPMENT MANUFACTURERS.

ALL WORK SHALL BE PERFORMED BY WORKERS SKILLED IN THEIR RESPECTIVE TRADES AND ALL MATERIALS AND EQUIPMENT SHALL BE INSTALLED IN ACCORDANCE WITH MANUFACTURER'S RECOMMENDATIONS. ALL WORK SHALL BE EXECUTED IN A NEAT AND WORKMANLIKE MANNER.

INSTALL EQUIPMENT, INCLUDING SWITCHES, CONTROLLERS, FIXTURES AND TRANSFORMERS SUCH THAT REMOVAL OR REPLACEMENT MAY BE READILY ACCOMPLISHED WITHOUT DAMAGE TO EQUIPMENT OR FASTENERS.

IDENTIFY ALL EQUIPMENT, INCLUDING SAFETY SWITCHES, STARTERS, TRANSFORMERS, PANELS, TERMINAL BOXES, MOTORS, SPECIAL OUTLETS, RELAYS. IDENTIFICATION SHALL CORRESPOND TO THE TERMINOLOGY ON THE CONTRACT DOCUMENTS.

EXAMPLES:
1. AHU #1 STARTER
2. TRANSFORMER T-4
3. EMERGENCY STOP STATION
4. PANEL BC

H. SUPPORTING DEVICES DEVICES, INCLUDING ANCHORS, FASTENERS, HANGERS AND SUPPORTS, SHALL BE OF A TYPE DESIGNED OR FABRICATED FOR THE PURPOSE, AND SHALL ADEQUATELY AND SAFELY SECURE THE MATERIAL AND EQUIPMENT AND PRESENT A NEAT APPEARANCE. USE DEVICES WITH CORROSION RESISTANT CHARACTERISTICS FOR THE ATMOSPHERIC CONDITIONS IN WHICH THEY ARE INSTALLED.

I. BACKBOARDS USE 3/4" THICK EXTERIOR GRADE PLYWOOD, FIRE RETARDANT TREATED, OF WIDTH AND HEIGHT REQUIRED. PLYWOOD SHALL BE NEW AND PAINTED ON ALL SIDES AND EDGES. PAINT BACK SIDE WITH ASPHALTUM WHEN MOUNTED ON MASONRY.

PROVIDE BACKBOARDS FOR ALL GROUP-MOUNTED ELECTRICAL EQUIPMENT, AND FOR COMMUNICATIONS SYSTEMS AS CALLED FOR ON PLANS.

J. RACEWAYS & BOXES ROUTING OF RACEWAYS, INTERCONNECTING OUTLETS AND HOME-RUNS IS UP TO THE ELECTRICAL CONTRACTOR, BUT AFTER COMPLETION OF THE INSTALLATION, HE SHALL SUBMIT TO THE ENGINEER AS-BUILT DRAWINGS OF HIS WORK FOR FUTURE RECORD. DEVICE BOXES SHALL BE INSTALLED FLUSH, CONDUIT SHALL BE CONCEALED UNLESS OTHERWISE INDICATED. ALL CONDUCTORS SHALL BE IN CONDUIT. FOR UNDERGROUND/IN-SLAB LOCATIONS USE GALVANIZED RIGID STEEL (GRS) CONDUIT OR SCHEDULE 40 PVC CONDUIT WITH GROUND WIRE SIZED AS INDICATED OR REQUIRED BY N.E.C., STUB-UPS FROM UNDERGROUND/IN-SLAB PVC CONDUIT SHALL BE GRS. UNDERGROUND GRS SHALL BE COATED WITH TWO COATS OF BITUMASTIC #50 APPLIED WITHOUT THINNING. ALL SECTIONS OF METALLIC CONDUIT SYSTEM SHALL BE GROUNDED AND ELECTRICALLY CONTINUOUS. USE ELECTRICAL METALLIC TUBING (EMT) FOR INTERIOR CONCEALED WIRING AND ELSEWHERE AS PERMITTED BY THE N.E.C. USE FLEXIBLE METAL CONDUIT FOR FLEXIBLE CONNECTIONS IN ALL WET LOCATIONS. INSTALL A NYLON PULL-CORD IN ALL EMPTY RACEWAYS FOR FUTURE USE. SIZE ALL GUTTERS AND PULL-BOXES PER NEC 370 AND 374. ALL PULL AND JUNCTION BOXES SHALL REMAIN ACCESSIBLE AT ALL TIMES.

ALL JUNCTION BOXES SHALL HAVE THE TYPE OF SYSTEM AND VOLTAGE OF CONTAINED CONDUCTORS STENCILED ON THE OUTSIDE OF THE BOX COVER.

EXAMPLES:	POWER 120/208	SOUND
	POWER 277/480	CONTROL 120 V
	T.V.	FIRE ALARM

INSTALL EXPOSED CONDUIT PARALLEL WITH OR AT RIGHT ANGLES TO THE BUILDING LINES. CONDUIT IN CONCRETE MEMBERS AND SLABS SHALL BE LOCATED SO AS NOT TO AFFECT THEIR STRUCTURAL STRENGTH. CONCEAL ALL CONDUIT IN WALLS, ABOVE CEILINGS, IN OR UNDER SLABS OR IN FURRING, EXCEPT IN MECHANICAL AND ELECTRICAL ROOMS.

ROUTE RACEWAYS TO AVOID CONFLICTS WITH THE WORK OF OTHER TRADES.

ALUMINUM CONDUIT WILL NOT BE PERMITTED.
MINIMUM SIZE OUTLET BOX SHALL BE 4" SQUARE BY 1-1/2" DEEP UNLESS APPROVED OR INDICATED OTHERWISE.
USE CAST METAL OUTLET BOXES WITH GASKETED COVERS FOR ALL EXTERIOR AND FOR ALL DAMP LOCATIONS.

PROVIDE APPROVED FIRE STOPPING MATERIALS AT ALL CHASES TO PREVENT DRAFTS, AT PENETRATIONS INTO RATED SPACES, AND OTHER LOCATIONS AS REQUIRED BY CODES.

PROVIDE CABLE SUPPORTS IN ACCORDANCE WITH NEC ARTICLE 300.

PROVIDE EXPANSION FITTINGS IN CONDUIT RUNS CROSSING EXPANSION JOINTS IN THE STRUCTURE.

K. CONDUCTORS. UNLESS OTHERWISE INDICATED, ALL CONDUCTORS ARE #12 IN 1/2" CONDUIT. ALL CONDUCTORS SHALL BE COPPER. ACCEPTABLE INSULATION TYPES ARE TW, THW, THHN, THWN, AND XHHW, WITH USES AS RESTRICTED BY THE NEC. AMPACITIES OF CONDUCTORS IS TO BE BASED ON ARTICLE 310 OF THE NEC WITH UL LIMITATIONS: 60 DEG. RATING FOR SIZES #14 THROUGH #1; 75 DEG. FOR #1/0 AND LARGER. CABLES 3/0 AND LARGER SHALL BE TERMINATED WITH PRESSURE CRIMP CONNECTORS.

FOR 20 AMP BRANCH CIRCUITS GREATER THAN 100 FT. IN LENGTH, ONE WAY, UP TO 200 FT. USE #10 WIRE; OVER 200 FT., USE #8 WIRE.
INCREASE CONDUIT SIZE AS REQUIRED FOR THE LARGER CONDUCTORS. THIS SUPERSEDES WIRE SIZES CALLED FOR ON THE DRAWINGS.

CONDUCTORS SIZE #10 AND SMALLER SHALL HAVE INSULATION COLORED FOR PHASES A, B, C, AND N RESPECTIVELY AS FOLLOWS FOR 3 PHASE SYSTEM:

120/208 VOLTS: BLACK, RED, BLUE AND WHITE
120/240 VOLTS: BLACK, ORANGE (HIGH), BLUE AND WHITE
277/480 VOLTS: BROWN, ORANGE, YELLOW AND GRAY

ALL CONDUCTORS OF THE SAME PHASE IN PARALLELED FEEDERS OR SERVICES SHALL BE SOLIDLY CONNECTED TOGETHER AT THEIR TERMINATION IN A WIREWAY OR SPLICE BOX. MAKE CONDUCTOR LENGTH FOR PARALLEL FEEDERS IDENTICAL.

THE PHASE DESIGNATION OF ALL SECONDARY CONDUCTORS SHALL BE THE SAME AND SHALL BE INDICATED IN OR ON ALL 3 PHASE OUTLETS, TRANSFORMERS, PANELBOARDS, AND DISCONNECT SWITCHES, AND THEY SHALL BE CONNECTED WITH UNIFORM PHASE SEQUENCE.

MAINTAIN A, B, C PHASE RELATION LEFT TO RIGHT WHEN VIEWED FROM THE FRONT.

TAG ALL FEEDER CONDUCTORS AND IDENTIFY MAJOR CONDUITS IN OR AT WIREWAYS, PANELS, PULL BOXES, SWITCHBOARDS, MOTOR CONTROLLERS, CABINETS AND SIMILAR ITEMS TO ASSIST IN FUTURE CIRCUIT TRACING. CONDUCTOR TAGS SHALL BE NONCONDUCTIVE. IDENTIFICATION SHALL CORRESPOND TO THE CONTRACT DOCUMENTS.

COMMUNICATIONS, DATA, AND/OR WIRING WHICH IS NOT INSTALLED IN CONDUIT, AND WHICH IS ROUTED THROUGH ENVIRONMENTAL AIR SPACES, SHALL COMPLY WITH THE REQUIREMENTS OF NEC 300-22. PROVIDE TRAPEZE HANGER ASSEMBLY FOR PLENUM CABLES USING 3/8" DIAMETER HANGER ROD AND CHANNEL ASSEMBLY TO SUPPORT CABLE BUNDLES EVERY 4 FEET. ALL BUNDLES SHALL BE PROPERLY STRAPPED WITH SELF-LOCKING CABLE TIES. EXPOSED CABLES SHALL NOT LIE ON TOP OF CEILING TILES OR LUMINARIES.

L. GROUNDING. END-TO-END LIGHTING FIXTURES SHALL BE CONTINUOUSLY BONDED.

GROUNDING CONTACTS OF RECEPTACLES SHALL BE CONNECTED TO A SOLIDLY GROUNDED CONDUIT SYSTEM OR TO A SYSTEM GROUNDING CONDUCTOR (NOT THE SYSTEM NEUTRAL) BY A STRANDED COPPER WIRE NOT SMALLER THAN #12 AWG OR SHALL BE GROUNDED IN SOME OTHER APPROVED MANNER; THE RESISTANCE BETWEEN THE CONTACTS AND SERVICE GROUND SHALL NOT EXCEED 3 OHMS.

ALL CIRCUITS SHALL HAVE AN EQUIPMENT GROUNDING CONDUCTOR.

M. SAFETY SWITCHES/CIRCUIT BREAKER DISCONNECTS. SAFETY SWITCHES SHALL BE HEAVY DUTY TYPE KD, FUSIBLE, OR NON-FUSIBLE, WITH POLES, AMPERE, VOLTAGE AND HORSEPOWER RATINGS INDICATED AND SHALL HAVE SOLID NEUTRALS. LUGS SHALL BE U.L. LISTED FOR COPPER-ALUMINUM.

ENCLOSURES FOR SAFETY SWITCHES SHALL BE NEMA-1, GENERAL PURPOSE, EXCEPT THAT SWITCHES INDICATED (WP) WEATHERPROOF, SHALL BE NEMA-3R ENCLOSURES WITH SUITABLE GASKETS AND BONDING MEANS.

SWITCHES AND DISCONNECT SHALL BE AS MANUFACTURED BY SQUARE "D", OR APPROVED EQUAL.

CIRCUIT BREAKER DISCONNECTS MAY BE USED IN LIEU OF SAFETY SWITCHES PROVIDING THEY COMPLY WITH THE SAFETY SWITCH REQUIREMENTS AND ARE SUPPLIED WITHIN THEIR RATINGS AND A SCHEDULE IS SUBMITTED FOR APPROVAL.

P. MOLDED CASE CIRCUIT BREAKERS. CIRCUIT BREAKERS SHALL CONFORM TO APPLICABLE FEDERAL SPECIFICATIONS AND NEMA STANDARDS. CIRCUIT BREAKERS SHALL BE OF THE AMPERE RATING, VOLTAGE RATING, NUMBER OF POLES AND CLASS OR INTERRUPTING CAPACITY (I.C.) AS INDICATED. INTERRUPTING RATINGS ARE GIVEN IN ROOT MEAN SQUARE (RMS), SYMMETRICAL AMPERES BASED ON NEMA TEST PROCEDURES. LUGS AND TERMINALS SHALL BE U.L. APPROVED FOR COPPER-ALUMINUM. ACCESSORIES SHALL BE 120 VOLT. A.I.C. OF BREAKER TO BE INSTALLED ON EXIST. PANELS SHALL MATCH EXIST.

EACH CIRCUIT BREAKER SHALL HAVE A TRIP UNIT FOR EACH POLE WITH ELEMENTS PROVIDING INVERSE TIME DELAY UNDER OVERLOAD CONDITIONS AND INSTANTANEOUS MAGNETIC TRIP FOR SHORT CIRCUIT PROTECTION UNLESS INDICATED AS NON-AUTOMATIC. TRIP ELEMENTS SHALL OPERATE A COMMON TRIP BAR TO OPEN ALL ELEMENTS. BREAKERS USED FOR SWITCHING SHALL BE RATED FOR SWITCHING DUTY.

O. FUSES. FUSES SHALL CONFORM TO NEMA AND U.L. AND SHALL BE OF THE VOLTAGE, CLASS AND AMPERE RATING INDICATED.

FUSES FOR MAIN DISCONNECT DEVICES SHALL BE HIGH INTERRUPTING CAPACITY, TIME DELAY, OR TYPE SUITABLE FOR DEVICE. PROVIDE ONE SPARE SET MOUNTED INSIDE THE CUBICLE, FOR EACH MAIN DEVICE.

FUSES FOR MOTORS AND ENCLOSED SWITCHES, NEMA CLASS K-5, UNLESS INDICATED OTHERWISE, DUAL ELEMENT, TIME DELAY. BUSSMAN - FUSETRON, FRN AND FRS, OR EQUAL.

OTHER FUSES SHALL BE AS INDICATED.

P. WIRING DEVICES. DEVICES SHALL BE AS SPECIFIED IN CONTRACT DOCUMENTS.

INSTALL PLATES AND COVERS ON ALL OUTLETS. INSTALL ALL DEVICES UNIFORMLY IN EACH AREA.

PLATES SHALL BE ALIGNED VERTICALLY AND HORIZONTALLY AND ALL EDGES SHALL BE IN FIRM CONTACT WITH SURROUNDING WALL FINISH.

MOUNTING HEIGHTS (TO CENTER LINE OF BOX):

GENERALLY MOUNT RECEPTACLES 18" AFF (ABOVE FINISHED FLOOR) UNLESS NOTED OTHERWISE.
MOUNT SWITCHES AND DIMMERS AT 48" AFF.
MOUNT OUTLETS OVER MIRRORS 8" HIGHER THAN MIRROR.
MOUNT OUTLETS OVER COUNTERS AND CENTERED IN THE BACK SPLASH WHERE IT OCCURS; RECEPTACLE SHALL BE HORIZONTAL.

ADJUST OUTLET HEIGHTS IN CERAMIC TILE WALLS TO BE ENTIRELY IN OR ENTIRELY OUT OF THE TILE. OUTLETS MAY BE HORIZONTAL TO MEET SPACE CONDITIONS.

TEST EACH SOCKET OF EACH OUTLET WITH A DEVICE INTENDED FOR THE PURPOSE.

ALL DEDICATED DATA EQUIPMENT BRANCH CIRCUITS SHALL FEED THIS TYPE OF EQUIPMENT ONLY AND SHALL CARRY A DEDICATED GROUNDING CONDUCTOR TO THE PANEL TO BE CONNECTED TO THE GROUNDING SYSTEM.

III DEMOLITION

REMOVE EXISTING RECEPTACLES, TELEPHONE, SWITCHES, AND ANY ELECTRICAL DEVICES IN WALLS TO BE DEMOLISHED. RELOCATE ANY OF THESE DEVICES AS INDICATED OR REQUIRED BY THE DRAWINGS. PROVIDE ARCHITECT WITH AS-BUILT DRAWINGS OF FINAL INSTALLATION FOR RECORD PURPOSES. CONTRACTOR IS NOTIFIED THAT NOT ALL EXISTING DEVICES MAY HAVE BEEN INDICATED ON THE DRAWINGS AND THAT SOME EXISTING ELECTRICAL DEVICES MAY NOT HAVE BEEN SHOWN IN THEIR ACTUAL LOCATION. CONTRACTOR IS REQUIRED TO VISIT SITE AND BECOME FAMILIAR WITH THE EXISTING CONDITIONS PRIOR TO DETERMINING THE WORK THAT NEEDS TO BE ACCOMPLISHED AS PART OF HIS/HER BID.

THE WORK SHALL INCLUDE THE FURNISHING OF ALL MATERIALS, CUTTING, EXTENDING, CONNECTING, REPAIRING, ADAPTING, AND OTHER WORK COINCIDENTAL HERETO, TOGETHER WITH SUCH TEMPORARY INSTALLATIONS AS MAY BE NECESSARY TO SATISFY THE DEMOLITION PROGRAM. APPROVAL SHALL BE SECURED FROM THE LANDLORD/ARCHITECT PRIOR TO CUTTING/DRILLING ANY STRUCTURAL SUPPORT.

ALL BUILDING CONSTRUCTION AFFECTED BY THE REMOVAL, RELOCATION, INSTALLATION OF ANY PIECE OF EQUIPMENT SHALL BE REPAIRED AND FINISHED AS REQUIRED TO MATCH EXISTING CONDITIONS OR AS DIRECTED BY THE ARCHITECTURAL DRAWINGS, SPECIFICATIONS, OR OWNER'S REPRESENTATIVE.

WHEN ELECTRICAL DEVICES ARE INSTALLED IN PARTITIONS OR CEILINGS TO BE REMOVED, THE ELECTRICAL CONTRACTORTRACTOR SHALL DISCONNECT THEM UP TO THE NEXT OUTLET TO REMAIN OR BACK TO THE PANELBOARD, IF EXISTING TO REMAIN OUTLETS ARE FED THROUGH DEMOLISHED PARTITIONS OR CEILINGS, THE CIRCUIT SHALL BE REARRANGED TO MAINTAIN CIRCUIT CONTINUITY. WIRE SHALL BE REMOVED BACK TO SOURCE FROM INACCESSIBLE RACEWAYS NOT REUSED. INSTALL BLANK PLATES ON FLUSH OUTLETS NOT REUSED. PLATE COLOR SHALL MATCH ADJACENT SURFACE AS NEAR AS POSSIBLE IN FINISHED AREAS.

ALL ELECTRICAL EQUIPMENT SHALL BE REMOVED FROM STRUCTURE TO BE REMOVED. ACCESSIBLE RACEWAYS, WIRES, BOXES, SWITCHES, AND OTHER ELECTRICAL ITEMS ASSOCIATED WITH THIS WORK SHALL BE REMOVED IF NOT REQUIRED FOR NEW EQUIPMENT TO CONTINUE IN SERVICE.

ALL MATERIAL REMOVED SHALL BE DISPOSED OF AS DIRECTED BY OWNER.

GENERAL ELECTRICAL NOTES

1. ALL ELECTRICAL WORK PERFORMED UNDER THIS CONTRACT SHALL COMPLY WITH NEC 2017, FBC 2020, LOCAL CODES AND ORDINANCES AND ALL STANDARDS OF CONSTRUCTION ESTABLISHED BY THE LANDLORD.
2. SUBMIT SHOP DRAWINGS FOR ACCEPTANCE BY THE ARCHITECT AND/OR ENGINEER BEFORE PROCEEDING WITH THE PURCHASE OR INSTALLATION OF THE EQUIPMENT AND MATERIALS. NO FACSIMILES OR FACSIMILE COPIES SHALL BE ACCEPTED.
3. ALL CONDUCTORS SHALL BE THW OR THWN COPPER. ALL EXPOSED CONDUITS SHALL BE RUN AS NEAT AS POSSIBLE. P.V.C. CONDUIT SHALL ONLY BE USED IN SLAB OR UNDERGROUND AT A MINIMUM DEPTH OF 24 INCHES.
4. FLEXIBLE CONDUIT SHALL BE USED FOR CONNECTION TO ALL VIBRATING EQUIPMENT SUCH AS MOTORS, ETC.
5. ALL ELECTRICAL EQUIPMENT SHALL BE APPROVED AS SAFE FOR USE IN THE U.S. WORKPLACE, AS PER A "NRTL" RECOGNIZED ORGANIZATION (U.L., C.S.A., ETC.)
6. ALL EQUIPMENT SHALL BE MOUNTED ABOVE FLOOD CRITERIA.
7. PRIOR TO BID, THE CONTRACTOR SHALL VISIT THE JOB SITE AND BECOME FAMILIAR WITH ALL EXISTING CONDITIONS. NOTIFY THE ARCHITECT OR ENGINEER OF ANY DISCREPANCIES. THE CONTRACTOR SHALL QUALIFY THE BID ACCORDINGLY.
8. THE DESIGNATED NUMBERS ARE SHOWN ON THESE PLANS AS PER THE ORIGINAL DOCUMENTS OR SITE INVESTIGATION FOR THE EXISTING CONDITIONS AND ARE FOR IDENTIFICATION ONLY. CONTRACTOR SHALL VERIFY AND SHOW THE CIRCUIT NUMBERS ACTUALLY USED IN THE INSTALLATION ON THE "AS-BUILT" DRAWINGS.
9. CONTRACTOR SHALL WARRANT ALL WORK TO BE FREE OF DEFECT IN WORKMANSHIP AND MATERIALS FOR A PRIOR OF ONE YEAR AFTER ACCEPTANCE OF THE PROJECT.

ELECTRICAL NOTES:

1. ALL CONTRACTOR WORK SHALL BE IN ACCORDANCE WITH LOCAL CODES
2. CONTRACTOR SHALL SEAL OFF CONDUIT RUNS
3. CONTRACTOR TO MOUNT LIGHTNING ARRESTOR AT SWITCH DISCONNECT
4. CONTRACTOR SHALL VERIFY POWER SOURCE PRIOR TO ORDERING EQUIPMENT
5. NEUTRAL TO BE SUPPLIED FOR 230V-3 PHASE POWER.

SECTION 01010

SUMMARY OF WORK

PART 1 GENERAL

1.01 SCOPE OF WORK

A. This Section describes the project in general and provides an overview of the extent of the work to be performed under this Contract. Detailed requirements and extent of work is stated in the applicable Specification sections and shown on the Plans. The Contractor shall, except as otherwise specifically stated herein or in any applicable parts of the Contract Documents, provide and pay for all labor, materials, equipment, tools, construction equipment, and other facilities and services necessary for proper execution, testing, and completion of the work under this Contract.

1.02 CONSENT DECREE PROJECT

Not Applicable.

1.03 SPECIFICATIONS

A. The Specifications included in these Contract Documents establish the minimum performance and quality requirements for materials and equipment with the minimum standards for quality of the workmanship and appearance. Generally, there has been no attempt to separate the Specification sections into groups for the work of separate subcontractors, or for work to be performed by the various trades. Should there be any question as to the interpretation of any particular Specification section or part of Specification section, such question should be directed to the Department prior to the submittal of a proposal for the work under this Contract.

B. The work shown on the Plans is intended to be comprehensive and descriptive, not an exact and complete representation of the actual finished work. Installed work shall include fittings, joints, supports, nuts, bolts, and all other accessories required to provide complete and satisfactory systems as specified, even though some items may not be specifically shown on the Plans.

C. It is the intent of City to obtain a complete functional, satisfactory and legally operable installation under this project, and any items of labor, equipment or materials which may be reasonably assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the Plans or stated herein. The Contractor shall provide all materials for the project unless they are specifically called out in these specifications as being supplied by the Department. The Contractor shall also supply all other labor, material or equipment

required to preclude damage to or loss of functionality of any existing facility or system.

D. No request for additional compensation or Contract time (except for a non-compensable item extension at the sole discretion of the Engineer, whose decision shall be final) resulting from encountering utilities or structures not shown, or differing in location or elevation from that shown, will be considered. The Contractor shall explore sufficiently ahead of the Work to allow time for any necessary adjustments without delay to the progress of the installation. Cost due to delays occasioned by encountering utilities or structures which could have or should have been discovered by timely exploration ahead of the work shall rest solely with the Contractor.

1.04 REASONABLY IMPLIED PARTS OF THE WORK SHALL BE DONE THOUGH ABSENT FROM SPECIFICATIONS

A. Any part of the work which is not mentioned in the Specifications but is shown on the Plans, or any part not shown on the Plans but described in the Specifications, or any part not shown on the Plans nor described in the Specifications, but which is necessary or normally required as a part of such work, or is necessary or required to make each installation satisfactorily and legally operable, shall be performed by the Contractor as incidental work without extra cost to the City, as if fully described in the Specifications and shown on the Plans, and the expense thereof shall be included in the applicable unit prices or lump sum bid for the work.

1.05 DESCRIPTION OF WORK

A. The project consists of furnishing all materials, labor, and equipment necessary to Upgrade Sewage Pump Station No. 09, including, but not limited to, excavation, demolition and modification work including: Abandon existing dry well; Remove of dry well chimney; Remove of existing pumps, valves, piping, fittings, emergency discharge connection, existing sewer clean out plug, existing concrete slabs; existing wet well top slab; Remove and Replace in kind to match existing 6’(feet) chain link fence; Remove and Relocate as required: existing water meter and connect line to existing service; existing RTU antenna, existing electric box, existing concrete slab for electrical service; Relocate as required existing back flow preventer unit and water faucet, existing plug valve; furnish, installation, operation, and removal of temporary sewage effluent by-pass pumps, equipment and accessories; furnish and install wet well concrete top slab / new valve vault structure concrete and concrete top slab; furnish and install aluminum access hatches for wet well and valve vault and emergency connection; furnish and install new wet well protecting coating; furnish and install two (2) 2.68 HP submersible pumps and related equipment; furnish and install bubbler control system and related equipment; furnish and install new meter and main disconnect; furnish and install the proposed power/control system inclusive of the necessary electrical panel, enclosure, telemetry system and related equipment; install electrical conduits and junction boxes; install R.T.U. panel and S.C.A.D.A. equipment furnished by the Department; electrical work;

mechanical work: furnish all materials, equipment and supplies necessary for pump station startup and testing; furnish and install sewage force main pipe and fittings; connection to existing sewage force main; replacement of any sod, sidewalk, pavement damaged during construction; site restoration; and other appurtenant and miscellaneous items for a complete, satisfactory and functional installation.

B. Pumping Station No. 09 is located at SW Corner of NW 151st ST and Seman Ave in Section 21, Township 52, Range 41, Miami-Dade County, Florida.

C. It is the intent of the department to obtain a complete and working installation under this Project and any items of labor, equipment or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the Plans or stated herein.

1.06 TESTING

A. Testing procedures shall be submitted to the Engineer as Shop Drawings and will be subject to review and approval. The Department reserves the right to require test procedure and equipment changes and revisions to the extent considered appropriate by the Engineer whose decision shall be final. The Contractor is advised that all testing shall be carried out in accordance with the best practices of the trade, best management practices (bmp) and as recommended in writing by the engineering/technical/test staff of the manufacturer of the equipment and he should plan and price his test work accordingly. In no case will test recommendations of a manufacturer's sales or management groups be considered sufficient. All necessary temporary power sources, load banks, test materials, test instrumentation, qualified test personnel including manufacturer's representatives, fuels and lubricants shall be provided by the Contractor and shall be as approved by the Engineer and, if not approved, the Contractor shall change the item(s) to the satisfaction of the Engineer. Where required by the Engineer, testing shall be carried out utilizing Contractor-supplied power sources and load banks prior to any connection with FPL. The Contractor shall include in his prices bid all costs for testing and no extra compensation will be allowed.

B. Factory testing of equipment is in all cases required and test data from these tests shall be provided to the Engineer prior to shipment. The Department will decide when to send its personnel or representatives to the factory for witness testing of equipment. Travel expenses for Department personnel or representatives are paid for by the Department. Repeat tests due to unsuccessful tests will be borne by the Contractor. To establish a base line, the Bidder will assume that any piece of equipment with an invoice cost to the Contractor of one hundred thousand dollars ($100,000) or more will require witnessed testing. The City will in the Specifications try in all cases to note which items will require testing.

C. On site testing shall conform to the protocol previously approved by the Engineer, and shall include testing and calibration prior to energizing of individual cubicles followed by testing and calibration as a whole system or group of systems. The Contractor shall supply all material, equipment, power, time, and fully qualified

specialist personnel to perform all system integration work as necessary to provide systems that talk to one another and correctly react to one another, including systems that must communicate with, and react to existing systems, and systems being or to be installed by others. It is an absolute requirement that upon completion, all systems installed in the Work be able to correctly communicate and react to one another and to systems in existence, being or to be installed, external to the Work. Final testing and calibration will be performed with the equipment energized and will only take place when the Engineer is satisfied with the results of earlier tests. Full written reports of tests and results shall be furnished by the Contractor to the City. All costs for this testing, calibration, system integration and reporting, including the costs for factory and specialist personnel required during testing, calibration and system integration, shall be included in the prices bid and no extra compensation will be allowed. Any delays or costs occasioned by test procedures or results not being satisfactory to the Engineer shall rest solely with the Contractor and no extra time or compensation will be allowed. All on-site testing shall be witnessed by City, and the Contractor shall make timely arrangements and fully coordinate tests with the Engineer.

D. After installation is completed, the Contractor shall provide records of non-destructive electrical insulation tests performed by a certified institution approved by the Engineer, witnessed by the City personnel and attesting that the dielectric condition of the equipment and wiring is acceptable.

PART 2 PRODUCTS (NOT USED)

PART 3 EXECUTION (NOT USED)

END OF SECTION

SECTION 01011

SITE CONDITIONS

PART 1 GENERAL

1.01 SITE INVESTIGATION AND REPRESENTATION

A. The Contractor acknowledges that he has satisfied himself as to the nature and location of the work, the general and local conditions, particularly those bearing upon availability of transportation; disposal, handling and storage of materials; availability of labor, water, electric power, roads; disposal of water from construction; uncertainties of weather; the conformation and conditions at the ground; the type of equipment and facilities needed preliminary to and during the prosecution of the work and all other matters which can in any way affect the work or the cost thereof under this Contract.

B. The Contractor further acknowledges that he has satisfied himself as to the character, quality, and quantity of surface and subsurface materials to be encountered from inspecting the site and from evaluating information derived from exploratory work that may have been done by the City or included with these Contract Documents. Any failure by the Contractor to acquaint himself with all the available information will not relieve him from responsibility for properly estimating the difficulty or cost thereof under this Contract.

C. The Contractor acknowledges that by personal field observation or other means satisfactory to himself, performed prior to the bid, he has included in the prices bid all costs for dealing with all construction problems created by observable above or on grade features on or adjacent to the site of the work whether these features are shown on the Plans or described in the Specifications. In instances where the observable features indicate subsurface conditions which may affect the Project work, as for example, a pavement patch or catch basin gratings indicating respectively a utility or storm sewer not shown on the Plans, the Contractor acknowledges that he has made timely, diligent, inquiry of the Engineer or by other means fully satisfied himself prior to the bid as to the nature of, and costs created by, the subsurface condition and included all costs therefore in the prices bid.

1.02 INFORMATION ON SITE CONDITIONS

A. All information obtained by City regarding the site conditions, topography, subsurface information, ground water elevations, existing construction of site facilities as applicable, and similar data will be made available to the Contractor in the Contract Documents. Such information is offered as supplementary information only. Neither the Engineer nor MDWASD assumes any responsibility for the completeness or for the Contractor's interpretation of such supplementary information. Prior to bidding and after written approval from MDWASD, bidder

may make his own survey investigations to satisfy himself with site conditions at his own cost.

B. Subsurface investigations, including test borings, have been made to indicate subsurface conditions at locations in the Project.

C. Prospective bidders are advised, at their own expense, to make such subsurface investigation, by boring or test hole excavation, as may be desirable. However, such work is to be scheduled by appointment with the Engineer if on a City site or by notification to the City and properly permitted if in the public right of way.

1.03 DIFFERING SUBSURFACE CONDITIONS

A. In the event subsurface or latent physical conditions are found materially different from those indicated in these Documents, and differing materially from those ordinarily encountered and generally recognized as inherent in the character of work covered in these Contract Documents, promptly, and before such conditions are disturbed, notify the Engineer in writing of such changed conditions.

B. The Engineer will investigate such conditions promptly and following this investigation, the Contractor shall proceed with the work, unless otherwise instructed by the Engineer. If the Engineer finds that such conditions do so materially differ as to cause an increase or decrease in cost and time considered reasonable by the Engineer, the City will make the final decision regarding any adjustment in cost or time for completion.

C. In the event that site conditions differ from those expected by the Contractor, the Contractor shall proceed to complete the work as contemplated by the Plans and Specifications at his own cost and expense. If in the discretion of the Engineer, the difference in site conditions renders completion of the work as described by the Plans and Specifications impossible, the Engineer may alter the work, whereupon the Contractor shall be compensated for any extra work in accordance with Section 13 "Extra Work and Payment Therefore" of the General Covenants and Conditions; the Engineer shall not alter the work where the site conditions render the work more difficult or costly to perform, if such work is otherwise still possible as described in the Contract Documents.

1.04 EXISTING UTILITIES AND LOCATION SERVICES

A. Known utilities and structures adjacent to or encountered in the work are shown on the Plans. The locations shown are taken from existing records and the best information available from existing plans. However, it is expected that there may be some discrepancies and omissions in the locations and quantities of utilities and structures shown. Those shown are for the convenience of the Contractor only, and no responsibility is assumed by either MDWASD or the Engineer for their accuracy or completeness. **No request for additional compensation or**

Contract time (except for a non-compensable time extension at the sole discretion of the Engineer, whose decision shall be final) resulting from encountering utilities or structures not shown, or differing in location or elevation from that shown, will be considered. The Contractor shall explore sufficiently ahead of the work to allow time for any necessary adjustments without delay to the progress of the installation. Costs due to delays occasioned by encountering underground utilities or structures which could have or should have been discovered by timely exploration ahead of the Work shall rest solely with the Contractor.

B. Prior to proceeding with excavation the Contractor shall contact all utility companies and all other users of the right-of-way in the area to aid in locating their underground services. It shall be the Contractor's responsibility to contact utility companies at least three Normal Working Days before starting construction. The Contractor shall proceed with caution in the excavation and preparation so that the exact location of underground utilities may be determined. The Contractor shall comply with Chapter 556, F.S. "Underground Facility Damage Prevention and Safety Act", Chapter 553, F.S. "Florida Trench Safety Act, Part IV", Chapter 368, F.S., "Florida Gas Safety Law, Part 1, and OSHA Standard 1926.651.

C. It is the responsibility of the Contractor to ensure that all utility or other existing facilities, the stability of which may be endangered by the close proximity of excavation, are temporarily held in position while work proceeds in the vicinity of the facilities and that the utility or other companies concerned be given reasonable advance notice of any such excavation by the Contractor.

D. The Contractor shall take all reasonable precautions against damage to existing utilities. However, in the event of a break in an existing water main, gas main, sewer or underground cable, the Contractor shall immediately notify the responsible official of the organization operating the interrupted utility. The Contractor shall lend all possible assistance in restoring services and shall assume all cost, charges, or claims connected with the interruption and repair of such services, as determined by the Department.

1.07 CONTRACTOR'S RESPONSIBILITY FOR UTILITY PROPERTIES AND SERVICE

A. Where the Contractor's operation could cause damage or inconvenience to railway, telephone, fiber optic, television, electrical power, oil, gas, water, sewer, irrigation system, or any other utility, the Contractor shall make all arrangements necessary for the protection of these utilities and services.

B. Notify all utility companies that are affected by the construction operation at least 48 hours in advance. Under no circumstance expose any utility without first obtaining permission from the appropriate agency. Once permission has been granted, locate, expose, and provide temporary support for all existing underground utilities and utility poles where necessary. **Absolutely no extra compensation will be allowed for construction problems created by utility**

poles of whatever size, overhead electric, telephone or other lines, whether shown on the Plans or not. The Contractor is solely responsible for discerning such items in the field prior to bidding and including all costs for such work in the prices bid.

C. The Contractor and his subcontractors shall be solely and directly responsible to the owners and operators of such properties for any damage, injury, expense, loss, inconvenience, delay, suits, actions, or claims of any character brought because of any injuries or damage which may result from the construction operations under this Contract.

D. Neither the City nor its officers or agents shall be responsible to the Contractor for damages as a result of the Contractor's failure to protect utilities encountered in the work.

E. In the event of interruption to domestic water, sewer, storm drain, or other utility services as a result of accidental breakage due to construction operations, promptly notify the proper authority. Cooperate with said authority in restoration of service as promptly as possible and bear all costs of repair. In no event shall interruption of any utility service be allowed unless granted by the owner of the utility. In the event water service lines that interfere with trenching are encountered, the Contractor may, by obtaining prior approval of the water utility, cut the service, dig through, and restore the service with similar and equal materials at the Contractor's expense and as approved by the Engineer.

G. Replace, with material approved by the Engineer, at Contractor's expense, any and all other laterals, existing utilities or structures removed or damaged during construction, unless otherwise provided for in these Contract Documents and as approved by the Engineer.

1.08 INTERFERING STRUCTURES

A. Take necessary precautions to prevent damage to existing structures whether on the surface, above ground, or underground. An attempt has been made to show major structures on the Plans. While the information has been compiled from the best available sources, its completeness and accuracy cannot be guaranteed, and is presented as a guide. The Contractor is solely responsible for field verification of all locations.

1.9 FIELD RELOCATION

A. During the process of construction, it is expected that minor relocations of the work may be necessary. Such relocations shall be made only by the direction of the Engineer at the Contractor’s expense. If existing structures are encountered that will prevent construction as shown, notify the Engineer before continuing with the work in order that the Engineer may make such field revisions as necessary to avoid conflict with the existing structures. If the Contractor fails to notify the

Engineer when an existing structure is encountered, and shall proceed with the work despite this interference, the Contractor does so at his own risk.

B. Representatives of utility companies, the railroad companies, the traffic and transportation authorities, etc., shall be notified in accordance with the provisions set forth in the relevant sections of the Specifications and the permitting documents.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

NOT USED

END OF SECTION

SECTION 01016

SAFETY REQUIREMENTS AND PROTECTION OF PROPERTY

PART 1 GENERAL

1.01 CONTRACTOR'S RESPONSIBILITY FOR SAFETY

A. Conduct whatever work is necessary for safety and be solely and completely responsible for conditions of the job site, including safety of all persons (including employees) and property during the Contract period. This requirement shall apply continuously and not be limited to normal working hours.

B. Neither the Professional activities of the Design Professional, nor the presence of the Design Professional nor his or her employees and subconsultants at a construction site, shall relieve the Contractor and any other entity of their obligations, duties and responsibilities including but not limited to, construction means, methods, sequence techniques or procedures necessary for performing, superintending, or coordinating all portions of the Work of construction in accordance with the Project Documents and any health and safety precautions required by any regulatory agencies.

1.02 MANDATORY SAFETY TRAINING AT WATER AND SEWER TREATMENT PLANTS

A. The Contractor shall coordinate with the Construction Manager and thereafter the Water and Sewer Department Safety Office to arrange for a mandatory (PSM) Project Safety Management training for all his personnel who will be on site. This training must be completed prior to mobilization or any other work on site. The Contractor shall also be responsible that all on-site personnel of his subcontractors, at whatever tier, receive this training. The training normally takes about 2 to 3 hours and is held at the project site.

1.03 FEDERAL, STATE, AND LOCAL SAFETY REQUIREMENTS

A. Safety provisions shall conform to the Federal and State Departments of Labor Occupational Safety and Health Act (OSHA), and all other applicable Federal, State, County, and local laws, ordinances, codes, the requirements set forth herein, and any regulations that may be specified in other parts of these Project Documents. Where any of these are in conflict, the more stringent requirements shall be followed. Contractor's failure to thoroughly familiarize himself with the aforementioned safety provisions shall not relieve him from compliance with the obligations and penalties set forth therein.

B. All open excavations made in the earth shall be performed in compliance with the State of Florida Trench Safety Act, OSHA 29 CFR 1926 Subpart P (Chapter 90-96, Laws of Florida). The Contractor shall appoint a "competent person", in

accordance with Subpart P, who shall be present at the jobsite. A "competent person" shall mean one who is capable of identifying existing and predictable hazards in the surroundings, or working conditions which are unsanitary, hazardous, or dangerous to employees, and who has authorization to take prompt corrective measures to eliminate them.

C. The Contractor shall familiarize himself with the "Underground Facility Damage Prevention and Safety Act", Florida Statute 556. The Contractor shall contact the Sunshine 811, at 1-800-432-4770, (or by submitting an internet ticket entry via www.sunshine811.com) at least forty-eight hours prior to any excavation. Failure to familiarize himself with the aforementioned safety provisions shall not relieve him from compliance with the obligations and penalties set forth therein.

D. Conduct operations in such a manner utilizing warning devices, such as traffic cones, barricades and warning lights that traffic, pedestrian and Department personnel are given adequate warning of hazards of the worksite as may be deemed necessary by the Department, Engineer of Record, and governing agency having jurisdiction over the work or political subdivision.

E. The Contractor shall be in compliance with all applicable provisions of the OSHA Code of Federal Regulations (CFR), including, but not limited to, the following:
   1. Process Safety Management (29 CFR 1910.119)
   2. Personal Protective Equipment (29 CFR 1910.132)
   3. Respiratory Protection (29 CFR 1910.134)
   4. Confined Space Entry Procedures (29 CFR 1910.146)
   5. Lockout/Tagout (29 CFR 1910.147)
   6. Industrial Truck / Forklift (29 CFR 1910.178)
   7. Electrical Safety (29 CFR 1910.301)
   8. Commercial Diving (29 CFR 1910.401)
   9. Air Monitoring (29 CFR 1910.1000)
   10. Asbestos & Lead Abatement (29 CFR 1910.1001, 1025)
   11. Blood Borne Pathogens (29 CFR 1910.1030)
   12. Crane Operations (29 CFR 1926 & ANSI)
   13. Fall Prevention Protection (29 CFR 1926.104)
   14. Welding and Cutting (29 CFR 1926.350)
   15. Scaffolding (29 CFR 1926.451)
   16. Excavation Protection (29 CFR 1926.650)
   17. Movement of Traffic (FDOT Index)

1.04 SAFE ACCESS BY FEDERAL, STATE, AND LOCAL GOVERNMENT OFFICIALS

A. The Contractor shall at all times provide proper facilities for safe access to the Work by authorized government officials.

1.05 CONSTRUCTION SAFETY PROGRAM

A. Develop and maintain for the duration of this Contract, a safety program that will effectively incorporate and implement all required safety provisions. The Contractor's Manual of Safety Practices outlining the firms policies on field safety procedures for employees shall be submitted to the Engineer for review before "Notice to Proceed" will be issued. The Contractor shall appoint an employee who is qualified and authorized to supervise and enforce compliance with the safety program.

B. Certain products specified in these specifications contain warnings by the manufacturers that under certain conditions, if instructions for use are not followed, a hazardous condition may exist. It is the Contractor's responsibility to instruct his workmen in the safe use of the product, or any product substitution.

C. The duty of the Engineer to conduct construction review of the Contractor's performance is not intended to include a review or approval of the adequacy of the Contractor's Safety Supervisor, the safety program, or any safety measures taken in, on, or near the construction site.

1.06 SAFETY EQUIPMENT

A. As part of the safety program, maintain at an office or other well-known place at the jobsite, safety equipment applicable to the Work as prescribed by the governing safety authorities, all articles necessary for giving first-aid to the injured, and establish the procedure for the immediate relocation to a hospital or a doctor's care of any person who may be injured on the jobsite.

B. Perform all necessary work to protect all personnel and the general public from hazards, including, but not limited to, surface irregularities or unramped grade changes, and trenches or excavations. Furnish barricades, lanterns, and proper signs to safeguard all persons and work.

C. The performance of all work and all completed construction, particularly with respect to ladders, platforms, structure openings, scaffolding, shoring, logging, machinery guards and the like, shall be in accordance with the applicable governing safety authorities.

D. During construction, construct and at all times maintain satisfactory and substantial temporary chain link fencing, solid fencing, railings, barricades or steel plates, as applicable, at all openings, obstructions, or other hazards. All such barriers shall have adequate warning lights as necessary, or required, for safety.

E. There shall be no oil dripping from equipment or oil spills.

1.07 STORAGE OF HAZARDOUS MATERIALS

A. The material shall be stored and handled in a proper and safe manner and upon its use, immediately dispose of the containers, cans, rags and remnants of the

material in a manner approved by the Department of Environmental Resources Management (DERM) at the Contractor's sole cost. The Contractor is not allowed to store empty containers at the site. In case of any violation, the Engineer will report such violation to DERM and the Contractor shall be subject to all penalties and fines as required by State and County regulations.

B. The Contractor is hereby cautioned that he cannot store any environmentally hazardous materials such as solvents, greases, lubricants or any other type of chemical substances at the Pump Station site. The Contractor shall be allowed to keep only such materials at the site for immediate use.

1.08 ACCIDENT REPORTS

A. If death, serious injuries, or serious damages are caused, report the accident immediately by telephone or messenger to the Engineer. In addition, the Contractor must promptly report in writing to the Engineer and the City all accidents whatsoever arising out of, or in connection with, the performance of the work whether on, or adjacent to, the site, giving full details and statements of witnesses.

B. If a claim is made by anyone against the Contractor or any subcontractor on account of any accident, promptly report the facts in writing to the Engineer and the City, giving full details of the claim.

1.09 TRAFFIC SAFETY AND ACCESS TO PROPERTY

A. Comply with all rules and regulations of the city, state, and county authorities regarding closing or restricting the use of public streets or highways. No public or private road shall be closed, except by express permission of the City and the controlling authority. Conduct the work so as to assure the least possible obstruction to traffic and normal commercial pursuits. Protect all obstructions within traveled roadways by installing approved barricades, signs, and lights where necessary for the safety of the public. The convenience of the general public and residents and the protection of persons and property are of prime importance and shall be provided for in an adequate and satisfactory manner.

B. Where traffic will pass over backfilled trenches before they are paved, the top of the trench shall be maintained with temporary asphalt that will allow normal vehicular traffic to pass over. Temporary access driveways must be provided where required. Access to businesses, schools and homes along the route of the work shall be provided by the Contractor at all times. Cleanup operations shall follow immediately behind backfilling and the worksite shall be kept in an orderly condition at all times.

C. Supply flagmen and guards or Police when they are required by regulation, when deemed necessary for safety, or required by the Engineer. Flagmen and Guards

shall be furnished with approved orange wearing apparel and other regulation traffic control devices.

1.10 FIRE PREVENTION AND PROTECTION

A. Perform all work in fire-safe manner. Furnish and maintain on the site adequate fire-fighting equipment capable of extinguishing incipient fires. Comply with applicable federal, local, and state fire-prevention regulations. Where these regulations do not apply, applicable parts of the National Fire Prevention Standard for Safeguarding Building Construction Operations (NFPA No. 241) shall be followed.

1.11 DECLARED STATE OF EMERGENCIES

HURRICANE

A. Hurricane Preparedness: During such periods of time as are designated by the United States Weather Bureau as being a hurricane alert, the Contractor shall perform all precautions as necessary to safeguard the work and property, including the removal of all small equipment and materials from the site, lashing all other equipment and materials to each other and to rigid construction, and any other safety measures as may be directed by the Engineer.

B. Prior to the Start of Work: The Contractor shall submit for approval, a Plan of Action for the specific actions to be taken on his particular projects during a hurricane watch and hurricane warning.

C. Upon Notification of a Hurricane Warning

1. Formal notification to the Contractors to implement their approved Plan of Action to protect the project and the public.
2. For construction projects at a Plant or Pump Station, a copy of the notifications will be provided to the Plant Superintendent or, for Pump Stations, to the Engineer. The Plant Superintendent or Engineer may notify the Construction Superintendent of any assistance he may need for the Contractor in order to secure the Plant or Pump Station.
3. For pipeline construction projects within the public right-of-ways, the Contractor will be notified by the Construction Manager Office to suspend his construction operations. The Contractor will backfill all open trenches, remove all construction equipment and materials from the right-of-way, remove unnecessary traffic barricades and signs, secure remaining barricades by "half burial" or "double sand bags".

POST DISASTER WORK

A. In the event of a disaster declaration by the Local or State governing authorities, the Department may choose to obtain the services of the Contractor to perform

work made an imminent priority for the disaster event. The compensation for the additional work caused by the disaster shall be negotiated between the Engineer and the Contractor with written approval provided by both parties prior to mobilizing at the designated location or locations. The value of the work performed shall be up to the amount of the original contract with contingencies and dedicated allowances.

1.12 JOINT SURVEY TO ESTABLISH AUTHENTICITY OF POSSIBLE DAMAGE CLAIMS

A. The Contractor shall maintain vertical and horizontal survey control points on all structures and improvements, located in the vicinity of the work prior to beginning work, and shall periodically check the points for movements with copies provided to the Engineer, of the survey notes for each survey and a copy of the layout of the survey control points.

B. After the contract is awarded and before commencement of work, the Contractor shall perform a thorough examination of existing buildings, structures, and other improvements in the vicinity of the work, as applicable, which might be damaged by his operations.

1. Examinations of existing structures, buildings, and other improvements in the vicinity of the work shall be done by the Contractor. The scope of the examination shall include cracks in the structures, settlement, leakage, and similar conditions. The City assumes no responsibility for pre-existing conditions of the structure.

2. Records in triplicate of all observations shall be prepared by the Contractor, photographs shall be taken by the Contractor signed and dated, with descriptive information and in the manner specified above. One signed copy of every document and photograph will kept on file in the office of the Engineer. Video recording also required.
3. The above records are intended to be used as indisputable evidence in ascertaining the extent of any damage which may occur as a result of the Contractor's operations and are for the protection of the Contractor and the City, and will be a means of determining whether and to what extent damage, resulting from the Contractor's operations, occurred during the Contract work.

C. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. Preconstruction videos and digital pictures shall be taken with date stamps of the entire area of work. A copy of all such notices shall be forwarded to the City.

1.13 TRAFFIC CONTROL AND USE OF PUBLIC STREETS

A. The Contractor shall be responsible for traffic control as specified hereinafter. Any reference to Miami-Dade County, its departments, or its published regulations, permits and data, shall be synonymous and interchangeable with other recognized governing bodies over particular areas of streets or their departments, published regulations, permits, or data. Abide by all applicable laws, regulations and codes thereof, pertaining to maintenance of public streets, detour of traffic, traffic control and other provisions as may be required for this project.

B. The Contractor shall be fully responsible for the maintenance of public streets, detour of traffic (including furnishing and maintaining regulatory and informative signs along the detour route), traffic control and other provisions, throughout the project as required by the Metropolitan Dade County Department of Public Works, Traffic Engineering Division (Traffic Division). Traffic shall be maintained according to corresponding typical traffic control details as outlined in the Dade County Public Works Manual. No street shall be completely blocked nor blocked more than one-half at any time, keeping the other half open for traffic without specific approval.

C. If required by the Traffic Division, employ the required number of uniformed off-duty policemen to maintain and regulate the flow of traffic through the construction area. The number of men required and the number of hours on duty necessary for the maintenance and regulation of the traffic flow shall be subject to their approval. If required for traffic control permits or agencies, the Contractor shall work odd or night hours, as required for traffic control reasons, and the cost of such work shall be considered as incidental to construction.

D. The Contractor shall provide all barricades and/or flashing warning lights necessary to warn motorist of the construction throughout the project.

E. Excavated or other material stored adjacent to or partially upon a roadway pavement shall be adequately marked for traffic safety at all times. Provide necessary access to all adjacent property during construction.

F. The contractor shall be responsible for the provision, installation and maintenance of all traffic control and safety devices, in accordance with specifications outlined in the Dade County Public Works Manual. In addition, provide for the resetting of all traffic control and information signing removed during the construction period.

G. Where excavations are to be made in the vicinity of signalized intersections, attention is directed to the fact that vehicle loop detectors may have been embedded in the pavement. Verify these locations by inspecting the site of the work and by contacting the Sunshine 811, at 1-800-432-4770, (or by submitting an internet ticket entry via www.sunshine811.com) . Any loop detector which is damaged, whether shown on the Plans or not, shall be repaired or replaced to the satisfaction of the Traffic Division.

H. Notify the Traffic Division 24 hours in advance of the construction date, and 48 hours in advance of construction within any signalized intersection.

I. Temporary pavement will be required over all cuts in pavement areas, and also where

traffic is to be routed over swale or median areas. When the temporary pavement for routing traffic is no longer necessary, it shall be removed and the swale or median area restored to their previous condition.

1.14 WORKING IN CONFINED SPACES

Where a Contractor needs to work in a confined space, the Contractor must comply with the General Industry, OSHA Confined Space Standard, 29 CFR 1910.146 or the equivalent Confined Space Standard in CFR 1926, Safety and Health Regulations for Construction Standards.

SECTION 01031

GRADES, LINES AND LEVELS

PART 1 - GENERAL

1.01 SCOPE

This work of this Section comprises the establishing of grades, lines and levels.

1.02 RELATED WORK

Section 01720 - Project Record Documents
Section 01725 - Project As-Builts

PART 2 - PRODUCTS

2.01 Materials:

Furnish all stakes, templates and other materials necessary for establishing and maintaining of the lines and grades necessary for control and construction of the Work and all incidental labor necessary for the prosecution of the Work.

PART 3 - EXECUTION

3.01 LAYOUT OF THE WORK:

A. GENERAL

1. The Engineer of Record, through retaining the services of a Professional Land Surveyor and Mapper, who is licensed in the State of Florida, shall furnish the Contractor with horizontal and vertical controls which shall be utilized as specified elsewhere herein to layout the work. The Professional Land Surveyor and Mapper, who is licensed in the State of Florida hired by the Contractor, shall verify all controls provided by the Engineer of Record and it shall be the responsibility of the Contractor to preserve same.

2. The Contractor shall retain the services of a Professional Land Surveyor and Mapper, who is licensed in the State of Florida who, shall furnish and set stakes, establishing line and grade and shall solely be responsible for the layout of the work as well as the recording of all as-built dimensions and elevations. The Contractor shall furnish all additional stakes, templates, and other materials for marking and maintaining survey points and lines given, and shall be responsible for their preservation. Should any of the horizontal and vertical control points set by the Engineer of Record be

destroyed or disturbed, they shall be reset by the Contractor's Florida Registered Land Surveyor and Mapper, at the Contractor's expense. All control points previously set by the Engineer of Record shall be verified by the Contractor's surveyor.

B. LAYOUT

As provided in Subsection 3.01-A, above, the Contractor through the services of his Florida Registered Land Surveyor and Mapper, shall establish the line and bench mark and other reference points for the pipeline or structure, as follows:

1. Structures: Will consist of baselines, stakes at building corners, centers and centerlines, auxiliary lines and two bench marks from which to establish the elevations. The Engineer of Record shall set a minimum of three horizontal and vertical control points which shall thereafter be maintained by the Contractor, without further help from the Engineer of Record, for use in establishing and checking the lines and grades as shown on the contract drawings.

2. Pipelines: Will consist of baselines, construction lines, centerlines, auxiliary lines and bench marks from which to establish the elevations. The Engineer of Record shall set horizontal and vertical control points at the beginning and end of the work and at a minimum distance of 1,400 ft. in between. When the total distance is less than 1,400 ft. control points shall be set at the beginning and end of the work.

3. The Contractor shall use this information to construct the structures and pipelines to the lines and grades shown on the project drawings and shall supply all equipment and personnel necessary to accomplish this end.

4. For pipelines, this will consist of establishing all points of bend (but not necessarily bevel pipe unless in close proximity to other facilities), valves, tees, crosses and other stations not more than 100 feet apart along the proposed centerline of the pipe, or along a stationed offset line as shown on the Plans, marked by a nail in a metal cap if in pavement, with the station painted nearby or by a nail in the top of a wooden stake driven flush with the ground with the station marked on the flag stake nearby, if not in pavement.

5. The Contractor shall supply the Department Inspector with a copy of the Florida Registered Land Surveyor and Mapper's layout of the work immediately upon its availability to his own forces.

6. The Contractor shall make his equipment and men available to the Inspector for spot checking the accuracy of the pipe laying. The Inspector shall require the Contractor to correct pipe alignment when necessary.

C. RECORD DRAWINGS:

1. During the entire construction operation, the Contractor shall retain the services of a State of Florida Registered Land Surveyor and Mapper who shall maintain records of

the installation, including all deviations from the Plans and Specifications by obtaining "as-built" dimensions and elevations.

2. The Surveyor shall prepare Record As-Built Drawings showing correctly and accurately all changes and deviations made during construction, including approved construction variances, to reflect the work as it was actually constructed.

3. Refer to Sections 01720 and 01725 for Department's criteria for developing project record documents and record As-Built drawings.

D. HORIZONTAL AND VERTICAL CONTROL FOR DESIGN

The following shall apply when establishing horizontal and vertical controls for design. They shall also be used for the development of construction drawings.

1. Survey stationing shall proceed from south to north and/or from west to east.

2. Baseline or centerline shall be tied to section corners, or to monument lines or to right-of-way lines.

3. Points along the survey line shall be referenced to perpetuate the alignment. Whenever possible, the reference points shall be established at right angles to the survey line and at intervals no longer than 1,400 feet. Reference points shall be shown on construction plans.

4. Centerline of side streets shall be established and set by nail and disc. Station and angle turned shall be given and shown on the plans.

5. All curve data (horizontal) shall be shown on Plans. Point of curvature and point of tangency shall be set in the field, reference P.C. and P.T. or P.I.

6. Easement lines shall be tied to baseline or centerline. Give station and angle turned.

7. Set centerline or baseline stations every 100 feet on the ground using iron rods in unpaved areas or P.K. nails on asphalt.

8. On vertical control refer to datum used (such as NGVD 88, NGVD 1929, City of Miami). Nationwide, surveys and as-builts are in the process of conversion to NAVD 88 from the NGVD 1929. The Department will accept NAVD 88 datum with a conversion factor on each page. The Florida Department of Transportation is using the NAVD 88 datum. Projects within FDOT roadway limits shall either use NAVD 88 datum or provide a conversion factor on each page if the NGVD 1929 datum is used. For projects using City of Miami datum provide a conversion factor on each page to the NAVD 88 datum.

9. Temporary bench marks (T.B.M.) and bench marks shall be established throughout the project at approximately 1,000 feet intervals. Show information on plans

10. Centerline shall be tied to baseline if different from each other.

11. Tie proposed pipe to centerline or baseline, not to right-of-way line. Right-of-way line shall be tied to centerline or baseline.

12. All survey information shall be shown on the plans.

13. All point of intersections and deflection angles shall also be shown. Angle can be submitted by bearings.

END OF SECTION

SECTION 01070

CUTTING AND PATCHING

PART 1 GENERAL

1.01 SCOPE OF WORK

A. Work Included: This section includes work required to provide complete, in place, cutting, fitting, and patching of new and existing work.

1. Do not imperil any work by cutting or altering work or any part of it.
2. Do not cut structural or reinforcing steel without the written consent of the Engineer.

1.02 DESCRIPTION OF WORK

A. Execute cutting (including excavating), fitting or patching of work, required to:

1. Make the several parts fit properly.
2. Uncover work to provide for the installation of ill-timed work.
3. Remove samples of installed work as specified for testing.
4. Install specified work in existing construction.

B. In addition to Contract requirements, upon written instructions from the Engineer:

1. Uncover work to provide for Engineer's observation of covered work.
2. Remove samples of installed materials for testing.

1.03 SUBMITTALS DURING CONSTRUCTION

A. Prior to cutting which affects structural integrity or safety, submit written notice to the Engineer and other Contractors, requesting consent to proceed with cutting.

B. All cutting and patching, to be performed at no additional cost to the Department.

C. Should conditions of work, schedule, indicate change of materials or methods, submit written recommendation to the Engineer, including:

1. Conditions indicating change.
2. Recommendations for alternative materials and/or methods.
3. Submittals as required for substitutions.
4. Submit written notice to the Engineer, designating time work will be uncovered, to provide for observation.

PART 2 PRODUCTS

2.01 GENERAL

A. Materials for replacement of work removed shall comply with applicable sections of these specifications for type of work to be performed. Materials not specified herein

shall be replaced as specified in Sub- Section 3.03 of this Section, Restoration.

B. Provide all tools and equipment required to accomplish cutting and patching.
C. Completely remove damaged or deteriorated concrete or other material.
D. Legally dispose of all demolition debris generated by the project. The Contractor shall pay for all loading, hauling, transportation and applicable tipping fees.

PART 3 EXECUTION

3.01 INSPECTION

A. Inspect existing condition of work, including elements subject to movement or damage during cutting, patching, excavating, and backfilling.

B. After uncovering work, inspect conditions affecting installation of new products.

3.02 PERFORMANCE

A. Execute fitting and adjustment of products to provide finished installation to comply with specified tolerances and finishes.

B. Execute cutting and demolition as specified below:

1. The cutting and removal of existing work necessary for modifications and installation of new work shall be made with a minimum of damage to the work that is to remain. Any damage done to existing facilities which are to remain shall be repaired at the Contractor's expense to the satisfaction of the Department.
2. When removing materials, or portions of existing structures, and when making openings in walls and partitions, the Contractor shall take all precautions and use all necessary barriers and other protective devices so as not to damage the structures beyond the limits necessary for the new work, and not to damage the structures or contents by falling or flying debris. Unless otherwise permitted, line drilling will be required in cutting existing concrete.
3. Surfaces of seals visible in the completed work shall be made to match as nearly as possible the adjacent surfaces.
4. Non-shrink grout shall be used for setting wall casting, sleeves, and leveling equipment bases. Doweling anchors into existing concrete and elsewhere as required shall be done with an approved type of epoxy material.
5. Debris created within facilities, which are to remain in service during the modification work, shall be removed daily. Operators of the Department and Contractor's employees shall not be subjected to hazardous areas, when performing their duties.
6. Follow other specific instructions for the modification work given in other sections of these specifications and as shown on the Drawings. Should these instructions conflict, the more stringent conditions shall prevail.

C. Restore work which has been cut or removed; install new products to provide completed work in accordance with the requirements of Contract Documents.

3.03 RESTORATION

A. Restore structures and surfaces damaged during the course of this Contract that are to remain in the completed work.

B. Restoration shall be done with new materials and appropriate methods as specified elsewhere in these specifications for new work of similar nature; if not specified, best recommended practice of manufacturer, or appropriate trade association.

C. Restore damaged work in such a way that there is a secure intimate bond or fastening between new and old work. Restored surfaces shall be finished to such planes, shapes, and textures that no transition between new and old work is evident in finished surfaces.

3.04 CLEANING

A. Remove from site all debris, rubbish, and extra material caused by cutting and patching.

END OF SECTION

SECTION 01340

SHOP DRAWINGS, PRODUCT DATA, AND SAMPLES

PART 1 GENERAL

1.01 SCOPE OF WORK

A. The Department has established a "Pre-Approved Product List" for products to be used in the construction of water and sewer facilities. The "Pre-Approved Product List" lists manufacturer's product models pre-approved by the Department which meet the minimum requirements established in the Department's design and construction standards and specifications. However, not all products that may be used in the construction of water and sewer facilities that meet the Department's design and construction standards and specifications are listed in the "Pre-Approved Product List." The "Pre-Approved Product List" is not an exclusive collection of all qualified and approved products. For those products that are not on the "Pre-Approved Product List," the Contractor shall submit shop drawings as specified herein.

B. Contractors and suppliers can submit the "Pre-Approved Product List(s)" for the products that they intend to use in the construction of the water and sewer facilities for the Project. Products listed in the "Pre-Approved Product List" do not require the submittal of shop drawings to the Department. The "Pre-Approved Product List(s)" must be stamped, reviewed and initialed by the Contractor and by his engineer, if applicable, prior to submittal to the Department. A "Submittal Summary Sheet" must accompany all "Pre-Approved Product List" submittals. Both forms can be found in the Department website at www.miamidade.gov/water/pre-approved-product-list.asp.

B. Shop Drawings (including Pre-Approved Product List submittals) shall be submitted prior to any project construction activity. In a timely fashion, well before the contemplated ordering for fabrication of special order or long-lead items or construction use of any standard element of the work, the Contractor shall furnish Shop Drawings for the review and approval of the City.

C. It is the Contractor's sole responsibility, upon the first occasion of submittal of a particular element of the work, to submit Shop Drawings of an element which match and fulfill the requirements and intent of the Plans and Specifications. Any delays or costs caused, either directly or indirectly, by non-timely submissions; submission of items differing significantly from the intent of the Plans and/or Specifications; repeated submission of, or argument over, rejected elements or changes required for acceptance; arguments with the criteria or requirements of the Plans or Specifications; or any other such similar activities shall be at the expense of the Contractor.

D. It is the intent of the Contract Documents that the Contractor shall, in the first instance, submit Shop Drawings of elements which meet or exceed the requirements of the Contract Documents and fit with the other elements of the work and the existing conditions. Delays or the inability to obtain shop drawing approval may subject the Contractor to costs for liquidated or actual damages as specified in the Contract.

E. The approval of Pre-Approved product sheets, shop drawings and data will be general and shall mean that upon examination of the drawings, no variations from the approved project drawings and project requirements have been discovered, and approval will not relieve the Contractor of his responsibilities as defined above. The Department's review will not constitute an approval of dimensions, quantities and details of the material, equipment or item shown.

1.02 CONTRACTOR SUBMITTALS

A. The Contractor shall submit a minimum of four (4) hardcopies of the shop drawing submittal package to the Water and Sewer Department Document Control Section. PDF files of the entire submittal package along with the hard copies are encouraged to simplify the approval process.

B. The Shop Drawing submittal package shall include a transmittal, submittal registry and the pre-approved product list or shop drawing sheets stamped by the Contractor.

C. The Contractor shall meet with the Department Engineer (Construction Manager) the after Project Award to begin the shop drawing submittal process and establish a schedule for submittal and approval.

D. Where there is a deviation from the Specifications, the Contractor shall note it and state the reasons why a deviation is required.

1.03 DESCRIPTION OF WORK

A. Submit to the Engineer for review and approval, Shop Drawings, test reports and data on materials, equipment, and material samples as required for the proper control of work, and as specified in the Specification sections. Shop Drawings shall be submitted for all materials and equipment to be furnished.

B. After award of the project, the Contractor may begin providing submittals for approval. Submit to the Engineer a complete list of preliminary data on items for which Shop Drawings are to be submitted. Included in this list shall be the names of all proposed manufacturers furnishing specified items. Review of this list by the Engineer shall in no way expressed or implied relieve the Contractor from submitting complete Shop Drawings and providing materials, equipment, etc., fully in accordance with the Specifications. This procedure is required in order to expedite

final review of Shop Drawings.

C. Maintain an accurate updated Shop Drawing submittal log which shall include the following items:

1. Submittal Description and Number Assigned
2. Specification Section
3. Plans Sheet Number
4. Date to Engineer
5. Date Returned to Contractor (from Engineer)
6. Status of Submittal (Approved, Approved as Noted, Rejected/Resubmit)
7. Date of Resubmittal and Return (as Applicable)
8. Date Material Release (for Fabrication)
9. Projected Date of Fabrication
10. Projected Date of Delivery to Site
11. Status of O & M Manuals Submittal

1.04 CONTRACTOR'S RESPONSIBILITY

A. Furnish the Engineer with a schedule of Shop Drawings submittals, fixing the respective dates for the submission of Shop Drawings, the beginning of manufacture, testing and installation of materials, supplies and equipment. This schedule shall indicate those that are critical to the progress schedule.

B. Submit to the Engineer all plans and schedules sufficiently in advance of construction requirements to provide maximum time for checking and appropriate action from the time the Engineer receive them.

C. It is the duty of the Contractor to check and approve all plans, data and samples prepared by or for him before submitting them to the Engineer for review. Each and every copy of the Plans and data shall bear Contractor's stamp showing that they have been checked and approved. Shop Drawings submitted to the Engineer without the Contractor's stamp and approval shall be returned to the Contractor for conformance with this requirement before Engineer's review. **Shop Drawings shall indicate any deviations in the submittal from requirements of the Project Documents and the Contractor shall state the reason why a deviation is required.**

D. All submittals shall be accompanied by a submittal registry and transmittal letter containing the following information:

1. Date
2. Project Title and Number
3. Contractor's name and address
4. The number of each Shop Drawing, Data, and Sample submitted
5. Notification of Deviations from Project Documents
6. Submittal Log Number conforming to and referring to Specification Section

Numbers

E. Submit seven copies of Shop Drawings and of descriptive or product data submittals necessary to complement Shop Drawing. The Engineer will retain five sets.

F. After receiving approval by the Engineer, the Contractor shall be responsible for submitting the Shop Drawings to the Building Department. Shop Drawings of all premanufactured items and all other Shop Drawings are required to obtain approval prior to manufacturing or installing the submitted items. The Contractor shall also be responsible for contesting any interpretations by the Building Department that the City considers non-acceptable. The Contractor shall include in the bid prices, all costs for permits, fees and expenses associated with the submittals, including resubmittals (if any) of Shop Drawings to the Building Department. The Building Department as used in this paragraph shall be taken to mean the Miami-Dade County Building Department and/or other governing building authority appropriate to this project.

G. Do not begin any of the work covered by a drawing, data, or a sample returned as “Rejected/Resubmit” until a revision or correction thereof has been reviewed and returned to the Contractor, by the Engineer, with approval or approval “As Noted”. Be responsible for and bear all costs of damages which may result from the ordering of any material or from proceeding with any part of work prior to receiving Engineer's approval or approval “As Noted” of the necessary Shop Drawings.

H. Be fully responsible for observing the need for and for making any changes in the arrangement of piping, connections, wiring, manner of installation, etc., which may be required by the materials/equipment the Contractor proposes to supply, both as they pertain to the Contractor’s own work, work of others, or of other Divisions herein or Trades and clearly show such changes on the Shop Drawings.

I. When substitutions in materials or equipment are allowed, the Contractor shall make all necessary changes in adjacent or connected structures and equipment at his expense. Where contemplated changes, substitutions or appurtenant work require engineering design, in the opinion of the Engineer, the Contractor shall have such design services performed at his expense. Said engineering design services shall be of an extent satisfactory to the Engineer whose word shall be final and shall be performed by a Registered Professional Engineer licensed to practice in the State of Florida.

J. When substitutions in materials or equipment are allowed, the Contractor shall be solely responsible for all costs and time required by any differences in construction methods, fabrication or assembly required and no additional time will be allowed.

K. When a construction change, initiated by the Contractor or resulting from a change made by the Contractor, requires re-permitting as discussed in the preceding paragraph, the Contractor shall be responsible for all labor, material and equipment required to redraw the Plan sheet or sheets affected by the change to the satisfac-

tion of the Engineer of Record and the City. The costs for all work of this sort and all costs of re-permitting shall be borne by the Contractor and no extra com-pensation will be allowed.

L. Determine and verify:

1. Field measurements
2. Field construction criteria
3. Catalog numbers and similar data
4. Conformance with specifications
5. That installation and maintenance clearances are sufficient particularly when equipment or arrangement changes have been made

1.05 ENGINEER'S REVIEW OF SHOP DRAWINGS

A. Engineer's review of plans, data and samples, submitted by the Contractor will cover only general conformity to the Drawing and Specifications. The Engineer's review will not constitute an approval of dimensions, quantities, and details of the material, equipment, device, or item shown. The review of plans and schedules will be general, and shall not be construed:

1. As permitting any departure from the Contract requirements
2. As relieving the Contractor of responsibility for any errors, including detail, dimensions, and materials
3. As approving departures from details furnished by the Engineer, except as otherwise provided herein

B. Variations

1. If the plans or schedules, as submitted, describe variations per paragraph 1.03 C, and show a departure from the Contract requirements which Engineer finds to be in the interest of the City and to be so minor as not to involve a change in Contract price or time for performance, the Engineer may return the reviewed plans without noting an exception.
2. If the plans or schedules, as submitted, describe variations and show a departure from the Contract requirements which the Engineer finds to be minor enough to be corrected by redlining the submittal, the engineer will mark and return the submittal marked "Approved as Noted." The redlined corrections shall be as binding on the Contractor as would be a resubmission embodying the same corrections.

C. When reviewed by the Engineer, each of the Shop Drawings shall be stamped and dated to indicate it had been reviewed. Shop Drawings stamped "Revise and Resubmit" and with required corrections shown will be returned to the Contractor for correction and resubmittal.

D. Resubmittals will be handled in the same manner as first submittals. On resubmit-

tals the Contractor shall direct specific attention, in writing or on resubmitted Shop Drawings, to revisions and corrections required by the Engineer on previous submissions. The Contractor shall make any corrections required by the Engineer.

E. If the Contractor considers any correction indicated on the Shop Drawings to constitute a change to the Project Plans or Specifications, the Contractor shall give written notice thereof to the Engineer who will render a decision which shall be final. After the decision has been made, the Contractor shall without delay, provide the corrections to the plans.

F. When the Shop Drawings have been approved by the Engineer, the Contractor shall carry out the construction in accordance therewith and shall make no further changes therein except upon written instructions from the Engineer.

G. No partial submittals will be reviewed. Submittals not complete will be returned to the Contractor for resubmittal. Unless otherwise specifically permitted by the Engineer, all submittals shall be made in groups containing all associated items for systems, processes or as indicated in specific specifications sections. All plans, schematics, manufacturer's product data, certifications and other Shop Drawing submittals required by a system specification shall be submitted at one time as a package to facilitate interface checking.

1.06 SHOP DRAWINGS

A. When used in the Project Documents, the term "Shop Drawings" shall be considered to mean Contractor's plans for materials and equipment which become an integral part of the Project. These Shop Drawings shall be complete and detailed. Shop Drawings shall consist of fabrication, erection and setting drawings and schedule drawings, manufacturer's scale drawings, and wiring and control diagrams. Cuts, catalogs, pamphlets, descriptive literature, and performance/test data shall be considered only as supportive to required Shop Drawings as defined above.

B. Manufacturer's catalog sheets, brochures, diagrams, illustrations and other standard descriptive data shall be clearly marked to identify pertinent materials, product or models. Information which is not applicable to the Work shall be deleted by striking or cross hatching.

C. Shop Drawing shall have a submittal registry and display the following:

1. Project Title and Number
2. Name of Project Building or Structure
3. Number and Title of the Shop Drawing
4. Date of Shop Drawing or Revision
5. Name of Contractor and Subcontractor Submitting Drawing
6. Supplier/Manufacturer
7. Separate Detailer when Pertinent

8. Specification Title and Number
9. Specification Section
10. Application Project Drawing Number

D. If plans show variations from Contract requirements because of standard shop practice or for other reasons, describe such variations in the letter of transmittal. If no explanation of these variations is provided, the Contractor shall not be relieved of the responsibility for executing the work in accordance with the Contract, even though such plans have been reviewed and approved.

E. For all mechanical and electrical equipment furnished, provide a list including the equipment name, address of and telephone number of the manufacturer's representative and service company so that service and/or spare parts can be readily obtained.

F. All manufacturers or equipment suppliers who propose to furnish equipment or products shall submit an installation list to the Engineer along with the required Shop Drawings. The installation list shall include at least five installations where identical equipment has been installed and has been in operation for a period of at least five years, unless otherwise specified. Manufacturers and/or equipment which fails to meet the specified experience period will be considered if the manufacturer or supplier provides a bond or cash deposit which will guarantee replacement of the equipment or process in the event of failure or unsatisfactory service.

G. Only the Engineer will utilize the color "red" in marking Shop Drawing submittals.

1.07 REQUIRED INFORMATION

A. Submit, as applicable, the following for all prefabricated or manufactured structural, mechanical, electrical, plumbing, process system, and equipment work:

1. Shop Drawings or equipment drawings, including dimensions, size and location of connections to other work, and weight of equipment
2. Catalog information and cuts
3. Installation or placing plans for equipment, drives, and bases
4. Supporting calculations, signed and sealed by a Florida Registered Engineer when required, for equipment and associated supports, or hangers required or specified to be designed by equipment manufacturers
5. Signed and sealed calculations and plans by in-house Florida Registered Professional Engineer for structural systems, indicating compliance to the structural design criteria specified in the Plans
6. Complete manufacturer's specifications, including materials description and paint system
7. Performance data and pump curves
8. Suggested spare parts with current price information
9. List of special tools required for testing, checking, parts replacement, and maintenance. (Special tools are those which have been specially designed

or adapted for use on parts of the equipment, and are not customarily and routinely carried by maintenance mechanics)

10. List of special tools furnished with the equipment
11. List of materials and supplies required for the equipment prior to, and during startup
12. List of materials or supplies furnished with the equipment
13. Special handling instructions
14. Requirements for storage and protection prior to installation
15. Requirements for routine maintenance required prior to equipment startup
16. List of all requested exceptions to the Project Documents

1.08 SUBMITTAL REQUIRED FOR FOREIGN MANUFACTURED ITEMS

A. In addition to the submittal requirements stated above, suppliers of foreign manufactured items shall submit the names and addresses of companies within the United States that maintain technical service representatives and a complete inventory of spare parts and accessories for each foreign-made item proposed for incorporation into the Work. Failure to prove these capabilities shall be cause for rejection of the foreign manufactured items.

B. Foreign manufactured equipment and materials shall in all cases be clearly and permanently marked with the manufacturer's name and country of origin of the item. The name of the U.S. importing/supplying firm is not acceptable. Shop Drawing submittals of foreign-made items shall be accompanied by written information to include name and location (i.e. country, City, and street address) of the manufacturer. This requirement shall also apply to the foreign made elements of items assembled in this country from parts wholly or partially manufactured overseas.

1. The words, "Permanently Marked" as used in this paragraph shall mean; die stamped, cast-in, welded, or otherwise marked such that the removal of the marking by any mechanical or chemical means will result in obvious permanent damage to the surface marked. These markings shall be on surfaces which are not hidden by assembly.

C. Where specified elsewhere herein or at the sole discretion of the Engineer, whose word shall be final, supply verification of quality, suitability or other aspects, as directed by the Engineer, from a Professional Engineer licensed to practice in the State of Florida or the state where the supplying U.S. firm is located. The verification shall be signed, sealed, and dated. All costs for this verification shall be at the sole expense of the Contractor and no extra compensation will be allowed. Verification by foreign-based engineers, firms, manufacturers, etc. will not be acceptable. Verification by means of a very stringent foreign testing agency/standard (for example ISO 9000 series) may be acceptable. However, this shall again be at the sole discretion of the Engineer and the full burden of proof and satisfaction of the City shall rest with the Contractor. No extra time will be permitted due to the requirement for verification and the Contractor has the sole responsibility to make

his submittals with all necessary information in a timely fashion.

1.09 SAMPLES

A. Furnish for the approval of the Engineer, samples required by the Project Documents or required by the Engineer. Samples shall be delivered to the Engineer as specified or directed. The Contractor shall prepay all shipping charges on samples. Materials or equipment for which samples are required shall not be used in work until approved by the Engineer.

B. Samples shall be of sufficient size and quantity to clearly illustrate:

1. Functional characteristics of the product, with integrally related parts and attachment devices
2. Full range of color, texture and pattern
3. A minimum of two samples of each Item shall be submitted

C. Each sample shall have a label indicating:

1. Name of Project
2. Material or Equipment Represented
3. Name of Producer and Brand (if any)
4. Location in Project

D. Prepare a transmittal letter in triplicate for each shipment of samples containing the information specified herein in Paragraph 1.06 A. Enclose a copy of this letter with the shipment and send a copy of this letter to the Engineer. Approval of a sample shall be only for the characteristics or use specified and shall not be construed to change or modify any Contract requirements.

E. Approved samples of the hardware in good condition will be marked for identification and may be used in the work. Materials and equipment incorporated in work shall match the approved samples. Samples which failed testing or were not approved shall be returned to the Contractor at his expense, if so requested at time of submission.

1.10 SUBSTITUTIONS

A. Changes in products, materials, equipment, and methods of construction required by the Contract Documents, which are proposed by the Contractor after award of the Contract, are considered to be requests for substitutions. Where the Plans and/or Specifications designate the products of a particular manufacturer, the product specified has been found suitable for the intended use. Articles or products of similar characteristics may be offered for the approval of the Engineer, whose decision shall be final. Copies of complete descriptive data shall be fur-

nished regarding all materials furnished by the Contractor, consisting of Dimension drawings, catalog references, product data, cost, and other information necessary to clearly identify and evaluate each article. When substitutions are permitted, the Contractor shall make all necessary changes in adjacent, connected, or other structures and equipment at his expense.

B. Where engineer-recommended changes, substitutions or appurtenant work require engineering design, the Contractor shall have such design services performed. Those engineering design services shall be of an extent satisfactory to the Engineer, whose decision shall be final. Engineering services for engineer-recommended changes, substitutions or appurtenant work, shall be performed by a Registered Professional Engineer licensed to practice in the State of Florida.

C Unless specifically authorized by the Engineer in writing, no additional contract time will be allowed, and a decrease in time may be appropriate.

END OF SECTION

SECTION 01410

TESTING AND TESTING LABORATORY SERVICES

PART 1 GENERAL

1.01 SCOPE OF WORK

A. The City will employ and pay for services of an independent testing laboratory to perform testing as indicated in the Project Documents, and may at any time elect to have materials and equipment tested for conformance with the Project Documents.

B. Cooperate with the laboratory to facilitate the execution of its required services.

C. Testing laboratory inspection, sampling and testing will be required for, but not limited to, the following:

1. Soil Compaction
2. Cast-in-Place Concrete
3. Mechanical Work

1.02 CONTRACTOR'S RESPONSIBILITIES

A. Cooperate with laboratory personnel and provide access to Work.

B. Make available, at no cost to the City, adequate quantities of representative samples of materials proposed to be used and which require testing.

C. Provide to the laboratory the preliminary design mix approved to be used for concrete, and other materials mixes, which require control by the testing laboratory.

D. Furnish incidental labor and facilities:

1. To provide access to work to be tested
2. To obtain and handle samples at the Project site or at the source of the product to be tested
3. To facilitate inspections and tests
4. For storage and curing of test samples

E. Notify laboratory sufficiently in advance of operations to allow for laboratory assignment of personnel and scheduling of tests.

1.03 PAYMENT FOR TESTING

A. The City will pay for initial testing services required elsewhere in these Specifications.

B. When initial tests indicate non-compliance with the Project Documents, subsequent retesting occasioned by the non-compliance shall be performed by the same Testing Laboratory, and all costs thereof shall be paid for by the Contractor.

C. Inspecting and testing, performed exclusively for the Contractor's convenience, shall be the sole responsibility of and shall be paid for by the Contractor.

1.04 QUALITY ASSURANCE

A. Upon completion of each test and/or inspection, promptly distribute copies of test or inspection reports to the Engineer, the Contractor, to governmental agencies requiring submission of such reports, and to other persons as directed by the Engineer.

PART 2 PRODUCTS

2.01 TEST METHODS

A. Tests and Inspections will be conducted in accordance with the requirements of these specifications or, if not herein specified, in accordance with the latest standards of the American Society for Testing and Materials (ASTM), or other approved and recognized authorities as acceptable to the City.

B. Requirements for testing are described in various Sections of these Specifications.

PART 3 EXECUTION

NOT USED

END OF SECTION

SECTION 01710

CLEANING

PART 1 GENERAL

1.01 SCOPE OF WORK

A. This Section specifies the maintenance of the work site in a clean, orderly, hazard-free condition.

1.02 QUALITY ASSURANCE

A. Conduct cleaning and disposal operations in accordance with local ordinances and anti-pollution laws. Rubbish, volatile wastes, and other construction wastes shall be neither burned nor buried on the work site, and shall not be disposed of into storm drains, sanitary drains, streams or other waterways.

B. Final cleaning shall be accomplished either by workmen experienced in cleaning operations or by professional cleaners.

1.03 DISPOSAL REQUIREMENTS

A. Conduct cleaning and disposal operations to comply with local codes, ordinances, regulations, and anti-pollution laws. Do not burn or bury rubbish or waste materials on Project site. Do not dispose of volatile wastes, such as mineral spirits, oil, or paint thinner, in storm or sanitary drains, Volatile wastes shall be disposed in accordance with proper laws and be approved by the Department. Do not dispose of wastes into streams or waterways.

PART 2 PRODUCTS

2.01 ON-SITE WASTE CONTAINERS

A. Provide on-site waste containers for collection of waste materials, debris and rubbish. See Section 01100 - Special Project Procedures, Subsection 1.05 regarding Safety Requirements for environmentally hazardous materials.

2.02 CLEANING MATERIALS

A. Cleaning materials shall be as recommended by the manufacturer of the surface to be cleaned.

PART 3 EXECUTION

3.01 SAFETY REQUIREMENTS

A. Maintain work site in accordance with local ordinances and anti-pollution laws

applicable to work site cleanliness and in a neat, orderly and hazard-free condition until final acceptance of the work. Catwalks, accessible underground structures, work site sidewalks and walkways adjacent to the work site shall be kept free from hazards caused by construction activities.

B. Store volatile wastes including rags in covered metal containers, and remove from work site daily.

C. Prevent accumulations of wastes which create hazardous conditions.

D. Artificially ventilate spaces which are not naturally ventilated when volatile or noxious substances are present in those spaces.

3.02 CLEANING DURING CONSTRUCTION

A. Perform cleaning every workday for duration of the Work. Structures, grounds, and areas of the work site, access roads and adjacent public and private properties shall be maintained free from accumulations of waste materials and rubbish caused by construction operations on the work site. Place waste materials and rubbish in on site containers or as otherwise approved. Unneeded construction equipment shall be removed and all damaged repaired so that the public and property owners will be inconvenienced as little as possible.

B. Remove or secure loose material on open decks and on other exposed surfaces at end of each day's work or more often to maintain work site in hazard-free condition.

C. Prevent dislodgement of materials due to wind and other forces. Wet down dry materials and rubbish to lay dust and prevent blowing dust. Cover or wet excavated material leaving and arriving at the site to prevent blowing dust. Clean the public access roads to the site of any material falling from the haul trucks.

D. Empty on-site waste containers whenever necessary so that trash overflow does not occur. Legally dispose of contents at either public or private dumping areas.

E. Control the handling of materials, debris and rubbish; do not drop or throw from heights.

F. Immediately remove spillages of construction-related materials from hauling routes or the site.

G. Where material or debris has washed or flowed into or been placed in existing watercourses, ditches, gutters, drains, pipes, structures, or elsewhere during the course of the Contractor’s operations, such material or debris shall be entirely removed and satisfactorily disposed of during the progress of the work, and the ditches, channels, drains, pipes, structures, and work, etc., shall, upon completion of the work, be left in a clean and neat condition.

3.03 FINAL CLEANING

A. In addition to the cleaning performed above, in preparation for final inspection, remove grease, dust, dirt, rust stain from surfaces. Remove labels, fingerprints and other foreign materials from exposed exterior finished surfaces. Flush down all manhole covers and frames, valve boxes, and areas leaving such surfaces clean of all sand, laitances, etc.

B. In preparation for final acceptance or occupancy, conduct final inspection and cleaning of exposed exterior surfaces, and of concealed spaces.

C. Maintain cleaning operations until project has been finally accepted.

END OF SECTION

SECTION 01720

PROJECT RECORD DOCUMENTS

PART 1 GENERAL

1.01 DESCRIPTION

A. Scope of Work: For contracts where the work is performed at an on-site location maintain one record copy of:

1. Record Drawings. Record Drawings as used herein shall mean a drawing that accurately records constructed improvements and any field changes.
2. Record Specifications.
3. Addenda.
4. Change Orders and other modification of the contract.
5. Engineer's written orders or instructions.
6. Approved Shop Drawings, Product Data and Samples.
7. Field Test records.
8. Construction photographs.
9. As built dimensions and elevations as recorded by the Contractor's Florida Licensed Professional Surveyor and Mapper (PSM) on a daily basis.
10. Field Book. Survey Field notes taken by the Florida Licensed Professional Surveyor and Mapper’s survey crew (copy provided to the Engineer on a monthly basis).

B. The records listed above are to be made available to the Engineer at all times for all projects.

C. Related Requirements Described Elsewhere:

1. Section 01340: Shop Drawings, Product Data and Samples.

1.02 MAINTENANCE OF DOCUMENTS AND SAMPLES

A. Maintain documents in a clean dry, legible, condition and in good order. Do not use record documents for construction purposes.

1.03 REQUIRED MEASUREMENTS

A. Set-up and Verification: The Contractor’s Florida Licensed Professional Surveyor and Mapper is required to recover the design baseline and verify the elevations and coordinates on a regular basis as needed.

B. The Contractor is required to have a level instrument setup next to the construction site in order to control the vertical alignment of the pipe installation

prior to trench backfilling. The level shall be setup daily for use by the surveyor, Contractor's foreman and Department Engineer/Inspector. Any underground construction work that does not have a level properly setup will be stopped by the Department Engineer/Inspector.

C. The Contractor is required to have a survey crew record the field information on a daily basis when there is underground pipe installation. The survey crew shall be on-site as needed to record and verify the information before it is covered. Any underground construction work that does not have the information recorded by a survey crew will be stopped by the Department Engineer/Inspector. The Engineer/Inspector has the authority to order re-excavation of work that was covered without accurate survey measurements.

D. Field Book Information: The Florida Licensed Professional Surveyor and Mapper is required to have his crews make daily visits to the project site during underground pipe installation work to perform field measurements of the Contractor's daily installations. This information shall be recorded in field books. Copies of the field notes are required to be provided to the Construction Manager on a monthly basis. The surveyor's field notes of the surveyor shall be submitted to the Department along with partial as-builts plans (signed and sealed) on a monthly basis as a condition of payment.

1.04 PROJECT RECORDS

A. During the life of the Contract the Contractor shall retain the services of a Florida Licensed Professional Surveyor and Mapper (PSM) who shall maintain daily records of the installation, including all deviations from Plans and Specifications and for the purposes of preparing and submitting to the Department an as-built/record survey in compliance with:

1) Florida Statutes Chapter 472.027.

2) Florida Administrative Code Chapter 5J-17.050, 5J-17.051 and 5J-17.052

3) As further required by these Contract Documents.

B. The Measure and Recording of all information required in Subsection A above for all projects concurrently with construction progress. The services of the Florida Licensed Professional Surveyor and Mapper for the project shall be retained by the Contractor prior to the issuance of the Notice to Proceed. A letter from the Florida Licensed Professional Surveyor and Mapper shall be provided at the preconstruction meeting indicating that the Contractor has secured his services to perform all survey work for the duration of the project and prepare final as-builts plans.

C. Submit redlines, partially completed as-built plan sheets and fully complete as-built Plan sheets and certified copies of field book information to include raw data of the measurements all as required by and satisfactory to, the Engineer as

prerequisite for the acceptance of monthly payment applications.

D. Label each document "PROJECT RECORD" in neat large printed letters.

1. Record all information for pipeline projects and on-site projects concurrently with construction progress.

2. Do not conceal any work until as-built information is recorded by the Contractor's surveyor.
3. All locations for future connections or tie-ins shall be left unburied and uncovered until the Contractor's PSM measures and records the as-built information.

    a. All as-built and inspector information is to be made available to the Engineer on a daily basis for inclusion in the M-D WASD records.

4. Restrained pipe, end line valves, thrust blocks shall be left uncovered for the last complete length. Inline valves and tees shall be left exposed for 1 length on both sides plus the face end. Measure and record the elevation, horizontal and vertical alignment, and the inclination for these items.
5. For all projects, the Contractor's PSM shall maintain exact and extensive records of any deviations from Drawings and Specifications. These records shall be satisfactory to the Engineer, whose decision shall be final, and sufficient to allow the production of accurate as built Plans which correctly and completely portray the work as constructed.

6. For all projects, the Contractor's PSM shall record data as follows during the entirety of construction.

    a. For facility (e.g. a water or sewage plant, pumping station, or similar site, if so designated by M-D WASD) projects, record as-built dimensions and elevations every twenty-five feet (25') or portion thereof along pipeline and at every abrupt change in direction of the new line.
    b. For pipeline projects, constructed in the public right-of-way, record dimensions and elevations every one hundred feet or portion thereof along the pipeline and at every horizontal and vertical change in direction.
    c. In all cases, record locations and elevations for each valve, fitting, service line, fire hydrant, water sampling point, utility poles adjacent to the proposed line, overhead wires crossing the ditch line (approximate height above grade) and other appurtenances along the pipeline.
    d. The identity, dimensions, location, and elevation of any existing utility crossing the proposed line and so immediately adjacent to the new line as to be exposed by the excavation, shall also be

recorded. Locate, excavate, expose, and record the same data for any utility shown in the plans whose proximity to the proposed pipeline could affect the certification requirements of the new installation. Note that in instances of a very wide ditch due to ground conditions, the recording of data for adjacent, paralleling utilities shall only be required for lines which come within three feet of the outside of the pipe being installed, unless otherwise ordered by the Engineer who's decision shall be final.

e. Without exception, for all thrust blocks, the top elevation, outer dimension, thickness of the block, length and location of any sheet piling, if used, shall be recorded by the Contractor's PSM.

f. Specific locations and elevation of equipment, the buildings and miscellaneous items installed inside them shall be recorded as applicable and as required by the Engineer.

g. Without exception, where the substitution of another piece of equipment for that shown on the Plans has been allowed, the footprint, clearance, and elevation dimensions shall be recorded by the Contractor's PSM and these changes shall be accurately and thoroughly portrayed on the as-built plans.

h. Contractor's Licensed Surveyor shall prepare from the field data, as-built record drawings showing correctly, completely, and accurately the installation, embracing all changes and deviations made during construction, including all construction variances, to reflect the work as it was constructed.

i. Record Drawings shall be prepared as specified hereinafter.

j. Record Drawings and five (5) copies shall be signed and sealed by the Surveyor and shall be submitted to the Department for the Engineer's review within ten (10) calendar days following the completion date of successful pressure testing of all mains and appurtenances under this Contract.

k. If the Engineer determines that the Drawings are not acceptable, they will be returned to the Contractor with a cover letter noting the deficiencies and/or reasons for the disapproval. Contractor shall have ten (10) calendar days to correct all exceptions taken by the Engineer and resubmit as-built record drawings to the Engineer for final acceptance.

1.05 MECHANICAL, STRUCTURAL AND ELECTRICAL AS-BUILT RECORDS

A. The mechanical, structural and electrical information on as-builts for Pump Stations and Plant work shall be reviewed and signed and sealed by a Florida Registered Professional Engineer when designated as the responsible party for the corresponding portion of the as-builts.

B. The Engineer shall verify that all mechanical, structural and electrical information on the as-built the work was constructed as designed on the Design Plans. Any deviation shall be noted and approved by the Department.

C. Capital Improvement Projects contracted by the Department shall be certified by

the Construction Manager or Engineer of Record that the work was constructed as designed on the Design Plans with any deviation shall be noted and approved by the Department.

1.06 PROPERTY BOUNDARIES

A. The Florida Licensed Professional Surveyor and Mapper shall establish and maintain throughout the construction the property boundaries of pump stations and easements. The surveyor shall verify that the work of the project does not encroach into adjacent (abutting) property. Property corners lost during construction shall be reset at the first opportunity to ensure that the work is done within the designated limits.

B. The as-builts for pump stations or other Water and Sewer Department above ground facilities in an easement or designated property shall show all property corners, setbacks and dimensions of the structure and appurtenances. All information required of a boundary survey shall be contained on the as-built plans. A boundary survey signed and sealed by a PSM shall be a part of the as-built plans.

1.07 DRAWINGS

A. During the life of the Contract, maintain records of all deviations from the Plans and Specifications and prepare therefrom As-Built Record Drawings showing correctly and accurately all changes and deviations made during construction to reflect the work as it was actually constructed. It is the responsibility of the Contractor to check the As-Built Record Drawings for errors and omissions prior to submittal to the Department and certify in writing that the As-Built Record Drawings are correct and accurate, including the actual location of all piping, exposed and internal piping, and electrical/signal conduits in or below the concrete floor. Indicate the size, depth and voltage in each conduit.

B. Legibly Mark To Record Actual Construction: All data as previously specified for all installations by the Contractor’s PSM. For on-site structures and facilities work the Contractor’s Florida Registered Land Surveyor shall record:

1. Depths of various elements of foundation in relation to finish first floor and datum plane.
2. All exposed and underground piping and ductwork with elevations and dimensions and locations of valves, pull boxes, etc. Changes in location. Horizontal and vertical locations of underground utilities and appurtenances, referenced to permanent reference points, plant survey grids, property lines and similar.
3. Location of internal utilities and appurtenances concealed in the construction shall be referenced to visible and accessible features of the structure. Air conditioning ducts with locations of dampers, access doors, fans and other items needing periodic maintenance.
4. Field changes in dimensions and details.
5. Changes made by Engineer's written instructions or by Change Order.

6. Details not on original Contract Drawings.
7. Equipment and piping relocations.
8. Major architectural and structural changes in structures, including tanks.
9. Architectural schedule changes according to Contractor's record and shop drawings.
10. Record Drawings shall be prepared as specified hereinafter.

C. Specifications and Addenda: Legibly mark each section to record:

1. Manufacturer, trade name, catalog number and Supplier of each product and item of equipment actually installed.
2. Changes made by Engineer's written instructions or by Change Order.

D. Approved Shop Drawings: Provide record copies for system diagrams and drawings together with each element of process equipment, piping, electrical system and instrumentation system.

1.08 SUBMITTALS

A. Accompany submittal with transmittal letter in duplicate, containing:

1. Date
2. Project title and number
3. Contractor's name and address
4. Title and number of each Record Document
5. Signature of Contractor or his authorized representative.

B. Record Drawings with five copies which have been signed and sealed by the surveyor shall be submitted to the M-D WASD for the engineer’s review. Drawings shall conform to recognized drafting standards. As-built drawing shall be submitted on 24-inch by 36-inch bond paper. These materials shall be submitted to the MD-WASD for the Engineer’s review as a prerequisite for payment during the course of construction as previously specified and final, complete sets of documents within ten calendar days following the completion date of successful testing of all mains, equipment and appurtenances under this Contract. Final payment will not be made until the five sets of as-built record drawings (with AutoCAD file) and five sets of prints have been approved and accepted by the Engineer.

1. In cases where a portion of a pipeline system or parts of a process system are put into service, the above conditions shall apply for the in-service portion and monthly payments shall be withheld until the as-built drawings are accepted by the Engineer.
2. As-Built Record Drawings, as prepared by the Contractor’s Florida Licensed Professional Surveyor and Mapper and submitted by the Contractor, shall comply with following criteria and standards:
   a. Title block must show the Contract or Project Title (as applicable); Contract number; MD-WASD ER, PCTS, RPQ numbers; Contractor’s name; Engineer of Record’s name;

Surveyor's name and address; date; location; and where appropriate to the work, size and type (i.e. water main, sanitary gravity main, sanitary force main) of main.

b. Baselines or centerlines must be tied to section corners, monument line and right-of-way lines.

c. Pipeline must be tied to baseline or centerline with stations and offsets.

d. Baselines or centerlines must show bearings or deflection angles, or delta, radius, chord and arc length for curves.

e. Show all horizontal curve data, including point of curvature (PC) and point of tangency (PT) stations or radial bearing.

f. Stationing must be the same as shown on construction drawings and must be tied to Section corners, centerline intersections and all other pertinent control points within the Project. All such pertinent points shall have their stationing shown and where there is dual stationing for a point, both stations shall be called out.

g. Indentify all streets by name or number and show stationing at all intersecting streets.

h. Refer to vertical datum plane and identify the location, elevation and source supplying the bench mark used.

i. Tie easement lines to survey baseline or platted centerline and right-of-ways.

j. Show horizontal and vertical locations of all fittings, deflections, or at any significant change of direction, and at a maximum of 100-foot intervals along the pipeline for off-site (e.g. in the public right-of-way) and at maximum 25- foot intervals for on-site (e.g. on a facility such as a pump station or plant work.

k. On all pipe fittings of 36-inch diameter or over, (i.e. tees bends, crosses, wyes, increasers/decreasers, bevels) elevations must be taken at the end and center points to reflect the true elevation and altitude of the fitting.

l. Elevations of natural ground or pavement over the pipeline must be shown at each position where the pipe elevation is shown and at intervening high and low points.

m. Manhole rim and valve box rim elevations must be shown.

n. Show all invert and bottom elevations in manholes and valve vaults or boxes. Show all invert and bottom elevations together with pipe size, and where it can be determined, pipe material, for existing structures having pipes which cross the pipe line being constructed.

o. Locations and elevations together with diameter, thickness and material of all casings.

p. Location, top and bottom elevations of all sheeting left in place.

q. Coordinate values used inside plants shall be the local, the City established coordinate systems referenced to the property boundary.

r. State plane coordinate values for all new valves and manholes; on existing valves and manholes at points of connection or closest to the point of connection and the point of connection

itself.

3. Certification: The Contractor shall certify on as-built record drawings all other actual constructed details and information as may be required by the City including but not limited to:

   a. Pipeline must be identified by type of pipe material, manufacturer, type of joint and type of joint restraint.
   b. Valves shall be identified by size, type, end condition; and n valves 16-inch or larger, the manufacturer's name and number of turns required to open or close the valve.
   c. Show calculated pipeline percent of grade between manholes of gravity systems.
   d. Types and sizes of sheeting and piling together with measured and complete; location, dimensional, , and elevation data on any pile caps, tie backs, anchors, whalers or other appurtenant structures left in place.

C. Digital Records: The City requires the submittal of as-built drawings in AutoCAD for Windows format and in PDF format. Graphical information contained on magnetic media shall be the same as provided on plan sheets. Digital Records shall be delivered to the City Project Manager containing a list of all files and data being provided. The AutoCAD file shall be compatible with the Department system and capable of being uploaded without external reference files.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

NOT USED

END OF SECTION

SECTION 01 78 40 (01725)

PROJECT AS-BUILT/RECORD DRAWINGS

PART 1 GENERAL

1.01 SCOPE

A. This Section shall serve to set requirements for As-Built/Record Drawings submitted to Miami-Dade Water and Sewer Department (Department").

B. As-Built/Record Drawings shall be submitted prior to placing any mains in service. The approved Final As-Built/Record Drawings are required for Substantial Completion and Conveyance of new water or sewer infrastructure. The infrastructure shall have As-Built/Record Drawings in the format and information specified herein, as recorded by a Professional Surveyor and Mapper (PSM) and prepared in accordance with these guidelines as part of the construction and inspection process.

1.02 RELATED WORK SPECIFIED ELSEWHERE

A. The work shall proceed in accordance with the following specification sections, bound herein:

1. Section 01 31 19.13 (01150) – “Preconstruction Conference”
2. Section 01 42 16 (01005) – “Defined Terms”
3. Section 01 71 23 (01031) – “Grades, Lines and Levels”
4. Section 01 77 00 (01700) – “Contract Closeout”

1.03 GENERAL

A. The Contractor shall retain the services of a Florida Registered Professional Surveyor and Mapper as a prerequisite to receiving a Notice To Proceed (NTP).

1. Prior to receiving the NTP the Contractor shall provide a letter from the PSM indicating that the Contractor has secured his services to perform all survey work for the duration of the Project, and to prepare final As-built/Record Drawings.
2. Prior to receiving the NTP the Contractor shall provide a copy of the insurance policy declaration page of the surveying company, and the professional Liability insurance coverage.
3. The Surveyor shall attend the Preconstruction Conference. It is the Contractor’s responsibility to have the services of the PSM by the Preconstruction Conference and the PSM in attendance.
4. Donation projects require the Survey Company or PSM to carry professional liability insurance coverage. A copy of the insurance policy including the declaration page shall be provided with the Final As-Built/Record Drawings.

B. The Florida Registered PSM shall maintain records of the installation, including all deviations from Plans and Specifications, and for the purposes of preparing and submitting to the Department an As-Built/Record Drawing in compliance with:

1. Florida Statutes Chapter 472.027.
2. Florida Administrative Code Chapter 5J-17.
3. As further required by the Contract Documents.

1.04 AS-BUILT SUBMITTAL PACKAGE

A. The Final As-Built/Record Drawing shall be submitted by the Contractor prior to performing the pressure test of the main to be placed into service. The Department is required to have as-built record documentation of all mains in operation.

B. Donation Projects As-Built Package-Submittal Prior To Pressure Testing and Certification

1. A set of signed and sealed As-Built/Record Drawings (DWFX or PDF file), signed and sealed field book information, electronic field raw data shall be submitted using the applicable Department's system.
2. As-Built/Record Drawings in digital format DWG.
3. Bill of Materials, Bill of Sale Sketch (completed and signed by the Contractor).
4. Easement(s) legal description and sketch (signed by the owner if part of the project). All surveys for right-of-ways, easements, properties, topographical, boundaries and other special purposes.

C. Monthly submittals (for WASD contract projects)

1. A set of signed and sealed As-Built/Record Drawings (DWFX or PDF file), signed and sealed field book information, electronic field raw data shall be submitted using the applicable Department's system.
2. As-Built/Record Drawings in digital format DWG.
3. Final As-Built/Record Drawings shall be submitted as a prerequisite for the last progress payment.
4. Easement(s) legal description and sketch (signed by the owner if part of the project). All surveys for right-of-ways, easements, properties, topographical, boundaries and other special purposes.

D. **Final submittal** shall consist of corrected As-Built/Record Drawings and Documents in digital format (DWG and PDF files), to be submitted using the applicable Department's system and the following sets of signed and sealed hard copies:

1. Two sets for water main projects,
2. Two sets for gravity and force main sewer projects,
3. For pump stations:
    a. Five sets for donation projects.

b. Three sets for contracts.

4. PSM's signed and sealed copy of the Field Book.

5. For donations, a copy of the insurance policy of the PSM, and the surveying company, including the declaration page.

E. As-Built/Record Drawings signed and sealed by the Florida Registered Professional Surveyor and Mapper and/or Engineer of Record or designated Florida Registered Professional Engineer must comply with format requirements.

F. Platted Lots Requirement

1. In lieu of recorded plats, 1 copy of a tentative plat signed by a representative of the Miami-Dade County, Department of Transportation and Public Works, Plats Division may be acceptable for As-Built/Record purposes. The Plats Division representative shall attest that the lot and block numbers, street names, easements, and other pertinent data shown are as will be recorded in the plat's final form. In this case, the submitter is responsible to provide a copy of the recorded plat to the Department's New Business office before any water meters are set on the Project.

1.05 AS-BUILT/RECORD DRAWINGS FORMAT AND GENERAL SUBMITTAL REQUIREMENTS

A. Size shall be 24" X 36".

1. Preferred scales are 1"=20' for contracts and 1"=40' for donations horizontally, and 1"=2' for contracts and 1"=4' for donations vertically. Other scales may be permitted but must be approved by the Department prior to preparation of the drawings.

2. Provide separate As-Built/Record Drawings and easements for water and sewer conveyances. Where water and sewer are shown on the sewer As-Built/Record Drawings, print dash the water on the sewer As-Built/Record Drawings and show only sewer As-Built information. The same applies for the water As-Built/Record Drawings.

3. Any deviations from the design plans must be approved by the Department.

B. Quality of As-Built/Record Drawings

1. To ensure that As-Built/Record Drawings may serve their intended purposes, they shall be prepared with consideration for quality. The Inspector and As-Built Reviewer will consider the following elements to ensure the quality of As-Built/Record Drawings:

a. Accuracy: The Contractor is required to have a survey crew record the field information as necessary when there is underground pipe installation. The Florida Registered Professional Surveyor and Mapper shall be responsible for providing measurements in accordance with the standard of practice established in Chapter 5J-17 of the Florida Administrative Code, pursuant to Section 427.027, Florida Statutes. The approved final As-Built/Record Drawing will be used as part of the Department's GIS and Record System. In addition, the horizontal

accuracy shall not exceed 1 foot in 7,500 feet, a commonly value accepted for suburban areas. The elevations shall be based on a closed level between two-benchmarks and shall not exceed the calculated value of a closure in feet of plus or minus 0.05 feet times the square root of the distance in miles.

b. Appearance: As-Built/Record Drawing shall be prepared in a professional manner consistent with common drafting standards for layout, lettering and line work.

c. Understandability: As-Built information shall be portrayed in a manner that is readily understandable by someone not familiar with the specific job.

d. Clarity: Preparer shall endeavor to present As-Built information clearly without "cluttering" the drawing. Do not include or show trees, shrubs, traffic lights or signs, landscaping, etc.

1.06 CERTIFICATION

A. As-Built/Record Drawings shall include a signed, sealed and dated certification statement by the responsible Florida Registered Professional Surveyor and Mapper, that all measurements were recorded under his direction and that they are accurate.

B. Final As-Built/Record Drawings that contain electrical, mechanical or structural work (pump stations, sewage flow meters, etc.), shall be signed and sealed by the Engineer of Record to indicate As-Built conditions.

C. Certifier shall be fully responsible for the accuracy of the As-Built/Record Drawings. As-Built/Record Drawings shall not contain any statement that the information was obtained from another party other than a Professional Surveyor and Mapper under his direction (e.g. a statement such as "As-Built information provided by Contractor" shall not be permitted).

D. The Contractor shall certify on the As-Built/Record Drawings that the As-Built/Record Drawings are correct and accurately depict what was constructed in the field, in addition that all As-Built field information submitted to the EOR or designated Florida Registered Professional Engineer and/or PSM reflects actual field As-Built project conditions, such as:

1. Valves must be identified by size, type, and end condition. On valves 16-inch or larger, the manufacturer’s name and number of turns required to open or close the valve.

2. Pipeline must be identified by type of pipe material, manufacturer, type of joint and type of joint restraint.

3. Types and sizes of sheeting and piling together with location, dimensional, and elevation data on any pile caps, tie backs, anchors, whalers or other appurtenant structures left in place.

4. External wiring has been terminated inside the panel at the designated “terminal boxes” in accordance with the approved electrical schematic and/or shop drawings.

5. The electrical control panel has been installed and its components match approved shop drawings and are in compliance with the Department's Standards and Specifications.

6. The electrical power and control diagrams are current and reflect all approved plans and/or field modifications made, if any.

7. The electrical control panel and associated electrical equipment are safe to energize and operate.

E. The electrical control panel manufacturer shall certify that:

1. The installed control panel has been inspected at the job site.

2. The control panel and its components match approved shop drawings and are in compliance with project's plans and specifications.

3. The control panel and its components have not been modified, changed or altered in any way, shape or form as to void the Underwriter Laboratory (UL) listing.

4. The electrical control panel and its components are safe to energize and operate

1.07 QUALITY ASSURANCE

A. Contractor's Responsibility

1. As-Built/Record Drawing preparation and submittal shall be the responsibility of the Contractor. The final As-Built/Record Drawings shall be completed and submitted to the Department prior to pressure testing, pending to show only portions of the Project not authorized to be done before certification of the system, such as interconnections, abandonments, cut and plugs, etc.; those activities shall be reflected on the final As-Built/Record Drawing and resubmitted within ten (10) County calendar days after a successful test. Testing will not be considered complete until As-Built/Record Drawings, field book data and other record documents are submitted and approved by the Department.

2. As-Built/Record Drawings shall be checked by the Contractor for errors and omissions prior to submittal to the Department.

3. For Donation Projects: A Bill of Materials (on Department form) shall also be certified as correct by signature and presented at the time of As-Built submission. Quantities shown on the Bill of Materials shall match installed and As-Built quantities, not quantities proposed, bid or bought nor scaled distances or quantities.

B. Professional Surveyor and Mapper Responsibility

1. The PSM shall be responsible for all locations, measurements and associated information on the As-Built/Record Drawings.

2. Infrastructure being shown on As-Built/Record Drawings shall have been located under the direction of a Florida Registered Professional Surveyor and Mapper.

3. As-Built/Record Drawings shall meet the requirements established in these specifications.

1.08 PHASING

A. Phasing of projects must be approved by the Department and such approval communicated to the Inspections Unit. Where phasing is approved the following additional requirements for As-Built/Record Drawings shall apply:

1. The phase number must appear prominently on each sheet.

2. A prominent phase line shall be drawn at the junctures of the submitted phase with any previous or subsequent phases. The phase line shall be labeled and the phase numbers on either side of it identified.

3. Work in previous or subsequent phases shall be "hatched" out or dashed in plan and profile and labeled "Not a Part" to clearly eliminate it from the As-Built/Record Drawings.

4. Clearly show what is part of the present phase and what is part of previous or subsequent phases at the tie-in points or phase lines. Make certain that this matches what was previously submitted with any earlier phases.

5. Unless otherwise authorized, phases shall end at a valve for water and force mains, and at a manhole for gravity sewers.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

3.01 GENERAL

A. If construction drawings are used to create the As-Built/Record Drawings, all "proposed" construction related information such as “equal to”, “typical”, “approximately”, “shall”, etc. shall be removed from As-Built/Record Drawings, leaving only "As-Built" information reflected on the drawing. Do not remove any information on materials installed. The construction drawings need to be adjusted accordingly to reflect constructed as-built information.

B. Site location sketch shall be provided showing the Project site and surrounding area with all streets clearly named, its own north arrow and a readable scale. The section, township and range shall also be provided therein.

C. Provide separate water and sewer profiles.

D. When the main crosses a utility or structure, the two points providing the clearance shall be identified, measured and recorded. This shall apply to all utilities (water, sewer, sewer laterals, water services, gas, electric, storm, telecommunication, duct banks, etc.).

E. All mains shall be stationed, and all facilities and infrastructure labeled. As-Built/Record Drawings shall show stations for all services. As-Built lengths and distances for service runs shall also be given.

F. Stations shall run along the baseline.

G. For water mains, force mains and gravity sewers use one continuous stationing system.

H. Where different stationing systems cross, show the equation station.

I. Label with station and offset all valves, fittings, services, outlets, manholes, deflection points and other components in the line. The labels, stations and offsets shall coincide, plan and profile.

3.02 REQUIRED INFORMATION AND MEASUREMENTS

A. Set-Up Verification

1. The Contractor's Florida Registered Professional Surveyor and Mapper is required to recover the design baseline and verify the elevations and coordinates on a regular basis as needed.

2. The Florida Registered Professional Surveyor and Mapper shall establish and maintain throughout the construction the property boundaries and easements of pump stations and any other Department's facilities and infrastructure. The PSM shall verify that the work of the Project does not encroach into adjacent (abutting) property. Property corners lost during construction shall be reset at the first opportunity to ensure that the work is done within the designated limits. The PSM shall note on As-Built/Record Drawings any Department approved encroachments into pump station site (fencing, driveways, etc.).

3. The Contractor is required to have a level instrument setup next to the construction site in order to control the vertical alignment of the pipe installation prior to trench backfilling. The level shall be setup daily for use by the PSM, Contractor's foreman and Department Engineer/Inspector.

4. The Contractor is required to have a survey crew record the field information on a daily basis when there is underground facilities and infrastructure installation. The survey crew shall be on-site as needed to record and verify the information before it is covered. Any underground construction work that does not have the information recorded by a survey crew will be stopped by the Department Engineer/Inspector. The Engineer/Inspector has the authority to order re-excavation of work that was covered without accurate survey measurements.

B. Field Book Information

1. The Florida Registered Professional Surveyor and Mapper is required to have his crews make daily visits to the Project site during underground pipe installation work to perform field measurements of the Contractor's daily installations. This information shall be recorded in field books. Copies of the field notes are required to be provided to the Construction Manager/Inspector

on a monthly basis. The PSM's field notes shall be submitted to the Department along with final As-Built/Record Drawings (signed and sealed) as a condition of conveyance (for donation projects), or monthly basis as a condition of payment and at substantial completion (for contract projects) before applying for final payment. Electronic field raw data is acceptable.

C. As-Built/Record Drawings Content Requirements and Procedures

1. The following shall be made a part of any As-Built submittal for water or sewer, where applicable:

a. Project name, Project identification number and the words "As-Built/Record Water" or "Record Drawing Water" or "As-Built/Record Sewer" or "Record Drawing Sewer", all prominently displayed. PMS's or Engineer's name, company, address, phone number and certification statement shall also be displayed.

b. All applicable permit numbers for the Project shall be shown on the cover sheet.

c. Graphic and numeric scale, north arrow and any symbol legend needed.

d. All involved streets shown with centerlines, right-of-way lines, widths and names, with matching plat, if applicable, subdivision name, phase line and number. (Phasing to be nearest valve and manhole in limits of phase area). Show station at all intersecting streets.

e. All involved lots and blocks shown and correctly designated (to match plat).

f. All control lines identified (i.e. centerline, section line, monument line, property line, etc.). Identify all streets by name or number.

g. Baseline shall be tied to centerlines, boundary lines, section corners, or to monument lines or to right-of-way lines. Baselines must show bearings or deflection angles, or delta, radius, chord and arc length for curves.

h. Pipeline shall be tied to a baseline that is easily identified on the existing or proposed right-of-way. Baseline shall not be on top of the main except for gravity sewers installed on centerlines.

i. Show all horizontal curve data, including point of curvature (PC) and point of tangency (PT) stations or radial bearing.

j. Stationing shall proceed from south to north and/or from west to east. Stationing shall be the same as shown on construction drawings and must be tied to section corners, centerline intersections and all other pertinent control points within the Project. All such pertinent points shall have their stationing shown and where there is dual stationing for a point, both stations shall be called out.

k. Horizontal Control

1) The PSM shall show on the As-Built/Record Drawings the Florida State Plane Coordinate (current readjustment - NAD 83,

FLA East Zone 901) with at least two physically located horizontal control points within the Project limits.

2) For As-Built/Record Drawings within Department facilities with relative coordinates, a coordinate conversion equation needs to be included on every sheet.

l. Vertical Control

1) As-Built/Record Drawing shall use the same datum as per approved design plans.

2) Nationwide, surveys and As-Built/Record Drawings are in the process of conversion to NAVD 88 from the NGVD 1929. The Department will accept NAVD 88 datum with a conversion factor to NGVD 1929 on each page.

3) For projects using City of Miami datum provide a conversion factor on each page to NGVD 1929 datum.

m. Easements

1) Easements, if any, shall be clearly shown with size, coordinates for each corner and tied to the property line. The easements shall be separate for water, sewer, force main and pump stations.

2) Existing easements with Official Record Book (ORB) information must be shown.

3) Easements are required for any infrastructure not in the public right-of-way. An easement may also be required for a main in the public right of way if there is insufficient side clearance to the right-of-way line to permit maintenance of the pipeline (usually 6' for water and 7.5' for force mains and gravity sewer mains on each side measured from the center of the pipe). For pipelines larger than 16-inches in diameter the easement size shall be determined by the Department.

4) Easement lines shall be tied to the centerline of the main.

5) Show easement released with Miami Dade County Clerk of the Court Official Record Book (ORB) and page.

n. Tie-in Points

1) All tie-in points, water or sewer shall be tied to the baseline.

2) In instances where this is impractical such as for service installations, the tie-in location may be referenced to a known Department facility such as a valve or manhole. This facility must be fully identified with atlas page, Department As-Built/Record Drawing number and page and its designation and station as given therein. Approval for this method of location shall be secured with the As-Built Reviewer/Inspector.

3) All locations for future connections or tie-ins shall be left unburied and uncovered until the Contractor’s Florida

Registered Professional Surveyor and Mapper measures and records the As-Built information.

4) Clearly show and label what is new and what is existing at the tie-in points with the WASD As-Built/Record Drawing number identified on the existing main.

o. The ends of all services and laterals shall be fully located by reference to the main and the nearest property line(s).

p. Show all outlets, stub-outs, sewer lateral, water service and any other relevant information. Identify the size, material, length, direction and elevation (top of pipe for water and force main, invert for gravity sewer).

q. On all pipe fittings of 36-inches diameter or larger, including tees, bends, crosses, wyes and bevels, station and elevation shall be taken at the end and center points to reflect the true elevation and orientation of the fitting.

r. Elevations of natural ground or pavement over pipelines shall be shown at each position where the pipe elevation is shown at least every 100 feet on profile view.

s. Show profile view of the main pipeline installation on the same sheet as the plan view. Stationing on both views shall be aligned to facilitate As-Built review.

t. Manhole rim and valve box rim elevations shall be shown.

u. Show all invert and bottom elevations in manholes and valve vaults or boxes.

v. Show all invert and bottom elevations together with pipe size, and where it can be determined, pipe material, for existing structures having pipes which cross the pipe line being constructed within 250 feet of point of crossing.

w. Location, elevation, material and size of all casings shall be shown. Launching and receiving pits location and dimensions shall be shown in case of jack and boring or micro tunneling used for casing installation.

x. Types, sizes of sheeting and piling together with measured and complete locations with dimensions, top and bottom elevations of all sheeting and pile caps, tie backs, anchors, whalers or other appurtenant structures including sheeting left in-place, shall be shown.

y. Where service is not at a right angle (90 degrees) to main line, tie service with length of offset to nearest property line.

z. For Horizontal Directional Drilling installations, in addition to the applicable items already mentioned on this section, As-Built/Record Drawings shall include:

1) Equipment used.

2) Angles at entry and exit and radius.

3) Bore path report to include detection method used, location for both entry and exit referenced to a permanent structure,

information of the company collecting the data, such as company name, address, date, staff information who collected the data.

4) The Department shall be provided with As-Built/Record Drawing for any failed bore path.

aa. Provide State Plane Coordinate values and elevations for all visible features such as valves, fittings, service lines, manholes, fire hydrants, water sampling points, water meters, cleanouts and backflow preventers, utility poles, adjacent to the main, overhead wires crossing the main and other appurtenances along the main. Also provide State Plane Coordinate values for existing valves and manholes at points of connection or closest to the point of connection and the point of connection itself.

bb. Lines that are abandoned in place, placed out of service or removed shall be clearly identified (dashed and bold line type) on the As-Built/Record Drawings to include cut and plug locations, pipe material and existing As-Built location. Include the existing As-Built/Record Drawing numbers. State whether cut and plug was performed by Department forces.

cc. Include a statement showing work performed by the Contractor under Department's licensed operator supervision.

dd. Mechanical restraints shall be identified on the As-Built/Record Drawing. The restraint system used shall be identified (gland restrained, joint restrained or gasket restrained). If thrust blocks are constructed, the top elevation, outer dimension, thickness of the block, length and location of any sheet piling, if used, shall be recorded by the Contractor's PSM.

ee. Large diameter concrete transmission mains 42-inches and larger shall show each pipe joint with station and pipe length.

ff. Restrained pipe, end line valves, thrust blocks shall be left uncovered for the last complete length. In line valves and tees shall be left exposed for one length on both sides plus the face end. Measure and record the elevation, horizontal and vertical alignment, and inclination for these items.

gg. For pipeline projects, provide dimensions and elevations of ground and top of pipe every one-hundred feet maximum, or portion thereof along the pipeline, at every significant change on ground elevation, at every horizontal and vertical change in direction and at all fittings, with stations.

hh. If an asset is authorized to be reused, clearly show that asset, such as a fire hydrant, is being reused.

ii. Pipeline must be identified by type of pipe material, manufacturer, type of joint and type of joint restraint.

jj. The identity, dimension, location and elevation of any existing utilities crossing the proposed line and so immediately adjacent to the new line

as to be exposed by the excavation shall also be recorded. Locate, excavate, expose and record the same data for any utility shown in the plans whose proximity to the proposed pipeline could affect the certification requirements of the new installation. Note that in instances of a very wide ditch due to ground conditions the recording of data for adjacent, paralleling, utilities shall only be required for lines which come within three feet of the outside (but not less than the minimum required per FAC 62-555.314) of the pipe being installed unless otherwise ordered by the Department whose decision shall be final.

kk. Specific location and elevation of equipment, buildings and miscellaneous items installed inside the buildings shall be recorded as applicable and as required by the Department.

ll. Without exception, where the substitution of a piece of equipment for that shown on the Plans has been allowed, the footprint, clearance and elevation dimensions shall be recorded by the Contractor's PSM and these changes shall be accurately and thoroughly portrayed on the As-Built/Record Drawings.

2. As-Built/Record Drawings for **water and sewer force mains** shall additionally include the following:

a. Plan view showing size, material, offset of main, deflections (if any), stations and offsets of services, hydrants and fittings at the main; and at main, deflections (if any) and the end of the service line.

b. Profile showing ground and top of pipe elevation every 100 feet, maximum, and at any change in grade (with corresponding station) and at every fitting. Show size and material of pipe, all fittings and extend of restrained pipe with stations. Stationing system shall be the same as that used in the plan view.

c. Distances from main to all valves, fire hydrants and meter boxes shall be shown. Tie hydrants to right-of-way. In established areas, the PSM shall run-out right-of-way lines.

d. All "Assembly Detail" shall be provided for all turbo meter installations and for all meters greater than four (4) inches.

e. Label water service as either double, single, irrigation, and so on, based on type of service, including diameter and material.

f. When meter banks are used, show typical detail with size of service line, material and type of services.

g. Location of all air release valves and top of pipe elevation, identifying if the air release valves are automatic or manual.

h. Valves must be identified by size, type, and end condition. Manufacturer's name and number of turns required to open or close the valve shall be provided for valves 16 inch or larger.

3. Gravity sewer As-Built/Record Drawings shall additionally include the following:

a. Plan showing manhole numbers and stations, size and material of pipe,

manhole to manhole length and slope in percentage. The size, material, station and lengths of laterals shall also be shown. Stationing shall be in accordance with the approved permit Plans.

b. Profile showing manhole numbers (as per plan), rim elevations, invert elevations in and out of each manhole with directions, length and slope of line. Pipes with a slope less than the minimum recommended by RER (formerly Department of Environmental Resource Management) minimum for a particular size of pipe shall not be accepted.

c. Stations and offsets of all wyes and tees for laterals and location of cleanouts with distance to property line.

d. Connections to existing sewer collection systems with flow direction shown.

e. Show profile for sewer laterals crossing utilities, with invert elevations at main, at crossings, at change in direction and at clean out, including slope, clearance at crossing and station.

f. When connecting a new main or lateral to an existing main, the As-Built/Record Drawing shall show distance and invert elevations of downstream and upstream existing manholes.

4. The following shall also be included on As-Built/Record Drawings for sewer pump stations and other infrastructure:

a. A complete topographic and boundary survey for the pump station and/or other facilities signed and sealed by the Florida Registered Professional Surveyor and Mapper as part of the As-Built/Record Drawings. All information required of a boundary survey, such as property corners, setbacks, dimensions of the structure and appurtenances, etc. shall be contained on the As-Built/Record Drawings to include the legal description of pump station site and/or other facilities, easements and rights-of-way abutting the pump station site and location of all surface facilities recorded by a PSM. All utilities within pump station property shall be properly shown, along with their associated elevation and clearance.

b. Horizontal and vertical locations of all fittings, deflections, or at any significant change of direction, and at a maximum 25- foot intervals for on-site (e.g. on a facility such as a pump station or plant work).

c. Plan and vertical cross-section of the station showing and identifying the piping and mechanical layout. Show elevations for top of wet and dry wells, bottom of wet well, pipe inverts, finish floor elevation, etc.

d. FEMA flood zone and elevation shall be shown on the cover sheet.

e. Electrical As-Built/Record Drawing control and riser/one-line power schematic diagrams, RTU wiring diagram and all other elevation and any other electrical details.

f. Engineering Report as to the pump manufacturer, size, capacity (TDH), peak design capacity (in GPM) and Bill of Materials (for donation projects).

g. The mechanical, structural and electrical record drawings are to be prepared by the Engineer of Record or a designated Florida Registered Professional Engineer, each sheet of the record drawings must be signed and sealed by the Engineer of Record or a designated Florida Registered Professional Engineer. The cover sheet is to be signed and sealed by the Engineer of Record or a designated Florida Registered Professional Engineer and shall include the following statement:

1) "I certify that these record drawings have been reviewed by me or by individual(s) under my direct supervision and that these drawings incorporate the information contained in the certified As-Built/Record Drawings. To the best of my knowledge and belief these record drawings substantially reflect the sanitary sewer pump station and/or other infrastructure as constructed, and as depicted on the permit plans including any Department approved deviations, if any. The accuracy of these record drawings is reliant on the accuracy applied by the PSM that prepared the certified As-Built/Record Drawings, which was [include the PSM's name, business name, PSM number, address and telephone number]. The PSM has certified to me in writing, that the As-Built location information of the sanitary sewer pump station and/or other infrastructure conforms to the standards of practice for land surveying, Chapter 5J-17 of the Florida Administrative Code."

3.03 DEPARTMENT PROCESSING

A. The Department will require 10 County calendar days to perform the As-Built review.

B. As-Built/Record Drawings will be initially reviewed, commented and/or recommended to be approved, from construction perspective, by the responsible Field Inspector, who shall verify that they are an accurate representation of the work as installed and that the job as shown is complete and in accordance with the permitted plans.

C. Following the Field Inspector's review, As-Built/Record Drawings will be reviewed in depth by the As-Built Reviewer to ensure compliance with these specifications. The Reviewer will also check the complete package which for donation projects shall include the Bill of Materials.

D. The complete submittal package as defined above shall be delivered using the applicable Department's system.

E. Cause for Non-Review

1. If review by the As-Built Reviewers reveals excessive errors or omissions, the As-Built/Record Drawings shall be deemed "non reviewable". As-Built/Record Drawings containing excessive errors or omissions shall include those with omission of major sections of the installation, water and sewer As-Built/Record Drawings on same sheet, those lacking large amounts of information and other

rrors or omissions that are considered excessive in the opinion of the As-Built Reviewer.

2. In cases when an As-Built/Record Drawing is considered "non-reviewable", it shall be marked "Not Reviewable", the reviewer shall note comments regarding obvious problem(s) and shall be returned to submitter. Such As-Built/Record Drawings will not be considered as having been reviewed for the purposes of Sub-section F, Punch List, below.

F. Punch List (for donation projects only)

1. Punch List items may be generated from the Department initial review. Successive reviews are solely for the purpose of ensuring that original punch list items are completely and correctly done to obtain a final As-Built/Record Drawing acceptable to the Department.

2. Successive punch list items may only be added to correct a problem resulting from submitter's efforts to comply with the original punch list. The Department will prevent adding new punch list item(s). Submitter shall be required to make these successive changes.

3. In the case of a major oversight on the part of the As-Built Reviewer, punch list items may be added to the list or requested to the submitter after the valid time for such items. The Department requires that all corrections be made as a condition of accepting the final As-Built/Record Drawings.

G. Acquisition and Resubmittal

1. After notification from the Department, DWFX and/or PDF file with markups along with the As-Built punch list (donation projects only) can be obtained from the applicable Department’s System.

2. After making the corrections requested on the As-Built/Record Drawing set and punch list, upload the revised package to the applicable Department’s System. On contracts, contractor shall resubmit corrected As-Built/Record Drawings to the Department within 10 County calendar days for contracts

3. The Department will require 10 County calendar days to perform the As-Built/Record Drawing review.

H. Disputes or Interpretation

1. Resolution of disputes and interpretation of these requirements is the responsibility of the As-Built Reviewer. Submitting parties are urged to work with him to resolve any problems of this nature.

2. Where necessary, the submitting party may request a hearing with the Department’s PSM in matters of dispute or interpretation. The Department’s PSM's decisions shall be final.

END OF SECTION

SECTION 01730

OPERATING AND MAINTENANCE DATA

PART 1 - GENERAL

1.01 SCOPE OF WORK:

A. Prepare Operating and Maintenance (O & M) Manual covering all equipments and systems provided under this project.

B. Instruct Department's personnel in the operation of equipment and maintenance provided under this project.

C. This Section covers the services of the manufacturer's representatives and special coordinating services required of the Contractor that shall apply during construction, facilities startup, and training of the Department's personnel for facilities operation.

D. The Contractor shall inform all subcontractors and manufacturers of the requirements herein and include the following services in his costs for the work. Where a minimum amount of time is stated in the Technical Specifications for manufacturer's services, any additional time required to perform the specified services shall be at no additional cost to the Department.

1.02 FORM, FORMAT AND SUBMITTALS CONTENTS:

A. Operating and Maintenance manuals will be used for use by Miami-Dade Water and Sewer Department personnel in the operation and maintenance of the various systems.

B. The Department shall be furnished with one set of any special tools required for servicing for each type of equipment actually furnished.

C. Prepare data in the form of an instructional manual for use by Department's personnel.

D. Format:

1) Size: 8½ in. x 11 in.
2) Paper: 20-pound minimum, white, for typed pages.
3) Text: Manufacturer's printed data or neatly typewritten.
4) Drawings:
   (a) Provide reinforced punched binder tab, bind in with text.
   (b) Fold larger drawings to the size of the text paper.
5) Provide fly-leaf for each separate product, or each piece of operating equipment.
   (a) Provide typed description of product, and major component parts of equipment.
   (b) Provide indexed tabs.
6) Cover: Identify each volume with typed or printed title "OPERATING AND MAINTENANCE INSTRUCTIONS". List:
   (a) Title of Project.
   (b) Identify of separate structure as applicable.
   (c) Identity of general subject matter covered in the manual.

E. Binders:

1) Commercial quality three-ring binders with durable and cleanable plastic covers.
2) Maximum ring size: As required (Minimum 1½-inches).

F. Content of Manual:

1) Neatly typewritten table of contents, arranged in a systematic order.
   (a) Contractor, name of responsible principal, address and telephone number.
   (b) A list of each product required to be included, indexed to the content of the volume.
   (c) List, with each product, the name, address and telephone number of:
      (i) Subcontractor or installer.
      (ii) Maintenance contractor, as appropriate.
      (iii) Identify the area of responsibility of each.
      (iv) Local source of supply for parts and replacement.
   (d) Identify each product by product name and other identifying symbols as set forth in Contract Documents.

G. Product Data:

1) Include only those sheets which are pertinent to the specific product.
2) Annotate each sheet to:
   (a) Clearly identify the specific product or part Installed.
   (b) Clearly identify the data applicable in the installation.
   (c) Delete references to inapplicable information.

H. Drawings:

1) Supplement product data with drawings as necessary to clearly illustrate:
   (a) Relations of component part of equipment and system.
   (b) Control wiring, schematic wiring, and flow diagram.
2) Coordinate drawings with information in Project Record Documents to assure correct illustration of completed installation.
3) Do not use Project Record Documents as maintenance drawings.

I. Written text, as required to supplement product data for the particular installation:

1) Organize in a consistent format under separate headings for different procedures.
2) Provide a logical sequence of instructions for each procedure.

J. Copy of each warranty, bond and service contract issued.

1) Provide information sheet for Department's personnel, give:

   (a) Proper procedures in the event of failure.
   (b) Instances which might affect the validity of warranties or bonds.

1.03 MANUAL FOR EQUIPMENT AND SYSTEMS:

A. Content, for each unit of equipment and system, as appropriate:

1) Description of unit and component parts.

(a) Function, normal operating characteristics, and limiting conditions.
(b) Performance curves, engineering data and tests.
(c) Complete nomenclature and commercial number of all replaceable parts.

2) Operating Procedures:

(a) Start-up, break-in, routine and normal operating instructions.
(b) Regulation, control, stopping, shut-down, and emergency instructions.
(c) Special operating instructions.

3) Maintenance Procedures:

(a) Routine operations.
(b) Guide to "trouble shooting".
(c) Disassembly, repair, and reassembly.
(d) Alignment, adjusting, and checking.

4) Servicing and lubrication schedule.

(a) List of lubricants required.

5) Manufacturer's printed operating and maintenance instructions.

6) Description of sequence of operation by control manufacturer.

7) Original manufacturer's parts list, illustration, as drawings and diagrams required for maintenance.

(a) Predicted life of parts subject to wear.
(b) Items recommended to be stocked as spare parts.

8) List of original manufacturer's spare parts, manufacturer's current prices, and recommended quantities to be maintained in storage.

9) Other data as required under pertinent sections of specifications.

B. Prepare and include additional data when the need for such data becomes apparent during instruction of Department's personnel.

C. Additional requirements for operating and maintenance data: The respective sections of Specifications.

1.04 POSTED OPERATING INSTRUCTIONS:

A. General: Operating instructions and diagrams shall be prepared for posting near the equipment. Posted operating instructions shall be photographic or equal non-fading reproductions framed under glass encased in non-discoloring plastic and shall be mounted in location directed. Copies of the posted operating instructions shall also used with the operating and maintenance manuals as a basis in training employees in the operation and maintenance of systems and related equipment installed.

B. Contents: Posted operating instructions shall consist of simplified, consolidated equipment, control and power diagrams graphically representing the entire system and actual equipment installed, including concise written instructions on how to start and stop systems, what settings and conditions are to be observed and what control adjustments are to be made or maintained by the operation.

1.05 MANUFACTURER'S NAMEPLATES:

A. Each major component of equipment to have manufacturer's name, address, model number and rating on a plate securely affixed in a conspicuous place. Nameplate of a distributing agent will not be acceptable in lieu of manufacturer's nameplate.

B. Nameplate shall be die-stamped, engraved, or etched to guarantee long term legibility.

1.06 GUARANTY/WARRANTY:

A. The Contractor shall guarantee that all new equipment has the capacity specified and that it will operate without excess noise or vibration.

B. Contractor shall furnish a written guarantee covering all workmanship and materials for a period of one (1) year, from the date of acceptance. This shall include an agreement to repair or replace, at his expense, all defects that may appear in that time, which in the opinion of the Department, are due to defective workmanship or materials.

C. Copies of factory warranties on all equipment furnished shall be submitted with the above described, written guarantee period, and included in maintenance manuals.

1.07 OPERATION AND MAINTENANCE RESPONSIBILITY:

A. Contractor shall provide all required service and maintenance on all equipment installed under this contract for one (1) year following final acceptance or the beginning of beneficial use by the Department. The starting date of one (1) year service period shall be determined by the Department. Included in the service and maintenance to be provided during this one (1) year period, shall be all required lubrication, adjusting belt tensions, eliminating excessive noise and vibration, correcting all electrical and mechanical faults, recording all permanent installed gauge meter and temperature readings, and other general service items, including the answering of service calls.

B. Services During Construction:

1) General: Competent and experienced technical representatives shall represent the manufacturers of all equipment and systems as many days as may be necessary to resolve assembly or installation problems at the worksite which are attributable to, or associated with, the equipment furnished. This requirement applies to manufacturers of all equipment furnished, whether or not specifically set forth in the Technical Specifications.

2) Manufacturer's Certificate of Proper Installation: Where called for in the Technical Specifications, the manufacturer's representative shall provide a certificate stating that the equipment or system has been installed in accordance with the manufacturer's recommendation and has been inspected by a manufacturer's authorized representative, that it has been serviced with the proper initial lubricants, that applicable safety equipment has been properly installed, and that the proper electrical and mechanical connections have been made.

C. Functional Testing Assistance:

1) Where functional (or run) testing is called for on the Technical Specifications, the manufacturer's representative shall assist with the initial test, which shall include checking for proper rotation, alignment, speed, excessive vibration, and noisy operation. Initial equipment and system adjustment and calibrations shall be performed in the presence of and with the assistance of the manufacturer's representative. The previously specified Manufacturer's Certificate of Proper Installation shall include the statement that proper adjustment have been made and that the equipment or system is ready for plant startup and operation.

2) The Contractor, as applicable to the equipment furnished, shall state in writing that all necessary hydraulic structures, piping systems, and valves have been successfully tested; that all necessary equipment systems and subsystems have been checked for proper installation, started, and successfully tested to indicate that they are all operational; that the systems and subsystems are capable of performing their intended functions; and that the facilities are ready for startup and intended operation.

D. Training of Owner's Personnel

Where called for in the Specifications, the manufacturer's representative shall provide detailed instructions to the Departments personnel for operation and maintenance of the specified equipment. These training services shall include pre-startup classroom and onsite equipment instruction and/or post-startup classroom and onsite equipment instruction, as stated in the Specifications.

PART 2 - PRODUCTS

(Not used)

PART 3 - EXECUTION

(Not used)

END OF SECTION

SECTION 01750

MAINTENANCE OF TRAFFIC AND PUBLIC STREETS

PART 1 GENERAL

1.01 SCOPE OF WORK

A. The Contractor shall be responsible for providing the Engineer with Maintenance of Traffic (M.O.T.) plans for lane closures and/or detours for approval. These M.O.T. plans shall be produced by an individual employed by the Contractor and certified as "Work Zone Traffic Safety Supervisor" by the American Traffic Safety Service Association, ATSSA.

B. The Contractor shall be responsible for the maintenance of public streets and traffic control for the duration of the project. The cost of Traffic Control including the cost of any required off duty police officers shall be included under the appropriate bid item in the Proposal. If no bid item for this is included, said costs shall be included in other appropriate items of the bid and no extra compensation will be allowed.

1.02 REGULATIONS

A. As used herein, any reference to Miami-Dade County, its departments, or its published regulations, permits and data, shall be synonymous and interchangeable with other recognized governing bodies over particular areas or streets, or their departments, published regulations, permits or data. The Contractor shall abide by all applicable laws, regulations, and codes thereof pertaining to maintenance of public streets, detour of traffic, traffic control and other provisions as may be required for this Project.

1.03 MAINTENANCE OF TRAFFIC (M.O.T.)

A. The Contractor shall be fully responsible for the maintenance of public streets, detour of traffic (including furnishing and maintaining regulatory and informative signs along the detour route), traffic control, and other provisions throughout the Project as required by the MDCDTPW, Traffic Engineering Division (Traffic Division), FDOT or other governing agency. Traffic shall be maintained according to corresponding typical traffic control details as outlined in the MDCDTPW Manual. No street shall be completely blocked, nor blocked more than one-half at any time, keeping the other one-half open for traffic, without specific approval.

B. If required by the Traffic Division, the Contractor shall make arrangements for the employment of uniformed off-duty policemen to maintain and regulate the flow of traffic through the construction area. The number of men required and the number of hours on duty necessary for the maintenance and regulation of the traffic flow shall be subject to their approval. The cost of such off-duty policemen shall be paid from the Quotation Item established for this purpose. If required by traffic control permits or agencies, the Contractor shall work, odd or night hours, as required for traffic control reasons, and the cost of such work shall be considered as incidental to construction and no extra compensation will be

allowed.

C. The Contractor shall provide all barricades with warning lights, necessary arrow boards and signs, to warn motorists of the work throughout the Project. Adequate approved devices shall be erected and maintained by the Contractor to detour traffic.

D. Excavated or other material stored adjacent to or partially upon a roadway pavement shall be adequately marked for traffic safety at all times. The Contractor shall provide necessary access to all adjacent property during construction.

E. The Contractor shall be responsible for the provision, installation and maintenance of all traffic control and safety devices, in accordance with specifications outlined in the MDCDTPW Manual. In addition, the Contractor shall be responsible for the resetting of all traffic control and information signing removed during the construction period.

F. Where excavations are to be made in the vicinity of signalized intersections, the Contractor is alerted that vehicle loop detectors may have been embedded in the pavement. Every effort has been made to show the approximate locations on the Plans; however, the Contractor shall verify these locations by inspecting the site of the work and by contacting the Traffic Division. Any loop detector which is damaged by the Contractor, whether shown on the Plans or not, shall be repaired or replaced by the Contractor, at his expense, and to the satisfaction of the Traffic Division.

G. Where applicable, the Contractor shall notify the Traffic Division 24 hours in advance of the construction date or 48 hours in advance of construction within any signalized intersection.

H. Temporary pavement will be required over all cuts in pavement areas, and also where traffic is to be routed over swale or median areas. When the temporary pavement for routing traffic is no longer necessary, it shall be removed and the swale or median areas restored to their previous condition.

I. Pavement markings damaged during construction shall be remarked, as required by the Traffic Division.

PART 2 PRODUCTS

NOT USED

PART 3 EXECUTION

NOT USED

END OF SECTION

SECTION 02230

CLEARING AND GRUBBING

PART 1 - GENERAL

1.01 WORK INCLUDED

A. Clear and grub the areas to be occupied by the facilities or utility systems to be constructed, including all areas to be excavated, filled, paved or planted as shown on the approved plans and as specified herein.

1.02 DEFINITIONS

A. Clearing shall consist of the cutting, removal and satisfactory disposal of all trees, stumps, brush, shrubs, rubbish and any other objectional material within the designated areas.

B. Grubbing shall consist of the removal and disposal of all stumps larger than 1-1/2 inches in diameter and other objectional material to a depth of at least 12 inches below the ground surface.

1.03 QUALITY ASSURANCE

In the course of the work, it may become to remove trees if they interfere with the work. Dade County and various municipalities have ordinances regulating the removal, relocation and pruning of trees in the public right-of-way, these ordinances shall be strictly adhered to. The Contractor shall obtain a permit from Dade County and/or other regulatory agencies having jurisdiction over the work area before removing, relocating and/or pruning any tree. The Contractor shall comply with all requirements and conditions of the permit.

PART 2 - PRODUCTS

(Not Used)

PART 3 - EXECUTION

3.01 CLEARING AND GRUBBING

A. The Contractor shall remove and replace, where required all existing shrubbery, trees, grass, sprinklers, fences, signs, mailboxes, structures, roadways, sidewalks, curbs and similar items or structures in the way of all excavation necessary for the construction of the project.

B. Where pavements or sidewalks are cut, they shall be cut by means of a mechanical pavement saw to form true and straight edges. Where such cutting is for the purpose of pipeline installation, saw cutting shall be either parallel or at right angles with the centerline of the pipe,

C. To protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction, prior to proceeding with any work in the vicinity.

3.02 PROTECTION OF ADJACENT AREAS

The Contractor shall protect areas shown on the Drawings or designated by the Engineer of Record to remain protected from damage by construction operations by erecting suitable barriers of other acceptable means.

3.03 DISPOSAL

All roots, vegetation and other refuse removed from the site during clearing and/or grubbing operations shall be legally disposed of by the Contractor. Where required, the Contractor shall obtain a permit from Miami-Dade County and/or other regulatory agencies having jurisdiction over the work area before burning any material on the site.

- END OF SECTION -

SECTION 02260

STEEL SHEET PILING

PART 1 - GENERAL

1.01 SCOPE

The Contractor shall furnish and install steel sheet piling as shown in the plans or as required for a complete and satisfactory installation.

PART 2 - PRODUCTS

2.01 STEEL SHEET PILING

A. Steel sheet piling shall conform to the requirements of "High-Strength Low-Alloy Columbium-Vanadium Steels of Structural Quality", ASTM A572/A572M-94b (AASHTO No. M223).

B. The Contractor will be responsible for design and selection. Structural plans for the sheet steel piling installation and the calculations for the required Section Modulus and the Sheet Piling Designation shall be prepared by a Professional Engineer registered in the State of Florida. Sealed plans shall be submitted to the Engineer of Record for approval prior to installation of the piling system.

B. Structural steel shall meet the requirements of ASTM Standard A36/A36M-94 "Structural Steel".

PART 3 - EXECUTION

3.01 The Contractor will be responsible for removing the temporary sheet piling and structural steel at the completion of the Project, such material will remain the property of the Contractor.

END OF SECTION

SECTION 02314

EXCAVATION, BACKFILL AND FILL FOR STRUCTURAL FACILITY AND UTILITY SYSTEMS

PART 1 - GENERAL

1.01 SCOPE OF WORK:

A. The work included under this Section consists of furnishing material and equipment, and performing all labor necessary for excavating, backfilling, filling and compaction of areas to be occupied by facilities or utility systems to be constructed.

B. Plan For Excavation: Prior to commencing the excavation, the Contractor shall submit a plan of his proposed operations to the Engineer of Record for approval. The Contractor shall consider, and his plan for excavation shall reflect, existing utilities that are to remain, the equipment and methods to be employed in the excavation.

1.02 QUALITY ASSURANCE

All excavations shall conform with South Florida Building Codes, the State of Florida Trench Safety Act, OSHA requirements and the provisions herein. Excavations shall be executed in accordance with all applicable requirements of Section 01016, including notification of Sunshine State One-Call Center (1-800-432-4770) 48 hours prior to any excavation.

PART 2 - PRODUCTS

2.01 MATERIALS:

A. Structural Fill: Structural fill shall consist of an inorganic, non-plastic, granular soil containing less than 10 percent material passing the No.200 mesh sieve (relatively clean sand or crushed limerock with a 2-inch max. particle size) with a Unified Soil Classification of GP, GW, SP, SP-GM, SW-SM or SP-SM.

B. Ballast Rock: Ballast rock shall be composed of hard, durable, sound pieces having a specific gravity of not less than 2.65. It shall be crushed rock conforming to the following gradation:

U.S. Standard sieve size	Percent by weight passing
1-1/2 inch	100
3/4 inch	30-75
½ inch	15-55
1/4 inch	0-5

C. Suitable Backfill Material: Backfill material shall be clean and free from all organic material, clay, marl or unstable materials, debris, lumps, or broken paving. No rocks or stones larger than 6 inches in diameter shall be allowed in any backfill. Material for backfill may be material resulting from excavation, if suitable in the opinion of the Department.

D. Select Backfill Material: Select backfill material specified herein shall meet all the general requirements for backfill material set forth above, and in addition, shall be free of any rocks or stones larger than 2 inches in diameter. Select backfill material may be material resulting from trench excavation, if suitable in the opinion of the Department, carefully selected to comply with these requirements.

PART 3 - EXECUTION

3.01 PREPARATION:

A. Clearing: The construction site shall be cleared of all obstructions and vegetation, including large roots and undergrowth, within 5 feet of the lines of excavation, in accordance with Section 02230. All debris created by this clearing operation shall be hauled from the site and disposed of by the Contractor.

B. Removals: Complete all removals within the lines of excavation prior to beginning excavation. Where required, all existing shrubbery, trees, grass, sprinklers, fences signs, mailboxes, structures, sidewalks, curbs, utility poles, or structures subject to damage resulting from the excavation should be transplanted, relocated, braced, shored, or otherwise protected and preserved.

3.02 EXCAVATION

A. The Contractor shall perform all excavation of every description and of whatever substances encountered, to the dimensions and depths shown on the approved plans, but in all cases as required for construction, and as specified herein. All excavations shall be made by open cut.

B. When the walls of the excavations are to be kept vertical and in order to protect the safety of workmen, the general public, this or other work or structures, or excavation walls, or pipe installation including materials encountered in the excavation which have a tendency to slough or flow into the excavation, undermine the banks, weaken the overlying strata, or are otherwise rendered unstable by the excavation operation shall be retained by steel sheeting, stabilization, grouting or approved methods. Said methods shall comply with the Trench Safety Act (TSA). Sheeting and shoring or other approved method shall be designed by a Professional Engineer licensed to practice in the State of Florida.

C. For structures, the Contractor shall maintain the bottom of the excavation firm and dry, and maintain an elevation of the water one (1) foot below the concrete to be placed, by use of pumps, tremie or other acceptable method.

D. In areas where trench widths are not limited by right-of-way or easement widths, property line restrictions, existing adjacent improvements including pavements, structures, and other utilities, and maintenance of traffic, the trench sides may be sloped to a suitable angle of repose of the excavated material.

E. Ladders or steps shall be provided for and used by workmen to enter and leave trenches.

F. Excavated material shall be stored and disposed of in such a manner that they will not interfere unduly with traffic on public streets and sidewalks. In congested areas, such materials, cannot be stored adjacent to the trench nor used immediately as backfill, shall be removed to convenient places of storage. If any material is creating a public hazard or other unsafe condition, it shall be removed immediately to a storage area.

G. Materials suitable for use as backfill be hauled to and used in areas where not enough suitable material is available from the excavation. Material unsuitable for use in backfill shall be removed promptly and disposed of by the Contractor. Any pockets of organic matter, concrete or other unsuitable material encountered in excavating shall be removed and replaced with material satisfactory to the Department.

H. The excavation of walls for forms will not be permitted.

I. Excavation for structures:

1. Clear, as stated above, all existing items or structures in the way of the proposed pipeline or structures, and excavate as necessary to the depths and dimensions shown on the Plans, but in all cases as necessary for satisfactory installation.

2. Where pavements or sidewalks are cut, they shall be cut by means of a mechanical pavement saw to form true and straight edges which shall, in general, be either parallel or at right angles.

3. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. A copy of all such notices shall be forwarded to the Department.

4. Where interlocking steel sheeting is used, the Department may require that the sheeting be cut off at a level two (2) feet above the top of the installed pipe and that portion below the level be left in place.

5. Excavation for manholes and other piping appurtenances shall be sufficient to leave at least two (2) feet clear between their outer surfaces and the embankment or sheeting.

6. If, in the opinion of the Engineer of Record or the Department, the soil at that depth is unsatisfactory as foundation material because it contains marl, muck, organic matter, or other unsuitable material, the excavation shall be continued two (2) feet deeper, except if a suitable foundation material is exposed at a lesser depth, further excavation will not be required.

7. When the pipe to be installed in a trench requires the pipe installers to work under and around the pipe, the Contractor may request the Department that he be allowed to exceed the 12" maximum clearance, specifying the clear distance desired.

8. The ends of existing mains shall be temporarily capped or plugged to keep them clean and the ends of all mains shall be temporarily anchored to keep the joints from blowing apart from internal pressure until the new mains can be reconnected to them.

9. In addition to specific construction methods specified, the general requirements in subsequent subsections, below, shall apply to the work of this project.

3.03 DEWATERING

A. Any water which accumulates in the excavations for structures shall be removed promptly by means satisfactory to the Engineer of Record in such a manner as to not create a nuisance to adjacent property or public thoroughfare. Pumps and engines for dewatering systems shall be operated with mufflers and at a minimum noise level suitable to a residential area. The Contractor shall be responsible for any nuisance created due to the disposal of the water from his drainage system.

B. Where applicable, the Contractor shall be required to obtain all necessary permits approving the location and proposed method of disposal before discharging water from any excavation into any portion of the public right-of-way or into any existing drainage structure or facility.

3.04 STOCKPILED MATERIALS

Suitable materials removed from the excavation shall be stored and disposed of in a manner which will not interfere with traffic at the site. Material suitable for backfill and not needed for backfill at the structure, but needed elsewhere shall be stockpiled until moved and used elsewhere.

3.05 BACKFILL

A. The excavation shall then be brought to the structures bottom elevation by placing and compacting 6-inch layers of Oolitic limerock (or material previously defined) to 95 percent of maximum density as determined by AASTHO T-180. Structural fill shall be supplied by the Contractor except as may otherwise be carefully selected from excavated material if deemed suitable in the opinion of the Engineer. Backfill around new structures up to the pavement base or surface of the ground shall be material not exceeding 6-inches in diameter, and shall be compacted in layers not exceeding 9 inches. Each layer shall be compacted with a powered hand tamper, or other approved method to at least 98% of maximum density as determined by AASHTO T-180

B. Backfill for precast manholes shall be drainfield limerock or specified pipe bedding material to a level to receive the manhole at the proper elevation.

END OF SECTION

SECTION 02315

TRENCHING AND BACKFILLING FOR PIPING SYSTEMS

PART 1 - GENERAL

1.01 WORK INCLUDED

A. The work included under this Section consists of excavating, backfilling and compaction as required for the construction of the piping systems as specified herein. (See Section 02314 for excavation for structures.)

B. All excavations shall be executed in accordance with the South Florida Building Codes, the State of Florida Trench Safety Act (TSA), OSHA requirements and all applicable requirements of Section 01016, including notification of Sunshine State One-Call Center (1-800-432-4770), 48 hours prior to any excavation.

PARTS 2 - PRODUCTS

2.01 BACKFILL MATERIAL

A. Except where a 1:10 cement/sand or flowable fill concrete mix is required (See Section 02745), granular soil backfill materials shall be utilized. Suitable backfill material shall be clean, shall not be expansive nor have high organic content, shall be free of clay, marl, unstable materials, debris, lumps and clods, and shall meet the following requirements:

1. Maximum Liquid Limit shall not exceed 12 as determined by ASTM D 423.

2. Maximum Plasticity Index shall not exceed 35 as determined by ASTM D 424.

3. Not more than 10 percent of weight shall be finer than 74 micron (No. 200) U.S. Standard Sieve.

B. Backfill material containing limerock shall have sufficient sand to fill the voids in the limerock. No stones or rocks larger than 6-inches in diameter will be permitted in any backfill. Backfill material placed to a point at least one foot (1 ft.) above pipe and appurtenances shall be select backfill material not exceeding 2-inches in diameter. For PVC gravity sewers backfill material placed at least two feet (2 ft.) above pipe shall be select backfill material not exceeding 2-inches in diameter. In any case, above this point, but up to the upper 6-inches of the trench, backfill shall be of material not exceeding 6-inches in diameter.

C. Debris, broken paving or broken concrete shall not be used.

D. Material for backfill may be material resulting from excavation, only if it meets the above mentioned requirements, or if suitable in the opinion of the Department. If sufficient suitable backfill material, including select backfill material, is not available from the site, additional material shall be furnished.

2.02 SELECT BACKFILL MATERIAL

Select backfill material specified in these specifications or required by the Plans shall meet all the general requirements for backfill material set forth above, and in addition, shall be free of any rocks or stones larger than 2 inches in diameter. Select backfill for copper tubing shall be limerock screenings or sand. Select backfill material may be material resulting from excavation, if suitable in the opinion of the Department, carefully selected to comply with these requirements.

2.03 BEDDING MATERIAL

Pipe bedding material shall consist of one of the following types of material, and accordance with the Department's Standard Details: (See Section UC-300 for Gravity Sewer Piping Foundations)

A. Bedding may be select backfill material, as specified above, if approved by the Department.

B. Crushed stone (or drainfield limerock) shall be used for bedding of piping (except for copper pipe) and/or manholes as shown on the Standard Details. Crushed stone shall consist of hard, durable, sub-angular particles of proper size and gradation, and shall be free from organic material, wood, trash, sand, loam, clay, excess fines and other deleterious materials. The stone shall conform to the requirements of ASTM C 33, Size No. 57 (3/4-inch rock) and be graded within the following limits:

Sieve Size	Percent Finer by Weight
1 ½-inch	100
1-inch	95 to 100
½-inch	25 to 60
No. 4	0 to 10
No. 8	0 to 5

C. Sand for bedding copper pipe shall be a dry screened sand. Sand shall be graded sand with 100 percent passing a 3/8-inch sieve and not more than 5 percent passing a No. 200 sieve.

D. Limerock screenings, sand or other fine material shall not be used for bedding.

E. All pipe bedding material shall be new, unless otherwise approve by the Department. Existing pipe bedding material may not be used.

2.04 BACKFILL UNDER MANHOLES AND METER VAULTS

Any excavation below the levels required for the proper construction of manholes or meter vaults shall be filled with Class C concrete. The use of earth, rock, sand or other materials for this purpose will not be permitted. (See Section 02314 for excavation for structures.)

PART 3 - EXECUTION

3.01 CLEARING

A. The Contractor shall perform all clearing necessary for the proper installation of all piping and appurtenances in the locations shown in the Drawings, in accordance with Section 02230, "Clearing and Grubbing".

B. Where required, all existing shrubbery, trees, grass, sprinklers, fences, signs, mail boxes, structures, sidewalks, curbs, utility poles or structures subject to damage resulting from the excavation should be transplanted, relocated, braced, shored, or otherwise protected and preserved.

3.02 EXCAVATION

A. The Contractor shall perform all excavation of every description and of whatever substances encountered, to the dimensions and depth shown on the Drawings. All excavations shall be made by open cut.

B. When the walls of the excavations are to be kept vertical and in order to protect the safety of workmen, the general public, this or other work or structures, or excavation walls, or pipe installation including materials encountered in the excavation which have a tendency to slough or flow into the excavation, undermine the banks, weaken the overlying strata, or are otherwise rendered unstable by the excavation operation shall be retained by steel sheeting, stabilization, grouting or approved methods. Said methods shall comply with the Trench Safety Act (TSA). Sheeting and shoring or other approved method shall be designed by a Professional Engineer licensed to practice in the State of Florida.

C. In areas where trench widths are not limited by right-of-way or easement widths, property line restrictions, existing adjacent improvements including pavements, structures, and other utilities, and maintenance of traffic, the trench sides may be sloped to a suitable angle of repose of the excavated material, but only from a point one foot above the crown of the pipe.

D. A substantially and safely constructed moveable shield or box, as approved by the Engineer of Record, may be used in place of sheeting, except where specifically called for on the Plans to install sheeting. Where a moveable shield or trench box, is used in place of sheeting and shoring, the trench shall be opened immediately ahead of the shield as pipe laying proceeds inside the shield.

E. Ladders or steps shall be provided for and used by workmen to enter and leave trenches.

F. Materials removed from the trenches shall be stored and disposed of in such a manner that they will not interfere unduly with traffic on public streets and sidewalks. In congested areas, such materials, cannot be stored adjacent to the trench nor used immediately as backfill, shall be removed to convenient places of storage. If any material is creating a public hazard or other unsafe condition, it shall be removed immediately to a storage area.

G. Materials suitable for use as backfill be hauled to and used in areas where not enough suitable material is available from the excavation. Material unsuitable for use in backfill shall be removed promptly and disposed of by the Contractor

H. Excavation for Pipes and Piping Appurtenances (See Section UC-300 for additional requirements for gravity sewer piping):

1. Clear, as stated above, all existing items or structures in the way of the proposed pipeline or structures and excavate as necessary to the lines and grades shown on the Plans.

2. Where pavements or sidewalks are cut they shall be cut by means of a mechanical pavement saw to form true and straight edges which shall in general be either parallel or at right angles with the centerline of the pipe.

3. In order to protect himself from being held liable for any existing damaged pavement, including detour routes, the Contractor is advised to notify in writing the authority having jurisdiction over the street where such defective pavement exists prior to proceeding with any work in the vicinity. A copy of all such notices shall be forwarded to the Department.
4. Excavate pipe trenches to a minimum of 6-inches below the outside bottom of the proposed pipe barrel to provide for the installation of the bedding material.

5. If, in the opinion of the Department, the soil at that depth is unsatisfactory as foundation material because it contains unsuitable marl, muck, organic matter, or other unsuitable material, the excavation shall be continued 2 feet deeper, except if a suitable foundation material is exposed at a lesser depth, further excavation will not be required.

6. If the soil is still unsuitable after the additional excavation as prescribed above, the trench bottom shall be excavated further in one foot increments in accordance with "Trench Overcut", below.

7. Sheeting and shoring shall be installed where necessary to control trench width, protect the workmen and the general public, and prevent damage to this or adjacent work, or structures.

8. Where wood sheeting or certain designs of steel sheeting are used, the Department may require the sheeting to be cut off at a level 2-feet above the top of the installed pipe and that portion below that level shall be left in place.

9. If interlocking steel sheeting is used, the Department may permit its complete removal in lieu of cut-off, providing removal can be accomplished without disturbing the bedding, pipe or alignment of the pipe. Any damage to the pipe bedding, pipe or alignment of the constructed utility caused by removal of sheeting shall be cause for rejection of the affected portion of the work. Not more than 100-feet of trench shall be opened ahead of pipe laying operations at one time unless a greater length of open trench is approved by the Department.

10. Trench widths, when measured at a point 12 inches above the top of the pipe, shall provide a 12-inch maximum clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used. Minimum trench width shall provide at least 6-inches clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used.

11. Excavation for appurtenances, such as manholes and valves, shall be sufficient to provide a clearance between their outer surfaces and the face of the excavation or sheeting, if used, of not less than 12-inches. Manhole excavations shall be carried to sufficient depth to permit their construction on the undisturbed bottom of the excavation.

12. Excavation for thrust block shall be made in such a manner so that, when concrete is placed, it will bear against a firm, undisturbed, vertical trench wall with bearing are in accordance with the schedule shown in the Standard Details.

13. Selected backfill shall then be placed and compacted in 6-inch layers up to the level of the pipe bedding material.

14. When the pipe to be installed in a trench requires the pipe installers to work under and around the pipe, the Contractor may request the Department that he be allowed to exceed the 12" maximum clearance, specifying the clear distance desired. The decision of the Department in this regard shall be final.

15. The ends of existing mains shall be temporarily capped or plugged to keep them clean and the ends of all mains shall be temporarily anchored to keep the joints from blowing apart from internal pressure until the new mains can be reconnected to them.

16. In addition to specific construction methods specified, the general requirements in subsequent subsections, below, shall apply to the work of this project.

I. Excavation for PVC Gravity Sewers and Service Laterals:

1. The Contractor shall make all excavations necessary for the construction of the gravity sewers and service laterals to the lines and grades shown on the Plans, and in accordance with the Standard Details.

2. In stable soils, trench widths when measured to a point 12 inches above the top of the pipe shall provide a 12-inch maximum clearance on each side, between the outside of the pipe barrel and the face of the excavation, or sheeting if used. Minimum trench widths under the same conditions shall be 6-inches on each side for the pipe for 4-inch and 6-inch pipe, and 9-inches on each side of the pipe for 8-inch pipe and larger. Minimum trench widths are required to provide room for a man to place and compact the haunching and initial backfill material. Embedment material shall be Class I. (See Section UC-300)

3. In unstable soils (defined as peat, much or other organic soils, elastic silts and clays below the water table, and fine sands below the water level), trench widths when measured at a point 12-inches above the top of the pipe shall be a minimum of five (5) nominal pipe diameter in width. Slightly greater width are at the Contractor's option in order to accommodate his trenching equipment, but the pipe bedding material shall extend to the face of the excavation, or sheeting if used. Embedment material shall be Class II. (See Section UC-300)

3.03 TRENCH STABILIZATION

Trench bottoms which are rendered soft or unstable as a result of construction methods, such as improper or inadequate sheeting, dewatering or other causes, shall be stabilized. In no event shall pipe be installed when such conditions exist. The Contractor shall correct such conditions so as to provide proper bedding or foundations for the proposed installation.

3.04 TRENCH OVERCUT

A. If, after excavating the trench to a depth of 2 feet 6 inches below the outside bottom elevation of the proposed pipe barrel, and the soil at that depth is still unsatisfactory as foundation material because it contains marl, muck, organic matter, or other unsuitable material, the pipe trench shall be excavated further in one-foot depth increments until a suitable foundation material is found. As a point of reference, it has been the Department's experience that, typically, trench overcut does not extend to depths more than 6 feet. However, the Department reserves the right to require trench overcut to depths up to 6 feet, i.e., to a point 8.5 feet below the bottom of the pipe.

B. Select backfill, as defined above, shall then be compacted in 6-inch layers up to the bottom of the proposed 6 inches of pipe bedding.

3.05 REMOVAL OF WATER

A. It is a basic requirement of these Specifications that excavation shall be free from water before pipe or structures are installed. However, it is realized that in certain sections of the work this cannot be accomplished economically and the Contractor may request permission to use the "Alternate Method of Construction" defined below.

B. The Contractor shall provide all necessary pumps, underdrains, well point systems, and other means for removing water from trenches and other parts of the work including structures. The Contractor shall continue dewatering operations until the backfill has progressed to a sufficient height over the pipe to prevent flotation or movement of the pipe in the trench, so that the backfill is above the natural water level.

C. Where applicable, the Contractor shall be required to obtain all necessary permits approving the location and proposed method of disposal before discharging water from any excavation into any portion of the public right-of-away or into any existing drainage structure or facility.

D. Water from the trenches and excavation shall be disposed of in such a manner as will not cause injury to public health, to public or private property, to the work completed or in progress, to the surface of the streets, or to cause interference with the use of the same by public. Submit the proposed method of handling and disposal of trench waster for approval before starting the excavation.

E. The Contractor is cautioned that Dade County or other governing body having jurisdiction over the work location may have regulatory rules and ordinances prohibiting, or limiting, the discharge of water from any excavation into sanitary and storm sewer systems, or to canals and drainage ditches. Obtain all necessary permits approving the location and proposed method of disposal before discharging water from any excavation into any portion of the public right-of-way, or into any existing drainage structure or facility.

F. Pumps and engines for dewatering systems shall be operated with mufflers and a minimum noise level suitable to a residential area. The Contractor shall be responsible for any nuisance created due to the disposal of the water from his discharge system.

3.06 INSTALLATION OF BACKFILL

A. Backfilling of pipe trenches will not be allowed until the work has been approved by the Department, pressure tested if required, and the Department indicates that backfilling may proceed. Any work which is covered or concealed without the knowledge and consent of the Department shall be uncovered or exposed for inspection. Partial backfill may be made to help restrain the pipe during pressure testing, if previously authorized by the Department.

B. The Contractor shall backfill all trenches and other excavations made in the process of installing the pipe. He shall maintain the surface of the backfill free from major irregularities and potholes.

C. Select backfill material shall be placed under and around the pipe to one foot above the crown (or to two feet above crown for PVC gravity sewers) in 6-inch layers. Each layer shall be thoroughly compacted to at least 90 percent of maximum density as defined by AASHTO Standard No. T-180, "Moisture-Density Relations of Soils using a 10-lb. (4.54 kg.) Rammer and an 18-in. (457 mm) Drop". The material in the ditch may be compacted by either hand tamper or a mechanized power tamper, provided the results obtained meet the continued approval of the Department. Particular attention and care shall be exercised in obtaining thorough support for the branch of all service connection fittings. Care shall be taken to preserve the alignment and gradient of the installed pipe.

D. Backfilling and compacting of material lying above a point one foot (or two feet for PVC pipe), above the crown of the pipe and below the pavement base or the surface of the ground, if out of pavement, shall be accomplished in layers not exceeding 9 inches in thickness. Each layer shall be thoroughly compacted with a powered hand tamper or a mechanized power tamper to at least 98 percent of maximum density as determined by AASHTO Specification T-180 or such greater density as may be required by the governing authority over the area in which the work is performed. A testing laboratory will make periodic field tests to determine the density being obtained in each lift, or layer, or the backfill. When compacted backfill fails to meet the specified percentage of maximum density as shown by test results, it shall be reworked and recompacted, and then retested. The reworking, recompacting and retesting of the backfill shall be repeated as many times as may be necessary to obtain compacted backfill with density meeting or exceeding the specified percentage as indicated by test results.

E. The Contractor shall exercise proper care to insure that no pipe will be broken or displaced through the use of the type of mechanical compacting equipment he selects. Water shall be added as required to obtain optimum moisture to facilitate compaction, but ponding or inundation of backfill will not be permitted. These ponding limitations shall not prohibit backfill in a wet trench up to the level of the natural water table if the "Alternate Method of Construction" is utilized.

F. Backfill shall in general be kept up with the rate of pipe laying. The backfill up to the springline of the pipe shall be placed as soon as practical after the laying of the pipe. On parts of the line where ground water level may be high enough to float the pipe, the placing of the backfill and the rate of pumping the trench shall be so controlled as to prevent the pipe from floating or moving from the line and grade shown on the Plans.

G. In the event that sufficient suitable material is not available at any point to properly backfill the trench, the Contractor shall transport suitable material from points of the line where such material is available or shall otherwise furnish suitable material.

H. Suitable material in excess of all backfill requirements and all unsuitable material shall be removed from the work and disposed of by the Contractor.

I. Within paved areas of trench excavation, the base and surfacing shall be reconstructed as specified under Section 02745, "Pavement Removal and Replacement".

J. Where cuts have been made through unpaved, stabilized rock roadways, driveways and parkways, surface restoration shall consist of 3 inches of compacted limerock overlaid by 3 inches of gravel or graded and washed rock with a maximum diameter of ½-inch, except as otherwise directed by the Department. The rock shall be installed over the entire width of the disturbed area and shall closely match the existing rock at each location. Several grades of rock may be required to attain this end, but it is not anticipated that more than one grade will have to be used at any one location.

K. Backfill for Structures: See Section 02314.

3.07 INSTALLATION OF PIPE BEDDING - FORCE MAIN AND WATER MAIN

A. As described above, all pipe trenches shall be excavated to a level 6-inches below the outside bottom of the proposed pipe barrel. The resulting excavation shall be backfilled with approved pipe bedding material, up to the level of the outside bottom of the proposed pipe barrel. This material shall be tamped and compacted to provide a proper bedding for the pipe and shall then be shaped to receive the pipe, including recesses for the pipe bells and couplings. Placing and compacting bedding up to the level of the lower one-third of the pipe barrel shall immediately follow the installation of the pipe. Bedding shall be provided under the branch of all fittings to furnish adequate support and bearing under the fitting.

B. Select Backfill material may be utilized where the excavated trench bottom is above water.

C. Any excavation below the levels required for installation of the pipe bedding shall be backfilled with approved bedding material, tamped, compacted and shaped to provide proper support for the proposed pipe.

D. For installation of gravity sewers, see Section UC-300, "Gravity Sewer Pipe Foundation".

3.08 COMPACTION AND DENSITIES

A. Methods of control and testing of backfill construction to be employed in this work are:

1. Maximum density of the material in trenches shall be determined by AASHTO Designation T 180.

2. Field density of the backfill material in place shall be determined by AASHTO Designation T 238.

B. Laboratory and field density tests are necessary to establish compliance with the compaction requirements of these specifications. The Department will not accepts projects for which successful laboratory and field density test results are submitted. Tests will be made at depths and locations to the satisfaction of the Department.

C. Trench backfill which does not comply with the specified densities, as indicated by such tests, shall be reworked and recompacted until the required compaction is secured.

3.09 ALTERNATE METHOD OF CONSTRUCTION

A. General:

1. A combination of conditions in the substrata, water table, or method of disposal may be encountered during the course of the work which make dewatering impossible, or only possible through the use of unusual methods, the cost of which is excessive. When such conditions are encountered, but only after all reasonable means to dewater the excavation have been employed without success, the Contractor, with the concurrence of the Department may elect to employ the following alternate method of construction. The concurrence of the Department shall be obtained and the Contractor shall limit the use of the alternate method of construction to such specific portions of the work as determined applicable.

2. The requirements set forth in other sections of these Specifications shall establish the required standards of construction quality for this work. Use of the alternate method of construction described hereinafter shall in no way be construed as relieving the Contractor of his basic responsibility for satisfactory completion of the work.

3. Subject to all of the requirements stated hereinabove, including approval by the Department, construction will be permitted in accordance with the following specifications.

B. Removal of Water: The installation of pipe, manholes and appurtenances under water will be permitted and the dry-trench requirements of "Removal of Water" will be waived.

C. Excavation: Excavation shall be performed in accordance with normal applicable excavation specifications.

D. Pipe Bedding for Ductile Iron and Vitrified Clay Pipe:

1. Pipe bedding shall be placed from 6-inches below the outside bottom of the proposed pipe barrel up to the level of the springline of the pipe barrel of gravity sewers and to the level of the lower one-third of the pipe barrel for force mains or water mains. The bedding material shall be washrock, drainfield limerock or approved material. Limerock screenings, sand or other fine organic material shall not be used.

2. The bedding material used shall be tamped and graded to provide a proper bedding for the pipe and shall then be shaped to receive the pipe. Bedding shall be provided under the branch of all fittings to furnish adequate support and bearing under the fitting.

E. Bedding for PVC Pipe: The pipe bedding, haunching and initial backfill material shall conform to embedment material listed in Section UC-300 for either stable or unstable soil conditions as required, and shall be placed and compacted in as stated in "Installation of Pipe Bedding", above.

F. Backfill:

1. After the pipe is installed, backfilling shall proceed in accordance with the provisions of "Installation of Backfill", except that select backfill material or pipe bedding material shall be used to backfill around the pipe and to a level one foot above the outside top (crown) of the pipe. Under no circumstances shall material other than select backfill or specified pipe bedding material be considered satisfactory for this purpose.

2. If the Alternate Method of Construction is used, all backfill material, shall be carefully lifted into the trench and released to fall freely therein when the bucket or container is near or at a moderate height above water level. Height of release shall be to the satisfaction of the Department. Below the existing water level, and to a point not more than 18-inches above the water level, the backfill material shall be carefully placed into place in uniform layers, of equal depth on each side of the pipe. From a point not more than 18-inches above the water level, and below the pavement base or the surface of the ground if out of paving, backfill material shall be placed and compacted for normal backfilling as provided in "Installation of Backfill" and "Compaction and Densities".

G. Backfill for PVC Gravity Sewers:

1. After the pipe is installed, backfilling shall proceed in accordance with the provisions of "Installation of Backfill", except that select backfill material or pipe bedding material shall be used to backfill to a level two feet above the outside top (crown) of the pipe. Under no circumstances shall material other than select backfill or specified pipe bedding material be considered satisfactory for this purpose.

2. If the Alternate Method of Construction is used, all embedment and backfill material, shall be carefully lifted into the trench and released to fall freely therein until the bucket or container is at or just above water level. Below the existing water level, and to a point not more than 18-inches above the water level, the backfill material shall be carefully placed into place in uniform layers, of equal depth on each side of the pipe. From a point not more than 18-inches above the water level, and below the pavement base or the surface of the ground if out of paving, backfill material shall be placed and compacted for normal backfilling as provided in "Installation of Backfill" and "Compaction and Densities".

3.11 RESTORATION OF EXISTING SURFACES

Paved and grassed areas disturbed by the operations required under this Section shall be restored as indicated on the approved Plans and/or specified herein.

END OF SECTION

SECTION 02534

PUMP STATION TESTING

PART 1 GENERAL

1.01 SCOPE

A. The Contractor shall test sewage pump station, to the complete satisfaction of the Engineer, prior to final acceptance by the Department.

B. The Contractor shall provide start-up service to place the pumps and controls in proper operation. During this service, the operation of the equipment will be reviewed and the station will be inspected for proper installation and operation. This service shall be provided by a representative of the manufacturer. The Contractor shall inform the Department 48-hours prior to commencement of such services. These services shall be at no additional cost to the Department.

PART 2 PRODUCTS

(Not Used)

PART 3 EXECUTION

3.01 GENERAL

A. The Engineer and the Contractor shall jointly be present to witness test for determination of conformance with approved plans and specifications.

B. The Contractor shall notify the Department a minimum of forty-eight (48) hours in advance of the test.

3.02 PROCEDURE FOR TESTING SEWAGE PUMP STATION

A. The Contractor shall be responsible for testing the pump station in the manner described below:

1. Place the operating mode selector switch in the manual position.
2. Fill wet well with water.
3. Start and stop each pump sequentially and then both pumps together. While doing this, add water to the wet well as necessary.
4. With water level lower than pump’s shut-off point, place selector switch to automatic position.
5. Fill wet well slowly. Observe lead pump run.
6. Increase water flow into wet well for lag pump to run.
7. Stop pouring water into wet well and observe as both pumps shut off at the pre-selected levels.
8. Disconnect power to pumps and fill wet well to alarm level and make sure it operates.

9. Disconnect level controller and check that the lead pump is turned "on" and "off' at the proper levels by the float switches.

B. If the above parts of the test show that any component is not operating as intended, make necessary adjustments and/or repairs and repeat steps 1 through 9, until the entire system operates trouble free.

C. Fill the wet-well with water to the invert of the influent pipe. Leave it full of water for at least two hours. If the water level goes down, locate and repair the leak to the satisfaction of the Department. Repeat test to insure absence of leaks.

3.03 GENERATOR START-UP

A. Upon completion of the initial start-up and system checkout, perform a field test, with the Engineer notified in advance, to prove full specified power, stability, voltage and frequency. The test shall run for four hours using a portable, dry resistive load bank capable of incremental loading. Use the load bank instrumentation to check the meters on the generator. The generator set shall be able to take its full rated KW load when applied in one step. The generator set shall also run continuously for four hours with all available load connected through the automatic load transfer switch. Records shall be maintained through the testing periods on coolant temperature, lubricating oil pressure, ambient air temperature, voltage, current, frequency and kilowatts. Record the data at fifteen minute intervals through the tests. There shall be a thirty minute unloaded run at the conclusion of each test to allow the engine to cool down before shutdown. Three copies of the field tests data shall be furnished to the Engineer. The generator set shall also be tested under a simulated power failure to check that the transfer sequence operates satisfactorily.

3.04 CERTIFICATIONS

A. At the time of final acceptance inspection, and in addition to all other submittals required by the specifications, the Contractor shall furnish the following to the Engineer:

1. Submit letter from electrical panel manufacturer certifying that:

    a. The electrical panel has been inspected at the jobsite, after complete installation.
    b. The electrical panel and its components match approved shop drawings and are in compliance with the project's plans and specifications.
    c. The electrical panel and its components have not been modified, changed or altered in any way, shape, or form as to void the Underwriter Laboratory "UL" listing.
    d. The electrical panel and its components are safe to energize and operate.

2. Submit letter from the Contractor certifying that:

    a. The electrical panel has been installed in accordance with the Department's standards and these specifications.
    b. External wiring has been terminated inside the panel at the

designated “Terminal Boxes,” in accordance with the approved electrical schematic and/or shop drawings.

c. The electrical panel and its components have not been modified, changed or altered in any way, shape, or form as to void the Underwriter’s Laboratory “UL” listing.

d. The electrical panel and its components match approved shop drawings and are in compliance with the Department’s specifications.

e. The electrical wiring schematic and control schematic are current and reflect all approved field modifications made, if any.

f. The electrical panel associated electrical equipment are safe to energize and operate.

END OF SECTION

SECTION 02536

PRECAST MANHOLES & COVERS

PART 1 - GENERAL

1.01 SCOPE OF WORK:

This section includes minimum construction requirements for standard sewer manholes and precast concrete wet wells. It also includes precast concrete manhole sections with bell and spigot joints with masonry transition to covering, anchorage, coating/lining and accessories.

1.02 REFERENCES:

Unless otherwise indicated, all materials, workmanship and practices shall be in accordance with the current editions of the following standards:

A. Florida Building Code

B. ACI 318, Building Code Requirements for Reinforced Concrete; ACI 350 Code Requirement for Environmental Engineer Construction Structures.

C. PCI MNL 116, Manual for Quality Control for Plants and Production of Precast Concrete Products.

D. ASTM C62 - Specification for Building Brick (Solid masonry units made from Clay or shale).

E. ASTM C478 - Precast Reinforced Concrete Manhole Sections.

F. ASTM A123 - Zinc (Hot-Dipped Galvanized) Coatings on Iron and Steel Products.

1.03 SUBMITTALS, INSPECTIONS:

Submit the following information for approval. Fabrication shall not begin until submission has been approved.

A. Satisfactory evidence that plant and production methods meet the requirements of PCI MNL 116 for the Quality Control of the Precast Plant, Concrete Batch Plant and Testing Lab.

B. Submit Design mix to the Engineer prior to fabrication.

C. Complete shop drawings of both concrete structure and castings and showing all dimensions, reinforcement data, concrete strengths, etc. If of a non-standard design or if required by the Engineer of Record submit design calculations and data. All computation shall bear the seal of a Professional Engineer registered in the State of Florida.

D. Manhole and Wet Wells: The WASD shall have the option of witnessing the manhole wet well pour, reinforcing or formwork prior to fabrication. Provide the Engineer a schedule of the manhole fabrication at the preconstruction meeting.

E. Provide a rebar cutting lists for Pump Station Wet Wells. The rebar cut list is not required for standard manholes.

F. Cylinder breaks shall be done for each lot in accordance with FDOT Standards (max of 50 structures per LOT). The manufacturer shall maintain records of the cylinder breaks for each design mix. The 28 day concrete cylinder break reports shall be submitted to the Department once the 28 day before the project closeout.

1.05 QUALIFICATIONS:

A. Manufacturer: Company specializing in manufacturing products specified in this section with minimum five years documented experience. United Concrete Products, Landmark Precast, Concrete Products of the Palm Beaches, TJ Precast, US Concrete Products or Approved equal.

B. Quality Control Plan approved by the FDOT. The testing laboratory and batch plant shall be included in the FDOT Quality Control Plan.

C. The Precast Manufacturer shall have a stamp from the Quality Control Manager on each completed precast structure. The Quality Control Manager Stamp shall indicate that the manhole was constructed in accordance with ASTM C478 and Municipality Standards and the date that the structure was fabricated.

1.06 TRANPORTATION

A. The precast concrete structure shall cure for a minimum of 72 hours. Transport of the precast structure to the jobsite is not allowed during the 72 hour curing period.

B. Comply with all applicable requirements of FDOT Section 450-16 Handling, Storage, Shipping and Erection.

PART 2 - PRODUCTS

2.01 MATERIALS:

Precast manholes shall conform to the requirements of ASTM C478, latest edition, the Miami-Dade Water and Sewer Department Standard Details and the following:

A. Properties:

1. Reinforcement of Grade 60 bars. (Pump Station Wet Wells require rebars not wire mesh reinforcing).
2. Concrete 4,000 psi.
3. Water Cement Ratio: 0.40 to 0.34 Standard Manholes, 0.34 Pump Station Wet Wells.
4. Waterstops: Ribbed PVC Waterstop with centerbulb.

B. Cement shall be Type II with a **maximum aggregate size of #57**. Aggregate shall be **well graded** to produce a less porous and stronger concrete.

1. **Gravity Sewer System Manholes**: In sanitary sewage applications, all manholes receiving the discharge of a force main, connecting to a major sewer line or interceptor sewer terminal manhole within a 350 foot radius of the pump station, drop manholes, or where called for in the plans and/or specifications shall have a concrete protective coating or a antimicrobial admixture in the concrete mix.

   The antimicrobial admixture in the concrete mix is specified below:

   a. An antimicrobial agent, Con^{MIC}Shield®, or approved equal, shall be used to render the concrete uninhabitable for bacteria growth.
   b. Contractor shall mix the liquid antimicrobial additive with the total water content of the concrete mix design in a proportion of 1 gallon per cubic yard. In the case of repairs to damaged concrete a proportion of 2 gallons per cubic yard shall be utilized.
   c. In some instances all of the concrete in the structure will receive the additive and in other instances only a portion of the concrete will receive the additive. Hence, the Contractor shall apply the additive only as directed in the specific instance.
   d. Precast Plant shall submit a letter of certification to the Department, stating that the correct amount and correct mixing procedure was followed for all antimicrobial concrete.
   e. Con^{MIC}Shield® antimicrobial additive shall be as manufactured by Con^{MIC}Shield® Technologies, Inc.; 541 Tenth Street NW #233, Atlanta, GA 30318; Phone: (877)543-2094.

2. **Pump Station Wet Wells**

   a. Pump Station Wet Wells shall have Xypex/BASF Crystalline Waterproofing Admixture or approved equal, applied at 2 to 3% of the weight of portland cement in the wet well by volume. The Crystalline Waterproofing Admixture shall be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy.

   b. Do not use Con-Shield with the Crystalline Waterproofing Admixture

   c. Concrete Protective Coating Preparation: The precast concrete structure with the Crystalline Waterproofing Admixture is required to cure for 28 days prior to application of the concrete protective coating. Prepare the interior wet well surface with an epoxy cement underlayment compatible with the concrete protective coatings approved for Pump Station Wet Wells, Epoxytec CPP, Tnemic 218 or approved equal.

C. Minimum shell thickness of manholes shall be eight (8) inches.

D. Lifting holes through the structure will not be permitted.

E. Three to five courses of brick shall be constructed atop the manhole corbel for height adjustment. Manhole adjustment grade rings may be utilized in lieu of clay bricks.

F. Precast Joints above Elevation +4.0. and Waterproofing

1. Standard Manhole: Ram-Nek preformed plastic joint filler, Swellseal Hydrophillic Waterstop by Deneef, or approved equal. Apply Non-Shrink Grout both inside and outside of the joint. Wrap the outside Corbel and Exterior joint with a heat activated high shrink membrane.

2. Pump Station Wet Wells: Ram-Nek preformed plastic joint filler, Swellseal Hydrophillic Waterstop by Deneef, or approved equal. Apply Xypex Concentrate Cementitous Slurry or approved equal to the exterior and interior of the joint between precast members for waterproofing.

G. Holes for pipe connections, with a diameter equal to the outside dimension of the connecting pipe plus an additional 4-inches, shall be formed in the manhole walls. No cutting or chipping of the pre-formed holes, or cutting additional holes in the precast concrete walls will be permitted.

H. The bottom slab shall be cast monolithically with the lower section and the longitudinal reinforcement extending into the slab. The free air drop of the mix shall not exceed five feet.

I. No construction joints will be allowed below an elevation of four feet above mean sea level. Construction joints will be allowed above elevation+4.0, if adequate keyways and waterstops, approved by the Department (Ribbed PVC waterstop with centerbulb), are provided. The Department may approve an alternate joint method in cases of excessively deeper and heavy structures.

J. Built-in ladders or climbing rungs will not be permitted in any sanitary sewer manhole and only in other structures where shown on the Plans and called for in the specifications.

K. Openings shall be sealed with hydraulic cement non-shrink grout on both the exterior and interior of the structure.

L. Furnish manholes with accessories listed under "Manhole Accessories", below.

M. Lid and Frame: See Section 05550, "Castings".

N. Waterproofing:
Xypex Crystalline Waterproofing Admixture C-1000R with red dye or approved equal, applied at 3% of the volume of Portland cement in the manhole by volume.
Rheomac 300D Admixture as manufactured by BASF with red dye applied at 2% of the volume of Portland cement in the manhole by volume.
The Crystalline Waterproofing Admixture may be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy.
Note: The Engineer may accept certification from the precast fabricator in lieu of the red dye.

2.02 CLAY BRICK UNITS AND GRADE RINGS

A. Clay brick shall be used in manhole construction. Clay brick shall conform to ASTM Standard C32, "Building Brick (Solid Masonry Units Made from Clay or Shale)". Bricks shall have true edges and sharp corners and shall have been cured for at least 14 days before being placed in any wall. Under no circumstances shall brick with holes be utilized anywhere in construction of a manhole or other structure unless specifically called out on the Plans or in the Specifications.

B. Manhole adjustment grade rings may be utilized. Rings shall be made of 100% recycled HDPE and available in cone opening diameters of 24, 27, 30 and 36-inches. Slope adjustment shall be attained by rotation of “wedge” rings from 4.1% to 0% grade. Rings shall have been tested to withstand HS25 loading through at least 1,100,000 cycles without cracking or other damage. Rings shall not be damaged by hydrogen sulfide manhole conditions and shall be waterproof when assembled with approved butyl sealant. Ring shall weigh six pounds or less and be equipped with UV inhibitor. Rings shall have been in successful service in multiple locations within the US for at least ten years and shall be warranted for five years. Rings shall be LadTech, Inc. HDPE Recycled Adjusting Rings or approved equal.

C. Exterior Shrink Membrane not required on the HDPE Grade Rings.

2.03 MORTAR AND GROUT: As specified in Section 04060 and 03600, respectively. Only Type II cement shall be used.

2.04 REINFORCEMENT: As specified in Section 03300.

2.05 SUMP: Where required, formed integrally with the base slab.

2.06 CONCRETE PROTECTIVE COATINGS **(Gravity Sewer Manholes)**

A. For manholes standard manholes that do not have a concrete protective coating or an antimicrobial additive (ConShield)in the mix, coat the interior of the manhole with Bitumastic 300M or approved equal, 16 mils minimum thickness. The manholes with a concrete protective coating or ConShield anti-bacterial admixture shall not have Bitumastic on the interior of the manhole.

Locations that require a Concrete Protective Coating or the Con Shield Admixture:

1 Manholes receiving the discharge of a force main.
2 Manholes within a 350 foot radius of a pump station wet well.
3 Drop manholes (if a drop connection is added to an existing manhole the existing manhole shall be rehabilitated with a concrete protective coating).
4 Any manhole location determined by the Engineer to have the probability of generating large quantities of sewer gas.

B. All concrete protective coating systems shall be pre-approved by the Water and Sewer Department based on testing done within the WASD system. Only products that have had a successful test application within the Miami-Dade Water and Sewer Department system and approved by WASD forces shall be allowed.

PREAPROVED PRODUCTS LIST- concrete protective coatings (standard manholes)

1. **Available Manufacturers: The manhole coating products below have passed the WASD testing protocol and have been approved for use for rehabilitation of standard manholes. The manhole rehabilitation products shall be used as a complete system with no third party products used unless approved in writing by the coating manufacturer. A one year warranty on the complete coating system from the project completion is required.**

   a. Uroflex as manufactured by Epoxytec International
   b. PPC as Manufactured by Polymorphic Polymers Corporation
   c. SP15 Spray Mortar, Sewer Guard HBS 100 Epoxy Liner by BASF
   d. Permaform MS-10,000 Fortified with ConShield or Cor-Guard Epoxy
   e. SprayRoq, Spray Wall and SprayShield GT Coating
   f. GEOKRETE System as manufactured by Quadex
   g. Mainstay DS-5 High Build Epoxy, Mainstay ML-72 Restoration Mortar
   h. GML Coating System: Green Monster Epoxy, GML-30 and GML-60 Epoxy Cement
   i. Raven Lining System: Raven 405 Epoxy, Raven 755 Epoxy Mortar

2. The manhole chimney shall utilize a flexible concrete protective coating. The acceptable flexible interior coatings for the manhole Chimeny are Epoxytec Uroseal, Uroflex or Geokrete.

C. Due to the probability of sewer gas generation, all manholes receiving the discharge of a force main, connecting to a major sewer line or interceptor sewer, drop manholes, or within a 350-foot radius of the terminal manhole immediately upstream of the pump station shall be either constructed of concrete containing Con^{MIC}Shield® antimicrobial additive or lined on all interior concrete surfaces with a pre-approved concrete protective coating or approved equal. Concrete protective coating system shall fully protect openings, such as for pipes, to insure that corrosive attack cannot take place at these locations. Protective system design for these areas will be checked as shop drawings. Note that boot systems are not accepted by the Department.

   Since the proprietary grouts used to close the annular area between the manhole wall and pipe entering or leaving the manhole are not compatible to the addition of Con^{MIC}Shield® these areas require liner or coating (as acceptable to the Engineer) protection even in manholes constructed of concrete containing this material.

D. All manhole exterior surfaces, from finished grade to base, shall be coated with Carboline Bitumastic 300M, 2 coats 16 mils minimum thickness or have Xypex/BASF Crystalline Waterproofing Admixture, applied at 2 to 3% of the volume of portland cement in the manhole by volume. The Crystalline Waterproofing Admixture may be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy.

E. If Con^{MIC}Shield® anti-microbial agent is used, interior coating and liners can be eliminated except as specified above.

2.07 CONCRETE ADDITIVE AND PROTECTIVE COATINGS **(Pump Station Wet Wells)**

A. Waterproofing Additive: Xypex Crystalline Waterproofing Admixture or approved equal, applied at 3% of the weight of Portland cement in the manhole by volume. The concrete protective coating shall be applied a minimum of 28 days after the casting of the reinforced concrete structure in order for new concrete to cure.

B. Epoxy Cement Underlayment to smooth and prepare concrete surface Epoxytec Ceramico, Tnemic 218 or approved equal.

C. Preapproved Concrete Protective Coating for Pump Station Wet Wells

1. Uroflex Coating System as manufactured by Epoxytec International
2. PPC as Manufactured by Polymorphic Polymers Corporation
3. or approved equal

2.08 MANHOLE ACCESSORIES:

All new sanitary sewer manholes shall be furnished with the following items. Where existing manholes will be modified or are scheduled to be refurbished, rehabilitation shall also include the following items unless otherwise approved by the Department.

A. Provide concrete protective coating system for manholes installed in locations identified to have high levels of sewer gas.

B. Provide high density polyethylene manhole infiltration inserts in accordance with Section 02625, unless the Department requires the installation of stainless steel insert.

C. Exterior Shrink Membrane on Corbel and Exterior Joint; <u>On all manholes</u> (excluding the HDPE grade rings)install a heat activated, high shrink membrane, on the manhole's exterior, at each section joint and from the cast iron frame to the corbel section. Membrane shall be Wrapid Seal, by Canusa Corrosion Protection and Sealing, or approved equal with the following properties:

PRODUCT COMPONENT	PROPERTY	TEST STANDARD	UNIT	RESULTS
ADHESIVE	Softening Point	ASTM E28	Deg. C (Deg. F)	100 (212)
	Lap Shear Strength	DIN 30 672	N/cm^2 (psi)	8 (12)
BACKING	Tensile Strength	ASTM D638	MPa (psi)	20 (2900)
	Elongation	ASTM D638	%	600
	Hardness	ASTM D2240	Shore D	46
	Abrasion Resistance	ASTM D1044	mg	45
SLEEVE	Peel Strength	ASTM D1000	N/cm^2 (psi)	15 (9)
	Water Absorption	ASTM D570	%	0.05

	Low Temp. Flexibility	ASTM D2671D	Deg. C (Deg. F)	-40 (-40)

PART 3 - EXECUTION

3.01 EXCAVATION:

A. Refer to Section 02314, "Excavation, Backfill and Fill for Structures" for specific procedures, requirements and testing methods appurtenant to the work under this Section.

B. Excavation shall extend to a level 12-inches below the level of the outside bottom of the base slab. If necessary, provide sheeting and shoring for the excavation.

C. Backfill resulting excavation with drainfield limerock or specified bedding material to a level to receive the structure at the proper elevation.

3.02 GENERAL INSTALLATION

A. The precast base shall be set level, with the walls plumb on the graded crushed rock bedding.

B. If any surfaces of structures are exposed to view and to a depth of 6 inches below grade, the Contractor shall fill all depressions and all air holes with mortar, dampen surfaces, and apply an approved bonding agent then spread slurry, consisting of one part cement and one and one-half parts sand, by damp loose volume, on the surface with clean burlap pads and sponge rubber floats. The Contractor shall remove any surplus by scraping and then rubbing with clean burlap. Finish surface shall be suitable to receive paint.

3.03 INSTALLATION OF MANHOLES

A. Place base slab and manhole sections plumb and level. Coat exterior of precast structure with Bitumastic 300M or approved equal. Install heat activated, high shrink membrane, on the manhole's exterior, at each section joint and from the cast iron frame to the corbel section.

B. During all backfilling operations, the backfill level shall be kept even on all sides of the structure. Exercise every precaution to prevent damage to, or unplanned loading of, the structures and its appurtenances.

C. Lay clay brick in running bond. A minimum of three and a maximum of five courses shall be constructed atop each manhole corbel. Lay masonry units in full bed of mortar, with full head joints, uniformly jointed with other work. Stucco inside and out with 3/4-inch of mortar.

D. Set cover frames and covers level without tipping, to correct elevations.

E. Exterior surfaces of all structures shall be painted prior to the installation as specified elsewhere herein.

F. Openings shall be sealed with non-shrink grout. No expanding grout shall be allowed.

G. After satisfactory installation and testing, all interior concrete surfaces of the new manhole shall be seal coated in accordance with Section 2.06-A.

H. The invert channels of the manhole shall be formed of brick or brick rubble thoroughly bedded and covered with sand-cement grout, accurately shaped to a semi-circular bottom conforming to the lower half of the connecting sewer pipe. Steep slopes outside the invert channels shall be avoided. Changes in size and grade shall be made gradually and evenly. Changes in the direction of the sewer or entering branch shall be a smooth curve with radius as long as practicable.

I. It shall be the Contractor's responsibility to assure that the frames and covers are set to match proposed finish paving grades at the manhole locations.

J. Gravity sewers shall connect to the manholes in accordance with Standard Details SS 7.0 and Section UC-250 "Gravity Sewer Systems".

3.04 ALTERNATE INSTALLATION

Installation methods given below in this Section shall only apply if permission is granted by the Engineer of Record to use the "Alternate Method of Construction" as specified elsewhere herein. All provisions of that Section shall be applied to the installation of the structures with the specific modifications as follows:

A. Excavation

Excavation shall be carried to a depth of two feet below the bottom of the base slab.

B. Special Bedding

1. Bedding shall be crushed stone or gravel meeting the requirements of ASTM Standard C33 "Concrete Aggregates", latest edition, gradation 67.
2. The bedding shall be placed in the excavation from cut bottom to the level of the bottom of the slab. Thereafter it shall be thoroughly rammed and tamped by use of a crane and weight or other means suitable to the Engineer of Record to provide a stable base for the structure. Tamping and, if necessary, additional filling shall be carried on until the Engineer of Record is satisfied that a suitably stable base has been created for the structure.

C. Backfill

1. After the structure is installed, special bedding material as specified immediately above shall be carefully hand or machine tamped around the structure up to a level of no more than eighteen inches above the water level. Thereafter the procedures and materials specified for backfill and compaction, shall be used to complete the installation.

2. During all backfilling operations the backfill level shall be kept even on all sides of the structure and the Contractor shall exercise every precaution to prevent damage to, or unplanned loading of, the structure or its appurtenances.

END OF SECTION

SECTION 02540

PUMP STATION

PART 1 – GENERAL

1.01 SCOPE OF WORK

The purpose of this Specification is to establish uniform MD-WASD requirements for the design and construction requirements for wastewater pumping stations. This Specification does not purport to cover all materials or installation procedures which may be required. However, it is intent of the MD-WASD to obtain a complete and working installation under this project, and any items of labor, equipment or materials which may reasonably be assumed as necessary to accomplish this end shall be supplied whether or not they are specifically shown on the Plans or stated herein.

1.02 QUALITY ASSURANCE

All material and installation shall be in accordance with the MD-WASD's Design and Construction Standard Specifications and Details.

1.03 DEFINITIONS

See Section 01005, "Defined Terms"

1.04 PROJECT APPROVAL

The approval of the MD-WASD and the local governing agencies shall be secured, prior to any construction related activity.

1.05 SPECIAL CONDITIONS

The work shall proceed in accordance with the following specification sections, found herein:

A. Section 01011 - Site Conditions
B. Section 01016 - Safety Requirements and Protection of Property
C. Section 01031 - Grades, Lines and Levels
D. Section 01100 - Special Project Procedures
E. Section 01720 - Project Record Documents
F. Section 01725 - Project As-Builts
G. Section 01730 - Operating and Maintenance Instructions
H. Section 01740 - Permits
I. Section 01750 - Maintenance of Traffic and Public Streets
J. Section 16051 – Pump Station Electrical Materials
K. Section 16268 – Low Voltage Variable Frequency Drive
L. Section 16420 - Stationary Engine-Generator Sets
M. Section 16510 – Interior Lighting
N. Section 16780 – S.C.A.D.A. System RTU Installation
O. Section 16940 – Pump Station Control Panel

1.06 PERMITS, INSPECTIONS AND FEES

A. The Contractor shall obtain and pay for all permits and fees in accordance with Section 01740, "Permits".

B. Inspection by MD-WASD personnel is required in addition to, not in lieu of, municipal and County department inspections. No facility will be accepted until it has passed all inspections, including pavement installation or replacement.

1.07 PRECONSTRUCTION CONFERENCE

A. Prior to commencement of the work, the Contractor shall attend a Preconstruction Conference.

1.08 SUBMITTALS

A. The Contractor shall furnish "As-Builts" in accordance with Section 01725. The Contractor shall submit operating and maintenance instructions and all other submittals in accordance with Section 01730.

B. Where the Specifications require test certification or certification that certain products or material furnished are as specified, the Contractor shall deliver such certification to the MD-WASD. No material or equipment shall be approved for use in the work until individual certification has been received.

1.09 DESIGN REQUIREMENTS

A. GENERAL

1. Pumping stations shall be designed in accordance with the State of Florida Department of Environmental Protection (DEP) Rules, Chapter 62-604 for Wastewater Facilities, with OSHA requirements and with the "Florida State Board Health Sewage Guide" and the recommendations of Chapter 12 of the ASCE Manual No. 37, "Sewer Design and Construction", except as otherwise provided herein. Wet wells shall be classified as hazardous areas, Class 1, Division 2, Group C.

2. In addition, pump stations shall be designed in accordance with the MD-WASD's "Supplemental Design Guidelines for Lift Stations and Force Mains" found in Appendix B. The MD-WASD's "Standard Pump Station Drawings", bound herein, are provided solely as an aid and shall not be considered as completed construction drawings.

3. Pump station shall be designed to serve no more than one quarter section. Also design shall incorporate corrosion inhibiting measures, practices and or products as found in the "Basic Guide to Corrosion Protection for Miami-Dade Water and Sewer Department Projects", found in Appendix D.

4. All applicable drawings of the MD-WASD's "Standard Details", found in PART IV herein, shall apply. Water service at pump stations shall be installed as shown in M-DWASD's Standard Pump Station Drawings.

B. STRUCTURE AND TYPE

1. Stations may be either precast or cast-in-place, installed by Caisson Method.

2. Stations shall be of reinforced concrete, and may be of the wet well-dry well type or submersible pumping station type, with depths no greater than 24 feet. The dry well shall maintain the cross-sectional area of the floor, up to ground level and shall be provided with an intermediate removable deck. Dry wells with entrance tubes shall not be approved.

3. Dry wells shall be close to square, in shape, with a minimum area of:
   64 sq. ft. - for stations of 50 horsepower per pump and below,
   100 sq. ft. - for stations of 60 to 75 horsepower per unit.
   In all cases, dimensions of dry well shall also be based on the size of the pumping equipment and appurtenances approved for installation therein.

4. Structural design shall conform with the requirements of the Florida Building Code and the American Concrete Institute "Building Code Requirements for Reinforced Concrete", ACI 318, latest edition. In order to provide strength, stability, and serviceability for sanitary structure under special loading conditions, the recommendations of ACI Committee 350 Report entitled "Concrete Sanitary Engineering Structures" (ACI 350) shall be used as a guide.

5. Wet-Well/Dry-well configuration shall be used when the station requires installation of pumps weighing more than 1,500 pounds.

6. Wet-wells may be constructed as an integral part of the dry-well or as a separate structure. Piping between separate wet-well and dry-well structures shall be provided with a flexible joint at the structure wall. There shall be at least four feet of separation between such structures. Wet-well operating capacity determination shall be based on pump cycling, not on a fixed determined wet-well effective volume. The method of determination shall be as specified in Section 3.4.3 of “Supplemental Design Guidelines for Pump Stations and Force Mains”.

C. ACCESS

1. Wet-well/dry-well pumping station: shall have separate outward opening access hatches for the-wet well and dry-well sized for the pump. Hatches shall be provided in accordance with Section 05540. Wet-well hatches shall have a minimum clear opening of 30 inches by 30 inches and shall be located directly above the influent pipe and the operating control tubing. Dry-well hatches shall have a minimum clear opening of 48-inches by 72-inches centered above the pumps. In no case shall dry-well opening be less than as recommended by pump manufacturer.

2. Submersible pumping station: shall have hatches designed for an H-20 live load and sized according to pump manufacturer's recommendations. [See Section 05540 and Plans entitled; “Typical Submersible Sewage Pumping Station].

D. PUMPING EQUIPMENT

1. For wet well-dry well stations furnish and install vertical, centrifugal sewage pumps, in accordance with Section 11210.

2. For submersible stations furnish and install submersible sewage pumps in accordance with Section 11205.

3. Each pumping unit shall be designed to pump the peak flow at the required head.

E. PIPING

1. Each pump suction line shall be sized for a maximum velocity of 5 feet per second at the rated peak flow. Provide a 90 degree flared elbow in the wet well and an isolation plug valve in the dry well, of a wet well-dry well type station. The plug valve shall be the same size as the suction piping. Provide a plug valve per pump in the valve vault of a submersible type station together with a further isolation plug valve just outside of the valve vault on the force main.

2. Discharge lines shall be provided with horizontally mounted check valves of the outside-lever and weight type and full size isolation plug valve. Discharge piping shall be sized for a maximum velocity of 6 feet per second at rated peak flow or a minimum of 6-inches in diameter, whichever is greater. Each pump discharge line shall be equipped with a petcock and pressure gage. The combined discharge line shall be equipped with a bronze tapping saddle with 1-inch plugged tap for installation of SCADA by MD-WASD.

3. All pipes and fittings furnished and installed shall be in accordance with Section 15060, "Pipe and Fittings".

4. Piping within the pumping station shall be flanged ductile iron pipe. Piping passing through concrete walls shall be provided with wall pipe or sleeves.

5. Fresh water and seal water pressure piping shall be copper. Seal water suction, drain and overflow piping shall be PVC. Small piping (including conduits), passing through concrete walls shall be provided with wall sleeves.

6. Valves 6-inches and larger shall be plug valves of the non-lubricated eccentric type with resilient faced plugs. Valves 2-inches and smaller shall be gate valves.

F. EMERGENCY PUMP CONNECTION

1. A connection to the discharge piping shall be provided for emergency pump-out of the wet well. It shall consist of necessary fittings, isolation plug valve, a ductile

iron or brass quick-connect male fitting and a dust cap with an air release petcock. A petcock for gage at discharge of force main shall be provided.

G. ELECTRICAL SERVICE

1. Coordinate with the power company early during the design stage. No booster or set-up transformer shall be permitted. Service shall be 3 phase, 208 or 480 volt, and adequate for the load served, but never smaller than the sizes indicated below:

SERVICE SIZE

Voltage	Pump Motor H.P.	AMP	THW Cu	Conduit
208	5 thru 10	110	# 3	1-1/2”
208	15 thru 25	200	# 3/0	2-1/2”
480	5 thru 15	70	# 3	1-1/2”
480	20 thru 50	200	# 3/0	2-1/2”
480	60 thru 75	250	250 MC	3”

2. Neutral and grounding conductors to be sized according to NEC and FBC.

H. STANDBY POWER

1. As shown on the Plans titled, “Typical Submersible Pumping Station (WASD Design Standard Update 2005)”, the MD-WASD will require, as a minimum, construction of a generator building, fuel tank pad and all interconnecting piping and conduits. MD-WASD may require actual provision and installation of the diesel generator, fuel tank and associated items dependent upon the criteria provided below in this subsection.

2. Stations Above 350 GPM Capacity: Stations that will a peak flow above 350 GPM shall require approval and installation of an emergency generator and fuel tank (Section 16420).

3. Stations at/or Below 350 GPM Capacity: May require stationary generator based on the area's need for uninterrupted service (i.e. hospitals, government centers, correctional institutions and similar facilities).

4. Unusually High Horsepower Motors: Which cannot be operated by portable generators shall require a stationary generator.

5. Special Cases:

a) The MD-WASD may, at its discretion, require portable generators at stations having unusual characteristics, or when an existing pump stations being upgraded above 350 GPM, or when an institution as described in Article 1.09-H.2, above, is added and no space exist for a permanent generator.

b) If the project will contribute less than 350 GPM, but the pump station is being designed to handle more than 350 GPM (PEAK) for the entire service area, no installation of emergency generator and fuel tank is required.

c) A pump station serving only one development and designed for peak flows of 150 GPM or more shall require installation of an emergency generator and fuel tank.

I. FIRE EXTINGUISHER

1. General: One fire extinguisher shall be wall mounted in the dry well on suitable brackets furnished by the manufacturer, bearing the mark of approval of Underwriter's Laboratory, Inc., and ratings conforming to NFPA No. 10, but not less than 3-A; 20-B:C. Fire extinguishers shall be of steel construction with red enamel finish, except the valves which shall be stainless steel or chromium-plated.

2. Dry Chemical Extinguishers: shall be rated for Class A, B and C fires, shall be ten (10) pound capacity, nitrogen operated and shall be steel with red enamel finish except valves which shall be stainless steel or chromium plated. Dry type extinguishers shall be Allenco, Badger-Powhatan, Larsen or approved equal.

3. Carbon Dioxide Extinguishers: shall be steel with red enamel finish, except valve and operator which shall be stainless steel or chromium-plated, Allenco Model 7400-10, Badgern-Powhatan or approved equal. Hose diffuser horns shall be non-metallic.

J. PANELBOARD & TRANSFORMER

A 100 amp single phase 120/240V breaker panelboard shall be provided to power all miscellaneous loads such as lights, seal water pump, air compressors, fans, sump pumps, dehumidifier, etc. If required, a dry type 480V-120/240V transformer wall mounted at the intermediate deck level shall be provided to feed all these loads. The transformer shall be sized to supply all of the connected load plus 30% of spare capacity.

K. STUCCO

Only the outside wall surfaces of the above-grade structure (to six inches below grade) shall be stuccoed. Materials shall conform to the Florida Building Code (latest edition).

L. LIGHTING

1. Provide LED indoor lighting with a minimum of 10 foot-candle power at the intermediate deck and at the lower level.

2. Where outdoor lighting is required provide LED wall-mounted fixture with photoelectric control.

3. Lighting fixtures shall be in accordance Section 16510.

M. ALARM SYSTEM

Provide an alarm system to give audible and visual alarms of pump station malfunction, in accordance with Section 16051.

N. AIR MOVING EQUIPMENT

All air moving equipment shall be in accordance with Section 15860.

O. INTERMEDIATE DECK

Provide an intermediate deck at an elevation with at least one-half foot clearance above the top of the motor, but never less than 7-foot clearance from floor slab. The deck shall be constructed of removable galvanized steel grating supported on galvanized steel channels. Grating shall be anchored to support frame channels. The channels shall be located such, that clear access is provided to the motors from the hatch opening when the grating is removed. Design in accordance with FBC and OSHA requirements.

P. LADDER

Provide a galvanized steel ladder from the hatch to the intermediate deck. It shall have extension rails which can be pulled up when the hatch is open. A second galvanized steel ladder shall be provided from the intermediate deck to the bottom floor. Ladders shall be in accordance with the requirements of the FBC and OSHA. A safety railing and stainless-steel chain shall also be provided around the opening in the intermediate deck for the bottom ladder.

Q. SURFACE PROTECTION - PAINTING

1. The inside walls of the dry well and all piping and equipment shall be properly primed and painted.

2. Paint material and specification requirements are shown in Section 09900.

R. SITE & LOCATION REQUIREMENTS

1. Stations shall be located on property of adequate size and said property shall be conveyed to the MD-WASD by fee simple title.

2. Location of pump stations shall be in accordance with local codes or governing authority having jurisdiction at the proposed site. In any case, a 25-feet long by 12-feet wide paved driveway, which shall provide access to all structures, wet well, dry well, valve pit, emergency generator and fuel tank, if required. Typical pump station site plans shall have a 45-feet by 65-feet format. A minimum separation of 5-feet shall be maintained between any proposed structure and a water or sewer main, and between two sewer

mains (edge to edge). Proposed rim elevations and final grade elevations shall be in compliance with DERM requirements.

3. Direct access shall be provided, without entering or crossing private property, by a paved driveway alongside the drywell and the wet-well for parking of maintenance trucks. The driveway shall be direct and clear from the roadway to the dry well / wet well. Control panels and emergency pump-out shall be located to permit clear access through driveway

4. Provide a chain link fence, in accordance with Section 02822, that will enclose the pump station property. The fence shall be 6-feet high minimum, with a 12-foot wide, minimum, double-leaf gate for the paved driveway. Barbed wire and extension arms may also be required in some locations.

5. Other types of property enclosures, such as block walls, may be substituted but shall require the prior approval of the MD-WASD.

6. Unpaved areas shall be completely sodded after construction is complete. Additional landscaping as required shall be incorporated in the Plans as set forth in Section 02900.

1.10 COMPLETED AS-BUILTS

A. The as-builts shall be completed and submitted to the Department at the time of system testing. Testing will not be considered complete until as-built record documents are submitted and approved by the Department. Completed finalized as-built package are required by the Department within 10-days upon the successful testing of all mains, equipment and appurtenances.

B. Complete topographic and boundary survey for the pump station shall be signed and signed and sealed by the Florida Licensed Professional Surveyor and Mapper as part of the as-built plans. All information required of a boundary survey shall be contained on the as-built plans to include the legal description of pump station site, easements and right-of-ways abutting the pump station site and location of all surface facilities recorded by a PSM. All utilities within pump station property shall be properly shown, along with their associated elevation and clearance.

C. The mechanical, structural and electrical information on as-builts for Pump Stations and Plant work shall be reviewed and signed and sealed by a Florida Registered Professional Engineer when designated as the responsible party for the corresponding portion of the as-builts. The Engineer shall verify that all mechanical, structural and electrical information on the as-built the work was constructed as designed on the Design Plans. Any deviation shall be noted and approved by the Department.

PART 2 - PRODUCTS

MDWASD

2.01 GENERAL

A. All material for use in the Project shall be new and of recent domestic manufacture and shall be the products of reliable manufacturers or suppliers who, unless otherwise specified, have been regularly engaged in the manufacture of such materials and equipment for at least five (5) years.

B. All fittings and components shall, wherever possible, be standard stock articles of well known manufacturers.

C. Where the Specifications designate the products of a particular manufacturer, the product specified has been found suitable for the intended use, but, unless otherwise provided, articles or products of similar characteristics may be offered for the approval of the MD-WASD, after prior approval by the Engineer.

D. Copies of complete descriptive data shall be furnished regarding all material, consisting of dimension drawings, catalog references and other information necessary to clearly identify and evaluate each article.

E. Unless otherwise specified, all fabricated items, steel bolts, nuts washers and all other miscellaneous ferrous metal items (except cast iron and stainless steel) shall be hot-dip galvanized in accordance with ASTM A123, "Zinc (Hot-Dip Galvanized) Coatings on Iron and Steel Products" and ASTM A153, "Zinc Coating (Hot-Dip) on Iron and Steel Hardware". Where the word "galvanized" or its abbreviation is used on the Plans or in these Specifications, it shall mean hot-dip galvanized. Fabricated items shall be hot-dip galvanized after fabrication. Internal threads shall be tapped or re-tapped after galvanizing. All threaded fasteners together with their associated components, such as washers, located in the wet well shall be type 316 stainless steel.

F. Pumps, motors, electrical items and other station equipment shall be shipped, handled, stored and protected in accordance with Section 01600, "Materials and Equipment Shipping, Handling, Storage and Protection"

G. Any salvageable pipe, fitting, or other miscellaneous material or equipment, removed from the MD-WASD-owned mains during construction and not reused in the work shall be cleaned, hauled to and stored where directed by, and shall remain the property of the MD-WASD. All other material and equipment shall be disposed of by the Contractor at his expense.

H. To insure satisfactory and successful final painting of materials and equipment to be furnished, it is essential that the paints applied in the shop and in the field be mutually compatible. To this end, require that the shop paints applied to materials and equipment be compatible with the paints proposed for use in the field, or determine what shop paints have been used and select field paints compatible therewith, all as approved by the MD-WASD.

2.02 PUMPS

A. Submersible Pumps – See Section 11205 Submersible Pumps

B. Dry Well Centrifugal Sewage Pumps – See Section 11210 Vertical (Dry Pit) Centrifugal Pumps

C. Pump Warranty

1. Submersible Pumps: The pump manufacturer shall warrant the units supplied to the owner against defects in workmanship and materials for a period of 5 years or 10,000 hours of operation, in normal use, operation and service. The warranty shall be in printed form and shall apply to all similar units. A copy of the warranty shall be supplied with each pump. The warranty shall consist of the following: From 0 18 months or 0 - 3,000 hours, 100% warranty, From 19 39 months or 3,001 6,500 hours, 50% warranty, From 40 60 months or 6,501 10,000 hours, 25% warranty.
2. Centrifugal over 60 HP and under: Same as for submersible pumps.
3. Centrifugal over 60 HP: One year Warranty minimum. Project specific as required by the Engineer.

2.03 WET WELL

A. See Section 02536 Precast Manholes.

B. Concrete Protective Coatings: See WASD Pre-Approved Product List Sheet 10.7 Wet Well Coating.

C. Crystalline Waterproofing: Pump Station Wet Wells shall have Xypex/BASF Crystalline Waterproofing Admixture or approved equal, applied at 2 to 3% of the weight of portland cement in the wet well by volume. The Crystalline Waterproofing Admixture shall be used in lieu of painting the exterior of the structure with Bitumastic Coal-Tar Epoxy. The precast concrete structure with the Crystalline Waterproofing Admixture is required to cure for 28 days prior to application of the concrete protective coating.

D. Water Cement Ratio: 0.34 for Pump Station Wet Wells

E. Reinforcement of Grade 60 bars. (Pump Station Wet Wells require rebars not wire mesh reinforcing).

F. Waterstops: Ribbed PVC Waterstop with centerbulb.

G. No construction joints will be allowed below an elevation of four feet above mean sea level. Construction joints will be allowed above elevation+4.0, if adequate keyways and waterstops, approved by the Department (Ribbed PVC waterstop with centerbulb), are provided. The Department may approve an alternate joint method in cases of excessively deeper and heavy structures.

2.04 CASTINGS

A. GENERAL

MDWASD

1. Material used in the manufacture of the castings shall conform to ASTM A48, "Gray Iron Castings", for Class 35B. Proof Loading: AASHTO M306 Loading

2. Castings shall be in compliance with Standard Details and Section 05550, "Castings".

B. MANHOLE FRAMES AND COVERS

Manhole covers and frames shall be MD-WASD Type "A" with roadway cover, U.S.F. Fabrication No. 310, or approved equal. The covers shall be cast labeled "SANITARY SEWER".

C. VALVE BOXES AND COVERS

Valve Boxes and Covers shall be MD-WASD No. 52 or No. 53 in accordance with the Standard Details appended hereto. Valve box covers shall be cast labeled with the letter "S".

2.05 BRICK

A. Concrete brick shall conform to ASTM Standard C55-01 "Concrete Building Brick". Clay brick shall be used in manhole construction. Clay brick shall conform to ASTM Standard C62-00, "Building Brick (Solid Masonry Units Made from Clay or Shale)".

B. Bricks shall have true edges and sharp corners and shall have been cured for at least 14 days before being placed.

2.05 CONCRETE, MORTAR AND GROUT

See Sections 03300, 04060 and 03600, respectively.

2.06 CONCRETE BLOCK

Unit masonry shall conform with Section 04220.

A. Standard units of concrete block shall conform to ASTM C90, "Hollow Load-Bearing Concrete Masonry Units", Normal Weight, Grade N-1, except that the maximum moisture content shall not exceed 50 percent of the total absorption.

B. Louvered concrete ventilator block shall conform to the FBC for materials and quality control. Louvered blocks shall be considered non-load bearing units requiring a reinforced concrete lintel above, when placed in standard concrete block construction. Size and reinforcement of the lintel shall be as required by the FBC, however, the lintel shall bear not less than 8 inches on the masonry at each end.

C. Louvered ventilator blocks shall be furnished in modular units 16 inches square nominal (15-1/2 inches by 15-1/2 inches actual), and each unit shall have four louvers.

D. A mortar groove shall be provided on the exterior of the frame, centered on the frame depth.

E. Each modular unit shall be provided with an insect screen. Fabrication shall be extruded aluminum frames, corners mitered aluminum spline, and 16-18 mesh aluminum screen. Screens shall be fixed type, with aluminum clips and screens suitable anchored to the unit.

2.07 ELECTRICAL MATERIALS

A. See Section 16051 "Pump Station Electrical Materials".
B. See Section 16940 "Pump Station Control Panel".

2.08 TELEMETRY

A. A telemetry panel provided by the MD-WASD shall be installed in the future. All appurtenances required by the telemetry system shall be provided, including antenna, concrete filled galvanized steel pipe, concrete base, mounting clamps and accessories.

B. All lift stations shall be designed for fully automatic unattended pump control with local override capability. Lift stations shall also be designed for remote monitoring capability. Provisions for these installations shall be made by Engineer of Record. Remote monitoring will be installed by the MD-WASD.

2.09 FENCING MATERIAL

Fencing material shall be furnished and installed in accordance with Section 02822, "Chainlink Fences and Gate". Gates shall be positioned to allow for maintenance and direct truck access to the wet well.

2.10 PIPING AND FITTING MATERIAL

Piping, fittings and appurtenances shall be as specified in Section 15060, "Piping and Fittings". Sewage lined ductile iron pipe and fittings are required within the pump station.

2.11 LADDERS & GUARD CHAINS

A. Galvanized steel ladders shall be fabricated with structural shapes in accordance with Section 05120, "Miscellaneous and Structural Steel", and shall be sized in accordance with the Plans. All welds shall be ground smooth and cleaned to remove welding marks. All screws and bolts appurtenant to the ladders shall be AISI Type 316 stainless steel.

B. Guards chains shall be used where shown on the Plans. The chains shall be welded stainless steel close link hoist chain 3/8-inch by 1.2 inch X .540 inch links. One end of each chain shall be attached by a stainless steel shackle to a 3/8-inch round stainless steel eye bolt through the pipe stanchion and the other end of each chain shall be connected to a heavy stainless steel snap hook. A 3/8-inch stainless steel

welded eye and concrete insert shall be provided in the wall for both chains. The eyes shall be installed just below the bottom of the top and intermediate rails. Stainless steel items shall be AISI Type 316.

2.12 All other material required for the satisfactory installation of the pump station, including valves, sewage pumps, sump pump, steel reinforcing, structural steel, waterstops, miscellaneous material and other products, shall be as specified elsewhere herein.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. The precast base shall be set level, with the walls plumb on the graded crushed rock bedding.

B. Excavation shall extend to a level 12-inches below the level of the outside bottom of the base slab. If necessary, provide sheeting and shoring for the excavation. Sheeting and shoring may be required in order to control the excavation dimensions, protect the workmen, and prevent damage to the structure or other adjacent facilities. The resulting excavation shall be backfilled with drainfield limerock or specified pipe bedding material to a level to receive the structures at the proper elevation.

C. Necessary sheeting and shoring shall be designed by a Registered Professional Engineer licensed to practice in the State of Florida. Signed, sealed, and dated drawings and design calculations shall be submitted to the Engineer for approval prior to construction.

D. The excavation shall then be brought to the structure's bottom elevation by placing and compacting 6-inch layers of Oolitic limerock to 95% of maximum density as determined by AASHTO Specification No. T-180. Excess excavated material, suitable for the purpose, may be used later as backfill around the structure. The wet well, dry well and/or valve pit shall be painted prior to installation. Backfill around new structures up to the pavement base or surface of the ground shall be material not exceeding 6-inches in diameter and shall be compacted in layers not exceeding 9-inches. Each layer shall be compacted with a powered hand tamper or other approved method.

E. For surfaces of structures exposed to view the Contractor shall fill all depressions and all air holes with mortar, dampen surfaces, and then spread slurry, consisting of one part cement and one and one-half parts sand, by damp loose volume, on the surface with clean burlap pads and sponge rubber floats. The Contractor shall remove any surplus by scraping and hen rubbing with clean burlap. Finish surface shall be suitable to receive paint.

3.02 INSTALLATION OF PRECAST PUMP STATION

MDWASD

A. Excavations for the cast-in-place or the precast structures shall be extended to a level 6-inches below the level of the outside bottom of the slab. Sheeting and shoring may be required in order to control the excavation dimensions, protect workmen, and prevent damage to the structure or adjacent facilities. The resulting excavation shall be backfilled with drainfield limerock or specified pipe bedding material to a level to receive the structures at the proper elevation. Pump station exteriors shall be painted prior to installation.

B. Sheeting and shoring for the pump station shall be designed by a Registered Professional Engineer licensed to practice in the State of Florida. Signed, sealed and dated drawings and design calculations shall be submitted to the MD-WASD for approval prior to construction.

C. The pump station shall come with an anchor slab, precast to the dimensions shown on the Plans to be lowered in to the excavation separately, or as a complete unit. The structure, with anchor slab shall be securely seated.

3.03 INSTALLATION OF VALVE PIT STRUCTURES

A. During all backfilling operations the backfill level shall be kept even on all sides of the structure and the Contractor shall exercise every precaution to prevent damage to, or unplanned loading of, the structure or its appurtenances.

B. The valve pit structure shall be precast to the dimensions shown on the plans and carefully lowered into the excavation. The structure shall be seated securely to grade and to the approval of the MD-WASD, after which the Contractor shall complete the remainder of the installations.

C. After satisfactory installation and testing, the valve pit interior shall be painted as specified.

3.04 MECHANICAL WORK

A. The mechanical work shall be performed by personnel who have had previous experience installing similar pumping station equipment. All equipment shall be installed in complete accordance with the installation instructions pertaining to the various items of equipment as published by the equipment manufacturers and no piece of equipment shall be installed unless its installation instructions are on hand. Duplicate copies of these instructions shall be furnished to the Engineer of Record prior to installation. Before any installation work is started, the Contractor shall submit five copies of installation drawings to the MD-WASD for approval of all the proposed mechanical work. No work shall commence until approval of the installation drawings has been received.

B. All pipe, tubing, and fittings shall be adequately supported with adjustable pipe saddle supports, by wall brackets, or by ceiling hangers, as indicated on the drawings. Except as otherwise indicated or specified, all piping passing through walls or floors shall be provided with pipe sleeves or wall pipe as indicated on the Plans. Sleeves shall be caulked to piping on both sides of wall with Dow-Corning

790 joint sealant or approved equal. Sleeves and wall pipe shall be accurately set in the forms and blocked to prevent movement during pouring of concrete. Sleeves and wall pipe for piping 6 inches and larger shall be made of cast iron. Sleeves for piping smaller than 6 inches shall be cut from Schedule 40 galvanized steel pipe, reamed and set flush with both faces of wall or floor, or as shown on the Plans.

C. All pipe shall be thoroughly cleaned internally to the satisfaction of the MD-WASD before installation.

D. All pipe work under this Contract including handling of materials, excavation, laying, blocking, alignment and grade, jointing, setting valves and fittings, and anchoring, shall meet the applicable provisions of AWWA Specification C600, "Installation of Ductile-Iron Water Mains and Their Appurtenances", latest edition, as modified herein.
